Commissioner of Education*

THE TOWNSHIP SYSTEM

INTRODUCTION

It is essential that those living contemporaneously with the great educational and social movements should collect and preserve in fullest detail, for future generations, the historical facts relative to these movements. This is essential for three reasons: first, that the labors of those involved in the movement should not be lost to future generations; second, only in this way can the minor details that give real life to history be preserved; and third, that the burden of those who are to take up the work for the future shall not be made heavier by the neglect of the past. It is for this purpose that I have attempted to gather between two covers the history of the township movement, both its successes and its failures, in as complete a history as is humanly possible.

No effort was saved in gathering all the information possible to make this volume complete. We have endeavored to preserve the facts in their true light, by reproducing many letters, newspaper clippings, etc. so that in as far as possible the actual life of the movement might be reproduced fairly and without prejudice. It was our endeavor to reproduce and preserve the efforts of all who took part in the great movement, both of those in opposition and those who endeavored to preserve the best in the system. This, however, was impossible, for it would have added too much to an already large volume.

It is hoped that the material presented will give new interest and inspiration to those interested in the educational progress of this great State and that those who take up the burden for the future, by being saved the great labor of compilation, may find this volume a source book of information.

I wish to express my appreciation to Mr Fred Engelhardt, one of my associates, for valuable assistance in the preparation of this report.

THE HISTORICAL BACKGROUND

Opinions of State Superintendents¹

The present school district system has been condemned by every State Superintendent and Commissioner of Education from 1844 to the present time. Hon. Samuel Young, one of New York's noted State Superintendents, spoke as follows upon the subject in his annual report to the Legislature of 1844:

There were in the State on the first day of October last, as appears from the returns, 10,875 districts; showing a considerable diminution from the number reported last year. This diminution has been caused by the union or consolidation of small districts, and by the refusal on the part of the town superintendents generally to increase the number of existing districts by the formation of new ones, excepting under peculiar circumstances; and it is earnestly hoped that the same policy will be steadily pursued in future, in every practicable case, throughout the State. Small and consequently inefficient districts have, heretofore for a long period, been the source of many formidable evils. Miserable schoolhouses, poor and cheap teachers, interrupted and temporary instruction, and heavy rate bills, are among the permanent calamities incident to small school districts. The ordinary pretext for the division and subdivision of districts, is the greater proximity to be afforded to a portion of the inhabitants to the schoolhouse. To this single fancied benefit, considerations of much greater importance are often sacrificed. The idea seems to be entertained by many that it is a great hardship for children to travel a mile, or even half a mile, to school; and that those individuals are the most favored who find the schoolhouse nearest to their homes. It is true that there are a few stormy days in the year, when the nearness of the schoolhouse may be deemed a convenience. But all children of 10 or 12 years of age must, in order to maintain health and secure the due development of their physical functions, exercise daily to a much greater extent than is produced by one or even two miles of travel. Unrestrained exercise in the open air is indispensable to the health of the young. It is one of the laws which has been strongly impressed by the Creator upon the animal organization; and obedience to this law is enforced by a powerful instinct which impels the young of all animals, while in a state of growth, to daily muscular exertion. The human race is as subject to this law as any other part of animated nature; and it is a fact established by all experience, that those children are the most healthful in body and vigorous in mind whose corporeal motions are least constrained, and whose lungs are most in contact with the pure and open air. The most aged and experienced teachers will testify that, as a general rule, those children who live farthest from the schoolhouse are the most punctual in their daily attendance and make the greatest progress in their studies.

¹ Reprinted from the annual report of 1914.

Hon. M. S. Benton, State Superintendent of Common Schools, spoke as follows in his annual report of 1847:

A larger and more extended acquaintance with school operations has induced many persons to believe that, by adopting the plan of union schools, uniting two or more districts, where the population is tolerably compact, and organizing the schools with two or more departments, and employing teachers of suitable qualifications to take charge of each, and at different rates of compensation, all the advantages of a school of the highest grade are enjoyed by these districts, and that these schools may be rendered less expensive than to employ teachers of the first class or highest grade, in each district before such consolidation.

In numerous instances, for two years past, these union schools have been formed in different parts of the State, under the most favorable auspices, with every reasonable prospect of being highly advantageous in promoting the objects of their establishment; and hence, we may justly anticipate a gradual reduction in the aggregate of the whole number of districts in the State, so long as this process shall continue.

H. H. Van Dyck, State Superintendent of Public Instruction, said in his report of 1860:

It is obvious that the pupils in the purely country districts are already reduced on an average to a point below the requirements of an efficient and healthy organization. In my estimation, educational progress will be subserved by the consolidation, rather than the subdivision, of the existing districts. As a matter of mere convenience, proximity to the schoolhouse may be desirable. But it needs no extended argument to prove that a district feeble in property, deficient in scholars, and scanty in its receipt of public money, is not likely to maintain a vigorous and efficient school. On the contrary, a combination of these elements to an appropriate extent will enable those interested to secure teachers of competent qualifications, will permit the scholars to be so classified as to separate the more advanced from those in the primary branches; and to give all that degree of attention which can not be secured in a promiscuous assemblage, presided over by a teacher selected with the reference to the means of the district, rather than with a view to the proper education of its children.

Hon. Neil Gilmour, State Superintendent of Public Instruction, was a persistent advocate of the elimination of the school district system and the adoption of the township system. In each of his annual reports he gave strong reasons for the adoption of the township system. In his report of 1877 he indorsed the township system in the following language:

Since the passage of the law by the Legislature of 1867, known as the free school act, whereby the old system of rate bills was abolished, the question whether the school districts as they now exist should not undergo a change has been agitated. In times past, when the balance of teachers' wages remaining due, after the application of the public money thereto, was raised by rate bills, it seemed well that the districts as defined should

exist; but now, since any balance of teachers' wages remaining unpaid is raised by a tax on the district property, I am of the opinion that the necessity of the present system of school districts has ceased, and that the schools can be materially benefited, the quality of the instruction improved, the attendance increased and supervision made more thorough by adopting the township system.

The district boundaries as they exist, are in many cases very indefinite, and much of the time of school commissioners is occupied in adjusting differences and difficulties in regard thereto, in setting off property first to one district and afterward to another; frequently these changes are the cause of bitter quarrels, and from this cause alone many appeals are brought to the Department. I believe that the existence of the present district system is detrimental to the interests of education.

I recommend that the Legislature abolish the present system of school districts and in its place establish the township system. Let all the schools of the town be under the care and direction of a board of education to be elected at the annual town meeting; the amount of tax necessary to be raised for the support thereof, after the application of the public money thereto, be levied as a town tax; the powers now vested in the trustees of school districts given to town boards of education, with such additions as wisdom and necessity may dictate, and that the powers now vested in the inhabitants at district meetings be transferred to the voters at town meetings, with such modifications and extensions as may be deemed expedient. With such a system properly organized and in thorough working order, I predict that the cause of education in the State of New York will be greatly advanced.

Hon. William B. Ruggles, State Superintendent of Public Instruction, spoke as follows in his report of 1884:

The formation of union free school districts, under the general law, in centers of population where more faculties and greater ability to maintain good schools are afforded than exist in the more sparsely populated districts, deserves to be encouraged. These schools are, as a general rule, a very decided improvement upon the ordinary school districts. With rare exceptions, they pay better wages and employ a better class of teachers; their attendance is much larger so as to admit of systematic grading and classification; they afford a wider range of studies and better methods of instruction.

Dr Andrew S. Draper, State Superintendent of Public Instruction, said in his report of 1892:

I can not admit that children in a poor or sparsely settled district are not entitled to as well-ordered schools and as skillful teachers as pupils in districts more fortunately situated. We are not to abandon the poor district to its fate. We must find some practical means of helping it. We must make small districts of small assessable valuation and with but few children, which ordinarily results in poor schools, or we must make larger districts with better schools. As between these alternatives the latter seems to be preferable. If it is adopted then we are confronted with the fact

that children would be frequently compelled to go farther to school than is practicable.

The difficulties involved in this question have been partially solved elsewhere by providing facilities for the transportation of children to the schools. The reports from Massachusetts where this plan has been put in operation show that, in addition to the financial gain, profitless schools have been abolished, and the children are now instructed for a longer term under teachers of more experience and skill. . . .

For many years there has been a continued effort to bring the subject of the township system of schools to the attention of the people of the State, and experience has shown that the warmest friends of the measure are those who most thoroughly understand its provisions.

In the report of the Superintendent of Public Instruction for 1877, Mr Gilmour expressed his belief that the district system of schools was detrimental to the interests of education, and recommended that the Legislature establish at once the township system.

It is well known that then as now there was strong opposition to the proposed change in many sections of the State.

In the report of 1880 Superintendent Gilmour suggested that if the Legislature deemed it unwise to make at once so radical a change, the result might be brought about gradually by an act conferring upon the legal voters in towns the right to change from the school district system to the township system.

Increased interest has been manifested in the township system during the past three years, which is due in a great degree to the thorough discussion and unanimous action of the New York State Association of School Commissioners and Superintendents.

A bill was introduced in 1890 and was referred to the committee on public education where it was allowed to remain rather than incur defeat through a misunderstanding of its provisions.

The following points in favor of the township system of schools were submitted at the meeting of the association referred to above, held at Batavia, January 14, 1891:

- 1 The affairs of all school districts would be managed with business system, an advantage which now attaches to union free school districts, where a school board has charge of the district, holding regular meetings and having an oversight over school interests.

- 2 Equalization of school taxes in towns. The inequality now prevalent would be removed, where one district pays ten dollars to twenty dollars per capita for school privileges—no better than given in an adjoining district for five dollars per capita.

- 3 A more efficient, intelligent and progressive class of school officers. Parsimony and extravagance would alike be controlled. As a rule boards of education are composed of the leading men of the community.

- 4 All the inhabitants of a town would receive equal educational advantages at equal rates.

- 5 It would guarantee to all communities the school privileges now enjoyed by residents of union free school districts.

- 6 Fewer and larger schools, better wages, better teachers. Weak districts would be annexed to others.

- 7 More and better supervision by school commissioners and boards of directors.

8 It would add dignity and usefulness to the office of school commissioner, giving him less anxiety over petty details and enabling him to supervise schools more systematically and intelligently.

9 Better facilities for grading the country schools and establishing a uniform and satisfactory course of study, having in view the entire school population of a town. Advanced or high schools could be established at convenient points which every pupil of the town of requisite educational advancement would have the right to attend. The small schools would become a part of a perfected, harmonious and efficient system, instead of straggling and struggling nonentities.

10 Cheaper and better schools, lower taxes, longer terms for less money. The Michigan report for 1888, page vi, refers to a town organized under the township system where the average length of term was nine months, at an expense of \$13.71 per capita, in comparison with a town retaining the district system where the average length of term was four and a half months at an expense of \$14.80 per capita.

11 Uniformity of textbooks would certainly be secured in every town. This would be very likely to extend to all the towns composing a commissioner district or a county.

12 A more systematic and satisfactory method of making reports would be possible, guaranteeing more reliable school statistics, thus closing the avenues now open in a hundred ways for imperfect and unreliable data.

13 Greater dignity would attach to public education in the common schools of the State; public opinion would have greater respect for it, and public pride would be aroused.

14 All troubles now encountered by trustees in making out or correcting tax lists would be abolished; the efforts of the collector to elude the taxpayer when fees are 1 per cent, and the hunt of the collector for the taxpayer when fees are 5 per cent, would entirely disappear.

15 The question of district boundaries would no longer vex school commissioners, or take their time. The matter would be entirely under the control of the school directors.

16 Cheaper textbooks would be possible. They could be purchased for all the schools of a town at greatly reduced rates. This would solve the vexed question of state publication of textbooks by allowing each town to purchase its own books where they could be obtained to the best advantage.

17 The present law in reference to compulsory education would be more generally and more easily enforced.

18 It is the only system which will save the small country districts from extinction.

19 More permanency in the teaching force of the State; a firm step toward making the teachers' profession permanent.

20 As a result of the last point, a better and higher grade of teachers.

21 Better facilities for instruction would be afforded in the way of apparatus, books of reference, etc., and more intelligent action would be taken in reference to the equipment, maintenance and preservation of school district libraries.

22 A general uplifting of educational sentiment throughout the State. With the township system, and enforceable compulsory education law, and provision for the professional training of teachers, our educational system would be placed 25 years in advance at one bound.

At the 37th annual meeting of the New York Association of School Commissioners and Superintendents held at Cobleskill in December 1891, the following preamble and resolution were unanimously adopted:

Whereas, It is the sentiment of this association that the enactment of a law embodying the practical features of the township system would greatly advance the cause of education, equalize the burden of taxation, and remove many of the difficulties met in our work of superintendence, therefor,

Resolved, That we hereby pledge ourselves to make diligent, persistent and immediate effort with our legislators to secure the passage of such a bill, which we urge our committee on legislation to perfect at as early a day as practicable.

I have no hesitation in saying that it is my belief that if the township system of schools were once in operation, it would greatly promote the efficiency as it would more equitably distribute the cost of our rural schools. Whether the change would overthrow existing relations and conditions, in other respects, to an extent which will render it impracticable of attainment is open to doubt. It is a subject of much importance which is earnestly advocated by the best friends of the school system and I bespeak for it the most thoughtful consideration of the Legislature.

Hon. James F. Crooker, State Superintendent of Public Instruction, favored the township system in the following language in his report of 1893:

For a quarter of a century our principal educators have been dissatisfied with the school district system in vogue in this State, and during this period they have been advocating the adoption of the township system. The leading educators of the State, irrespective of their political views, stand as a unit in the support of this system. Its principal features have long been under consideration by the various educational associations of the State, and at the last annual meeting of the State Association of School Commissioners, held at Watertown in September, that body instructed its legislative committee by a unanimous vote to direct its efforts toward securing the passage of a bill for its establishment.

Any measure affecting the public school system, which has the hearty support of the entire educational army of the State, is one which should receive most respectful consideration from our law-making power.

This measure is not a scheme which some man has sprung into existence, but represents a system that has been tried in other states and to the entire satisfaction of those directly interested in the success of the school system of such states. By its adoption we would surrender none of the vital features of our school system, but would strengthen its weak points, and place the local affairs of rural schools on such a basis that they would be managed in a strictly businesslike manner.

The bill proposed does not apply to city schools or to the union free schools, and is on the permissive plan, allowing each town to vote upon its adoption. Therefore, no effort is being put forth to force the measure upon people who are unwilling to receive it. If the Legislature should pass such a bill there is no doubt but that many towns throughout the State would adopt it, and the friends of the system be given an opportunity to show what results could be obtained under its workings. In my opinion it is a measure that would eliminate many obstacles that are now a source of great weakness to our school system and a barrier to its progress. It is not possible to enumerate all the advantages claimed for the system, but there are a few arguments in its behalf to which I desire to call especial attention, namely, the increasing of the efficiency of the teaching service. There is no part of our school system which needs greater care and

stronger support than our rural districts. Many of them are too weak numerically and financially to support a school. Districts with an assessed valuation ranging from \$2000 to \$25,000 and containing from 2 to 8 pupils of school age within their borders find the support of a school to be extremely burdensome.

Relief of some character must be given such districts. These school districts were formed years ago when the families in them were large and the expense of maintaining a school small. It costs as much to support a poor school in a weak district as it does to sustain a good school in a strong district. To continue schools in these districts under the present conditions is unwise and extravagant. Weak districts should be abolished and their territory annexed in a fair and judicious manner to other districts. The benefits which the school system of the State would derive from such a policy are twofold. There would be fewer schools to support, which would decrease the expense of maintaining the schools of the State, while the districts to which the territory of the dissolved districts is attached would be strengthened by an increase in their assessed valuation and in the number of pupils attending school, which would increase the amount of the public money for such districts.

A proposition to abolish school boards in cities and create in their stead a school district trustee for each district, and clothe such trustee with the authority to manage all of the affairs of his district would be pronounced at once as unsound and even foolish. Yet this is the very plan which exists in the rural part of the State under the present school district system. By the adoption of the proposed township law, the office of district trustee would be abolished and there would be created a town board of school directors consisting of nine members, who are elected by ballot at an annual town meeting and who serve without pay. This would place all schools of a town (except union free schools and others created by special acts) under the direct management of a town board, who are to hire teachers and provide for schools as trustees now do; and the expense incurred in maintaining the schools would be a charge upon the town, levied and assessed in the same manner as other town taxes are. One of the strongest arguments against the district system is the great injustice that exists under the present system of taxation. To show this inequality of taxation that exists, I have constructed a table comparing the rate of tax and the cost per capita of educating the children in two districts in the same town in every county in the State.

This table is submitted for careful study and may be found at the end of this chapter. It is strong proof of the injustice which a large number of districts suffer. To illustrate: In district 8 of the town of Hunter, county of Greene, the rate of tax for the year ending July 25, 1892, was 2.3 mills, and the cost per capita of educating the children of that district was \$8.37, while in district 1 in the same town and county the rate was 15.8 mills, or nearly seven times as great as in district 8, and the cost per capita of educating the children in district 1 was \$59.95, or more than seven times as much as in district 8.

In district 7, town of Broome, county of Schoharie, the rate of tax for the same year as above was 3.9 mills, and the cost per capita of educating the children of that district was \$6.18, while in district 13 in the same town

and county the rate of tax was 33.5 mills, or more than eight times as great as in district 7, and the cost per capita of educating the children in district 13 was \$54.37, or nearly nine times as much as in district 7. These are not rare and extreme illustrations, but similar cases exist in nearly every town in the State. This great difference in the cost of educating the future citizens of our State is not in harmony with the spirit on which our free school system was founded. The township has always been the unit of taxation for all local purposes, except for the support of schools.

If bridges are to be repaired or built, new roads to be laid out, or poor to support, the expense is borne by the county or town, and not by that portion of the town in which the expense is incurred and which is benefited thereby. Railroads and other corporations pay their share of all the taxes of a town. These corporations are subject to taxation for other purposes, not only in that portion of the town in which they are located, but for the whole town. Now, if it is fair to compel these corporations to pay their share of the taxes of a town and not limit them to that portion of the town in which they are located, why should they be restricted for taxation for school purposes to just that part of a town in which they are located? Under this system all children of a town would receive equal educational advantages at equal rates, and all property of a town would pay its proportionate share of the expense of maintaining the schools of that town.

One of the most important factors in our school work is the teaching force. Any measure that will elevate the standard of teaching is worthy of consideration. That the position of a teacher is not permanent is a weak point in our school system. A thorough, efficient teacher should be retained in a school as long as her work is satisfactory and her school progressive. But the frequent changes of trustees almost invariably result in a change of teachers to the great disadvantage of the school. A board of directors would not be likely to change teachers without sufficient cause. Teachers not qualified for their work would be removed and their places supplied with those who are qualified. In time the unqualified teachers would be removed from the field of service and find employment in positions of honor and usefulness, and to which they are adapted. After giving the measure careful study I am led to believe that under its workings we would have better schools at less expense and administered in a fairer and more economical manner. I therefore recommend the adoption of the "township system."

Hon. Charles R. Skinner, State Superintendent of Public Instruction, also favored the township system in his report of 1897 in the following language:

Notwithstanding the apparent advance in the general school work of the State, thoughtful educators view with apprehension the failure of the rural schools to keep in touch with the onward movement of those more fortunately located in our cities and villages. Students of educational problems thoroughly appreciate that in view of the constant tendency of our population and wealth toward the cities and villages, the rural school problem has become the one most worthy of attention and most perplexing in its solution. A careful study of this problem has led to a conviction that

the chief difficulty with the rural schools is the lack of systematic and businesslike management of their affairs, consequent upon the district system, that the remedy most likely to correct existing conditions lies along administrative lines, and that the larger unit of the township is much better adapted to good administration than is the present district system.

Massachusetts experienced the same evil results from the district system, and as early as 1839, that distinguished educator, Horace Mann, in his annual report as secretary of the state board of education, said: "I consider the law of 1789, authorizing towns (in Massachusetts) to divide themselves into school districts, the most unfortunate law on the subject of common schools ever enacted in the state." In the southern states the county is generally the unit in local administration, and in most of them it has wisely been made the unit of local school administration as well. In the states of the north and largely in those in the west, the township is the unit in local administration, and for that reason has been chosen as a unit for school organization.

Indiana was the first state to change from the district to the township system, and one after another the states have followed until but few retain the antiquated district system with its inferior administration, its wasteful expenditure, its unequal taxation, and, above all, its unequal school advantages. That the experience of those states which have abandoned the district system has been satisfactory, is best demonstrated by the fact that none have returned to it. To anyone at all conversant with existing conditions in the rural sections of the State, it is evident that hundreds of school districts have outlived their usefulness and the conditions under which they were created, and have become a public burden instead of a public benefit.

In 1870 there were no fewer than 1500 school districts with an average daily attendance of less than 10 pupils each, while the reports for 1896 show more than 3500 such districts, and it is safe to estimate that the average daily attendance for all strictly country schools in the State does not exceed 10 pupils for each school. In hundreds of districts the number of school district officers exceeds the number of pupils of average attendance. Under such conditions it is practically impossible to maintain interest in the school work, either in the community or among the pupils and patrons; the school is conducted in a perfunctory manner, and school spirit is at a minimum. An instance recently came to my attention of a teacher who asked to be released from an unexpired contract to teach in a school of two pupils, giving as her reason that the hopeless task of endeavoring to arouse interest in study under such conditions would drive her insane.

It may be argued that the law now provides for the annulling and consolidating of weak districts, but local sentiment stands in the way and clings to the old organization more from love of what it has been than from respect for what it is, until the results from such provisions of the law are meager and barren. From an economic point of view, the waste of the state school money under the district system is both startling and ludicrous. One of the officials of this Department reports visiting a country school in company with the school commissioner of the district, and finding there a teacher at work on a piece of embroidery, but with no pupils in attendance. Inquiry elicited the information that the school had been in session three weeks without any pupils, and that there were only two

children of school age in the entire district, both of whom were expected to attend the school later on. It is certainly unfortunate that such a condition should be even possible in a State that stands first among the states in population, wealth and natural resources.

The clear, unbiased judgment of Horace Mann, in regard to Massachusetts, pronounced over 50 years ago, still remains applicable to our own State, not only unchallenged, but affirmed again and again by the highest educational authorities throughout the United States and the world. The advisability of a change in our system has passed beyond the realm of discussion. Everywhere it has come to be recognized as the most important educational question before the people of our State. All others can afford to wait until it is solved. Better schools in our cities and villages but aggravate the evil by still further draining the rural schools and thus reducing the school advantages of those residing in rural communities.

I respectfully submit this question to your honorable body as one of paramount importance, demanding immediate attention.

The following is an extract from the report of the committee on the township bill to the New York State Association of State School Commissioners and Superintendents at its annual meeting held in November 1889, at Cortland, N. Y.

For the paper in regular order at this point was substituted the report of the committee on the township bill. Dr E. A. Sheldon presented the following report:

The committee appointed at the last meeting of this body to prepare a bill with a view of consolidating the school districts of the State into a township system have to report that such a bill was prepared and introduced into the last Legislature, and printed copies of the same were widely distributed throughout the State. Your committee found it impracticable to prepare a bill in time to secure its passage through the last Legislature, and so decided that it would be better to secure its introduction and in this way call the attention of the Legislature and the citizens of the State generally to the bill, with the view of calling out suggestions and criticisms in regard to it. With this view copies of the bill were sent to leading educational and political men and to the papers of the State.

Very little criticism or suggestions seems to have been called out, and we submit it now to the consideration of this meeting with very little change from the original draft.

It is just to say that the bill in its present form was prepared by Hon. Charles R. Skinner, our Deputy Superintendent of Public Instruction, at the urgent request of the committee. He had previously prepared a similar bill and seemed to your committee better qualified to do this work than any other man. The bill fully justifies the wisdom of our judgment.

E. A. SHELDON
M. C. FINLEY

W. J. BARR
JARED SANFORD

Committee

Printed copies of the bill were distributed and some time was spent in suggestions and in questions. On motion of Commissioner Lusk the report of the committee was adopted.

Commissioner Maxson thought that the committee should be authorized to receive such suggestions as may be offered, make such changes as may seem advisable, and to take charge of the future interests of the measure.

Dr J. M. Milne said the association should give some expression of its wishes, whether it was in favor of urging the measure or of taking no further action. For himself, he was in favor of pushing the measure. Commissioner Kenney offered the following:

Resolved, That the association approve the idea of the township system, and of the necessary changes in the laws of the State so as to establish that system.

After discussion, Commissioner Maxson offered the following as a substitute:

Resolved, That we approve the general features of the township system, and that the committee appointed at our last meeting be continued, and instructed to invite suggestions, criticisms and amendments to the bill presented, with a view to perfecting and securing the passage of said measure.

The substitute was adopted, ayes 44; noes 12.

Dr E. A. Sheldon moved that Deputy Superintendent of Public Instruction Charles R. Skinner be added to the committee. Carried.

On motion the committee was instructed to appoint a time when objections and suggestions could be offered.

Full Text of Proposed Bill

The following is the full text of the bill in reference to the township system, as introduced by Hon. D. E. Ainsworth, in the Assembly, May 9, 1889, with such amendments as were agreed upon by the special committee at a meeting held Thursday noon, during the recess of the association:

AN ACT to provide for the election of school directors in the several towns of this State, and to prescribe their powers and duties.

The People of the State of New York, represented in Senate and Assembly do enact as follows:

Section 1 On the first Tuesday of June, following the passage of this act, there shall be held in every town in this State, a meeting of persons duly qualified to vote by section 3 of this act, at which there shall be elected by ballot nine school directors, whose terms of office and whose powers and duties shall be as hereinafter provided. The penalty for noncompliance with the requirements of this section shall be the withholding of public school moneys to which the town failing to comply would otherwise be entitled. The terms of office of all school directors elected under this section shall begin on the day of the organization of the board of directors as hereinafter provided.

§ 2 This election shall be held at the place or places at which the last preceding meeting or meetings for the election of town officers were held.

If, for any reason, an election can not be held at the place or places where the last meeting or meetings for the election of town officers were held, the inspectors of election hereinafter provided for shall designate a suitable place therefor and give written notice thereof to the town clerk at least twenty days prior to the date fixed for the holding of such election. The polls shall be opened from nine o'clock in the forenoon to five o'clock in the afternoon, and no votes shall be received except between the hours thus designated. The ballots to be used at such elections shall contain the names of the persons to be voted for, and may be either written or printed or partly written and partly printed. The town clerk shall, at the expense of the town provide a suitable box in which the ballots shall be deposited as they are received, and a book to be used as a poll list.

§ 3 Every person of full age who shall have resided one year in the State, four months in the county and thirty days in the town, preceding the date of the meeting for the election of school directors, and who is entitled to hold lands in this State, and who owns or hires real property in such town liable to taxation, and every resident of such town who is a citizen of the United States above the age of twenty-one years, and who is a parent of a child or children of school age, some one or more of whom shall have attended a district school in such town for a period of at least eight weeks within one year preceding, and every such person not being the parent who shall have permanently residing with him or her such child or children, and every such resident and citizen aforesaid, who owns any personal property assessed on the last preceding assessment-roll of the town, exceeding fifty dollars in value, exclusive of such as is exempt from execution, and no others, shall be entitled to vote at any town meeting held in such town for the election of school directors. Any person qualified to vote for school directors under this section shall be eligible to the office of school directors provided always, that any person holding the office of supervisor shall not be eligible to the office of school director.

§ 4 If any person offering to vote at any such election shall be challenged as unqualified by any legal voter, the inspectors, or one of them, shall require the person so offering to vote to make the following declaration: "I do declare and affirm that I am an actual resident of this town, and that I am legally qualified to vote at this election." And every person making such declaration shall be permitted to vote; but if any person shall refuse to make such declaration his ballot shall not be received by the inspectors. Any person who upon being so challenged shall wilfully make a false declaration of his right to vote at such election, shall be deemed guilty of misdemeanor, and punished by imprisonment in the county jail for not less than six months nor more than one year. Any person who shall vote at such election, not being duly qualified, shall, though not challenged, forfeit the sum of ten dollars, to be sued for by the supervisor of the town for the benefit of the schools of the town.

§ 5 The officers of the town duly qualified to act for the town and receive the ballots of the electors at town meetings, shall constitute the board of inspectors of said election, and shall receive and deposit in the ballot-box the votes cast at said election. In case of a vacancy in the board of inspectors at the time of opening the polls, the remaining inspector or

inspectors shall appoint persons to fill the vacancies. If, at the time for opening the polls, there is no inspector of election present, the legal voters present shall organize and select three persons who are qualified voters, to act as inspectors of election, and the persons so selected shall possess all the powers and be subject to all the responsibilities that the regular inspectors provided for by this act would be. They shall appoint one of their number chairman of the board, who shall administer to the other inspectors the oath of office as prescribed by the constitution, and the same oath shall then be administered to the chairman by one of the other inspectors. The inspectors, or one of them, shall record in a book to be provided for that purpose, the name of each elector as he deposits his ballot. Any inspector who shall refuse or neglect to record the name of a person whose ballot is received by the inspectors shall be liable to a fine of twenty-five dollars to be sued for by the supervisors of the town for the benefit of the schools of the town. Inspectors shall be entitled to receive the same compensation for their services, and payable in the same manner, as now provided by law for the payment of inspectors of election, except that at all meetings for the election of school directors, the work shall be completed in one day, and they shall receive compensation for one day's service.

§ 6 When the polls shall have been closed, the inspectors shall proceed to canvass the votes cast. They shall first count the ballots without opening them to determine if they tally with the number of names on the poll list. If they exceed that number, enough unopened ballots shall be withdrawn to make them correspond. They shall then ascertain the number of votes cast for each person voted for for the office of school director, and in towns having but one polling place, shall declare the persons receiving the highest number of votes, elected, and certify the same in writing to the town clerk, who shall file the same in his office. In case two persons shall have an equal number of votes for the same office, the inspectors of election shall immediately choose one of such persons. If the inspectors of election can not agree, the supervisor of the town shall, by his certificate in writing to be filed with the town clerk decide the matter. In towns having more than one polling place, the inspectors shall certify the number of votes cast for each candidate. Inspectors shall, within twenty-four hours from the closing of the polls, file with the town clerk the certificates above provided for and the poll lists kept at such election. In towns having more than one polling place, the town board of canvassers shall meet at the town clerk's office two days after election, at ten o'clock in the forenoon, and proceed to canvass and ascertain from the certificates filed as aforesaid, the result of the election and by a certificate to be signed by them, declare the persons who were elected by reason of having received the highest number respectively for said offices, and file said certificate with the town clerk.

§ 7 An appeal from such election or from any of the acts of the inspectors may be taken to the State Superintendent of Public Instruction, whose decision in the matter shall be final. Such Superintendent may, in his discretion, order a new election in any town.

§ 8 Within ten days from the passage of this act the State Superintendent

of Public Instruction shall notify the several school commissioners of the State of the passage of such act by mailing to each commissioner a printed copy of the act. He shall also supply said commissioners with printed copies of the act sufficient to furnish one copy to each supervisor and town clerk in the State. Upon the receipt of such printed copies of this act, the several school commissioners shall immediately notify the supervisors and town clerks of the towns with their several districts of the passage of the act by transmitting a printed copy of the same. At least twenty days before the date of the first meeting, provided for by this act, each town clerk shall give notice of such meeting by posting a printed notice on the door of each schoolhouse within the town, except in such districts as are exempted from the operations of this act, and in ten other public places in said town. He shall also cause such notice to be inserted in every newspaper regularly published in said town, once a week for two weeks prior to the meeting. Such publication shall be paid for at the regular legal rates, and shall be a charge upon the town in which said newspaper is published, to be paid as other town charges are paid. Such printed and published notice shall be properly displayed, and shall read in part as follows:

"Election of school directors, town of _____ Pursuant to the provisions of chapter _____ of the Laws of 18 __, entitled 'An act to provide for the election of school directors in the several towns of this State and to prescribe their powers and duties', notice is hereby given to all persons duly qualified to vote by section 3 of said act (herewith given in full) that a meeting of such persons residing in the town of _____ (excepting residents in union free school districts organized under the general law relating to union free school districts, and school districts organized under special laws) will be held on Tuesday, June __, 18 __, between the hours of nine o'clock in the morning and five o'clock in the afternoon, for the purpose of electing nine school directors for said town, at the following place or places:" The notice shall then distinctly name the place or places at which said meeting or meetings will be held for said town, and shall also contain, in full, section three of this act, specifying who are legally qualified voters at such meeting.

§ 9 Within two days after the filing of the certificate of the inspectors of election setting forth the election of school directors, with the town clerk, the town clerk shall transmit to each person so elected a notice of election to said office, and such person, shall within ten days after receiving said notice, file with the town clerk a written acceptance of the office, and shall also take and subscribe to the constitutional oath of office before the town clerk or other officer authorized to administer oaths. For the purpose of this act, the town clerk is hereby authorized to administer the oath of office. The oath of office shall be filed and recorded in the office of the town clerk. In case any person shall decline the office to which he has been elected, or shall fail to accept the same and take the required oath within the stated time, the office shall be vacant, and the town clerk shall immediately notify the school commissioner of the district, and that officer shall, within ten days, appoint a suitable and qualified person to fill the vacancy, and notify the town clerk of such appointment. Such

person shall file his acceptance and take the required oath within ten days from the date of appointment. Such person shall hold the office, for the unexpired term of the person who was elected to the office, and in whose place the appointment was made.

§ 10 Within twenty days after the first election of school directors under this act, the directors so chosen shall meet at the offices of the town clerks of the various towns and classify themselves by lot, three to serve one year, three to serve two years, three to serve three years. At such meeting of the school directors held for the purpose of classification as aforesaid, the directors shall organize as a board, and shall choose one of their number as chairman of such board and one of their number as secretary, whose term of office shall be until the first annual meeting of the board. The secretary shall be entitled to a compensation at a rate to be fixed by the said board of school directors not to exceed two hundred dollars per annum. The supervisor of the town shall act as treasurer of the board and he shall serve without additional compensation. He shall assume the duties of the office immediately upon the organization of the board and hold office until his successor shall have qualified. The treasurer shall not be entitled to vote upon any question at any meeting of the board of directors.

§ 11 After the first election of school directors held under this act, there shall be elected in every town in this State in each year thereafter, three school directors. They shall be elected in the manner hereinbefore prescribed by this act, and shall hold office for three years. The annual meeting for the election of school directors shall be held on the first Tuesday of May in each year. Notice of such annual meeting for the election of school directors, shall be given by the board of school directors. Said notice shall be issued by the chairman and secretary of the board, acting for said board, and shall be given in all respects according to the provisions of section eight of this act, at least twenty days before the date of the annual meeting. Within five days after the holding of the annual meeting for the election of school directors, the town clerk shall notify the persons elected and shall also notify the secretary of the board of directors of the result of the election, giving the names of persons elected. The persons declared elected, shall notify the town clerk of their acceptance of the office within ten days after receiving such notice and take the oath prescribed by section 9 of this act. The terms of office of all school directors elected under this section shall begin on the first Tuesday of June following the election.

§ 12 It shall be the duty of the chairman of the town board of school directors, .

First. To prescribe, when present, at all meetings of the board.

Second. To countersign all orders legally drawn by the secretary of the board upon the treasurer for the moneys to be disbursed for school purposes, when such orders have been authorized by the board.

Third. To appear for and on behalf of the board of directors in all suits brought by or against the same, when no other directions shall be given by the qualified voters at an annual meeting.

Fourth. To perform such other duties as are or shall be by law required of such chairman.

§ 13 It shall be the duty of the secretary of the town board of school directors,

First. To act as clerk when present, at all meetings of the board.

Second. To record the proceedings of all meetings of the board orders, resolutions, in proper record books.

Third. To give written notice of all special meetings of the board.

Fourth. To draw and sign warrants upon the treasurer for all moneys to be disbursed by the town for school purposes, and present them to the chairman to be countersigned by that officer. Each order shall specify the object for which, and the fund upon which it is drawn.

Fifth. To draw and sign all contracts with teachers when directed by the board, and present them to the chairman for his signature.

Sixth. To receive and properly file in his office all books and papers belonging to the directors and all reports to the board from the trustees of the several subdistricts of the town.

Seventh. To prepare, under the direction of the board of directors, all reports required by law, and to forward the same to the proper officers.

Eighth. To receive all such communications, blanks and documents as may be transmitted to him by the State Superintendent of Public Instruction, the school commissioners, or other officers having official connection with the board, and dispose of the same in the manner directed by said officers.

Ninth. Immediately after the organization of the board of school directors, the secretary shall transmit to the school commissioner having jurisdiction of the town, and to the State Superintendent of Public Instruction, a certified statement of the names and post-office addresses of the members and officers of said board, and in case there shall be a change in the membership, or in the officers during the year, he shall immediately notify the school commissioner and State Superintendents of such change.

Tenth. On or before the first day of November of each year to make and deliver to the supervisor of the town a certified copy of all statements on file in his office, of moneys voted to be raised in the town for school purposes.

Eleventh. To notify the school commissioner of the district of the time when each school in the town begins, and the length of term.

Twelfth. To preserve and keep all books, papers and other documents belonging to his office or to the town, when not otherwise provided for, and to deliver the same to his successor in office.

Thirteenth. To perform such duties as are or shall be required by law or by the board of school directors.

§ 14 It shall be the duty of the treasurer of the board,

First. To receive, and hold subject to proper orders, all school and library moneys belonging to the town, and to keep such moneys separate and distinct from all other funds that may come into his hands.

Second. To pay all orders of the secretary, when lawfully drawn and

countersigned by the chairman of the board, out of any money in his hands belonging to the fund upon which such orders may be drawn.

Third. To keep a book in which all the moneys received and disbursed shall be entered, the sources from which the same have been received and the persons to whom and the objects for which the same have been paid.

Fourth. To present to the board of school directors, at the close of the school year, a report in writing, containing a statement of all moneys received during the preceding year, and each item of disbursements made, and exhibit the vouchers therefor. He shall also furnish to the board, whenever requested by said board, a statement showing the exact condition of all funds under his charge.

Fifth. To apply, at the proper time, to the county treasurer for all school and library moneys belonging to the town; also to the treasurer of any other township from which any money may be due. On receipt of any moneys belonging to the town, he shall notify the secretary of the same, who shall report the fact to the board.

Sixth. To give bonds with satisfactory sureties to the board when required by the board in such amount as may be required.

§ 15 The said board of school directors of every town shall severally have power, and it shall be their duty:

First. To pass such by-laws as they may deem proper for regulation and exercise of their lawful business and powers.

Second. In connection with the school commissioner to establish such rules and regulations concerning the order and discipline of the schools, in the several departments thereof as they may deem necessary to secure the best educational results.

Third. In connection with the school commissioner, to grade and classify the schools of the town, and to regulate the admission of pupils and their transfer from one class or department or school to another, as their scholarship shall warrant.

Fourth. To prescribe the textbooks to be used in the schools, and to compel a uniformity in the use of the same, and to furnish the same to pupils out of any moneys provided for that purpose.

Fifth. To take charge and possession of the schoolhouses, sites, lots, furniture, books, apparatus, and all school property within their respective towns; and the title of the same shall be vested respectively in said board of directors, and the same shall not be subject to taxation for any purpose.

Sixth. To take and hold for the use of the schools of the town or of any department of the same, any real estate transferred to it by gift, grant, bequest or devise, or any gift, legacy or annuity, of whatever kind, given or bequeathed to the said board, and apply the same, or the interest or proceeds thereof, according to the instructions of the donor testator.

Seventh. To have, in all respects, the superintendence, management and control of said schools, and to establish in the same an academical department or high school, whenever, in their judgment the same is warranted by the demand for such instruction; to receive into said

schools and pupils residing out of said towns, and to regulate and establish the tuition fees of such nonresident pupils in the several departments of said schools to provide fuel, furniture, apparatus and other necessities for the use of said schools, and to appoint such librarians as they may, from time to time, deem necessary.

Eighth. To contract with and employ qualified teachers in the several departments of instruction, in all not less than one for every fifty pupils attending any school; to remove them at any time for neglect of duty or for immoral conduct, and to pay the wages of such teachers out of the moneys appropriated for that purpose.

Ninth. To remove any member of their board for official misconduct. But a written copy of all charges made of such misconduct shall be served upon him at least ten days before the time appointed for a hearing of the same; and he shall be allowed a full and fair opportunity to refute such charges before removal.

Tenth. To purchase on lease sites, or to build, hire or purchase schoolhouses.

Eleventh. To authorize and direct the sale of any school property when the same shall no longer be needed for use of a subdistrict.

Twelfth. To authorize the borrowing of money as hereinafter provided.

Thirteenth. To make expenditures for the support of a township library.

Fourteenth. To determine the number of months, in addition to the minimum required by law, that the schools of the town shall be maintained.

Fifteenth. When directed by an annual township meeting, to provide textbooks for use in the schools of the town, the same to be loaned to the pupils without charge.

Sixteenth. To give such directions and make such provisions as they shall deem necessary in relation to the prosecution or defense of any suit or proceeding in which the board may be a party or interested.

§ 16 The board of school directors shall hold stated meetings as often as once each month, at such fixed time and place as the board shall determine. The annual meeting of the board shall be held on the first Tuesday of June in each year at three o'clock in the afternoon, at which officers for the ensuing year shall be chosen as provided in section 10 of this act. Special meetings of the board may be called by the chairman upon the request of two members of the board by serving a written notice of the time and place of such meeting upon every member of the board at least forty-eight hours before such meeting is to take place. No act authorized to be done by the board shall be valid unless voted at a meeting of the board.

§ 17 The office of school director shall become vacant upon the occurrence of any of the following events:

First. The death of the incumbent;

Second. His resignation;

Third. His removal from office;

Fourth. His removal from town;

Fifth. His conviction of any infamous crime;

Sixth. Neglect to attend two stated consecutive meetings of the board, without satisfactory excuse;

Seventh. His election or appointment being declared void by a competent tribunal;

Eighth. His neglect to file his acceptance of office, or his oath of office, or to give or renew any official bond according to law.

Any vacancy in the board of school directors, occurring through refusal to serve, removal, resignation, or other legal cause, shall be filled within twenty days from the occurrence of such vacancy, by the school commissioner of the district in which the town is located, and the person so appointed shall serve for the unexpired term of the director whose place the appointment shall be made. Any person qualified by law to vote for school directors shall be eligible to appointment as director to fill the vacancy.

§ 18 Each township district organized under the provisions of this act shall be a body corporate for public purposes under the name and style of "The school district of the town of _____" (give name of town), and in that name may purchase, hold and sell property, become party to suits and contracts, and perform other corporative acts.

§ 19 The board of school directors shall have power to secure and establish a room or an office for the use of the board at some central and convenient point in the town, and to supply the necessary fuel and furniture therefor, and shall provide such janitor service as may be required. Such room shall be under the care of the secretary, and proper arrangement shall be made for preserving books and papers belonging to the board, and for such opening of the room for the convenience of the public, as may be compatible with duties of the board.

§ 20 When the board of school directors shall have completed their first organization under this act and according to its provisions, the said board shall have, in connection with the school commissioner of the district and the trustees of the various school districts, a general supervision of the schools of the town, exclusive of such districts as are excepted from the operation of this act. All trustees holding office at the time of the passage of this act shall hold office until the expiration of the current school year, and shall make their reports according to law. At the expiration of the school year following the passage of this act, all school districts not herein excepted shall cease to exist and school district offices shall become vacant, except that all districts shall continue to exist in law until all the just debts of said districts are fully paid and satisfied, and to that end the trustees and other officers shall continue in office, and the inhabitants may hold special meetings, elect officers to supply vacancies and vote taxes, and all other acts necessary to raise money and pay such debts shall be done by the inhabitants and officers of the district.

§ 21 At the expiration of the school year next succeeding the passage of this act, the trustees of all school districts not excepted from the provisions thereof, shall turn over to the town board of school directors, all books and papers belonging to the district, and shall make a statement under oath of the exact financial condition of the district, and the collector of such district shall turn over to the treasurer of such board all moneys

in his possession, provided said school district shall be entirely free from debts and obligations. In all cases where school districts are not free from debts, all moneys in the hands of the district shall be withheld until a final statement shall be made. Such districts shall report through the trustees thereof to the board of directors once in three months, until said directors are free from debt, the exact financial condition of the district.

§ 22 Within three months after the passage of this act, the assessors of each town shall appraise all the school property, belonging to the several districts of the town, excepting union free school districts and school districts organized under special laws, deducting therefrom the amount of debts and liabilities of each school district, and shall make a detailed report of such appraisal to the board of school directors, and to the board of supervisors at the next annual meeting of said supervisors. Such report of appraisal shall be under oath, and shall be signed by a majority of the assessors of the town. Said board of supervisors shall levy the amount of such appraisal upon the entire property of the town (excepting such districts as are exempt from the provisions of this act) which sum shall be collected with the next town tax, and paid into the hands of the treasurer of the board of school directors. Within thirty days from the receipt of such money by the said treasurer, he shall remit proportionately to the taxpayers of each district upon the last assessment-roll of such district the said appraised value of the school property as previously determined. Whenever the treasurer of the board of school directors shall have remitted to each taxpayer the amount due, the schoolhouses and sites shall be considered as wholly belonging to and under the control of said board of school directors. In case of the refusal of any to accept the amount so remitted the tender shall be deemed equivalent to payment, and the amount shall be placed to the credit of said taxpayer upon the books of the treasurer.

§ 23 The town board of school directors shall divide the township into such number of subdistricts as they may deem necessary, distinctly describing the boundaries thereof, which subdistricts they shall properly number. Such divisions into subdistricts, shall be filed with a description of boundaries, with the secretary of the township board of school directors, after it shall have been approved by the school commissioner having jurisdiction. The board of school directors shall have power, with the consent of the school commissioner, to change any subdistrict boundary as may be found necessary, such change to be properly described and filed with the secretary of the board of directors.

§ 24. The board of school directors of any town shall have the power, and it shall be their duty to appoint or employ some person in each subdistrict, who shall act as the representative of said board, and under its instructions to have such care of the schoolhouse and grounds in such subdistrict as the said board shall direct, and to require such representative to report to the board at such times as may be fixed by the board.

§ 25 All persons who are not less than six and not more than eighteen years of age shall have an equal right to attend school in the subdistrict in which they reside, and in case any pupil can be better accommodated at a school in an adjoining subdistrict, within the same township, the board of school directors, shall, upon application, grant permission to such pupil

to attend such school; or in case any pupil can be better accommodated at a school taught in the subdistrict of an adjoining township, he may be transferred for educational purposes to such adjoining township hereinafter provided.

§ 26 When, in the judgment of the board of school directors any pupil can be better accommodated at a school in an adjoining township at the request of the parent or legal guardian the board of school directors of the township in which said pupil resides may transfer such pupil for educational purposes to such adjoining township, and shall at the same time send notice of such transfer to the board of school directors of the township to which such pupil is transferred, and also to the director of the subdistrict in which said pupil shall attend school. Whenever pupils have been transferred for educational purposes, the board of school directors of the township to which the transfer is made, shall, through its chairman and clerk make out and present to board of school directors of the township making the transfer a sworn statement of the amount due for the tuition of such transferred pupils, and the board of school directors receiving such statement shall immediately order the township treasurer of their township to pay such amount to the treasurer of the township whose board furnishes such statement, which amount shall be paid on demand from the school funds of the township. The amount of tuition of transferred pupils shall be determined by dividing the total current expenses of the schools of the township in which such transferred pupils attend school, by the average number of pupils belonging to such schools, as the same shall be shown by the records for the school year last closed, or may be determined by agreement between the boards of education of the several towns before such transfer is made.

§ 27 By a two-third vote of the board of directors a special town meeting may be ordered for the consideration of matters relating to the interests of the schools of the town. Whenever such a vote shall be taken, and a special town meeting ordered, the secretary shall publish a notice of the time of such meeting in the newspapers published in said town at least ten days before the time of such meeting, and if there are no newspapers published in said town, then he shall post printed notices of such meeting on the door of each schoolhouse in the town and in ten other prominent places in the town. Such notice shall distinctly state the object for which said special meeting has been called, and shall be signed by the chairman and secretary of the board. Such notice shall include section three of this act, specifying who are legally qualified voters for school directors.

§ 28 The board of school directors of every town shall provide that each school in every town shall be visited at least once in each month by at least one of the members of the board, and a verbal or written report of such visits shall be made at the regular meetings of the board of directors.

§ 29 The said board of school directors shall take charge of all school libraries in the various school districts, and they shall be under their control. It shall have power to appoint a librarian, who shall be under the direction of the board, and who will under the direction of the board collect all the books in the various libraries in the school districts in the town into one town school library. The said board may in its discretion

provide a separate library for each of the schools in the town and may appoint a librarian for each school, and prescribe his powers and duties.

§ 30 All union free school districts organized under the provisions of the general law relating to union free school districts, and all school districts organized under special laws, shall be excepted from the operations of this act, and the affairs of such school districts shall be conducted without reference thereto, and the residents of such districts shall not be entitled to vote for school directors at any town election for such officers except as provided in this section. Whenever at any meeting of the voters of any union free school district organized under the general law relating to union free school districts, or of any school district organized under a special act, duly called, a majority of the voters present and voting shall determine to transfer such district to the control of the board of school directors of the town, the clerk of such district shall notify the secretary of the board of directors within ten days, and at the expiration of the school year within which such action was taken, said school district shall cease to exist except for the purpose of closing up matters in said district, and the district shall thereafter be under the control of the board of school directors, who shall give the subdistrict a number, specify its boundaries and provide for the election of trustees in said subdistrict, and take such action in all respects as shall place the said subdistrict under its control the same as other subdistricts. The secretary of the board of school directors shall notify the assessors of the town of such action, and the assessors shall proceed to appraise the school property of said district in the manner prescribed by section 22 of this act. The board of supervisors shall levy the appraised value of school property in such district upon the property of the town, not otherwise excepted from the operations of this act, and remittances shall be made to the taxpayers of such subdistrict as in said section provided.

§ 31 With the advice of the school commissioner, the board of school directors shall specify the studies to be pursued in the schools of the district, and shall prescribe the textbooks to be used, which shall be uniform in each subject that may be taught; but the textbooks once adopted under the provisions of this act shall not be changed within five years, except by the affirmative vote of two-thirds of the members of the board of directors present at any regular meeting of the board. Each board making a selection of textbooks under this act shall make a record thereof in their proceedings.

§ 32 The board of school directors shall employ all legally qualified teachers necessary for the schools of the township. Every contract shall be authorized by said board, and shall be in writing and signed by the chairman and clerk of said board on behalf of the district and by the teacher. Said contract shall specify the wages agreed upon, the times at which payments shall be made, which shall be as often as once in each calendar month, and shall require the teacher to keep a complete and correct register of the school in accordance with the form approved by the State Superintendent of Public Instruction, and to furnish the secretary of the board with a correct summary of the same at the close of each term of school. Said contract shall be filed with the secretary of the board and a duplicate thereof shall be furnished the teacher. No contract with any person not holding a legal certificate of qualification authorizing such person to teach shall be

valid, and all such contracts shall terminate if the certificate shall expire by limitation and shall not immediately be renewed, or if it shall be suspended or revoked by proper legal authority.

§ 33 It shall be the duty of the town board of school directors to provide for the taking of the annual school census of the township. Said census shall be taken between the first and tenth day of June in each year. The person or persons taking such census shall make a list in writing of the names and ages of all the children between the ages of six and eighteen years, actually residing in the township, specifying also the number of males and the number of females; and a copy of said list shall be verified by the oath or affirmation of the person or persons taking such census by affidavit appended thereto, or indorsed thereon, setting forth that it is a correct list of the names of all the children between the ages aforesaid residing in the district, which affidavit may be made before the secretary of the board of school directors; and said list shall be filed with the said secretary. Children in alms-houses, prisons, or asylums, not otherwise residents of the township and not attending the school shall not be included in said census, nor shall Indian children be so included unless they attend the school, or their parents are liable to pay taxes therein.

§ 34 It shall be the duty of the board of school directors to act promptly upon such recommendations of school commissioners as said officers are authorized to make to the board in reference to matters pertaining to the school interests of the town. Nothing in this act shall be construed to affect the powers and duties now conferred by law upon the school commissioners relating to supervision of schools, except when the same may be inconsistent, with this act.

§ 35 The board of school directors shall purchase, at the expense of the district, such textbooks as may be necessary for the use of the children whose parents or guardians are not able to furnish the same; and said board shall also purchase when authorized by the voters at any annual meeting for the election of directors, all necessary textbooks for the use of all pupils in the several schools in the district. Any textbook purchased as provided herein, shall be the property of the district, and shall be loaned to pupils free of charge, under such rules and regulations for their careful use and return as said board may establish. The amount of funds required to make such purchase of textbooks as herein provided, shall be included in the report to the board of supervisors and the same shall be levied in like manner as other taxes.

§ 36 The town board of school trustees shall provide and maintain one or more schools, as may be necessary, in each subdistrict of the township, for at least thirty-two weeks in each school year, under penalty of the forfeiture of the township's share of the apportionment of the public school moneys. All schools in the township shall be maintained an equal length of time. The school year shall begin on the twenty-sixth day of July, and a school month shall consist of four weeks of five days each, including all legal holidays that may occur during the progress of the schools.

§ 37 The board of school directors shall cause all pupils attending the schools of the township to be classified according to their intellectual progress and to cause them to be taught in such schools or departments as they may deem expedient; but no separate school or department shall be kept for any persons on account of race or color.

§ 38 It shall not be lawful for any board of school directors to direct the payment of state moneys for any purpose except the payment of teachers' wages, or for the payment of library moneys for any other than library purposes. A violation of this section shall be deemed a misdemeanor, and punishable as such, and members of the board shall be held personally liable for any moneys diverted contrary to the provisions of this section.

§ 39 The board of school directors having supervision over the schools of any town of this state, shall provide suitable and convenient water-closets or privies for each of the schools under their charge, at least two in number, which shall be entirely separate each from the other, and having separate means of access, and the approaches thereto shall be separated by a substantial close fence not less than seven feet in height. It shall be the duty of the officers aforesaid to see that the same are kept at all times in a clean and wholesome condition, and a failure to comply with the provisions of this section on the part of the board of directors shall be sufficient grounds for removal from office, and for withholding from the town, such share of the public school moneys of the state as the State Superintendent of Public Instruction may determine.

§ 40 Between the twenty-fifth day of July and the first day of August of each the town board of school directors shall make a report, in duplicate, one copy of which shall be filed with the secretary of the board and one copy shall be filed with the school commissioner. Said report shall set forth the following:

First. The whole number of children, male and female, in the town between the ages of six and eighteen according to the census taken as provided by section 35.

Second. The whole number of pupils enrolled in the schools of the town during the year.

Third. The average number of pupils belonging to the schools for the year.

Fourth. The average daily attendance of pupils in the schools for the year.

Fifth. The length of time in days that the schools have been maintained.

Sixth. The number of schools in the district and the number of teachers employed.

Seventh. The number of schoolhouses and the valuation of school property.

Eighth. The number of volumes in the school libraries and the number of volumes purchased during the year.

Ninth. The amount of school revenue received by the board and the source from which derived.

Tenth. The amount of expenditures by the town board and the purposes for which expended.

Eleventh. The amount of the indebtedness of the town board, the amount due and the amount remaining on hand at the close of the year.

Twelfth. The subjects taught in the schools and the textbooks used.

Thirteenth. Such other facts and statistics in regard to the schools and the subjects of education as the State Superintendent of Public Instruction shall direct.

§ 41 On or before the first day of November following the passage of this act, the board of school directors in each town shall transmit to the board of supervisors of the county a full statement of the amounts estimated to be necessary for the proper maintenance and management of the schools of the town for the year beginning on the first day of March next succeeding, together with a verified statement of moneys expended and necessary to be expended from the date of organization of the board of directors to the first of March following for which the board of directors has given its obligations, and the said board of supervisors shall levy such amount in the next succeeding tax levy of the town, to be collected in the same manner as other town taxes are collected. The amounts thus collected in each town shall be paid to the treasurer of the county and by him paid to the treasurer of the board of school directors.

§ 42 On or before the first day of November in each year, the board of school directors in each town shall transmit to the board of supervisors of the county, a full statement of the amounts estimated to be necessary for the maintenance of the schools of the town and such other estimates as may be considered necessary by the board of directors for the proper management of the schools of the town for the year beginning March first, next succeeding the annual meeting of the board of supervisors, and the said board of supervisors shall levy such amount in the next tax levy of the town to be collected in the same manner as other taxes are collected. The amounts thus collected in each town shall be paid to the treasurer of the county and by him to the treasurer of the board of school directors. In case the board of supervisors shall fail to levy the tax or any part of the same, according to the estimate of the board of school directors said board of school directors shall report the fact to the State Superintendent of Public Instruction, giving in full the estimate furnished to the said board of supervisors. Whenever such estimate shall be approved by the State Superintendent of Public Instruction by notice to the chairman of the board of school directors, the board shall issue a warrant and tax list to the collector of the town who shall collect the same, and pay over to the treasurer of the county, to be paid to the treasurer of the board of school directors within thirty days from receipt thereof. The collector shall be paid the same rate per cent for collection as is now allowed by law for collection of moneys and have the same powers and be subject to the same liabilities. In all cases the tax levy is to be laid only upon such portions of the town as are not excepted from the provisions of this act.

§ 43 All estimates of the board of school directors to the board of supervisors shall be signed by the chairman and secretary of the board of directors and shall distinctly state in detail the items making up such estimate, which shall include estimates of teachers' wages, repairs, buildings and textbooks, and other items fully making up the sum required.

§ 44 In case of delay in the receipt of moneys collected for the use of the board of school directors, or in case of emergency requiring immediate expenditure of more money than can be made available through regular course of procedure, the board of school directors are hereby authorized to borrow such sums for not exceeding one year, as may be deemed necessary by a vote of the board, at the rate of interest not to exceed five per cent per annum.

§ 45 In all cases where a town charge is provided by this act and not otherwise specified, it shall be understood to mean a charge upon such portion of the town as is not excepted from the operations of this act.

§ 46 All acts or parts of acts which are applicable to school districts as constituted at the passage of this act, and not inconsistent with the provisions of this act, shall apply to the government and management of schools by town boards of school directors and all acts or parts of acts inconsistent or in conflict with this act are hereby repealed.

The first statement since 1897 in regard to the township system, appearing in the annual reports of the Commissioner of Education, appeared in the Annual Report of 1914. From this time until the passage of the bill considerable time and effort were spent to secure the necessary legislation to improve the rural schools. It is evident from the reports that every effort was made to secure the cooperation and suggestive help of those who would be most vitally effected by a change.

In this report of 1914 (pages 96-101) the following statement appeared:

Township System

The present school district system had its origin in the law enacted in 1795. The changes in the condition of the country and the advancement in our civilization have been tremendous since that date. When schools were organized under this law, it was on the plan of associated effort. The inhabitants in settled portions of the State banded together for the purpose of maintaining a school. As the settlement and development of the country extended, new associations were organized and, under the law of 1812, school districts were formed, the entire territory of the State being organized into such districts. The simplicity of the course of study, the number of children to receive instruction and the relatively small expenditure for the maintenance of a school enabled the people of the State in these early days to maintain satisfactory schools in the plan of the school district organization. Such plan does not meet the conditions of 1914.

In this State there are 1400 school districts having an assessed valuation of \$20,000 or less. There are 4000 districts having an assessed valuation of \$40,000 or less. This means that each of these 4000 districts must depend for its financial support on ten farms with an average value of \$4000. In about one-half of these districts the average daily attendance is less than ten. It is not possible to maintain a successful school with so few children and with so little property for its support, and accomplish the results demanded of rural schools in this age. The two most essential elements in the maintenance of a school are a sufficient number of children to grade it properly and a sufficient amount of taxable property to support it without such taxation being burdensome. These two elements of school organization are being recognized throughout the entire country and for several years there has been a movement favorable to the consolidation of weak country school districts so that a greater number of children, a larger amount of

taxable property, and more public funds may be brought to the support of a single school. There has been no movement in recent years looking to the improvement of the educational facilities in the agricultural sections of the State, which is of more importance than the one intended to bring about the consolidation of the weak school districts throughout the State. The law should be amended by providing that when a superintendent consolidates two or more districts the one district shall receive the same amount of State funds that it would receive if consolidated by vote of the districts.

One great injustice in the present plan is the inequality of taxation. An inequality in taxation for school purposes means an inequality in educational opportunity. School districts have been formed without reference in any way to assessed valuations. One district may have an assessed valuation of \$148,000 and an adjoining district a valuation of only \$16,000. The latter district may have as many children to educate as the former but the inequality of taxation is apparent. Then, too, some of the children residing in the weaker districts may live one mile nearer the school in the other district. Why should not such children attend the school which is most accessible to them? The following information relative to the rate of taxation and the cost per pupil of maintaining schools in several towns located in different parts of the State was taken from the last annual reports of district superintendents:

COUNTY	DISTRICT	TAX RATE	COST PER PUPIL
Albany.....	13 Berne.....	.0096	\$36 20
.....	10042	16 36
Allegany.....	8 Burns.....	.0074	51 20
.....	50045	17 85

Similar illustrations from other counties of the State could be taken from the official records to show that the same condition of inequality of taxation for school purposes exists in every town of the State.

For twenty-five years I have carefully studied the administration of our rural schools and have had very much to do with their management and, in the light of this experience, the best judgment which I now possess leads to the irresistible conclusion that the great improvements which should be made in our rural schools can not be accomplished until the township is made the administrative unit for the management of these schools. Until

the township unit may be substituted for the school district unit, our great hope is in the consolidation of weak school districts, as authorized by the law of 1913. Within the next few years district superintendents should reduce the number of these districts from 10,500 to less than 5000. When this result is accomplished the rural schools will be able to maintain the curriculum adapted to the present needs of the sections of the State in which such schools are located and to pay salaries which will command the teachers who have the preparation and training to direct properly the work of these schools. When these things are accomplished imagine the five thousand or less rural schools in this State, giving instruction to the boys and girls from every farm and performing the kind of service which such schools should render for a period of ten years, and then imagine what the effect would be upon our agricultural interests and upon the life of the State.

Thousands of dollars are wasted every year under the present system of collecting taxes in country school districts. Very often large sums of taxes remain uncollected; in many cases proper returns are not made; quite frequently taxes do not find their way into the treasury through the negligence of officers or for other reasons. You can appreciate the impossibility of organizing any effective kind of audit over our 10,500 school districts. The task is too stupendous to undertake. If the schools were on the basis of the township organization instead of the district organization, the town collector would collect all funds for school purposes at the same time that he collects all other taxes levied upon town property and this tax would be paid into the treasury of the school board for the town. The whole question of taxation, so far as schools are concerned, would be simplified and the inequality which now exists throughout the several towns of the State would be eliminated.

Unbusinesslike methods prevail under the present system of school administration. A town may have eleven school districts and many have more. In that town are eleven boards of trustees, each of which gives but little attention to school conditions and necessities. Each does what is absolutely necessary in order to organize the school and maintain it, and does but little more. If there could be substituted in such town one board of five or seven members, serving without pay and selected at a special town school meeting where no questions other than school matters are considered, and this one board performed the work which is now performed by eleven separate boards, the result would be the adoption of business methods, an economy of expenditure, and an increased efficiency in the management of the schools in every particular. By the substitution of this administrative unit, the compulsory attendance law could be made more effective, the chief difficulties in connection with medical inspection would be solved, the ability of superintendents to inaugurate plans for the advancement of the schools and the improvement of school property would be greatly increased by an agreement with only one board where an understanding is now required with ten or fifteen boards. An expert in agricultural work could be employed for each town, a practical and valuable system of school libraries could be operated, the transfer of teachers from one school district to another in the same town, when local conditions made such transfer advisable, would be possible, and the adoption of textbooks could be placed

upon an improved and satisfactory basis. Increased authority could safely be given to district superintendents under such a scheme of organization. Whole towns could be united and interested in the great rural problems which now confront the people in the agricultural sections. The school-house would become the meeting place for social, recreational and agricultural purposes and special functions along all these lines would be provided to meet the educational necessities of the community.

There has been widespread opposition to what is generally known as the township system of schools. This is due partially to a misunderstanding on the part of the people in the rural districts as to what that system is. Many of the people believe that the adoption of the township system means that some of the powers and rights of the localities are to be taken from them and centralized in the State. No such change is contemplated under this system. All the functions now exercised by local boards in the several districts of the State would continue to be exercised by local authorities. Under the proposed plan, larger powers would be given to local authorities, but the local authority would be a larger unit. Such authority would be the town instead of a fragment of a town. When the schools of an entire town are under the business administration of a single board and that board is chosen directly by the voters of the town at a meeting called especially for that purpose, it is evident that larger powers and more authority may be placed in the hands of such a responsible body of men. We should enter upon a campaign of education on this question but we should not enter upon an aggressive campaign for the adoption of this system until the organized and intelligent farmers of the State express approval of the plan and are willing to cooperate in such a movement. If the State Grange, the State Agricultural Society, the State Conference on Taxation and the Association of District Superintendents would come to the support of this movement and would jointly cooperate with the Education Department, it is my judgment that we should be willing to undertake the labor which such a plan would involve. I have no hesitancy in saying that, after an experience of twenty-five years in rural school work, the adoption of the township system would prove to be, next to the rural supervision plan recently adopted, one of the greatest uplifting forces in the improvement of our country schools and of rural life generally that has been put into operation since the organization of our public school system.

The following editorial in regard to the rural school problem appeared in the New York Times of November 30, 1914:

The Little Red Schoolhouse

A generation ago, in 1880, the pupils in the schools of the State numbered a little over 1,000,000. Of these, 42 per cent were in the cities and 58 per cent were in the country. Last year the school population had increased to over one million and a half, of whom 67 per cent were in the cities, and less than 33 per cent were in the country. Though the proportion in the country was somewhat larger relatively to the total, the actual school resources were, and are, in the country, shamefully inferior.

The above facts, and many others equally significant, are brought out in the report on elementary education made by Thomas E. Finegan, Assistant

Commissioner. Something has been done in recent years to better existing conditions, and it is in the right direction, but it is really but a beginning and not much of a beginning. The most promising measure is the consolidation of groups of poor schools, badly housed, badly taught, backward in the amount and kind of schooling, into single schools, better equipped, organized, and taught. Another good measure—radically good in principle and capable of fertile extension—is the introduction of practical training in farming. So far this has taken the form of competition among pupils in actual production of specified products on home land. In Ulster county one experiment of this sort has been, on a small scale, strikingly successful, and it points to rich possibilities for the gradual adoption of a comprehensive system. The essential virtue of the plan is that it provides for instruction in the science and art of farming, and the practical application of that instruction in a way which deeply interests the pupils in farm life while fitting them for its profitable pursuit.

One very serious difficulty in the rural schools is the system of district organization, which it is proposed to replace by township organization, at the same time replacing supervision through local school commissioners by competent superintendents. The former plan is terribly wasteful not merely in money, but even more and worse in the matter of instruction, while the grossest inequalities are found in expenditure and in utility. By making the township the unit of organization the expenditure can be fairly equalized and far better and more varied schooling can be provided at the same cost. Better still, at a more liberal cost the benefits of schooling can be improved and multiplied in a ratio far exceeding the increase in cost. There are now in this State 10,500 school districts. The cost of schooling per pupil ranges all the way from \$6.97 in district 13, in Malone, Franklin county, to \$67.44 in district 8, in Preble, Cortland county. "A town may have 11 school districts, and may have more. In that town are 11 boards of trustees, each of which gives but little attention to school conditions and necessities." Commissioner Finegan says:

If there could be substituted in such town one board of five or seven members, serving without pay and selected at a special town school meeting where no questions other than school matters are considered, and this one board performed the work which is now performed by eleven separate boards, the result would be the adoption of business methods, an economy of expenditure, and an increased efficiency in the management of the schools in every particular. By the substitution of this administrative unit, the compulsory attendance law could be made more effective, the chief difficulties in connection with medical inspection would be solved, the ability of Superintendents to inaugurate plans for the advancement of the schools and the improvement of school property would be greatly increased by an agreement with only one board where an understanding is now required with ten or fifteen boards. An expert in agricultural work could be employed for each town, a practical and valuable system of school libraries could be operated. . . . Whole towns could be united and interested in the great rural problems which now confront the people in the agricultural sections.

Here is a work of the utmost importance for the State. A generation ago one-half only of the people of New York lived in cities; now 8,000,000 out of our 10,000,000 live away from the country. A very large part of the migration from the country to the town is due to the wretched condition of the rural schools. Not only are our farm lands neglected, badly tilled,

exhausted in some districts, but the culture of human beings, the raising of citizens, preparation for the national life, the most vital process of modern civilization, is stupidly and wastefully conducted. The Department of Education is working earnestly to remedy this evil. It should receive cordial support.

The annual report of the Commissioner of Education in 1915 contains the following statement and a proposed law:

Township Bill

In order that the township bill may have proper consideration throughout the State, it will be introduced into the Legislature. It provides in substance for the reorganization of rural schools to be administered on the basis of the town instead of on the basis of the school district. It is not intended to press this bill for legislative action until it has been thoroughly discussed throughout the State and until sentiment in the agricultural regions is crystalized and in favor of a reorganization of the rural schools. The bill submitted herewith is therefore presented as a tentative measure. It is subject to modification after it has been carefully studied by those interested in the rural school problem. Every individual and organization interested in rural life questions is requested to study the problems involved in the administration of our rural schools, to examine this tentative bill with care, to suggest how it may be improved, and to offer any assistance which may be rendered in the solution of this problem. The bill will be modified to meet any suggestions which will improve it and which will provide a better plan for administering the rural schools of the State. The proposed bill is as follows:

AN ACT¹

To amend the Education Law, by creating town boards of education and providing for the support and maintenance of schools in towns.

The People of the State of New York, represented in Senate and Assembly, do enact as follows:

Section 1. Chapter 21 of the Laws of 1909, entitled "An act relating to education, constituting chapter 16 of the Consolidated Laws," as amended by chapter 140 of the Laws of 1910, is hereby amended by inserting therein a new article, to be known as article 11-a, and to read as follows:

ARTICLE XI-A

TOWN BOARDS OF EDUCATION

- Sec. 330 Town board of education
- 331 Qualification of members of board of education
- 332 Appointment of officers by board
- 333 Bond of treasurer
- 334 Vacancies in school offices
- 335 Board to constitute a body corporate
- 336 Meetings of board
- 337 Duties of clerk
- 338 Duties of treasurer
- 339 Powers of board of education

¹ This bill in substance was introduced in the assembly of 1914 and again in 1915 by Hon. Morrell E. Tallett of Madison county, chairman of the committee on public education.

- Sec. 340 Schools to be free to children of town
 341 Transfer of pupils
 342 Schoolhouse sites
 343 Erection, repair and improvement of school buildings
 344 Annual school budget
 345 Borrowing money in anticipation of collection of taxes
 346 Tax on property in districts in two or more towns
 347 Submission of certain questions to a vote of the town
 348 Issue and sale of school bonds
 349 State funds to be used for schools of town
 350 Certain union free school districts not subject to provisions of article
 351 School district officers abolished; terms continued to collect funds, pay claims, etc.
 352 Outstanding bonds; existing school property
 353 First school election
 354 Time and place of annual meeting
 355 Notice of annual school meeting
 356 Special school meeting in towns
 357 Qualifications of voters at school meetings
 358 Preparation of list of qualified electors
 359 Inspectors of election
 360 Nomination and ballots
 361 Conduct of school meetings; challenges
 362 Canvass of votes; declaration of result
 363 Successful candidates to be notified of election
 364 Appeals to the Commissioner of Education

Sec. 330 **Town board of education.** 1 A town board of education in each town of the State, having jurisdiction over all the schools in the town as hereinafter provided, except in union free school districts having a population of fifteen hundred or more, is hereby established to begin on the first day of August 1917. Such board shall consist of seven members. The term of office of each member shall be three years except that, of the members first elected hereunder, two shall hold office until August 1, 1918, three until August 1, 1919, and two until August 1, 1920. The terms of office of such members shall begin on the first day of August following their election.

2 Where there are two or more union free school districts having a population of less than fifteen hundred, situated wholly or partly in a town it shall be the duty of the district superintendent to execute an order or orders altering the boundaries of such union free school districts so that they shall include the remainder of the territory in such town. The district superintendent in so altering the boundaries of such district shall divide the territory in the town in such a way as to conveniently provide for the education of the children of the town and to equitably apportion the apportionment of school moneys. The said districts as so altered shall be subject to the provisions of this article and the boards of education of such districts shall be elected in the same manner and shall possess the same power, and exercise the same duties as boards of education in towns as herein provided.

3 In a town in which there is, wholly or in part, a union free school district having a population of fifteen hundred or more, the principal schoolhouse of which is situated in such town, such district may by resolution, duly submitted and adopted as provided by law at a district meeting, determine to become subject to the provisions of this article. The board of education shall, upon the petition signed by not less than fifteen per cent of the qualified electors of such district, give notice of the submission of such resolution to an annual or special meeting, in the manner provided by law. If such resolution be adopted at such meeting, the board of education of the town in which such district is wholly or partly situated, shall, upon petition signed by fifteen per cent of the qualified electors of such town, residing outside of such district, submit a resolution to an annual or special

HON. MORRELL E. TALLETT
Chairman of the Assembly committee on public education

meeting of such town as provided in this article, for the purpose of determining whether such union free school district shall become subject to the provisions of this article. If such resolution be adopted by such town, the schools of such district shall become subject to the jurisdiction of the board of education of such town and the provisions of this article shall apply to such district and the schools thereof, notwithstanding the exception contained in subdivision one of this section, and thereupon the terms of office of the officers of such district shall terminate.

Sec. 331 Qualifications of members of board of education. A member of a board of education must be a qualified elector at the school meetings of the town for which he is chosen. A district superintendent of schools, a school director or a supervisor shall not be eligible to the office of member of a board of education. Not more than one member of a family shall be a member of the same board of education in a town. A person who is removed from his office as a member of a board of education shall be ineligible to appointment or election to any school office in the town for a period of five years from the date of such removal.

Sec. 332 Appointment of officers by board. The board of education of each town shall elect one of its members chairman who shall serve until the next annual meeting of the board, and shall also appoint a clerk of the board and a town school treasurer to serve during the pleasure of such board. Any person who is qualified to vote at a school meeting in the town may be appointed as clerk or treasurer. A member of the board is ineligible to hold office of clerk or treasurer. A teacher employed in any of the public schools of the town shall not be appointed as clerk or treasurer. The board shall determine the duties and fix the compensation of such clerk and treasurer.

Sec. 333 Bond of treasurer. The treasurer, within ten days after the receipt of notice in writing of his appointment, duly served upon him, and before entering upon the duties of his office, shall execute and deliver to the board of education a bond, with such sufficient penalty and sureties as the board may desire, conditioned for the faithful discharge of the duties of his office.

Sec. 334 Vacancies in school offices. 1 A school office becomes vacant by death, resignation, refusal to serve, incapacity, removal from the town or from office.

2 A member of a board of education who publicly declares that he will not accept or serve in the office of member of the board of education, or refuses or neglects to attend three successive meetings of the board of which he is duly notified, without rendering a good and valid reason therefor to the board of education, vacates his office by refusal to serve.

3 A member of a board of education vacates his office by the acceptance of either the office of district superintendent of schools or of supervisor.

4 A treasurer vacates his office by failure to execute a bond to the board of education as herein required.

5 A vacancy in the office of member of a board of education may be filled by the board. A person appointed to fill such vacancy shall hold office until the next annual school meeting of the town, when such vacancy shall be filled by election for the balance of the unexpired term.

6 When a vacancy has existed in the office of a member of a board of education for thirty days, the district superintendent of schools shall appoint a qualified elector of the town to fill such vacancy and the person so appointed shall hold office until the next annual school meeting of the town, when the vacancy shall be filled for the balance of the unexpired term.

Sec. 335 Board to constitute a body corporate. The board of education of each town shall be a corporation. All property which is now vested in, or shall be hereafter transferred to, the board of education of a town for the use of schools therein shall be held by such board as a corporation.

Sec. 336 Meetings of board. The annual meeting of a board of education of a town shall be held on the first Tuesday in August of each year. A regular meeting of the board shall be held at least once in each quarter.

The board may adopt by-laws prescribing the time and place where regular meetings shall be held, and regulate the conduct of such meetings. Such board shall also prescribe a method of calling special meetings. The meetings of the board shall be open to the public but the board may hold executive sessions at which business may be transacted which should not, in its judgment, be transacted in an open session, at which sessions only members of the board or persons invited shall be present.

Sec. 337 Duties of clerk. The clerk of the board of education of each town shall have the powers and perform the duties of the clerk of a school district as provided in this chapter. In addition to such powers and duties, such clerk shall

- 1 Act as clerk at all meetings of the board and record the proceedings of such meetings, and the orders and resolutions adopted thereat, in proper books.

- 2 Draw and sign warrants upon the treasurer for all moneys to be disbursed by the town for school purposes and present them to the chairman to be countersigned by that officer. Each warrant shall specify the object for which, and the fund from which, it is drawn and the name of the individual or corporation to whom the amount thereof is payable.

- 3 When directed by the board of education, prepare all reports required by law and forward the same to the proper officers.

- 4 Perform such other duties as are or shall be required by law or by the board of education.

Sec. 338 Duties of treasurer. The treasurer shall have the powers and perform the duties of a district treasurer as provided in this chapter, and in addition thereto shall

- 1 Be the custodian of all school moneys of the town and be responsible for the safekeeping and accurate account thereof.

- 2 Pay all orders or warrants lawfully drawn upon him out of the moneys in his hands belonging to the funds upon which such orders or warrants are drawn.

- 3 Keep accurate accounts of all moneys received and disbursed by him, the sources from which they are received and the persons to whom, and the objects for which, they are disbursed.

- 4 Prepare and submit as required by law annual reports of receipts and disbursements, and render at such times as may be required by law or directed by the board of education, a report or statement relative to the school funds of the town.

Sec. 339 Powers of board of education. The board of education of each town shall, in respect to the public schools and school officers of the town,

- 1 Exercise the powers and perform the duties conferred or imposed by law upon boards of education or trustees of school districts, so far as they may be applicable to the schools or other educational affairs of the town and not inconsistent with the provisions of this article. Any power, duty, liability or obligation which is conferred or imposed by this chapter, or any other statute, upon the board of education of a union free school district or the trustees of a school district, shall be exercised or performed by the board of education of a town, and such board shall be subject to such liability or obligation, in respect to the schools in the town, in the same manner and to the same extent as in the case of boards of education in union free school districts or trustees of school districts.

- 2 Determine in what school districts of the town school shall be maintained and the number of teachers to be employed therein, and to contract with principals and teachers for the maintenance and operation of such schools pursuant to the provisions of the Education Law; employ or appoint medical inspectors, nurses, attendance officers, janitors and other employees required for the proper and efficient management of the schools and other educational affairs under their direction and control.

- 3 Determine in what schools the children of school age residing in the town shall attend and when necessary, under its regulations, to furnish transportation for such children.

4 Have the care, custody, control and safekeeping of all school property or other property of the town used for educational, social or recreational work and not specifically placed by law under the control of some other body or officer, and prescribe rules and regulations for the preservation of such property.

5 Purchase and furnish such apparatus, maps, globes, books, reproductions of standard works of art, furniture and other equipment and supplies as may be necessary for the proper and efficient management of the schools.

6 Establish and maintain elementary schools, high schools, vocational, industrial and agricultural schools, night schools, or such other schools and classes as shall be deemed necessary to meet the needs and demands of the town.

7 Establish and maintain school libraries which may be open to the public as provided by law.

8 Authorize general courses of study which shall be followed in the schools.

9 Contract with boards of education of the towns, union free school districts and cities for the instruction of pupils of the town, and when any such contract is made the public money or state tuition apportioned for such instruction shall be paid to such town.

Sec. 340 Schools to be free to children of town. Each school maintained in a town under the supervision and control of a town board of education, and each department of such school and each course of study maintained therein, shall be free to the children of school age residing in such town.

Sec. 341 Transfer of pupils. When in the judgment of the board of education of a town any pupil residing therein can be more conveniently accommodated at a school in an adjoining town such board of education may provide for the transfer of such pupil to the school in such adjoining town. The board of education making such transfer shall send notice thereof to the board of education of the town to which such pupil is transferred. Whenever pupils have been transferred as herein provided, the board of education of the town to which the transfer is made shall submit, through its chairman and clerk, to the board of education of the town where the pupils reside a verified statement of the amount due for the tuition of such pupils. The board of education of the town where such pupils reside shall direct the payment of such amount by the school treasurer of the town out of the school funds of the town. The amount due for such tuition shall be determined by dividing the total current expenses of the schools of the town in which such transferred pupils attend by the average number of pupils attending such schools as the same shall be shown by the records for the last preceding school year, or may be determined by agreement between the boards of education of such towns before the transfer is made.

Sec. 342 Schoolhouse sites. The board of education of a town, whenever in its judgment it is necessary for the interests of the schools of the town, may designate a new site for the schoolhouse, or enlarge the site of an existing schoolhouse. Whenever a new site is designated, or an existing site is enlarged, the board shall pass a resolution stating the necessity therefor, describing by metes and bounds the land to be acquired for either of such purposes, and estimating the amount of funds necessary therefor. Such resolution must be adopted by at least a majority of the members of the board of education. When such resolution is adopted the land described therein may be acquired by the board of education in the manner provided by law for the acquisition of real property for school purposes.

Sec. 343 Erection, repair and improvement of school buildings. The board of education of a town shall provide for the repair of school buildings in the town, or other buildings under its control and management, and shall expend therefor an amount not exceeding the amount included in the annual school tax budget. The board may also remodel, enlarge or improve such school buildings or other buildings under its control and

management, and may construct new buildings, whenever required, for the proper accommodation of the school children of the town. The board of education shall not expend in any one year for the remodeling, improvement or enlargement of an existing school building, an amount in excess of five thousand dollars (\$5000) without a vote of the school meeting of the town, except as hereinafter provided.

Sec 344 Annual school budget. 1 On or before the first day of July in each year the board of education shall prepare in duplicate an itemized tax budget containing the amounts required to be raised by tax for school purposes in the town for the ensuing school year. Such tax budget shall contain a statement of the probable amount to be received by the town in the next apportionment of school funds from the State and the estimated amount to be received from all other sources, and shall specify the several amounts to be raised for the following purposes:

a The salaries and compensation of principals, teachers, medical inspectors, attendance officers, janitors and other employees appointed or employed by said board of education.

b All necessary incidental and contingent expenses of the schools of the town, including transportation, the purchase of fuel and light, supplies, textbooks, school apparatus, furniture and other articles and services necessary for the proper maintenance, operation and support of the schools of the town.

c The ordinary repairs of school buildings and other buildings under its control and management.

d The remodeling, improvement or enlargement of existing buildings, and the construction of new buildings and the furnishing and equipment thereof.

e The amount required to be raised for the payment of the interest and principal of bonds and other indebtedness lawfully incurred for school purposes and which are a charge against the town.

f The amount which may be required for the payment of any other claim against the town arising from the support and maintenance of the schools of the town.

g The amount voted at the annual or a special school meeting in the town on a proposition or question lawfully submitted at such meeting.

h The amount determined upon as the proportionate share of the cost of maintaining a school in a district partly in two or more towns, required to be paid by said board.

2 The clerk shall cause such budget to be published at length once in each week for the four weeks next preceding the first day of August, in two newspapers if there shall be two, or in one newspaper if there shall be but one, published in such town, or in a newspaper published outside of such town but having a general circulation therein. A written or printed copy of such budget shall be posted in at least five of the most public places in the town at least twenty days before the first day of August.

3 Such tax budget shall be signed in duplicate by a majority of the members of the board of education of the town. One of such duplicate tax budgets shall be filed in the office of the clerk of the board of education and one shall be delivered to the supervisor of the town.

4 The board of education of a town may, in the manner herein provided, prepare a supplemental budget to raise money for any lawful purpose.

a When authorized by a vote of an annual or special school meeting in the town.

b When the amounts stated in the annual tax budget for the purposes specified are insufficient therefor and such amounts may be raised by tax without a vote of a school meeting in the town.

Such supplemental budget shall not authorize the levy of a tax for the purposes therein specified, or be effectual for any purpose unless there shall be indorsed thereon the certificate of the district superintendent of the supervisory district in which such town is situated, to the effect that the purposes for which the amount therein specified is to be raised are lawful.

5 The supervisor of the town shall cause such budget and supplemental budget, if any, to be presented to the board of supervisors at its annual

meeting and the amount specified therein shall be levied against the taxable property of the town as provided by the tax law. The board of supervisors shall provide for the collection of the tax so levied at the same time and in the same manner as other town taxes are collected and the warrant of the collector shall direct the payment of the tax so collected to the school treasurer of the town.

6 The Commissioner of Education may prescribe the form of such budgets. He may adopt regulations not inconsistent with law, providing for the examination, review, correction and the modification of such budgets and the instruction and assistance of school authorities in the performance of duties in respect thereto.

7 Each district superintendent shall, during the month of August in each year, examine the tax budgets on file in the office of each clerk of the board of education of each town in his supervisory district, and shall advise with and aid boards of education in the preparation and correction of such budgets, and perform such other duties in respect thereto as may be prescribed by the Commissioner of Education.

Sec. 345 Borrowing money in anticipation of collection of taxes. The board of education of a town may borrow money in anticipation of the levy and collection of a tax, for any of the purposes specified in a budget or supplemental budget filed with the clerk of the board and presented to the supervisor of the town as herein provided. Certificates of indebtedness may be issued by such board of education which shall be signed by the president of the board and countersigned by the treasurer thereof. Such certificate shall not be issued for more than one year from the date thereof, and shall bear interest at a rate not exceeding six per centum per annum. The money borrowed shall be placed in the custody of the treasurer and shall be paid out by him on the order of the board of education in the same manner as money collected by taxes levied against the taxable property of the town.

Sec. 346 Tax on property in districts in two or more towns. If a district is situated partly in two or more towns, the taxable property in that portion of such district lying in a town other than that in which the principal schoolhouse is situated, shall be assessed for school purposes at the same rate as the taxable property of the town in which such principal schoolhouse is located. The valuation of the real property in the portions of such district lying in two or more towns as appearing upon the several assessment rolls of such towns may be equalized by the supervisors of such towns upon the request of the boards of education of such towns, or of three or more taxpayers residing in the portion of such district, in either of such towns, and the provisions of section 414 of the Education Law shall apply to such equalization. The board of education of the town in which such principal schoolhouse is located shall certify, in writing, to the boards of education of the other towns in which portions of such district are situated the proportionate amounts of the tax to be assessed, levied and collected in such portions of such district and such amounts shall be included in the school tax budgets of such towns. The board of supervisors of the county in which such towns are located shall cause the amounts so certified to be levied against the taxable property in the portions of such district situated in such towns, at the same rate as the rate of tax for the support of schools in the town in which the principal schoolhouse in such district is located. The amount of such tax when collected shall be paid to the school treasurer of the town in which such principal schoolhouse is located. The taxable property in the portions of such district located in the towns other than the town in which such principal schoolhouse is located, shall not be assessed for school purposes in such towns.

Sec. 347 Submission of certain questions to a vote of the town.
1 Whenever the board of education of a town shall deem it necessary to expend an amount exceeding the sum of five thousand dollars for the repair, remodeling, improvement or enlargement of existing school buildings or the construction of a new school building or the purchase of land for a

new site or for an addition to an existing site it shall submit a proposition therefor to a vote of the qualified school electors of the town at either an annual school meeting of the town or a special school meeting called for such purpose.

2 If a school building in the town shall have been condemned by the district superintendent as wholly unfit for use and not worth repairing and the amount required to be raised by tax therefor shall exceed the sum of five thousand dollars, the board of education shall submit a proposition for the construction of such new building to the qualified school electors of the town as above provided. If the amount to be raised for the erection of a new building in place of a building which has been condemned is less than five thousand dollars, the amount thereof shall be included in the annual school tax budget of the town. Except as herein provided the provisions of this chapter relative to the condemnation of school buildings shall apply to the condemnation of school buildings in towns.

3 The board of education of a town may in its discretion submit a proposition to the qualified electors of the town at an annual or special school meeting of the town for the voting of a tax in an amount not less than one thousand dollars for the erection of a new building, the repair, remodeling, improvement or enlargement of an existing building, the purchase of a new site or of an addition to an existing site.

4 When the electors at a school meeting in a town adopt a proposition for any of the purposes specified in this section they may authorize and direct the levy of a tax to meet the expense incurred thereby either in one levy or by instalments.

5 The provisions of section 467 of this chapter as amended relative to the notice of the meeting and the levy of a tax by instalments shall apply, except as inconsistent herewith, to the submission of the propositions herein authorized and the levy and collection of taxes for the purposes specified.

Sec. 348 Issue and sale of school bonds. Whenever a tax shall have been voted to be collected in instalments for any of the purposes specified in the preceding section, the board of education of the town may borrow so much of the sum voted as may be necessary at a rate not exceeding six per centum. The board may issue bonds or other evidences of indebtedness for such purposes which shall not be sold below par. The interest and principal of such bonds or other evidences of indebtedness shall be a charge upon the town and shall be paid when due. Such bonds or other evidences of indebtedness shall be sold by the board of education in the manner provided by section 480 of this chapter.

Sec. 349 State funds to be used for schools of town. Funds hereafter apportioned by the State under the provisions of this chapter to school districts under the supervision and control of a town board of education shall be apportioned on the basis provided in this chapter, but the funds so apportioned to the several school districts of a town shall be paid to the town school treasurer. Funds apportioned for teachers' salaries shall be paid on the order of the board of education of the town for the payment of the salaries of teachers employed in such town and funds apportioned for school libraries, apparatus, maps or works of art, shall be paid respectively in like manner for school libraries, apparatus, maps or works of art, in such town.

Sec. 350 Certain union free school districts not subject to provisions of article. This article shall not apply to union free school districts having a population of five thousand or more and employing a superintendent of schools. A school tax in a town in which the whole or any portion of such a district is situated shall be levied only against the taxable property in the town outside of the boundaries of such union free school district. The inhabitants of such district shall not be permitted to vote for candidates for members of the town board of education or upon any proposition or question submitted at an annual or regular school meeting in the town. The provisions of the Education Law relative to union free school districts and the affairs thereof shall apply to union free school districts

having a population of five thousand or more and employing a superintendent of schools.

Sec. 351 School district officers abolished; terms continued to collect funds, pay claims, etc.

1 All trustees, members of boards of education and other school officers in office when this act takes effect shall continue in office until the first day of August 1915. Upon such day the offices of trustees, members of boards of education, district clerks, school district collectors, treasurers and other school district officers shall be and are hereby abolished and the terms of such officers shall cease except as herein provided.

2 The trustees, boards of education and other officers of each district, enumerated in subdivision 1 of this section, are hereby continued in office with all the powers and duties conferred on such officers by the Education Law or other statutes, including the power to levy, assess and collect taxes for the purpose of closing up the business and financial affairs of such district and of satisfying its obligations, adjusting its claims, collecting funds due it and paying its just debts. After liquidating all outstanding obligations and settling or adjusting all claims against such district, and closing up all its financial affairs as a district, such officers shall apportion any funds remaining in the treasury, except moneys received from the State, among the taxpayers of the district. Such apportionment shall be based upon the relation of the assessed valuation of such taxpayers to the aggregate assessed valuation of the district. The portion of such funds which consists of moneys received from the State shall be paid into the town school treasury.

Sec. 352 First school election. The first school election to elect a town board of education shall be held in each town of the State on the second Tuesday in June 1915. The polls of such election shall be open from nine o'clock in the morning until seven o'clock in the evening. The election shall be held in a schoolhouse in the town to be designated by the district superintendent of schools. Such district superintendent shall designate a schoolhouse which shall be the most accessible for the greatest number of residents of the town and which shall also afford adequate facilities for such election. The district superintendent of schools shall appoint three qualified school voters of the town to act as inspectors of such election. Such inspectors shall elect one of their number poll clerk. The provisions of this act relating to and governing annual school elections so far as may be practicable and not inconsistent with this section shall apply to and govern such first election. The inspectors shall canvass the votes cast and the persons receiving the greatest number of votes shall be elected. The district superintendent shall give notice of such election as required for an annual election. The returns of such election, all ballots, poll lists and other records of the election shall be filed by the inspectors with the district superintendent of schools. Such superintendent shall thereupon notify each person elected as a member of the board of education of such election. He shall also call a meeting of the board of education of each town in his supervisory district, elected at such election, on the first day of August 1915, at eleven o'clock in the forenoon at the principal schoolhouse of the town for the purpose of organization and the transaction of any other business which may properly come before such board. After a clerk of such board is chosen, the district superintendent shall deposit with such clerk the election returns, poll lists, ballots and other records of election delivered to him by the inspectors of the first town school election.

Sec. 353 Time and place of annual meeting.

1 The annual school meeting in each town shall be held on the first Tuesday in May in each year, at which members of the board of education shall be elected and such other business as may legally come before such meeting shall be transacted. Such meeting shall be held at the schoolhouse in the town which is most conveniently accessible to a majority of the qualified electors of such town. The board of education shall designate the schoolhouse at which such meeting shall be held.

2 The board of education may divide the town into school election districts, whenever it deems it necessary for the convenience of the qualified

electors, because of the territorial extent of the town or the number of such electors. If a town is divided into school election districts, the board shall designate the schoolhouse in each district where the annual meeting shall be held.

3 The polls for the election of members of the board of education, at such meeting, shall be open from nine o'clock in the morning to seven o'clock in the afternoon.

Sec. 354 Notice of annual school meeting. The clerk of each board of education shall give notice of the time when and the places where the annual school meeting in the town is to be held, by publishing such notice once in each week for the four weeks next preceding such meeting, in two newspapers, if there shall be two, or in one newspaper, if there shall be but one, published or circulated in such town. If no newspaper shall be published or circulated therein, such notice shall be posted on the door of each schoolhouse in the town and in at least ten other public places in said town, at least twenty days before the time of such meeting.

Sec. 355 Special school meetings in towns. The board of education of each town shall have power to call a special meeting of the qualified electors of the town, whenever it deems necessary and proper, and whenever required by law, in the manner prescribed for the giving of a notice of the annual meeting. Such special meeting shall be held at the schoolhouse or schoolhouses at which the annual school meeting of the town is required to be held.

Sec. 356 Qualifications of voters at school meetings. 1 To be eligible to vote at annual or special town school meetings, a person must possess the qualifications prescribed in section 203 of this chapter, except as provided in the following subdivision:

2 In a school district located in two or more towns, those persons possessing the qualifications required under subdivision 1 of this section shall be entitled to vote at annual or special town school meetings in the town in which the principal schoolhouse of the district in which they reside is located, irrespective of the town in which they reside. A person entitled to vote under this subdivision, at an annual or special town school meeting in a town other than the town in which he resides, shall not be entitled to vote at such meetings in the town in which he resides.

Sec. 357 Preparation of list of qualified electors. 1 The clerk of the board of education in each town shall, on or before the first day of April in each year, prepare a list of the persons qualified to vote at an annual or special school meeting held in the town. If the town is divided into school election districts, a separate list shall be prepared, as herein provided, containing the names of the qualified electors, residing in each district. The names of such list shall be arranged alphabetically, according to the surnames of such electors, and shall contain a statement as to the place of residence of each elector.

2 Such list shall be placed on file in the office of the clerk of the board of education or at some other place, to be designated by the board, where it may be examined by any person interested therein, from four to eight o'clock in the evening of each Friday and Saturday of the four weeks immediately preceding the annual school meeting. The clerk of the board of education or some person to be designated by the board, shall attend at such office or place, at such times, and permit public inspection of such list. A person whose name is not upon such list, who is or will be a qualified voter at the annual meeting, may submit to the clerk of the board evidence showing such fact, and the clerk shall correct such list, by inserting his name therein. If the name and residence of a qualified elector are incorrectly stated upon such list, the clerk, upon satisfactory evidence being presented to him, may correct such errors.

3 A qualified voter at the annual school meeting of the town may, upon the examination of such list, file with the clerk of the board a written challenge of the qualifications as an elector of any person whose name appears upon such list. The board of education of the town shall meet on the Monday preceding the annual school meeting and may, upon satisfactory

evidence being presented to it, correct the errors in such list of qualified electors and add the names of persons, ascertained by it to be qualified electors at such annual meeting. The board shall also indicate upon the list of qualified electors the persons whose qualifications as electors have been challenged.

4 If the annual school meeting is held in election districts, a separate list for each district, revised and corrected as above provided, shall be delivered by the clerk of the board of education to the inspectors appointed, as hereinafter provided, to conduct such school meeting in each of such districts.

Sec. 358 Inspectors of election. The board of education shall designate from its members three inspectors of election for each election district into which such town has been divided. If the town is divided into more than two election districts, the inspectors required in addition to the members of such board shall be chosen from the qualified voters of the district for which they are appointed. The clerk of the board of education shall give written notice of appointment to the persons so appointed. If a person, appointed as inspector of election, refuses to accept such appointment the board of education may appoint a qualified elector of the district to fill such vacancy. Such board of inspectors shall before opening the polls in the election district for which they are appointed, organize by electing one of their number as chairman and one as poll clerk. Each inspector shall receive for his services a compensation of three dollars to be paid out of the school funds of the town and in the same manner as other expenses are paid.

Sec. 359 Nominations and ballots. 1 Candidates for members of the board of education in a town shall be nominated by petition. Such petition shall be directed to the clerk of the board of education of the town and shall be signed by at least twenty-five qualified electors thereof. It shall state the names and residences of the candidates and whether such candidates are nominated for full terms or for the unexpired portion of such terms. Each petition shall be filed with the clerk of the board of education on or before the tenth day preceding the day of the annual school meeting.

2 The board of education shall cause to be printed official ballots, containing the names of all candidates nominated as above provided. Such ballots shall separately state whether the persons named thereon are candidates for full terms or for portions of terms. The names of the candidates shall be arranged alphabetically according to their surnames, in columns under titles or designations, showing whether they are to be elected for full terms or portions of terms. Blank spaces shall be provided so that persons may vote for candidates who have not been nominated for the offices to be filled at such election. Such ballots shall have printed thereon instructions as to the marking of the ballots and the number of candidates for the several offices for which an elector is permitted to vote.

3 Whenever a question is required to be submitted to an annual or special school meeting, the ballots therefor shall conform as nearly as may be to the ballots required to be used, under the election law, for the submission of questions or propositions, at a general election.

4 The number of ballots to be used at an annual or special school meeting shall at least equal the number of qualified electors in the town, as appears from the list of qualified electors thereof. The clerk of the board shall cause to be delivered to the inspectors in each of such election districts, on the day of the meeting, a sufficient supply of such ballots for the use of the qualified electors thereof. Such ballots shall be printed at the expense of the town and the cost thereof shall be paid out of school funds, in the same manner as other school expenses. An election of a member of a board of education shall not be declared invalid or illegal because of the use of ballots which do not conform to the requirements of this section or to the provisions of the election law, provided the intent of the elector may be ascertained from the use of such irregular or defective ballot and such use was not fraudulent and did not substantially affect the result of the election.

Sec. 360 Conduct of school meetings; challenges. 1 All elections, held as provided herein, shall be conducted, so far as may be, in accordance with the provisions of the election law relative to general elections, except as otherwise provided herein. Suitable ballot boxes shall be provided by the board of education, to be used at such school meetings. Such ballot boxes shall conform as nearly as may be to the provisions of the election law relative to ballot boxes at general elections. All persons, whose names appear upon the list of qualified electors, as residing in the town or election districts, shall be permitted to vote and shall be given ballots for such purpose. Persons whose names do not appear upon such list may be permitted to vote upon satisfactory evidence being presented showing that they are qualified electors of the town or district and upon making the declaration hereinafter prescribed. The ballots when presented to the inspectors, shall be folded so as to conceal the names of candidates for whom or the proposition or question for which the elector has voted. All electors entitled to vote, who are in the places where the election is held at or before the time of closing the polls, shall be allowed to vote. The poll clerk shall keep a poll list, containing the names of the qualified electors who vote at such election for the candidates or propositions or questions voted for thereat.

2 Any qualified elector may challenge the right of a person to vote, at the time when he requests a ballot. All persons, named upon the list of electors as having been challenged prior to the day of the meeting, shall also be challenged before ballots are given to them. The chairman of the board of inspectors shall require the person so challenged, or a person whose name does not appear upon the list of qualified electors, and who requests the privilege of voting, to make the following declaration: "I do declare and affirm that I have been for the thirty days last past an actual resident of this town and that I am qualified to vote at this meeting." If such person makes such declaration, he shall be permitted to vote at the meeting but if he shall refuse to make such declaration he shall not be permitted to vote for candidates or upon any question or proposition at such meeting.

3 A person who wilfully makes a false declaration as to his right to vote at such meeting, is guilty of a misdemeanor. A person who is not qualified to vote at such meeting but who shall vote thereat, shall be subjected to a penalty of fifty dollars which may be recovered in a suit brought therefor by the board of education for the benefit of the schools of the town.

Sec. 361 Canvass of votes; declaration of result. 1 Immediately upon the close of the polls, the board of inspectors shall count the ballots found in the ballot boxes, without unfolding them, except so far as is necessary to ascertain that each ballot is single. They shall compare the number of ballots found in the ballot boxes with the number of persons recorded on the poll list as having voted for the candidates or the questions or propositions submitted at such meeting. If the number of ballots found in the ballot boxes shall exceed the number of names so recorded on such list, such ballots shall be replaced, without being unfolded, in the boxes from which they were taken and shall be thoroughly mingled in such boxes and one of the members of the board of inspectors designated by such board shall publicly draw out as many ballots as shall be equal to the number of excess ballots. The ballots so drawn out shall be inclosed, without unfolding, in an envelop which shall be sealed and indorsed with a statement of the number of such excess ballots withdrawn from the box and shall be signed by the inspector who withdrew such ballots. Such envelop shall be delivered to the clerk of the board of education and shall be preserved by him for a period of at least one year.

2 The ballots shall be counted or canvassed by the inspectors in the manner provided for the canvassing of ballots at a general election, except as otherwise provided herein. The votes cast for each candidate and for each question or proposition shall be tallied and counted by the inspectors and a statement shall be made, containing the names of each candidate receiving

votes at such meeting and the number of votes cast for each candidate and also the number of votes cast for and against each question or proposition submitted at such meeting. Such statement shall also give the number of ballots which are declared void and describe the defects therein and shall also specify the number of wholly blank ballots cast. Such statement shall be signed by the inspectors. A ballot shall not be declared void unless the defects are such as clearly to indicate that the ballot was marked for identification or that the intent of the elector in voting such ballot can not be ascertained therefrom. The ballots which are declared void and not counted shall be inclosed in an envelop, which shall be sealed and indorsed as containing void ballots and shall be signed by the inspectors. Such envelop shall be filed with the clerk of the board of education and preserved by him for a period of at least one year. After the ballots are counted and the statements have been made as required herein, such ballots shall be replaced in the ballot boxes. Each box shall be securely locked and sealed and deposited with the clerk of the board of education. The unused ballots shall be placed in a sealed package and be returned to the clerk of the board of education, at the time when such ballot boxes are delivered to him.

3 The inspectors shall deliver the statement of the votes cast at such meeting, in each election district, to the clerk of the board of education on the day following such meeting. The board of education shall meet at the usual place of meeting, at eight o'clock in the evening of the day following such election and shall forthwith examine and tabulate the statement of the results of the election in the several election districts of such town. The board of education shall canvass the returns as contained in the statements of the inspectors and shall determine the number of votes cast for each candidate and for and against each question or proposition in the several election districts of the town. The board shall thereupon declare the result of the canvass of the votes in each election district.

4 The candidates receiving a plurality of the votes cast respectively for the several offices shall be declared elected. The clerk of the board of education shall record the result of the election as announced by the board of education, in the minutes of the meeting.

Sec. 362 Successful candidates to be notified of election. The clerk of the board of education shall, within twenty-four hours after the result of the election has been declared, serve a written notice either personally or by mail upon each person declared to be elected as member of the board of education. A person upon whom such notice has been served shall be deemed to have accepted the office unless within five days after the service of such notice he shall file written refusal with the clerk.

Sec. 363 Appeals to the Commissioner of Education. An appeal may be taken to the Commissioner of Education from such election or from any of the acts or proceedings of a school meeting or the board of education in respect thereto, in the same manner and with the same effect as in the case of an appeal to him from the acts or proceedings of a school meeting or election or of a board of education, under the provisions of this chapter. The Commissioner of Education may, in his discretion, order a new election in any town.

Sec. 2 Repeal of inconsistent provisions; effect of repeal. All acts or parts of acts, general or special, inconsistent with the provisions of this act are hereby repealed. The repeal of the acts hereinafter specified or of such inconsistent acts or parts of such acts shall not affect any right existing or accrued or any liability incurred prior to the passage of this act.

Sec. 3 Sections renumbered. Sections 340 and 341 of the Education Law are hereby renumbered sections 365 and 366; sections 360, 361, 362, 363, 364 and 365 of such law are hereby renumbered respectively sections 370, 371, 372, 373, 374 and 375.

Section 4 Time of taking effect. This act shall take effect immediately

Excerpt from address of Master W. H. Vary at the annual session of the New York State Grange, February, 1915:

Our Common Schools

Many a man owes all the education that he possesses to the little red schoolhouse beside the road. The district school has been from time immemorial the bulwark of our educational system, and fond recollections cluster round the memories of days gone by that we spent in those unpretentious buildings.

In those days the seats or benches were filled to overflowing with bright and winsome lads and lassies, eager for their work and a good natured rivalry as to who should stand at the head of the class in spelling.

Today things seemed to have changed. The seats in many a schoolhouse are practically unoccupied, consequently there is no rivalry and no incentive for effort to surpass. Teacher spends her time with but one to three pupils. Taxes have become extremely burdensome in many districts, others more favorably located, have none at all, being able to make arrangements with some village or high school for the instruction of the children residing in said district for the amount of public money appropriated by the State, thus relieving all property in such a district from any school tax whatever, while a poorer district, that is, one with less taxable property, has a tax burden grievous to be borne.

We believe most thoroughly in the country school not only for what it has already done, but what it may do in the future. But, would it not be well to consider and determine if possible whether or not there was some remedy for this seeming injustice and inequality, and consequently inefficiency? Some have suggested that the town be the unit of taxation instead of the district, thereby giving each district a like amount for school purposes. Under this system all taxes for school purposes would be put into one budget and assessed uniformly on the property of the whole town and paid to the town collector, the same as other taxes are now levied and collected in the town. It has also been suggested that a school board composed of five persons have charge of all the schools in a town, hiring teachers for all the schools and having charge of all school matters instead of having trustees in each district as now.

Another plan is to consolidate the schools so far as practicable to the end that the children may be brought together in a central location where two or more teachers would be employed, the public money apportioned to all the consolidated districts to be used in support of this central school.

I submit these questions for your thoughtful consideration to the end that possibly a solution may be found that will make our country schools more effective and the expense of maintenance more equitably divided. Intellectual progress will proceed more rapidly if we work hand in hand with the teachers in our public schools.

Albany, N. Y.

March 30, 1915

To the Members of the Senate and Assembly of the State of New York

An anonymous, typewritten circular letter is being distributed throughout the State among school officials, Grange members and other citizens, in

which the statement is made that the State Grange indorsed the township plan before the bill establishing town school boards was drafted. The question is then asked, "Do the members of the Grange know the provisions of the bill, No. 1731, introduced on March 17?"

In answer to that question the officers of the State Grange desire to state that they do know the provisions of the bill. No special bill was indorsed by the State Grange. The State Grange indorsed certain principles involved in the township school plan which they desired incorporated into a law. The officers of the Grange attended two different conferences at Albany at which the bill now before the Legislature was prepared and had written into that bill the provisions unanimously adopted by the resolution of the State Grange. We are therefore most cordially supporting the Tallett bill, No. 1731, now pending in the Assembly.

Very truly yours

W. H. VARY, *Master*

W. N. GILES, *Secretary*

Constituting the Legislative Committee of New York State Grange

On April 15, 1915 the Commissioner of Education called the attention of the Legislature to the need of legislation "which might make possible a betterment of rural school conditions" in the following letter:

THE UNIVERSITY OF THE STATE OF NEW YORK

THE STATE DEPARTMENT OF EDUCATION

OFFICE OF THE PRESIDENT OF THE UNIVERSITY

AND COMMISSIONER OF EDUCATION

ALBANY,

April 15, 1915

To The Honorable, The Legislature of the State of New York:

I deem it my duty to call the attention of the Legislature to the necessity for legislation which will make possible a betterment of rural school conditions. The trend of population and wealth to the cities, the appeal of the city life even to those who remain in the country, and the consequent inadequacy of financial support and lack of community spirit in many districts, have brought us face to face with a serious public problem: the efficient maintenance of the country school in the sparsely populated and less prosperous communities of the State.

There are 11,642 elementary schools in the State. Of these, 8,430 are one-room schools. In almost half of these (3,580) the average attendance for 1913 was ten or less, as follows:

Schools	Average attendance
13	1
74	2
172	3

Schools	Average attendance
235	4
362	5
440	6
533	7
544	8
631	9
576	10

These statistics give intimation of a condition more needful of attention than that of overcrowding in other parts of the State. The State contributes from \$125 to \$200 to each of these schools whatever the average attendance, and it has therefore a concern in the economic aspect of the problem; but this is of far less importance than the educational and social significance of these statistics.

Of even more serious import is the fact that the district property valuation basis for the support of schools in about half (3826 districts) of the one-room school districts (8430 districts) is less than \$40,000 (i. e. a valuation which at one per cent would yield a maximum of \$400 for school purposes). Of these, 1311 have a valuation of \$20,000 or less (i. e. a maximum of \$200 each for school purposes, if the school tax does not exceed one per cent), and 27 have a valuation of not more than \$5000 (i. e. not more than \$50, if the school tax does not exceed one per cent).

These districts are, many of them, undergoing substantial, and some of them painful, sacrifice for even the meager provision which is made. In contrast with these may be put districts which because of high property valuation (in many cases due to corporation properties) or nonresident tuition, have a merely nominal local school tax or none at all.

Under such conditions the burden must be unequal or else the educational provision must be unequal, as between districts.

The State, in its consciousness of these inequalities in educational provision or burden, has attempted to reduce them by its annual apportionments, making the allotments somewhat larger for the districts of low valuation than for those of high valuation (varying from \$125 to \$200); but these are by no means sufficient to bring about anything like adequate school provision in some of the districts, or to equalize the disparities of burden. While, at present, New York State is the thirty-third in the list of states in the percentage which state aid bears to the local expenditure for school purposes within the State, it is not anticipated that the State is ready to make any immediate increase of its appropriation for such equalization purposes.

Unless, then, the schools unable to make adequate provision out of their own district resources, plus the state allotment, are to remain static or to deteriorate, some other way must be sought to give them needed help.

Two courses are open: one (1) is the consolidation of districts and transportation of pupils where necessary; the other (2) is the creation of a larger local unit of taxation and consequently of administration.

As to the first (1), voluntary consolidation has proceeded slowly. In recent years the Legislature has sought to encourage the movement and has authorized consolidation by district superintendents; but, while the educational results promise to be wholesome, even under this plan progress is made only in spots and with difficulty. If there could be a redistricting of the entire State for school purposes, taking natural and social centers as the school centers, the problem, I believe, would in that way be most successfully solved; but it would be a task requiring not only closest sympathetic study of local conditions and tendencies (a prodigious labor in itself), but the highest and most courageous intelligence and judgment that the State could command.

The present district boundaries were many of them determined by economic and social and physical conditions which existed more than fifty years ago. (The districting was authorized under an act of 1812.) These conditions have been changed, not only by movements above referred to, but also by facilities of communication and transportation, and in many cases have been so changed as to give no reason for the continuance of these boundaries, except the convenience of a few and a sentiment (most worthy in itself) which attaches to a school that has cherished associations. Consolidation is a method of making readjustments slowly and, chiefly, in extreme cases, to changed conditions. Arbitrary redistricting by the Department or by a commission of the State would be a means of swift readjustment. The first is practicable but slow; the second is ideal but also remote.

There remains one other course: (2) that of widening the local area of taxation and administration, so that the burden may be more equitably distributed and a better school provision more generally maintained without diminishing local initiative or responsibility or increasing State provision or control. The so-called "township bill" is intended to call the attention of the Legislature to this alternative plan. While the township system is in vogue in all the states immediately surrounding New York State, and while it has been for years discussed in reports and in meetings of school teachers and officers, it has not recently, at any rate, been brought effectively to the attention of the people as a whole.

Even if, as is probable, your Honorable Body will not find itself ready to act favorably upon such a proposed plan this year, its presentation will at any rate invite your serious thought, and will through you reach the thousands of districts in the State which you represent, and there compel attention and have serious discussion. This Department has no desire to impose a system from above, even if it could; but it is under compulsion to urge upon your careful and courageous thought what it believes to be for the good of the schools of the State, that there may come a united effort, and sacrifice if necessary, for the improvement where it is most needful.

Just as the schools of our cities are now managed as a whole by the several cities, it should be possible, without in any way impairing local initiative, interest or pride, to plan for each township as a whole, to make each school a more vital force in the larger area and to relate it more closely to the daily life or the community which it serves.

Respectfully yours

JOHN H. FINLEY

The Annual Report of the Commissioner of Education in 1916 contains another reference to the proposed law:

School Legislation

The Department has considered carefully during the year the enactment of a general city school law and also of the township system. Measures were introduced in the Legislature similar to those suggested in the annual report last year. They were introduced for the principal purpose of having them printed for distribution, of centering public opinion upon the desirability of this legislation, and of giving teachers, school officers and the public the opportunity to criticize the propositions and to offer such suggestions for the improvement of the measures as might seem desirable.

The following transcription gives the action of the Legislature in 1916 in regard to the township school law as taken from the New York Assembly Journal of 1917, volume 2, pages 1128, 2026-27:

Int. no. A. 1498. Pr. no. A. 2090. Mr Machold. An act to amend the Education Law, by creating town boards of education and providing for the support and maintenance of the same.

March 24

Read first time — Referred to committee on public education.

April 13

On motion of Mr Machold, the committee on rules was instructed to report Assembly bill (no. 1805, int. no. 1498) entitled "An act to amend the Education Law, by creating town boards of education and providing for the support and maintenance of schools in towns," with the following amendments:

Page 3, strike out all of lines 22, 23, 24, 25 and 26, and on page 4 strike out all of lines 1, 2, 3, 4, 5, 6, 7, 8 and 9, and insert in lieu thereof the following:

"2 Where there are two or more union free school districts each having a population of less than fifteen hundred, each maintaining an academic department which has been admitted to The University of the State of New York and the principal schoolhouse in each is situated wholly in the same town, the district superintendent shall issue an order dividing the town into as many units as there are such union free school districts situated in the town and designating with which of these union free school districts the several school districts of the town shall be associated to form such units. Each union free school district together with the districts designated by the district superintendent to be associated with it in forming such unit shall elect a separate board of education in the same manner as boards of education in towns are elected, and such board shall have the same jurisdiction, possess the same powers, and exercise the same duties over all the schools forming said unit exactly as a town board of education does over the schools in a town, and wherever in this act reference is made to the town board of education it shall be construed as referring also to the boards of education elected for such units.

HONORABLE H. EDMUND MACHOLD
Member of the Assembly; introducer of the township bill

"3 Whenever twenty-five duly qualified voters from each of such separate units in a town having two or more boards of education shall present a petition to the district superintendent to have all of the schools situated within the limits of the town united under one town board of education as provided by subdivision 1 of this section, the district superintendent shall direct each separate board of education to submit to the voters of their unit at the next annual school meeting the question, 'Shall all the schools in the town of be put under the jurisdiction of one town board of education?' If a majority of the voters in each separate unit, voting at such election, shall vote in favor thereof, the terms of office of each of the members of the boards of education in such town shall terminate one year from the first day of August next following such annual meeting and there shall be elected at the next annual meeting a new town board of education as provided by section 353 of this act, which board shall take charge of all the schools of the town on the first day of August following such election."

Page 4, line 10, change the figure "3" to "4"

Mr Speaker, from the committee on rules, reported said bill amended as directed.

On motion of Mr Machold, said bill was ordered reprinted as amended and recommitted to said committee.

The Annual Report of the Commissioner of Education for 1917 contained a complete discussion of the advantages the township system would bring to the rural schools. In this report the approval of the new proposed law by the New York State Grange at their two annual meetings was also included.

Township System

There has been much misrepresentation in relation to the provisions of the township bill and therefore much misunderstanding exists throughout the whole State as to the terms of this measure. It has been stated, for the purpose of misleading the public, that all the schools in a town would be abolished and one central school established if the township system were put in operation. This statement is absolutely erroneous. Not a single school district in any town in the State is abolished under the terms of the township bill. Every district will continue, under the terms of such bill, under their present boundaries. The only way by which such boundaries may be changed or the school discontinued in any district will be by action of the town board chosen by the people of the town.

There will of necessity always be in this State several thousand of the one-room school buildings. The topography of the State, the climate and other conditions render it absolutely necessary, in order to provide educational facilities for all children of the State, to continue to maintain several thousand of these one-room schools. These one-room schools which are to be continued must be made the very best schools possible under existing conditions.

There is a great difference between the consolidation of schools and the township administration of schools. During recent years many school districts have been consolidated even under the school district system, but the method by which these consolidations have been effected have resulted in much ill feeling in various parts of the State. One purpose of the township bill is to remove the objections which now exist to the method of consolidating schools. It is proposed under the township bill to give more power to the local authorities in relation to the consolidation question. It is proposed in this measure to confer on the town board, which is chosen by the voters of the town, the power to veto or to confirm the action taken by a district superintendent of schools in the consolidation of school districts. It is also proposed in this measure to confer on the town boards of a supervisory district the power to elect district superintendents. District superintendents, therefore, and town boards will work in cooperation in the administration of schools and on all questions relating to the operation of the schools, including their consolidation.

It has also been stated that under the provisions of the township bill new school buildings are to be erected and large expenditures of money made for this purpose. Under the terms of this measure not more than five thousand dollars may be expended on any school building without authorization by the voters of the town.

Articles have been written in several papers by persons opposed to the township system in which it has been asserted that under the terms of the township bill children will be transported in conveyances eight, nine or ten miles for the purpose of attending school. No such plan is contemplated under the township system. Any plan which would impose such a hardship upon children would be opposed by the Education Department. It has been judicially determined by a commissioner of education that five miles is too great a distance for children to travel to attend school, even by conveyance, over rough roads and in sections of the State where the winter climate is severe. Children may, however, travel from two and one-half to four miles, when proper conveyance is provided, without any hardship or injury if the transportation is under proper regulation.

The township bill contemplates the utilization of our great system of state highways, improved town highways, the thousands of miles of electric and steam railroads, the automobile, the autobus and all modern means of transportation. These methods of transportation are utilized for every other purpose in rural life and there is no valid reason why such means of transportation should not be utilized in the maintenance of good schools in the farming sections.

In each town throughout the State there are from eight to thirty-five separate school districts. Each of these districts maintains an independent organization with its own local officers, and each is a tax district; so that in each township there are all the way from eight to thirty-five separate and independent authorities in charge of the schools of a single town, and possessing the power to assess taxes upon the property of such districts for the maintenance of schools. This kind of an organization for the administration of rural schools has been demonstrated to be cumbersome, obsolete and inefficient. It has been discontinued in many states and must be in this State before we can improve and modernize the rural schools, and enable

them to serve the people of the agricultural sections as they should and as conditions demand they shall. To make these schools effective there must be an efficient, modern organization to administer them. The plan proposed is the township system. By such system we mean the substitution of a town board of education for each of the separate district trustees and boards of the several districts in a town. This town board would be chosen at a special town meeting held annually in May, at which no other matters except those related to the educational affairs of the town would be considered. This board would have the control and management of the schools in a town. Large powers in relation to school matters would be conferred on this board. The method of control and management would be the most democratic plan which could be adopted.

Let us compare the organization and administration of the rural schools with the organization and administration of the schools maintained in the cities and villages of the State. When schools were first organized in this State, they were known as "district" schools not only in the rural sections but in the villages and cities as well. The schools in all parts of the State were known as "district" schools for the first half century of their existence. The districts of cities even had separate and distinct organizations. The movement for the establishment of consolidated schools originated as early as 1853, and New York was one of the first states of the Union to participate in this movement. A general law was enacted in that year, known as the "union free school district law." The name of the law signifies the general purpose for which it was enacted. The object of this law was to form a union of school districts and then to make the schools free. As most of you know, we did not have free schools in this State at that time, nor were the schools throughout the country free. It was not until 1866 that New York made her schools absolutely free. Under the act of 1853, however, the schools in the cities and villages were from time to time consolidated until all the schools of each of the cities of the State were organized into one system under the general control and management of one body. This same action has been taken from time to time in the villages, so that at the present time there is not a village in the State which maintains two separate and distinct school organizations.

Imagine how a plan would be received today proposing a separate school system for each school in each of the cities and villages of the State! What answer would be given by the people of any city in this State to the proposition to choose a local board for each school maintained in the city; to give to that board the power to employ teachers, fix their salaries, supervise repairs and all expenditures, and in short to have the general control and business management of the schools? Imagine a city having from fifteen to forty schools and changing the plan of organization of the school system of such city so as to create a separate and distinct organization for each school, giving to the authorities of that school taxing power, so that there would be in such city from fifteen to forty boards of control, each assessing and collecting taxes and managing and supervising the schools of such city. There is not a city in the country that would indorse such a proposition or that would tolerate it under any conditions. There is not even a body of farmers who could be selected in any part of this State that would indorse such a plan of school administration for the cities

and villages. Yet this very system of school administration exists throughout the rural regions of this State and has been in operation for one hundred twenty-five years. There has been no change in the fundamental organization of the rural school system since the enactment of the first general law relating to the organization of common schools in 1795.

The adoption of the township system as the unit of administration of the rural schools throughout the State would result in the following advantages:

- 1 The present unit of administration is so small, and the management of the usual district school regarded as a matter of so little importance, that the best men and women of a community will often decline to serve as trustees. If the management of country schools were raised to a higher plane, and the vital importance of the school to the community could be more strongly emphasized, men and women of the greatest education and culture and the widest business experience in a community would be attracted to the position, and would not only be willing but desirous of serving in such capacity. The general management of the educational interests of a whole town, which would include from ten to thirty schools as now organized, by a board of five, would exalt and dignify the importance of the office of school trustee and would emphasize the work of the school so that a board of the type above described would be chosen.

- 2 Placing the schools of an entire town under the general management of a single board of five persons chosen by the voters of the town, who possess the qualifications now required to be entitled to vote at school district meetings, would result in giving to every proposition involving an expenditure of funds active, deliberate and businesslike consideration. The great waste resulting from unnecessary expenditures and careless management and supervision of school funds would cease.

- 3 The maintenance of unnecessary schools would be discontinued. Five people chosen by the voters of a town, and each one interested in all the affairs of the town, could be trusted to determine what schools might be discontinued to the advantage of education and all other interests of the town. No one need fear that a board thus chosen and composed would close a school when such action would be the means of prohibiting children from attending school because of the distance to travel.

- 4 The unit of taxation would be the town. Taxation for school purposes would then be equalized. All the property of a town would pay its proportionate and equal share for the maintenance of schools in the entire town. The burdens which are unjustly borne by more than one-half of the school districts of the State would be removed. Large corporate interests which now pay taxes toward the maintenance of a single school would pay their proper share for the maintenance of all the schools of a town.

- 5 Schools maintained under such management would provide educational facilities in the country districts which would be the equal of the educational advantages afforded by the schools maintained in the cities. Many things must be done in connection with the country schools before this result may be accomplished. Such result will never be achieved until all the interests and agencies of a much larger unit than the present school district—and this unit is preferably the town—are brought together in harmonious action, and the people appreciate the possibilities of this cooperation.

6 It is impossible to grade small schools properly under their present organization. With nearly 4000 schools having an average daily attendance of less than 10, the impossibility of grading such schools will be readily recognized. In thousands of others the enrolment is 25 to 35. In these schools every one of the eight elementary grades is represented and often there are pupils taking advanced subjects. One teacher must do all this work with the result that not more than ten minutes on the average is given to a recitation, and often less. In the graded schools of the cities and villages from thirty to forty minutes are given to a recitation. The disadvantage of the pupil in the rural school is too obvious to need description.

7 With the greater number of pupils brought together and the basis of taxation equalized and enlarged, sufficient teachers might be employed so that the schools might be graded and the instruction adapted to the ages of the pupils, and be made as liberal, comprehensive and efficient as the instruction generally provided in the schools of the cities and villages.

8 Under such conditions courses of instruction could be provided which would be adapted to the needs of our agricultural communities. These courses could be enriched and made as strong from the intellectual and cultural standpoint as courses of study are in the populous centers. It would also be possible to establish courses of study which would contribute to the needs of every phase of agricultural development and interest in the State. These schools could then be made the great laboratories of every farming necessity of the State.

A generation ago the boy on the farm found it profitable to attend school during the winter months from the time he became 16 until he attained his majority. Boys of this age are no longer found in the rural schools. They now rarely seek the village high school when the usual fall work on the farm is completed in November. Courses of study are now generally arranged so that all pupils must enter school at the beginning of the year in September. If our rural schools were organized on the basis which I have outlined in this discussion it would be feasible to organize special courses for the boys of 16 or more who must remain at work on the farm until late in the fall or the beginning of winter, and who must return to such work in early spring. Courses of this type extending over several winters would be possible and would be of inestimable value. Courses especially prepared to meet the needs of girls as shown in some of the views which have been presented would be provided.

9 High school facilities could be provided throughout the farming sections. Central schools of academic grade might be maintained in many centers. These schools would be within daily reach of many of the children between the ages of 12 and 18 who now leave home Monday morning and remain until Friday night at considerable expense in order to enjoy such privileges. If these schools were established the young people would be provided at home with the educational advantages which they must now obtain away from home, and they would also be afforded the association, influence and protection which exists in every good home.

10 Competent teachers might then be employed in these schools. Teachers who possess qualifications which are the equivalent of teachers who are employed in the schools of cities and villages. Six thousand teachers, one-half of those employed in the rural schools of the State

today, who have had no educational advantages beyond the elementary school, and who have had no professional training, would be compelled to give way to efficient, trained teachers. The State could establish institutions for the training of teachers with courses of study based upon the economic, industrial and sociological conditions of our rural life.

11 Schools would be maintained for the same period of time in the country districts that they are now maintained in the cities and villages. The children in the rural schools who have one month less of school than the children of the cities are not given an equal opportunity with the city children. Vacation schools could also be established.

12 A system of libraries meeting the intellectual needs of every citizen of the town could then be maintained. Provision could be made for study clubs in any section of the town and these libraries would afford the books which would enable the people to get the literature required to carry on such study clubs. It would be unnecessary to attempt to maintain an independent library in each school in a town. One central library could be maintained and from this library books could be supplied every school in the town. Books could be taken from the central library and placed at the disposal of each school so as to meet its particular needs and thus avoid the duplication of the purchase of books. A set of books which had been used in one school for a period of time could be transferred to another school and the books of the latter school could be transferred to another, and so on. By this interchange of books much economy could be exercised in the administration of school libraries.

Lecture courses might also be established. These courses could be on popular subjects, political questions, cultural subjects, agricultural topics, health topics and any other question in which the people have a common interest.

These two agencies—the library and the lecture—could be made a tremendous power in promoting the common enlightenment of the people in all our rural communities.

13 The enforcement of the statutes in relation to the operation of the schools, such as the compulsory attendance law, the medical inspection law, the physical education law, sanitation of school buildings, etc., could be made more effective and administered more economically. There is much waste and inefficiency in the present enforcement of these statutes but under the authority of a central town board, one competent person might be employed to do the work for which several agencies are now required, and not only do such work for a less expenditure but with greater efficiency.

14 The recreational and social interests of the people could be properly organized and administered. Play is as essential as study in the moral and intellectual development and growth of a child. It is as important that children shall have wholesome recreation as it is that they shall have efficient classroom instruction. It is impossible in many rural communities for the boys to enjoy a game of baseball without becoming trespassers. There should be, under the control of the school authorities in every town, ample grounds to afford the usual outdoor sports and games in which young people generally desire to participate.

15 The people of an entire town would be brought closer together in a community of interests. The spirit of cooperation would be fostered not only in educational but in all other activities in which they had a common interest. To the rural communities might be restored much of the prestige and leadership in intellectual, social and political matters which such communities possessed half a century ago. Within a decade the influence of such a reorganization of our rural life would be felt in the life of the nation even.

16 Under the township system there would be an agency in the rural schools for the administration of practical and effective agricultural courses. The agricultural interests of the State are of prime importance and among its valuable commercial assets. The value of her farm property is about \$1,500,000,000 and the State ranks first in the value of her crops in many of the staple agricultural products. The value of her farm products for the past year was about \$300,000,000. If we are to apply to the rural schools the general principle that in any scheme of education the course of study shall be related to the living conditions of the children for whom such course of study is provided, instruction in agriculture must form a part of the course of study for the rural schools. Every rural district, therefore, and every district maintaining a high school in the 600 villages of 2,000 or less population should maintain courses of instruction related to rural life which must, of course, include agriculture and homemaking. The boys who are 12 years of age or more, in attendance upon these schools, from whom the great bulk of recruits for farm life in this State must be obtained, could then be given practical education along the lines of scientific agriculture. Potato, corn and other similar clubs could be organized in every rural school maintained in the State and instruction could be provided which would relate to the interests of every community. The pupils could be taught, for instance, how to prepare the soil for the various crops, what soil is adapted to the growing of such crops, what kind of fertilizer is necessary and when it should be used. They could also be taught how to select seed, when to plant and how to cultivate a crop, the value and necessity of frequent cultivation and of rotation in crops, when and how to harvest crops, and, what is equally as important, how to market a crop with the least expense and the greatest advantage to the producer. Similar work should be provided for girls in the organization of canning clubs, bread-making clubs, and all other work related to the home.

It is impossible, of course, to do this work satisfactorily under the school district system. A special teacher should be employed in agriculture in order to make this work successful. Not one of the rural schools as now organized is financially able to employ a teacher for this purpose. Under the township system a director of agriculture could be employed for the town and he could organize and supervise courses in agriculture in every school in the town. Every boy and girl, therefore, in attendance upon a rural school or upon a high school in any of these 600 villages could be given instruction in the lines of work in which the great majority of these young people will ultimately be employed.

The encouragement which this State has given in recent years to vocational courses has resulted in the organization of such courses in 70 of

the villages high schools located in agricultural communities. In 33 of these 70 schools homemaking courses have been organized for the girls. There are in attendance upon these schools about 1000 boys and about 600 girls. During the past year about 800 of these boys carried on home project work, which is an important feature of agricultural courses. By home project work is meant a business enterprise in some particular line of farming carried on at the home farm in accordance with the principles and practices learned in school and reinforced by the experience of the home. After paying all expenses incurred in their experiments and setting aside for their own labor \$20,000, these 800 boys mentioned above had a net profit of \$40,000. Each of these boys therefore earned on the average \$75. Of course some earned more than \$75, some received less and others sustained a loss. These experiments, however, illustrate the rule in the actual affairs of life, including farming. But such experiments as these present the opportunity, through the school, of showing the boy who fails the cause of such failure, to point out to him how such failure may be turned to success, and to offer him the necessary encouragement to achieve this result. This incident is mentioned to show the possibilities of what might be accomplished through the schools if all the schools in the farming sections of the State were organized on the basis of the 70 schools in which these courses have been maintained.

The entire rural school system should be organized on such a basis under the township system that instruction in agricultural courses and in homemaking courses may be given to all children in attendance upon these schools. Much work is now being done along this line as the accompanying pictures will show, but there would be a revolution in the work which might be accomplished in the agricultural sections of the State under an organization such as would be afforded by the township system.

In order to get accurate information upon the operation of consolidated schools in other states, the state superintendents of states which have done the most in connection with consolidated schools were requested to reply to the following questions:

1 What effect has the establishment of consolidated schools had upon the value of farm property within the territory where such schools have been established?

2 Has the establishment of such schools been the means of providing a system of education which is adapted to the needs of agricultural life and, if so, in what way?

3 What is the general attitude of the people in the consolidated districts toward the continuance of the consolidated school, after it has been established and its work become effective?

4 Are better educated and trained teachers provided in the consolidated schools than were provided in the separate schools?

5 Have you been able to establish a system of transportation for the children which is satisfactory to the people generally, and which does not operate as a hardship upon the children?

The following answers to these inquiries have been received:

Mr C. C. Swain, Rural School Commissioner, Minnesota:

Answering your specific questions, I beg to advise that the consolidation of schools has invariably increased the value of farm property within the territory served by that school.

In view of the fact that agriculture, manual training and home training are required in our consolidated schools, and, further, as principals engaged

must have rural experience and must be able to minister to rural educational needs, our consolidated schools are particularly fitted to minister to the people of the countryside.

Better educated and trained teachers are required by law in all our consolidated schools. Only teachers qualified for the elementary schools in our cities can qualify in our consolidated schools.

We have found our transportation problem is not so serious as we anticipated. Over eight thousand country children were successfully transported last year. We have reached a point now where we can say that if transportation is not a success, the failure is due to mismanagement.

We have not been able to find a school district where the people wish to go back to the old order of things. In fact, entire rural districts have joined and established consolidated schools without a dissenting vote after the advantages of consolidation have been demonstrated for just a single year.

Hon. F. B. Pearson, State Superintendent of Public Instruction, Ohio:

The consolidation of schools has had a marked effect upon the value of farm property where this system exists. Farmers who reside in such communities are confident that the value of their farms have been increased from five to twenty dollars an acre. As farms are advertised for sale it is noticeable that there is an increased number of advertisements that contain as a desirable point the information that these farms are located in school districts which have the advantage of centralized schools. It is easy to understand why centralization does raise farm values. Persons who are interested in the education of their children, and these persons are always the most desirable citizens for any community, prefer residences in communities where the schools are centralized. Owners, tenants and laborers are attracted to these townships which have centralized schools. This is evident by the increased enrolment and average attendance after centralization has taken place, although the tendency in rural districts is to decrease in population.

The establishment of centralized schools has been the means of providing a system of education which is adapted to the needs of agricultural life in that as the reputation of schools has become established the authorities do not feel obliged to copy the courses of study which have been adopted by town and city high schools. Again, the more careful gradation of pupils and the economy in equipment which result from centralization have made it possible to secure better equipment and grounds for the teaching of agriculture than could be secured when the appropriations which were given for this purpose had to be divided among a half dozen or more different schools. There is no duplication in equipment now and even if only the same amount is spent it results in much better advantages. Again, high schools are usually established in connection with centralized schools. In these high schools agriculture is sometimes taught all four years. There was no opportunity for this in rural high schools without centralization.

It has been estimated by A. B. Graham, who has carefully investigated conditions in Ohio, that after centralization is once established 75 per cent of the people who formerly opposed it become advocates of it after learning of its advantages at first hand. It is to be noted that in Ohio the spread of centralization is in spots. The school districts which adopt centralization are usually contiguous to districts which already are under that system. From this it would appear that the satisfaction with centralization must be evident to neighboring school districts. A map which we have in the office very clearly indicates the contagiousness of centralization. Better educated and better trained teachers are provided in consolidated schools. Not only this but teachers are usually obtained who are trained especially and peculiarly adapted to the work of their special grades, and instead of having one teacher who is not specially prepared teaching twenty-four to thirty recitations a day and giving each grade about thirty-three minutes of time, we have teachers who are specially prepared devoting either all or, in some instances, half of their time to a grade. The increased efficiency due to special training of teachers and to the better gradation is remarkable when this increased efficiency is established by observation in the two sorts of schools.

A satisfactory system of transportation is the most difficult feature of centralization. Where boards of education carefully plan routes and establish schedules and purchase adequate equipment the problem can be solved fairly satisfactorily. We do not advise routes over seven miles in length; that is, we do not believe that the most extreme distances on a route should exceed this. While there are many routes in Ohio that are eight and nine miles in length and while transportation on these in many instances is fairly satisfactory and in almost every instance is preferred to the one-room system of schools, yet we do not advise such long routes.

Hon. Charles A. Greathouse, State Superintendent of Public Instruction, Indiana:

[This is one of the pioneer states in consolidation and has more and better consolidated schools than an other state in the country.]

1 While I do not have any statistics in answer to this question, I am reliably informed that the value of farm lands has increased where consolidated schools have been established.

2 In reply to this question, there is no doubt in my mind but what the consolidated rural school has provided a system of education which is adapted to agricultural life in Indiana. In the majority of cases, the township trustees have purchased enough ground so that children taking agriculture work may experiment on the school grounds specially laid out for this purpose. The consolidated school provides a special agricultural teacher. I may add further that the consolidated school usually has a special room for agriculture in the basement where experiments in agricultural work are made and where they hold their stock shows and things of that sort.

3 In reply to your third question I desire to state the general attitude of the people in consolidated districts is such that they would not think of returning to the old district plan. It has been the experience in this state that people who experience the results of a consolidated rural school for two or three years, are very much pleased with the results.

4 Better educated and trained teachers are provided in the consolidated schools than are provided in the district schools. There are a number of reasons for this but two of the main ones are, first, a township trustee can pay more, second, the teachers in consolidated schools have the needed supervision, which can not be true in the district school.

5 This feature of the consolidated school has caused more trouble than any other. The trouble is usually with the township trustee who desires to make his route for transportation too long. When the route is not over $4\frac{1}{2}$ or 5 miles, we have very little trouble with the question of transportation.

Dr J. Y. Joyner, State Superintendent of Public Instruction, North Carolina:

1 The effect of the establishment of consolidated schools upon the value of farm property within the territory in which such schools have been established, is in all cases one showing positive increase in value of farm property. I have yet to learn of a single case in this state in which there has been any decrease in the value of farm property. I have learned of many instances in which property had increased considerably in value as evidenced by subsequent sale.

2 Regarding the question of whether the establishment of such schools has been the means of providing a system of education that is adapted to the needs of agricultural life, I will say that it has gone far in that direction, to enlarging the school sites, the employment of a large number of teachers who are better equipped, a more practicable division of labor among these teachers, the increase in the school funds to provide necessary equipment, etc., has clearly helped in a large measure to provide means for the adaptation of the rural schools to the needs of country life.

3 It has been our experience that people generally are enthusiastically proud of their consolidated schools once they can bring themselves to approve the consolidation. In other words, after consolidation is affected in a community, that community would not go back to the old system.

4 Better educated and better trained teachers are provided in practically all cases through the increase in popular interest in the school and through the provision that is made for larger school funds, with which to pay these teachers.

5 We have not put the system of public transportation into extensive use in this state as yet, but in these communities in which it has been tried, it seems to work very nicely and without any special hardship upon the children. We have learned, however, that it is essential that the length of the route over which the children are transported to and from school must not be made too long, else there will be hardships unavoidable, both as concerns the children themselves and their parents.

[Doctor Joyner also states that since 1903 the number of one-teacher, one-room rural school has decreased by over two thousand.]

Hon. C. P. Cary, State Superintendent of Public Instruction, Wisconsin:

1 The establishment of a good school in any community always increases the valuation of farm territory. People who are looking for places to make their homes always take the school into account when they buy property. If there is a good school in the community they will pay more for a piece of land than if their children will have to attend a poor school.

2 In this state when a consolidated school is established it becomes a state graded school of two or more departments. The consolidated schools are not considered in a class by themselves. The state graded schools as a class are regarded as superior to the one-teacher school.

3 In the state graded schools with two or more teachers it is possible to do more thorough work than can be done in a one-teacher school, especially if the enrolment in the latter is large. It has also been possible to introduce more hand work for the reason that there is more time to devote to such work and as a rule the teachers are better prepared for it.

4 With a stronger class of teachers it is possible to do more effective work. The teaching of agriculture as a rule becomes more effective. These schools also radiate their influence farther in that the territory is larger and the pupils come from a larger number of homes.

5 The transportation problem seems to solve itself whenever the people decide to adopt the new plan. This is a business undertaking and can usually be settled in a satisfactory way. In fact, transportation on a reasonably large scale is likely to prove more satisfactory than transportation on a small scale.

Hon. Francis G. Blair, State Superintendent of Public Instruction, Illinois:

I am fully convinced that wherever there has been created a community sentiment strong enough to organize and maintain a consolidated school, that such a school is far superior to the one-room schools which have been displaced by it.

At the dedication of the Kishwaukee consolidated school building in Illinois, Prof. Newell D. Gilbert of the Northern Illinois State Normal School, spoke as follows in relation to the value of consolidated schools:

Personally, I regard the consolidated school as second to no other advance step in the evolution of American education; also I regard it as nearer of effective realization than any other movement of equal importance. I do not believe you farmers are holding a place of political and social influence nearly commensurate with your numbers, your wealth, your intelligence, or your force of character. So far as this may be true, it comes, I believe, from living rather isolated, being educated in isolated one-room schools, so that the farmer has lived and thought too much in individual, rather than social terms.

The consolidated school offers a redemption from this situation, and at the same time a great expansion and enrichment of every phase of rural life, for:

1 It offers a rallying point for the people of a neighborhood about the greatest single idea in modern life, the education of children.

2 It stimulates an unlimited number of allied interests — entertainments, lectures and discussions on live themes, such as will set all reading, thinking; and it helps to make country life bright and attractive, comfortable and profitable away beyond the power of the city to compete.

3 It means better teachers, in healthier rooms, with more books and apparatus, with playground and gymnasium, with laboratory and shop — and all used to carry out a course of study specifically adapted to make the most and best of rural life.

4 A rural community is so homogenous in occupation that the children can work out on a practical scale at home what is taught at school, and thus make their lessons part and parcel of their growing lives.

5 That gallery takes my eye; not with its grace, for it hasn't much; but it is crowded to the spilling point with splendidly capable young men. This consolidated school might readily hold them united in things to be done here — things industrial, political, educational, social, religious. In this comradeship of effort they would learn organization and leadership, fulfilling the fondest dreams of their elders and bearing Kishwaukee influence far.

6 Into this group will come other young men from the normal school and university, with the best treasures of these institutions, to be leaders in their ways.

7 In the acceptance of leadership from without will come your greatest difficulty and, in all possibility, your greatest single gain; for on the wisdom of your choice of teachers, on your ability to listen to them with neither too great prejudice nor too ready compliance, and to follow right leading, all else will hinge.

In view of all I have said, you will readily believe that I am glad to be here to-night; to meet you, the people of this Kishwaukee school; to see your sons and your daughters about you, so noble in measureless power, so beautiful in the inexpressible graces of young life. It is splendid that you have among you a great dreamer, and that you have the heart to honor him in the giving and acceptance of this excellent portrait, a symbol, I take it, of what you hope, a pledge of what you purpose. I have not, I am sure, gone beyond his dreams in what I have said; I shrewdly suspect that I am barely started. You have put your hand to a big task in a fine way. You will recall the word of the Great Teacher touching one who puts his hand to the plow and looks back.

Hon. H. A. Davee, State Superintendent of Public Instruction, Montana:

1 The establishment of consolidation in three communities with which I am best acquainted has had the effect of increasing the value of farm property within the consolidated community. The fact that these schools maintain rural high school, makes that territory very attractive to prospective purchasers and renters.

2 The establishment of consolidated schools has made it possible to put in agriculture, manual training and domestic science courses, thus meeting the needs of the community.

3 After the second year the people in every locality with which I am familiar are well satisfied with the consolidated school. In many cases they have carried by a margin, and no attempt has ever been made to disestablish them.

4 There is no doubt but what better trained teachers are provided in the consolidated school. They have a better organization, and the positions are more attractive to better teachers.

5 Except on some of the very long roads (some of them are eight miles) the people are well satisfied with transportation. In some cases children have to start very early and get home late but in all cases during the cold weather the children who come in the wagons, no matter how far, arrive at school in better condition than those who walk a mile through the cold and snow.

Hon. Charles H. Lugg, State Superintendent of Public Instruction, South Dakota:

1 The establishment of a consolidated school has a tendency to increase the valuation of farm property in the neighborhood and to attract purchasers of such property.

2 The establishment of these schools has greatly improved the type of education offered in the country districts, but the advantages offered are not yet what we desire, except in a few schools. The deficiency is not inherent in the school or in its administration, but in the community, which has not, except in a few instances, risen to a full conception of the possibilities of the graded rural school.

3 The general attitude of the people toward the consolidated school after it has once been established in their community is favorable. We have not had a case where there was any talk of going back to the old system. A few of the more active opponents of the system usually keep up more or less growling, but even they acknowledge that "the things work."

4 Better trained and better educated teachers are sought for the consolidated schools, and the faculties employed will compare favorably with those employed in our city schools.

5 We have not found a system of transportation that is perfect, but district ownership of school wagons, with bonded drivers is as satisfactory as anything we have tried. We find that a route should not be longer than can be driven in one hour even when the roads are bad. Our routes average about five miles, and we have but little complaint except from people who are not inclined to accept any inconvenience personally for the good of the community, and we have come to feel that such selfishness should be ignored.

Governor Ferris of Michigan, in an address before a convention of farmers in his state recently expressed his views upon consolidation as follows:

I am anxious that Michigan should have her share of good roads; that she should do great things in this direction in order that we may revolutionize a dead school system, paralyzed because our forces are scattered. We have hundreds and hundreds of local schools that do not have more than 15 or 20 pupils, and these schools must remain little and must remain scattered so long as there is no means of consolidation. I am aware that there are in this audience bitter opponents to the consolidation of our schools, but when I make this plea for it, I plead for the human element, for the boy in the country, for the girl there. There are many farmers who own their own automobiles, who can get their boys and girls to Battle Creek, or rather large centers like Lansing or Kalamazoo, but I am talking for the majority who can not hope to find their way into these large cities; it is for these boys and these girls that I plead here this morning. . . . I, as governor of Michigan, care for good roads for the state of Michigan; I want them so that we can improve the educational system. This would bring up the value of farm property and I believe it is absolutely impossible to overestimate the possibilities of conserving brains, of building character, of educating men and women so that when they do get the dollars they can have the capacity of enjoying them and getting something out of life.

Superintendent Henry A. Dann of the second district of Erie county communicated with residents of many consolidated districts in other states to obtain their opinion of the desirability of maintaining such schools. Superintendent Dann has published a pamphlet giving in full the letters which he has received. We are including herein some of these letters so that school officers of this State may have the views of people of other states who have resided in districts maintaining single-room schools but

who are now residents of districts maintaining consolidated schools. The following letters were addressed to Superintendent Dann:

McNabb, Ill., May 15, 1916

MY DEAR SIR:

Yours of May 5th at hand. We have had our consolidated school in operation now for nine years. It is a great improvement over the "old way." No one in the district would care to go back to the old way. It costs more, but it gives us a first-class high school right at home within reach of those boys and girls who are not able to pay for high school and board in some town. At present we do not haul the children to school. They arrange for that. Drive their own rigs. Have a barn at the school grounds. I am a farmer. Live in the district. No children now in school. Have finished high school. Have land (farms) worth at least \$50,000 in the district. Taxes are higher, but they are well spent. It is the only hope for the poorer class, and you know "The poor will always be with us."

Hastily

W. B. MILLS

Putnam, Ill., May 13, 1916

DEAR SIR:

In reply to yours of the 5th. We have four districts in one building. Cost us \$12,000. Brick, inside closet, steam heat, 5 rooms and basement under entire building. Manual training in part of basement, employ five teachers and a janitor. Have a barn on school grounds for teachers to put their horses in. We have fifteen rigs at present, furnished by patrons. The district has never furnished rigs. The law in this state will not allow transportation, but they get there. Everyone well satisfied. It does not cost as much to maintain the consolidated school as it did the four district schools before; and we have a much better school than it is possible to have in the country. We can get better teachers at less salary than the country school has to pay. You can not get a good teacher to go five or six miles in the country and do her own janitor work and walk a mile or two to her boarding place. We pay our principal \$120 a month and the other teachers \$55, but we are going to have to pay about \$60 from now on, as they are getting it elsewhere. But most all teachers prefer consolidated school work. The children are generally a better class to handle than the city bred. And why is not the country child entitled to as good a school as the city child? I believe the day is not far away when the little country schoolhouse will be the thing of the past. The high school at home does away with the sending our boys and girls away from home to get a high school education. That alone is worth all it costs if you have but one to school. I have a boy sixteen, graduated last year. I knew what he was doing while he was getting his education. It is just the time in their young lives that we should be their companions as much as possible. Excuse this hasty letter. Will be glad to answer any other questions. Wish you success in your consolidation work.

Yours respectfully

W. M. DRAKE

Rochester, Ind., April 28, 1916

MY DEAR SIR:

Yours of the 24th inst. at hand and carefully noted. Yes, we have about ten consolidated schools in the county. Some of these schools are simply grade schools, while others are both grade and high schools.

From two to six school hacks per school are used in transporting the children to these schools, and in every instance the patrons have been perfectly satisfied with both the transportation and the advantages of the centralized school.

We have fifty one-room schools in the county with a total enrolment of 1514 pupils, and the total enrolment in the ten centralized schools is 1408. In other words, about one-half of all pupils in the county are enrolled in the centralized schools.

This year the average daily attendance in all one-room schools is 89 per cent, while the average daily attendance of all centralized schools is 99 per cent; besides this the quality of the work done in the centralized school is fully 25 per cent better than the quality of the work in the one-room school.

There is a much greater community spirit and better school interest manifested in the consolidated districts than in the small one-room districts.

Yours very truly

HENRY L. BECKER

Vincennes, Ind., May 5, 1916

DEAR SIR:

I am pleased to have an opportunity of giving my estimate of the consolidated school from my experience.

I am an attorney by profession and have an office in the city, but live two miles out. Have two children, ages ten and six, who attend said school. I have visited the school as a patron twice every year, and have a fair acquaintance with most of the patrons, which acquaintance was made principally at the meetings of patrons and teachers that are frequently held at the building.

At the beginning of the school there was some prejudice against abandoning the small district schools, but I think it has practically all disappeared since the interest of the children in school work has noticeably increased in the consolidated school. I have heard very few complaints on the method of transportation, as the rules for the drivers are strictly enforced and they are superseded if they become lax in their duties. I have been told they get from \$45 to \$50 a month, and the township furnishes the wagons. Besides having a better school, I think the taxes are lower in this township than any other in this state. I do not believe there is one of the patrons out of ten who would be willing to go back to the old plan.

I thank you for asking my opinion of this, as it has been a real pleasure to me to boost our school since my children do so well there.

Yours truly

J. M. GLENN

International Falls, Minn., May 25, 1916

DEAR SIR:

Yours of 18th inst. at hand, and I will be glad if I can give you any useful information with regard to the consolidated school. We have two girls of eight and ten years of age who expect to advance to fifth grade soon. This is their first term at the consolidated school to be hauled by wagon, and they like it better than the country school. I, with all the people that I have talked with about the school, believe it to be a great deal better for the children than the old school. The new school is modern in every way. There is work taken up there and taught which would be impossible in the small country school. None of the children who have been hauled in wagons have ever been tardy or missed a day so far this term.

We are dairy farmers about three miles from the school. The bus that takes our children has only ten children to haul and costs \$60 a month. There is another wagon on a shorter route which hauls fifteen children and costs \$40 a month. Another one hauls about twenty-four children and costs \$100 a month. So you see it depends some on how many children to the wagon and the distance.

Hoping this will help you, I remain,

MRS JOHN HOEY

P. S. If I can help you any further will be glad to do so.

Collins, Miss.

I will try to write you a few lines about our consolidated school. When they commenced to get the school I was against it. I did not think it would do, but there was enough for it to get it. I have been sending to school there three years and the more I send the better I like it. I will say to people in your community if they want a new school this is the best for them. It takes some more money to run it, but like you do with your horse when he is just about wore out trade it off and give the difference and say you made a good trade. Put your little schools together and you will make another good trade. I can tell you all it is just like running your farm with plenty of tools and without much team you can not do much. When you get your little school all together it is just like taking a handful of little sticks, one of them is easily broken, but put them all together and they are hard to break. By doing this you can get good teachers, and I find out that is the life of the school. Before the schools here were consolidated there was always confusion in the schools. Since we have tried it I can say for myself I would not take any kind of a price for it and do without it. When the school started the children didn't think they could go to such a school, but now they laugh about the little old schoolhouse and they say now they would not go back to it for anything. You have been feeding your pigs for a long time and I guess they are fine. Now let us give our children a better chance and see how they will do. When we train our horses we can get better prices for them and put more confidence in them; try your children the same way.

Yours truly

W. E. DEESE

October 16, 1916

DEAR SIR:

I am glad to write you a few words relating to our consolidated school at Orchard Park, for the system is very successful and the people who send children to the school find that every feature of the arrangement is much better than the former system.

We have a large, modern building with proper classrooms, gymnasium, good ventilation and heating, and all other features that should be found in an up-to-date school. There are fourteen teachers and the course includes four years of academic instruction.

About one hundred fifty children are brought in from districts in which the small schools have been abandoned. It was planned to keep the Windom school open for the children in the primary grades, but when the parents had an opportunity to compare the new building and superior instruction to be had there with that given in the smaller school, they were unwilling to have their children attend the small school. Our tax rate compares favorably with other academic districts.

At the start there was considerable outside opposition to the consolidation and maintenance of the consolidated school. This opposition has practically disappeared and the people seem to be generally satisfied.

I have held the position of postmaster for a number of years. At present I am engaged in the real estate and insurance business and have many opportunities of learning what people think on this subject. At one time I was principal of the local school and my daughter has taught school, so that I have been much interested in the questions that have come up.

Very truly

A. K. HOAG

Canandaigua, N. Y., August 22, 1916

DEAR MR DANN:

I received your letter asking facts about our consolidated school. I will answer as it looks to me. I think most of the people who send children to our district would say "Yes," quickly. It is an improvement over the old way. We have had our school one year and find we learn many things by

experience. Circumstances govern those. Transportation is the hard nut to crack, but it can be done and made a success of at that. We have three routes coming in here at an expense of \$900 yearly. Each driver has $2\frac{1}{2}$ or 3 miles one way, or nearly 6 miles to drive every day. Our school was closed only one day last year by bad roads. Last year we had a principal and two teachers; this year we are spreading out a little—a principal and three teachers; 70 pupils. This provides two years' high school work. The tax rate which covered running the school and retiring \$1000—the yearly payment we made on our building—was a fraction over \$8 a thousand.

I send one boy 12 years old to school—all I have. I am a farmer and also do road work.

Hoping this will be what you want.

Yours respectfully

FRANK A. HALL

Dansville, N. Y., R. F. D., 4, August 5, 1916

DEAR MR DANN:

A year ago three rural districts were consolidated with the Dansville High School district. Last autumn we hired two large inclosed auto buses to carry the children to and from their districts. These cost \$550 for the year. The children were, on the average, in them seven minutes a trip. In a remote district, we had a fire started each morning in the old district schoolhouse after the bad weather set in. A responsible woman built the fire and supervised the youngsters while there. This cost us less than \$25. We have a definite schedule for the arrival and the departure of the bus. We have it remain at the schoolhouse district five minutes.

The only trouble we had was in the beginning. We had to educate the driver that he had to live up to his schedule explicitly. We taught him this lesson by hiring an automobile to gather the children when he failed to arrive in time, and to charge the expense to him. The whole affair works beautifully now.

Very truly yours

J. M. FOSTER, *Superintendent*

Rolla, N. D., May 26, 1916

DEAR SIR:

Your letter of the 18th to hand and in reply have to say that we have had a consolidated school here for the last 15 years. Our school district is one township. We have four rigs to haul the children; one from each corner of the township school in the center; we haul all the children; two-room schoolhouse; two teachers; school starts from April to November. We pay \$40 to \$50 for the rigs; teachers \$55, \$60, \$65; children at school 65 to 70. Our taxes are 10 mills on the dollar; they are less than in some schools where children have to walk. The children learn better in our school than in the smaller schools. They go all the time. I have been on this school for 25 year and know how it goes. By all means get a consolidated school.

Yours truly

WILLIAM CRAIG, *Clerk*

Cando, N. D., June 6, 1915

DEAR SIR:

While I am pleased to reply to your inquiry of 28th ult., I feel it rather a task unless we assume that you know something of conditions in our West. The large farms—tenants with children one year, tenants without children the next. These two problems we met by placing our schoolhouse in the center of our civil township. Attendance has increased until now there are

36 children enrolled. The total number of children in one township! The school wagons are generally used in the consolidated districts throughout the state and are more or less satisfactory. We did not deem it advisable in our district, so voted the mileage system. We pay 10 cents a mile, one way, to each child each day he attends school—it would bankrupt a district to pay this amount under different conditions than ours. I know this pay system causes a better attendance, and if the parents do not realize this many of us do—that the regular attendance is working wonders with the children. In the three years we have paid transportation it has averaged probably \$170 a month. School wagons I believe are hired for \$75 to \$80 each a month. With us the \$170 is divided among the families of the district and almost everyone has an old horse and buggy whose use is not missed on the farm.

While everyone admits that the consolidated school does not solve the rural school problem yet it seems the most satisfactory solution yet presented.

I am a farmer. Have four children 12, 10, 8 and 7 years, respectively. Before we changed, the two older walked 20 rods to school—now they all drive two and one-half miles, yet their added interest and progress outrivals the inconvenience. I would like to suggest that you may find the consolidated schools of Indiana and Ohio more nearly like the conditions you must have in New York.

Yours very truly

GEORGE TIMMS

Montpelier, Vt., June 4, 1914

MY DEAR SIR:

In response to yours of June 1, I wish to say that consolidation has been going on in Vermont for nearly 30 years. Today there are within this small commonwealth over four hundred unused one-room school buildings.

At first transportation was not satisfactory but has gradually become so. In Montpelier all the schools of the township are consolidated and I have never heard of any complaint. In Fairfax, Vt., nine schools were closed and all the children were brought into the village school. In my opinion consolidation has been a success where it has been put in force.

Trusting this may be satisfactory, I remain,

Very sincerely yours

MASON STONE

Gary, W. Va., May 26, 1916

DEAR SIR:

In response to a request made by Supt. W. C. Cook, of McDowell county, W. Va., I am writing you concerning the workings of the consolidated school in Adkin district of McDowell county.

This school was established by bond issue in 1912. The building was erected in 1912-13, and was opened September 10, 1913. Three wagons were put into operation to carry the pupils from three towns at distances of one, two and three and one-half miles from the building. In some of these wagons only the four upper grades were so transported, and in others all ages of pupils were brought in. The consolidated system as we have it has always been satisfactory and we could not be induced to go back to the old system of one-room schools formerly in vogue.

Efforts are being made to effect more consolidation in other parts of the district which will no doubt be successful.

Yours very truly

C. H. ARCHER, *District Sup't, Adkin district*

Good Roads Aid Schools

One of the great agencies in the State for the proper administration of rural schools is New York's great system of improved highways. The movement to build a system of improved highways is of recent origin. It was inaugurated in 1898, only eighteen years ago, under the "Higbie-Armstrong" and the "Fuller-Plank" highway acts. In 1907, the people of the State voted to raise by the issuance of bonds \$50,000,000 to be used in the construction of improved highways. In 1912, the people of the State again voted to raise by the issuance of a second bond issue, an additional \$50,000,000 for the construction of additional improved highways. The highways which have been and which are to be constructed out of this enormous appropriation of \$100,000,000 are generally known as state roads. Approximately 12,000 miles of this type of roads have been designated to be constructed out of this fund. The report of the State Highway Commissioner for 1915 shows that, on January 1, 1916, about 8000 miles of state road had been constructed or were under contract for construction. This is about two-thirds of the entire mileage to be constructed. The same report shows that about \$75,000,000, or three-fourths of the entire appropriation, has been expended on roads completed or under contract for construction.

When these state roads are completed, the total amount of mileage will represent only one-seventh or one-eighth of the entire highway mileage of the State. In order to extend the improved highway system, the State has encouraged each town to improve its highways by providing a system of state aid. The State appropriates a fund which is apportioned by the State Highway Department to the several towns of the State for the improvement of their respective town highways. This fund is apportioned upon the assessed valuation per mile of road in each town. Under the statute regulating this subject, the towns of the State are entitled to receive annually about \$2,200,000. In addition to this sum, which must be expended for the improvement of town highways when it is once apportioned, each town in the State may raise by local tax, funds for the improvement of its highways. The report of the State Highway Commissioner for 1914 shows that the several towns of the State raised in that year the aggregate sum of \$3,340,000 for this purpose. If the towns should raise this sum annually, there would be invested each year in the improvement of town highways, \$5,540,000. The annual investment of such sum in constructing improved town highways of the type which have been constructed in many of the towns of the State would rapidly increase the mileage of improved highways in the State. In his annual report of January 1, 1916, the State Commissioner of Highways states that over 4000 miles of town macadam road and nearly 6000 miles of town gravel roads, or a total of 10,000 miles of improved town highways, have been constructed within the past few years. The combined mileage of state roads and of town improved roads includes about one-fourth of the total mileage of highways through the entire State.

It is the settled policy of the State to maintain a system of improved highways. The State not only will maintain the system of state roads which it has constructed but it may reasonably be expected that such system will gradually be extended. These roads have made rural life more attractive,

have made agricultural pursuits more profitable by bringing the farm in closer touch with the markets, and they afford those living in the rural regions the opportunity of enjoying the amusements and the social life of village and city. These roads have enhanced the value of all farms in the State which are located upon or near them. The construction of improved town roads has exerted a similar influence upon the conditions and life of the sections of the State through which they extend. For this reason, we may confidently expect that the maintenance of these roads and the rapid extension of such type of roads will be a permanent policy of the State in the development and maintenance of its highway system.

In this connection, consideration must be given to the recent action of the United States government on the question of improved highways. This subject is one in which the national government is certain to become permanently interested. Congress appropriated \$90,000,000 in July last for the construction of national highways. This sum was appropriated to be apportioned among the several states on condition that each state should duplicate the amount of its apportionment. This measure therefore provides for an expenditure within the next five years of \$180,000,000 for the construction of national highways through the several states. New York's share of this appropriation is about \$3,800,000. The act of July last made the initial appropriation but the interests of the national government in the subject have recently become so vital in many respects that it may reasonably be expected that the government has simply entered upon a great program in the construction of national highways and that other appropriations for the extension of this system of roads will follow.

Since the State entered upon the policy of improving its highways in 1898 there has been expended or authorized for expenditure for that purpose the following: revenue from bonds for constructing state roads, \$100,000,000; contributed by the State to the towns as state aid, about \$25,000,000; appropriated by the towns for town highway purposes, about \$80,000,000; New York's share of the appropriations made by Congress, about \$3,800,000. In addition to these items, a large amount of money has been raised and appropriated by the counties for the purpose of constructing and maintaining improved roads. The various amounts are rapidly increasing each year. The sum received as federal aid will in a few years be greatly in excess of the amount indicated above.

The amount authorized therefore for the construction of improved roads in this State within the last eighteen years exceeds the aggregate amount which all the cities and all the school districts of the State have invested in school buildings and sites. This great investment by the people, in good roads, should be utilized in every way possible to give a proper return thereon. These roads may be made one of the State's greatest agencies in the further development of her public school system. If these roads make the farms of the State more accessible to the markets because greater loads of produce may be hauled in less time and with greater comfort and less expense, such roads should also make the schools more accessible to the children of the State. If these roads permit families to drive twenty-five and forty miles even by automobiles, as many do, to attend a dinner party, a dance, a theater, a political meeting, or other forms of amusement in the evening without hardship, then surely such roads may also be

utilized to take children by automobile three or four miles to attend a school which will afford such children the school facilities to which they are entitled, without imposing a hardship upon them. Official reports in this Department show that 3000 schoolhouses are located on state roads and improved town roads or upon highways leading to such roads, so that these state and improved roads may be used by the children in traveling to and from school.

Through the courtesy of the Honorable Edwin Duffy, State Commissioner of Highways, the accompanying pictures of state roads and of town roads are given.

Previous to the inauguration of the movement for improved highways in 1898, the several towns of the State were divided into *road districts* on a plan similar to that under which the territory of a town is still divided into school districts. Each of these *road districts* was under the general control of an *overseer of highways* as each school district is now controlled by a *school trustee*. Each of the taxpayers living in one of these road districts was required to work on the road a certain number of days according to the assessed value of his property. Each male citizen above the age of 21 years was also required to work on the roads one day for a poll tax. The overseer of highways was authorized to warn all persons or corporations required to work on the roads to come to such place on the road, at such time and with such implements as such overseer designated. Those who are familiar with the method of "working the roads" which prevailed under such system know how much time was wasted and how the roads deteriorated. Under the act of 1898, towns were allowed to abandon the old labor system or the plan of each person working out his time on the road and to adopt the money system by which the town appropriated a sum of money for improving the highways. The State encouraged the adoption of this plan by appropriating to each town an amount equal to 25 per cent of that which the town raised. In a period of ten years, 650 out of 933 towns in the State had adopted the money system. The plan had by this time become so generally acceptable and satisfactory throughout the State that the old plan or labor system and the old office of overseer of highways were abolished and the money or tax system made mandatory and a new officer, known as town superintendent of highways, created. This officer has supervision of all repairs and construction of the highways of the entire town.

The old labor system of working the highways was the system of a century ago but it *did not* provide means of transportation equal to the demands of the present times. Those living in the country succeeded in getting over these roads when necessity compelled but such roads did not provide the facilities required by farmers for such traveling as they were compelled to do. The district schools still provide an education for the children living upon the farms but not of that type to which they are entitled and which the commercial and industrial interests of the State demand. When the Legislature abolished the plan of our fathers in building and maintaining roads and the time-honored office of overseer of highways and *pathmaster*, as he was often called, that body was not guilty of an invasion of the home rule doctrine or of undemocratic conduct. The initiative in the general movement was given to each town and as soon as

the people of the town saw the advantages which would accrue to them by an adoption of a modern and businesslike method, they voluntarily adopted it. Since that time, the people living in the rural districts have built 10,000 miles of improved highways. The consolidation of schools should be determined by the people of each town and when they realize the advantages to be derived from such type of schools the people will provide them.

It is quite as important to the agricultural interests of the State that good schools shall be maintained as it is that good roads shall be maintained. Facilities to give the children living upon the farms, who are to be the future farmers of the State, an education which will properly prepare them for their work, is an asset as vital to farming interests as the construction of good roads to enable the farmers to reach market and to serve other necessities. If it was not an invasion of the doctrine of home rule to substitute the money system of working roads for the labor system and to abolish road districts in a town and to substitute town superintendents of highways for overseers of road districts in order to provide an adequate system of improved roads, why can it be considered an infraction of the doctrine of home rule to substitute a town board of education for the district trustees, place the maintenance of schools upon the administrative unit of the town instead of the district and confer upon the people of the town the right to determine how many schools the educational necessities of the town require in order to provide an adequate system of improved schools? Are roads of more importance to the farm than schools? Is the *marketing of produce* grown upon a farm of more importance to the farm than *educating the children* living upon the farm?

The adoption of the township bill in the administration of rural schools will aid in improving the school facilities of rural New York as much as the present system of maintaining roads has aided in improving the highways of New York over the plan in vogue for a century preceding the adoption of such system.

The adoption of the township system of schools will produce a spirit of cooperation between the town board of education and the town superintendent of highways which will result advantageously to the system of improved roads as well as to the schools.

State Agricultural Society Indorses Township System

At the annual meeting of the New York State Agricultural Society in 1915 the following action was taken in reference to the township system:

Report of Committee on Agricultural Education

DEAN H. E. COOK

Your committee has indorsed the report of the special committee on agricultural unification, and asks the privilege of making their report a part of the report of this committee.

Your committee also recommends to the careful consideration of this society the proposition to change the unit of administration of the rural schools of the State from the district system to the township system. Inequalities in taxation, for education particularly, exist under the antiquated plan of the school district system. The modern idea now prevails to a large

extent, in a majority of the best farming sections of the country, of bringing more pupils and more property to the support of a single school so that the work of such school may be graded, better teachers employed, adequate equipment provided, and the schools of the farming sections made the equal of the city or village schools. Your committee believes that the township system worked out on proper lines would result in a economical administration of schools affairs in the rural regions, as well as providing not only school facilities necessary for the proper development of the educational interests of the State, but an enlarged use of school plants throughout the agricultural sections for community purposes.

MR SCHRIVER: I move a division of the subject and then move the adoption of the report of the first committee on unification of agricultural education.

THE PRESIDENT: It is moved and seconded that we divide the subject of Dean Cook's reports and vote for the adoption of the first report which is the report on the correlation of the agricultural educational subjects.

Carried.

MR. SCHRIVER: In order to bring it before the body parliamentarily, I move the adoption of the second report.

Motion lost.

DEAN COOK: Would I be out of place in asking for a more positive vote on the township system? If I ever saw a weak vote on both sides, it was expressed by this audience. If the subject is worth our attention at all it is worth putting some positive stamp on it. Let us show where we stand on a question that is bound to be important in the next few years in our rural communities.

MR FRASER: I honestly do not know how to vote on it. I judge we have a committee that has been working hard and that are interested, but personally I do not know how to vote on it.

THE PRESIDENT: I think Mr Fraser expresses a somewhat general feeling or condition. The chair will consider any resolution.

DEAN COOK: I should like to move for a reconsideration and give us a chance to vote on the two questions involved.

THE PRESIDENT: The Chair believes that a brief statement of just what the township proposition is, would probably clarify the matter a little in the minds of some people who have not given it much study. My understanding is that the proposition is to create in the township a township board to take the place of the direct school boards as we have them now, leaving the disposition of the schools entirely in local hands. This would make it possible for the town board to combine two or more schools in one if that seems advisable, and at the same time it would be left to the discretion of the board to continue other districts where they are now organized. The board would have the privilege of leaving the matter just as it is now, the only difference being that there would be a township board instead of a school district board, and that such board would have the authority to combine certain schools, if that seemed the best plan.

MR GILES: Unfortunately, I was out of the room and only came in just at the close of this report. It seems to me that we are not going at this just right, and, since it is open for reconsideration, I believe what I shall say will be in order. This committee has done a large amount of work at your direction. I think it is entirely right and proper to accept the report of that committee without adopting any part, and then take up the different recommendations for adoption or rejection. Let us accept it, and then it becomes our property and we can discuss it and settle it in a parliamentary manner.

THE PRESIDENT: Shall we reconsider the question?

Motion seconded. Carried.

THE PRESIDENT: The Chair will now consider a resolution on the question as it originally stood.

MR GILES: I move that the report of this committee be accepted. By that I mean it then becomes our property and we can take the questions up separately, and the body take care of them.

Motion carried.

THE PRESIDENT: Is there anything further at this time? I might say that I think the usual way would be for the matter to come in as a resolution and go to the committee on resolutions. If the Chair might, it would suggest that this be done in this case.

MR VAN ALSTYNE: It seems to me that the matter is clearly before us, and that we should dispose of it now. I move that this society accept or adopt the proposition of the township school as outlined by Doctor Finegan yesterday.

Seconded.

THE PRESIDENT: I think that the resolution should be put in writing and submitted to the committee on resolutions.

MR SCHRIVER: Is there any objection to our continuing in the way we once started, proceeding with the adoption of the first report?

THE PRESIDENT: It has been adopted.

MR SCHRIVER: What did the reconsideration involve?

THE PRESIDENT: The second question.

MR SCHRIVER: I move that we adopt the report as presented by the chairman of the committee.

MR GILES: I appear to discuss this question under some embarrassment, as I am not quite ready to be recorded. I am a little like Mr Fraser. We certainly had a very illuminating discussion yesterday by Doctor Finegan, and one that probably carried conviction to some doubters. In round terms Dean Cook has said, and Doctor Finegan approved, that we stand for the township system. But there are many details that have to be worked out before we can act intelligently. We have relegated to ourselves in a way, for the time being, duties of assistant legislature, and we would not want them to pass a bill without a first, second and third reading. We understand a bill is to be introduced. We do not know how these schools are to be supported. We do not know how the present indebtedness will be handled. I do not want to see a reform movement stopped. I am very confident in the opinion that neither this state society, nor any of us as individuals, are sufficiently posted on the whole details of this plan to pass now an arbitrary resolution to send to the Legislature, stating that we will adopt the township system. It may be coming. If it is coming, let us go carefully. I am opposed to this society passing this sweeping resolution now that ties us to a system, the details of which we do not know. I shall vote, no.

MR VAN ALSTYNE: I have always been an opponent of the township system of schools, but as I said in conversation with Doctor Finegan yesterday, I have become converted. There are some details I do not know about and that I am not clear on, but it seems to me that this body is not called upon at this time to pass upon details—that is not our function in regard to any matter. As I understand it, we are only called upon now to pass upon and approve the principle of the township system and the system of the town board of trustees, which to my mind is certainly sound. Our district superintendents are very good, but it must be apparent from what Doctor Finegan said, that an immense amount of power is in their hands; not too much power if they are the right men, but a great deal too much if they fail to come up to that standard. With the system of the township trustees, it seems to me that is avoided. I believe we must have something

better. Here is a plan presented, apparently economic, that has been worked out in other places, and we are simply asked now to vote on our approval of the township system as a whole. I believe the principle is sound and I think that the majority of people so believe. The details can be worked out later.

MR WEED: I believe Mr van Alstyne has brought out the proper point. We are not concerned with the details. The report of the committee simply says that they approve the township system as an abstract thing. We are not called upon to approve any special township system, but that we believe the township system is better than the supervisory district system. I am fully convinced that it would be better in the district where I live. We have, I think, 9 pupils on our school roll at present. There were 18 last year and I think our average attendance was about 7. We can not afford to pay the teacher we would like to have to teach those pupils. If the whole enrolment comes, there are but 18 pupils, ranging from 6 to 16 years of age. It is a pretty hard thing to get one teacher competent to teach them. It is not a specific plan but the general plan which we are called upon to approve.

MR TUTTLE: I think there is a misapprehension here on the part of some, that if we adopt the township system we are going to do away with the school superintendent system. This is not true. Doctor Finegan said that the school superintendent could supervise the fewer schools after consolidation much more efficiently than he could supervise the large number of schools under the present district system. It does not do away with the superintendent at all. It means the consolidation of certain schools, making perhaps one instead of four. Misapprehension should not be in our minds when we vote on this question. I think that this question is one that ought to be referred to the Association of School Superintendents. They are the men who visit all of these district schools. They know their own territory absolutely and perfectly, they know the requirements of the schools and the communities, and the feeling of the people in those communities. I wish to amend the motion which is before us by making a motion to amend this way, "That this question be respectfully referred to the Association of School Superintendents of this State," and let them confer with the Education Department on this subject.

DEAN COOK: It seems very unfortunate—we are dealing with legislative problems and education problems, soil problems, and all the problems incident to our life, and I do not understand that this is a school of agriculture, a legislature, or an education department. If our good friend's position were sound we can eliminate all of our work and refer it back to the organizations that deal with these subjects.

THE PRESIDENT: If Dean Cook would allow the Chair to say, the amendment has not yet been seconded.

All in favor of the adoption of the report on the township system, signify it by rising.

Carried—30 to 13.

Report of Committee on Common Schools at the Annual Meeting of the State Grange, February 1916

Worthy Master and Patrons:

Your committee on common schools desires to make the following report:

There were six resolutions presented to us, all of which pertained to the matter of the township bill no. 1731 which involves as paramount features the abolition of the present school district officers without affecting in the least the present district boundaries and establishing town boards of edu-

cation, also making a uniform tax in all districts of a town. All of these resolutions were read and reread, giving them the most careful consideration.

There were, also, four resolutions offered to the committee to amend section 129 of article 5 of the Education Law of this State, which gives district superintendents authority to change the boundaries of rural school districts.

We held a public hearing on all resolutions, which was largely attended, and at which the questions were discussed at great length by many interested people.

Practically all were substantially in favor of the township bill, as it is termed, becoming a law, but in a modified form from the bill as drafted a year ago.

On account of the wide divergence of opinion on a few of the salient points of this bill and chiefly because of the evident misunderstanding throughout the State of this extremely important matter, your committee deemed it the very best of wisdom to not take any definite action upon this bill, or resolutions offered, but to continue the action of the State Grange at its last meeting upon this measure for another year, and in the meantime provide a way in which every grange in the State may have the opportunity to study the bill as drafted at present and suggest any changes that they may consider as being for the best interests of the State at large.

The prevailing sentiment relative to the education law seemed to be in favor of the resolutions presented, but since the matter of the township bill was not definitely acted upon the committee unanimously thought best that all action upon pending measures of this body be deferred for one year.

Your committee, however, desires to recommend to your honorable body the following resolution, which we beg you to accept:

Resolved, That the so-called township bill as indorsed by the State Grange last year be left as it is until our meeting in 1917.

And that *Whereas*, Every year there is always so much work to be done on common schools and educational matters, that a permanent standing committee be established consisting of three members, each to serve for a term of three years, except the first one, when one member shall serve one year, another for two years, and the third for three years, making it necessary, after the first year, to have one appointment each year.

And *Whereas*, There is quite a general misunderstanding of the present bill in all parts of the State, that this committee cause to be distributed to all granges of the State circulars definitely explaining all important features of the bill.

It is also recommended that all subordinate granges devote at least one lecturer's hour to a consideration of the bill and afterwards present their resolutions containing reasons why they are for or against the bill to their pomona grange, at some time before December 1, 1916; that each pomona grange shall draw up resolutions from those submitted by the subordinate granges and send same to the chairman of the standing committee on common schools and education of the State Grange, that said committee may be able to formulate some resolutions in accordance, as much as it is possible and feasible, with the wishes of the farmers of New York State and have them presented to the State Grange in 1917.

Whereas, The township school bill will undoubtedly be considered by the present State Legislature, and

Whereas, It is an undisputed fact that there is urgent need of improvement of the country school system, and believing this bill is a step in the right direction; therefore be it

Resolved, by Arkwright Grange No. 1249, that the bill be passed as approved by the New York State Grange.

MRS BERTHA SNOW, Sec'y

Whereas, Section 129 of the Education Law of the State of New York gives a district superintendent unjust and practically unlimited power in changing school boundaries, dissolving and consolidating school districts, etc., and

Whereas, The State Commissioner of Education is requesting the district superintendents to make such consolidations as named in section 880 of article 34 of the same law, as the only persons to whom an appeal can be made, and

Whereas, The only relief from any order of a district superintendent is an appeal to said Commissioner of Education, and whose decision upon such appeal is final, thereby giving him more power than should ever be vested in any one official; be it therefore

Resolved, That the State Grange go on record as being in favor of immediate legislative action permitting any school district whose appeal from the act of a district superintendent changing school boundaries has not been allowed, the right to take their case into court to be tried by a judge and jury, and be it further

Resolved, That we favor the repeal of section 129 and also an amendment of section 880 of the Education Law making the decision of the Commissioner of Education upon any appeal provided for by said section subject to review by the courts.

Whereas, Section 129 of article 34 of the Education Law of this State gives a district superintendent an unjust and unlimited power in the changing of boundaries of rural schools, and

Whereas, District superintendents in many cases have made changes that are causing unnecessary expense to the farmers, and

Whereas, Sections 880 and 881 of article 34 of the same law are unfair and unconstitutional and give the Commissioner of Education more power than should be vested in one man, be it therefore

Resolved, That we ask the State Grange to make an effort to have section 129 of article 5 and sections 880 and 881 of article 34 of the Education Law repealed and a new section enacted giving all school districts that have had an appeal before the Commissioner of Education in regard to the changing of school district boundaries the privilege of taking their cases into court to be decided by a judge and jury.

Whereas, Section 129 of article 5 of the Education Law of this State gives a district superintendent an unjust and unlimited power in changing the boundaries of rural schools; and

Whereas, District superintendents in many cases have made changes that are causing inconveniences and unnecessary expense and hardship to the farmers of this State; and

Whereas, Sections 880 and 881 of article 34 of the same law are unfair and unconstitutional and give the Commissioner of Education more power than should be vested in one man; be it therefore

Resolved, That we ask the State Grange to make an effort to have section 129 of article 5 and sections 889 and 881 of article 34 of the Education Law repealed and a new section enacted giving all school districts that have made an appeal to the Commissioner of Education in regard to the changing of school district boundaries the privilege of taking their cases into court to be decided by a judge and jury.

Resolution offered by Conesus Grange No. 1195; indorsed by Springwater Grange No. 1245:

Whereas, The proposed law uniting rural schools would work a hardship upon the pupils of said schools of the State of New York, and

Whereas, It would place said schools in the hands of politics, and

Whereas, There would be grave danger of abuse of power by the proposed directors, and

Whereas, It would tend to materially increase the taxes of said rural districts; be it therefore

Resolved, That we ask the State Grange, an organization of rural people, to place itself on record as opposed to this bill and to do everything honorable within its power to prevent its passage.

Lockport, Jan. 8, 1916

Since we, the members of Niagara County Pomona Grange, have carefully considered in the light of conditions as they exist in our county, the communication from the State Grange legislative committee dated November 5, 1915, and calling our attention to the proposed amendment to the Education Law by creating town boards of education and providing for the support and maintenance of schools in towns, and since we believe

1 Such an amendment would complicate too much the organization of the schools of the towns, and

2 It would be difficult to elect a school board of seven in a town to perform thoroughly without salary the several duties outlined for it in this proposed amendment, and

3 That, if time should prove the necessity of remuneration for the services of this school board, it would make the office political, and would mix with politics the administration of the schools of the town, and

4 That the present administration of the schools is adequate under the trustee system with the efficient and thorough supervision of the district superintendent of schools.

Be it, therefore, *Resolved*, That we recommend to the New York State Grange that it use its influence to oppose in every legitimate manner possible the enactment into a law of the proposed bill no. 1731 to amend the Education Law of the State of New York.

[Signed] C. F. TREICHLER, *Master*
FRED COZZENS, *Secretary*

Resolved, That the New York State Grange is in favor of asking the State Legislature that no action be taken on the so-called township or consolidated school system at this session of the Legislature, but that each subordinate grange be requested and urged to study the subject, and that our state lecturer be requested to aid each subordinate grange lecturer in presenting the subject for study and consideration.

Resolved, That we express our appreciation of the work done by our legislative committee in this matter during the past year.

Resolution offered by B. T. Ball:

Resolved, That the Department of Education set a standard for all rural schools.

1 Any school not measuring up to the standard to be absorbed by another or other schools that do meet the requirements.

No school district having the ability and disposition to maintain a first-class school to be absorbed by another or other districts under any circumstances.

2 Such districts to have three trustees, a district clerk, and a treasurer. All to be elected at the annual school meeting.

3 Joint teachers and trustees conventions to be held annually in each supervisory district.

Trustees must attend such conventions.

Trustees' expenses to be paid from the school funds.

4 District superintendent to have not more than fifty schools under his charge.

He to visit each school at least one-half day each ten weeks.

5 Uniform blanks and books to be furnished by the State for the district officers.

Such blanks and books to be inspected by the state officials.

Such blanks and books to be kept in a place provided for them in the school building.

6 Every school to have sanitary toilets under same roof with the rest of the building, also approved light, heat and ventilation, also ample playgrounds.

7 All moneys for the general running expenses of the school to be raised by the county as a part of the regular county tax and paid to the district treasurer.

State moneys to pass through the county treasurer's hands.

Amount paid to the district treasurer to be based on the number of teachers in the district.

Individual districts may raise by special school tax any sums above what come from the county that may be wanted for any purpose.

8 Textbooks to be furnished by the county.

We, the undersigned committee of the Oswego County Pomona Grange, have carefully examined Assembly bill no. 1731, entitled an act "To amend the Education Law, by creating town boards of education and providing for the support and maintenance of schools in towns," introduced in the Assembly March 17, 1915, and we have also carefully studied the memorandum prepared by State Master Vary and State Secretary Giles, dated at Watertown, November 5th, 1915.

We believe that the common schools of the towns should be placed on a more uniform basis; that the teaching ability can be made more effective; that uniform textbooks should be provided; that supplies should be purchased more cheaply; and that the burden of taxation should be more equitably distributed. In accomplishing these important changes the farmers and the rural population should be very vigilant and watchful that home rule be conserved and not surrendered. We should hold a steady and firm hand lest we fall in the tide of centralization of power and unconsciously delegate to more remote powers the underlying principles of our government—the right of having a voice in our homes and a hand in governing our community. Let us not be governed by future promises, but let us exercise our independent thought and determine just what we must surrender and just what we shall gain.

Would we not obtain greater home rule if it is provided that the voters in the present school districts elect trustees as at present, that the trustees so elected prepare estimates of the amounts of money which will be required to operate the school, that the voting inhabitants have a voice in whether or not the school shall join with another either permanently or otherwise, that the trustees shall be the custodians of the school district property and have a voice in recommending needed supplies and repairs, that the trustees so elected meet at a central point and elect a town board of education?

Would it not provide a greater degree of home rule for the rural taxpayer if all union school districts be excluded from the proposed act instead of villages having a population of 5000 or over? Why make the town system of school taxation more extended than the town system of highway taxation whereby the incorporated villages are excluded? Why should the rural population assist in maintaining the high schools in incorporated villages any more than they should assist those localities in paving their streets?

We respectfully submit the foregoing for careful consideration.

Resolution submitted by Past Lecturer Lewis County Pomona Grange:

Whereas, It is generally conceded that the rural schools have carried the United States safely for over 100 years and that it would be far better and safer for the towns and cities to carry their own children out into the country district schools and keep them in school there, thereby avoiding the saloons and the dancing houses that are in the cities, as we all want our

people and our children to keep clean bodies, clean hearts and clean souls, which, if we can have but one, is far better than a college education. The country people are saying we can and we will keep our country district schools and woe to the politician that works against us. The districts that today have but few scholars may in four or five years have between twenty and thirty scholars. In the Stiles district four times in the last fifty years that school has gone down to two, three and four scholars, and in a few years there were between twenty and thirty scholars. In the Stiles district recently one boy passed the eighth grade before he was 13 years old and had taken the college arts course in Lowville Academy nearly one year before he was fourteen years old. In that Stiles district 47 years ago Mary Stiles, Jared Stiles' only daughter, went to the State Normal School at Oswego and entered the State Normal School one year in advance, right from that country district school, and every country district school in this, our great State, the greatest and best state in the whole United States, can do just as well if the trustees try as hard as those trustees to hire first-class teachers. And as the farmers learn to do intensive farming instead of extensive farming and the large farms are divided into small farms, we will have more families and more scholars; then we will need our country district schoolhouses and schools more than we ever have before. Therefore,

Resolved, That we will keep our country district schoolhouses and schools just as they are. Only we demand that there be money appropriated to help build better schoolhouses and we also demand better teachers.

Respectfully submitted

Report adopted.

*Report of Subcommittee on School Taxation to State Association
of Tax Officers*

January 5, 1917

Hon. Ogden L. Mills

*President, New York State Tax Association
15 Broad street, New York City*

MY DEAR SENATOR:

The subcommittee appointed by you to consider the subject of school taxation has held two meetings and reached a unanimous agreement upon a report.

The committee begs leave to report as follows:

It would be difficult to construct a system of school taxation the operation of which would result in greater injustice and inequality of taxation than the present school districts system. There has been no material change in the system of taxation for school purposes in this State since schools were established more than a century ago. When schools were first organized any group of citizens who desired to associate themselves together

for the purpose of maintaining a school could do so, without reference to the assessed valuation of the property involved. The schools established by these associations were later formed into school districts and, in the formation of such districts, no consideration was given to the number of children for whom school facilities were to be provided, the amount of territory embraced in the district, or the amount of assessable property which would support the schools. As the country became settled and the population increased, other districts were formed simply to meet a local necessity.

There are now more than 10,000 school districts in the State, outside of the cities and villages. More than 8000 of these maintain one-room schools and in about one-half of such schools the average attendance is less than ten. In about 1500 of these districts the assessed valuation of all property in the district is less than \$20,000. This means that five farms of an average value of \$4000 each must bear the burden of taxation for the support of a school. More than 2000 other districts have an assessed valuation ranging from \$20,000 to \$40,000. In these 2000 districts ten farms of an average value of \$4000 each must support a school.

The two essential elements for the maintenance of a school are the children to be educated therein and the property which must support it. The number of children attending the schools in the districts to which we have referred and the value of the property which must support such schools make it impossible to maintain good schools in these districts. There are, therefore, more than 3500 school districts in which it is not possible to maintain a satisfactory school. It is a fundamental principle that inequality of taxation for governmental purposes in any division of government results in an inequality of the services administered under such government. It follows that inequality in taxation for school purposes means an inequality in educational facilities and opportunities.

Your committee examined the official reports of the superintendents of several of the counties of the State and found it to be the general rule that one district would have an assessed valuation, for instance, of \$15,000 and an adjoining district in the same town would have an assessed valuation of \$150,000. It often occurs that the district having the low assessed valuation has more children to educate than the district having the large assessed valuation. This inequality of taxation is well illustrated by the following official reports of the tax rate for school purposes:

<i>District</i>	<i>County</i>	<i>Tax rate</i>
2 Peru	Clinton00099
13 "	"02253
6 Tompkins	Delaware010
16 "	"044
6 Hancock	"01065
21 "	"05177
6 Evans	Erie002
14 "	"0055
8 Brighton	Monroe00209
9 "	"00253
9 Phillipstown	Putnam01580
14 "	"00253
4 Canandaigua	Ontario00835
1 "	"00368

<i>District</i>	<i>County</i>	<i>Tax rate</i>
3 Phelps	Ontario00192
14 "	"00604
7 Edwards	St. Lawrence017
9 "	"00389
1 Rossie	"0144
8 "	"00399

Similar illustrations for every town in the State could be taken from the official reports which have been filed in the Education Department by superintendents of the several supervisory districts of the State.

The present system of taxation for school purposes not only results in an inequality of taxation and in providing inefficient schools but it is also wasteful in its operations. Thousands of dollars are wasted every year under this system of collecting taxes for school purposes. In some districts taxes remain uncollected, in others proper returns are not made, in others, through the negligence and improper qualifications of officers or for other reasons, school taxes which are collected are not paid into the treasury. It is impossible to establish a bureau which could organize an effective supervision of the collection of taxes in the 10,000 school districts of the State. The expense of such supervision makes it prohibitive.

There are nearly 14,000 separate officers charged with the duty and responsibility of levying and assessing taxes for school district purposes. There are also nearly 10,000 officers charged with the duty of collecting taxes for school purposes.

If the basis of administration for school purposes should be established upon a larger administrative unit better business methods would prevail in the assessment and collection of taxes, much waste of funds would be avoided, the inequality of taxation now prevailing would be eliminated, the burdens of taxation for school purposes would be more fairly distributed and the inefficient schools now maintained could be placed upon a basis which would serve the interests of separate communities to a much greater extent.

Your committee also examined the provisions of the bill introduced into the Legislature of 1916 by Assemblyman Machold of Jefferson county and reports that in the judgment of its members the township bill proposed therein as a substitution for the present school district system would result in more efficient schools, in economy in the administration of such schools and in a just and equitable system of taxation. Under the terms of such bill a town school board, selected by the voters of the town at a special school election, prepares a budget for the schools maintained in the town. This budget is to be presented to the board of supervisors at its annual meeting and such board is to provide for the levying and collection of such taxes at the same time and in the same manner as all other town taxes are collected. The unit of taxation for all local governmental purposes is the town. If the plan proposed in this measure should be adopted the assessment of taxes for school purposes would be on the same basis as taxation for all other local purposes.

The committee recommends the indorsement of the proposition making the town the unit of taxation for school purposes in accordance with the plan outlined in this bill.

Respectfully submitted

THOMAS E. FINEGAN

OTHO G. CARTWRIGHT

JULIUS A. ROBERTS

H. J. COOKINGHAM, JR

Committee

*Resolution adopted by the Seventh State Conference on Taxation,
held at Rochester, N. Y., January 11 and 12, 1917*

Whereas, The present system of taxation for rural schools is wasteful in its operation and unequal in its burdens;

Whereas, The present unit, the rural school district, finds in one instance a small unit with large property assessments, and an adjoining unit with small property assessment, and,

Whereas, Justice demands that all the property of the town should bear equally the costs of all the schools of the town; therefore

Resolved, That this association indorse the proposition to make the township the unit of taxation for school purposes.

*Two Annual Meetings of State Grange Have Indorsed Township
System*

At the meeting of the State Grange in 1915 the following action was taken by that organization relative to the township bill:

The following resolution was offered by Mr C. M. Pierce:

Resolved, That this New York State Grange is in favor of making the town the unit of taxation for school purposes, with a town school board, but is not in favor of a general consolidation of rural schools at present.

The committee on common schools was unable to reach a unanimous decision on the above resolution and presented the following resolution, which was adopted by the grange:

Resolved, That the New York State Grange is in favor of making the town the unit of taxation for school purposes, provided that all incorporated villages are excluded from said unit. That we are in favor of a town school board of from three to seven members, to be elected by the voters at an annual school meeting. This board shall serve without salary, and shall have the same powers and duties as the present trustee or board now have in their respective districts, but this law shall not wipe out existing school districts nor change their boundaries.

The following report of the standing committee on common schools, of the State Grange, will be of interest to every rural school district in the State. It was adopted without a dissenting vote at the meeting held in Oneonta, February 9, 1917:

Your committee has made a careful study of the report of the standing committee on education and common schools of the State Grange, and has made full use of the excellent work done by that committee during the past year. It has held lengthy hearings, at which all interested were permitted

to be heard; 30 persons appeared and spoke, either as individuals or as representatives of their granges. It has examined with care all the resolutions submitted to this Grange on the subject of rural schools, by pomona and subordinate granges of the State, and has given due consideration to the same, and offers this report as a substitute for such resolutions.

As a result this committee is unanimous in its belief that the welfare of the rural schools of this State demands a change in the methods of administration, to the end that the burden of the same may be more equitably distributed and the authority for the administration of the schools may be lodged in the hands of the people who support them and patronize them.

It found, it is true, a considerable diversity of opinion on many matters, and that it would be impossible for any individual or set of individuals to secure all those things which they would desire to see incorporated in new school legislation. In fact, every member of this committee has found it necessary to surrender some of his personal views in order that a working compromise might be reached. But this has been cheerfully done because we realize that some legislation is desirable and necessary; that the State Grange should have a voice in such legislation, and that to further delay action would not only be neglecting an obvious duty, but would undoubtedly lessen the future influence of the Grange in this and other matters.

Therefore we recommend that legislation be passed making the town the unit of school organization and taxation. In the formation of such legislation we regard the following principles as fundamental:

1 We believe that the power of consolidating schools should rest entirely in the hands of the people. Therefore we recommend that such power shall be taken entirely from the district superintendent and the State Department of Education, and that no consolidation order shall hereafter be effective until confirmed by the board of education of the town or towns in which these districts are located.

2 We recommend that in towns having four or more districts, or school units, not more than two members of the board of education shall be chosen from any one district. And in those towns having only three districts, a majority of the board shall not be chosen from any one district.

3 We recommend that any bill passed shall contain a provision whereby local school authorities may establish in the rural communities schools adapted to the needs of such communities, with adequate provision for instruction in agriculture and homemaking; these schools to receive such state aid as will make possible their development without a tuition charge or an excessive tax rate on the town.

4 Whereas, the use of many different kinds of textbooks is now a matter of inconvenience and unnecessary expense, we recommend that any bill passed shall contain a provision for uniform textbooks throughout each town to be adopted by the board of education.

5 We recommend that the board of education shall not expend in any one year for the construction of new buildings or the remodeling, improvement or enlargement of existing school buildings, an amount in excess of one-half of 1 per cent of the assessed valuation of the town, and in no case in excess of \$5000, without a vote of the qualified school electors of the town.

6 Whereas, experience has shown the present method of electing district superintendents of schools to be unsatisfactory, we recommend that such officials be elected at a joint meeting of the members of the town boards of education in each supervisory district.

7 We recommend that the town board of education shall consist of the trustees elected by the several districts in the same manner as at present, the board to choose its own chairman and appoint its own working committees, and that in submitting to the school electors the names of persons to be voted for as members of the board of education the connection of any political party designation with such name shall be absolutely prohibited.

8 Whereas, it is impossible for your committee to include in its report all the numerous details entering into a measure of such importance as a law on the subject now under consideration, we recommend that S. J. Lowell,

state master, and W. N. Giles, state secretary, or their successors as legislative committee, be a committee to represent the State Grange of New York in the framing of a law for the government of the rural schools of the State; and we ask them to secure the incorporation in such measure of the principles above set forth, and in other matters to secure what they believe, in their judgment, to be for the best interests of the rural schools of the State.

Tax Rate in One District

District Superintendent Pierce of the third supervisory district of Erie county has submitted the following statement in relation to the average daily attendance, cost per pupil and tax rate for the several districts under his supervision:

Aurora			
Dist. no.	Average daily attendance	Cost per pupil	Tax rate per M
1	492	\$52.59	\$8.92
2	57	20.00	8...
3	10	47.23	3.30
4	22	26.49	4.11
5	28	19.45	6...
6	8	57.11	4...
7	11	53.93	5...
8	41	36.58	8.53
9	16	28.28	6...
10	17	30.33	5.40
11	11	42.14	5.80
12	14	37.55	6.86

Average rate for town \$5.99

East Hamburg			
Dist. no.	Average daily attendance	Cost per pupil	Tax rate per M
1	271	\$47.50	\$9...
2	19	29.07	3.06
3	28	32.94	5.50
4	37	15.08	6.29
5	18	36.13	3.09
6	25	25.12	3.55
7	19	32.31	8...

Average rate for town \$5.50

Elma			
Dist. no.	Average daily attendance	Cost per pupil	Tax rate per M
1	9	\$58.93	\$4...
2	13	49.03	5.80
3	22	28.21	4.80
4	15	36.94	2.84
5	15	34.09	3.89

Dist. no.	Average daily attendance	Cost per pupil	Tax rate per M
6	30	133.16	18.03
7	44	42.31	6.11
8	43	26.69	7...
9	10	48.27	2.50
10	23	38.19	5...

Average rate for town \$5.99

Marilla			
Dist. no.	Average daily attendance	Cost per pupil	Tax rate per M
1	37	\$33.63	\$9...
2	13	38.26	6.50
3	26	21.15	9...
4	11	42.26	7.50
5	23	22.40	4.50
6	23	23.22	6.54
7	21	28.90	6.50
8	16	35.20	10...
9	23	20.33	8...

Average rate for town \$7.50

Wales			
Dist. no.	Average daily attendance	Cost per pupil	Tax rate per M
1	10	\$43.00	\$6.90
2	23	26.32	5.50
3	12	40.20	7.30
4	6	80.57	7.50
5	45	23.98	5.40
6	5	94.30	6.32
7	18	28.68	6.50
8	32	20.72	4...

Average rate for town \$6.18

^a Cost per pupil very much above normal for the reason that the district is paying for new building and equipment in two installments

Attention is directed to the fact that in one district in the town of Aurora the tax rate a thousand was \$3.30 and in another district it was \$8.92, while the average for the town was \$5.99. In East Hamburg the tax rate in one district was \$3.06 a thousand and in another district it was \$9, while the average for the town was \$5.50. In Elma the tax rate in one district was \$2.84 a thousand and in another district it was \$7, while the average for the town was \$5.99. In the town of Marilla the tax rate in one district was \$4.50 a thousand and in another district \$10, while the average rate for the town was \$7.50. In the town of Wales the tax rate in one district was \$4 a thousand and in another district \$7.50, while the average for the town was \$6.18.

The effect of the township system on the question of taxation would be to equalize the cost of maintaining the several schools in a town. The poor, weak districts which are now burdened with taxation for the maintenance of school would be relieved to the extent of paying only their proportionate share for school taxes. Illustrations similar to these could be given for every town in the State.

Opinion of Legislative Committee of State Grange

Watertown, N. Y., November 5, 1915

To the Subordinate and Pomona Granges:

The Committee on Legislation of the State Grange incloses herewith copy of the proposed township bill which was before the Legislature of 1915. The committee participated in the drafting of this proposed bill and gave the measure approval. We desire to call the attention of the granges of the State to some of the principal features of the bill. We ask all granges to examine this bill and to suggest amendments which will improve it. Your attention is especially called to the following provisions:

1 This bill may well be called a home-rule measure in rural education. It confers powers in relation to the management and control of rural schools, which are now exercised by district superintendents and the Department at Albany, upon the people themselves and upon representatives which the people may choose at local school elections. The committee regards this as one of the strongest features of the bill.

2 Not a single school district in the entire State is disturbed in any way by this bill. Not a single district is consolidated with another district. The boundaries of no district in the State are modified in any way whatever. Every school district now in existence is continued under this bill as such district is now formed.

3 The bill proposes to substitute for the various local trustees of the several districts of a town, a town board of education. This board is to be chosen by the local school voters of each town, at a school meeting held in May of each year and such board is to have the general charge, control and management of all the schools of its town.

4 This board is to determine in what districts school shall be maintained. If the children in a district may conveniently attend the school of another district without hardship and without traveling too far, the board of education of the town has authority to close such school temporarily and direct that the children attend the adjoining school. The board may,

in short, under this proposed plan open schools in a town whenever conditions require it and close such schools when necessary. Thus the varying conditions of the rural regions may be met and their needs as to schools promptly satisfied. We believe that any board of seven men and women, chosen in a town, may be trusted to act judiciously in an important matter of this kind and for the best interests of the people in all parts of the town. Under such arrangement, no unnecessary school will be maintained and a school may be operated in any district in the town where the convenience of the people requires it.

5 This plan will result in economy in many ways and in a great saving to the farmers of the State at large. Large sums which are now wasted and lost and moneys which are not even collected on a tax list will be saved to the people of the town. There will be no expenditures for the maintenance of unnecessary schools. All supplies for the schools of an entire town will be purchased in bulk and at a price much less than they may be purchased now. Textbooks may also be purchased on the same basis.

6 Not more than one-third of the money now expended in the enforcement of the compulsory attendance law and medical inspection law will be required under the plan proposed by this bill and much better results will be accomplished.

7 Uniform textbooks for an entire town will be provided and the parents of children, who move from one district to another, will not be compelled to buy new books. A large saving to the farmers of the State will result therefrom.

8 The taxes for the support of schools will be raised by the entire town. This will place the distribution of school taxes upon a more equitable basis. All the property of a town will pay its proportionate and equal share for the maintenance of the schools of the entire town. The burdens which are unjustly borne by more than one-half of the rural schools of the State will be removed. Large corporate interests, now paying taxes for the support of a single school, will pay their proportionate share for the maintenance of all the schools of the town.

9 Better teachers may be selected by a board for an entire town than if the teachers are selected by the school officers in each of the districts of the town. Better instruction will therefore be provided for the children.

10 Provision may be made for high school instruction in towns in which high schools do not exist. The whole plan will have a tendency to provide for all the children of the farming districts, school facilities which will be the equal of the school facilities provided in the cities.

11 We believe that one of the desirable features of this plan will be the bringing together of the farmers of an entire town and the solidifying of them into a community of interest. We believe that, under this management, the rural schools of the State may restore to the agricultural sections much of the prestige and leadership in intellectual, social and political matters which such communities possessed a generation ago.

Respectfully yours

W. H. VARY
W. N. GILES

Committee on Legislation

The Passage of the Township Bill — 1917

The following is a report of the action of the Legislature in 1917 on the township bill taken from the New York State Assembly and the Senate Journals. It contains a full discussion and the vote on the bill.

Int. no. S. 647. Pr. no. S. 1484. Mr Halliday. "An act to amend the Education Law by creating town boards of education and providing for support and maintenance of schools in towns."

February 22

Read first and second time. Referred to committee on public education.

March 28

Mr Halliday moved that the committee on public education be discharged from the consideration of Senate bill (no. 727, int. no. 647) entitled "An act to amend the Education Law, by creating town boards of education and providing for the support and maintenance of schools in towns," and that said bill be amended, reprinted and recommitted to the committee on public education.

The president put the question whether the Senate would agree to said motion, and it was decided in the affirmative. (New York Senate Journal 1917, v. 1, p. 250, 709-10.)

Int. no. A. 911. Pr. no. A. 2235. Mr Machold. "An act to amend the Education Law by creating town boards of education and providing for the support and maintenance of schools in towns."

February 22

Read first time — Referred to public education committee.

March 28

Mr Machold offered for the consideration of the House a resolution, in the words following:

Resolved, That the committee on public education be discharged from the further consideration of the bill (no. 1016, int. no. 911) entitled "An act to amend the Education Law, by creating town boards of education and providing for the support and maintenance of schools in towns."

Mr Speaker put the question whether the House would agree to said resolution, and it was determined in the affirmative.

Said bill having been announced, Mr Machold moved to amend by substitution therefor the following substitute bill:

(See Appendix no. 17)

Mr Speaker put the question whether the House would agree to said motion, and it was determined in the affirmative.

On motion of Mr Machold, said bill was ordered reprinted and recommitted to said committee.

April 11

Mr Machold gives notice that he requests that Assembly bill (no. 1872, int. no. 911) entitled "An act to amend the Education Law, by creating town boards of education and providing for the support and maintenance of schools in towns," a copy of which is hereto annexed, be made a special order, and asks that his request be referred to the committee on rules for the purpose of making said bill a special order on second and third reading.

Mr Speaker, from the committee on rules, to which was referred the bill introduced by Mr Machold (no. 1872, int. no. 911), entitled "An act to amend the Education Law, by creating town boards of education and providing for the support and maintenance of schools in towns," reported in favor of the passage of the same, with the following amendments:

Page 4, line 3, strike out "more than," and after the word "teachers" insert "or more."

Page 12, line 1, strike out all that follows the word "Determine."

Line 2, strike out "be maintained and," and insert after the word "employed in the several schools of the town"; also strike out the word "therein" in such line.

Page 4, line 6, strike out "at least" and insert in lieu thereof "only."

Line 9, strike out all that follows "3."

Line 10, strike out all of such line down to and including the word "necessary." Change the letter "p" in the word "provide" to a capital.

Line 11, insert after the word "transportation" the words "when necessary, and after the word "children" in such line insert "attending school." Strike out the word "such" in line 11.

Page 24, line 4, after the word "more" insert "at the time this act takes effect."

Page 24, line 10, strike out "at least" and insert in lieu thereof "only."

Page 26, line 1, after the word "more" insert "or employing fifteen teachers or more."

Page 39, at the end of line 24, insert the following: "This act shall not affect a pending action or proceeding brought by or against a trustee, trustees or a board of education of a school district but the same may be prosecuted or defended in the same manner and for the same purpose by the board of education of the town of which such district forms a part, as though this act had not been passed. All contracts entered into by a trustee, trustees or the board of education of a school district prior to the taking effect of this act, under and pursuant to the provisions of the Education Law, shall be carried into effect according to the terms thereof by the board of education of the town of which such school district forms a part, in the same manner and for the same purpose as though this act had not been passed. Any right, existing or accrued, or any liability incurred by a trustee, trustees or board of education of a school district, prior to the passage of this act, may be asserted and enforced by or against the board of education of the town of which such school district forms a part, in the same manner and to the same extent as though this act had not been passed."

Those who voted in the affirmative were: Messrs Sweet, Adler, Machold, Callahan.

*and that the same be reprinted, as amended, and when it shall have been on the desks of the members three calendar legislative days it be made a special order on second and third reading immediately after the consideration of the special orders on third reading theretofore reported.

Which report was agreed to, and said bill ordered reprinted, as amended,

* So in original.

and that when it shall have been on the desks of the members three calendar legislative days it be made a special order on second and third reading immediately after the consideration of the special orders on third reading theretofore reported.

April 19

Reported correctly printed no. 2235, int. no. 911.

April 23

On motion of Mr Machold, and by unanimous consent, said bill was ordered placed on the special order second and third reading calendar for Monday next.

April 25

On motion of Mr Machold, and by unanimous consent, said bill was ordered placed on the special order second and third reading calendar for Wednesday next.

Mr Speaker announced the special order, being the bill (no. 2235, int. no. 911) entitled "An act to amend the Education Law, by creating town boards of education and providing for the support and maintenance of of schools in towns."

Debate was had thereon, when Mr Adler moved the previous question.

Mr Speaker put the question, "Shall the main question now be put?" and it was determined in the affirmative.

On motion of Mr Machold, said bill was read the second time and ordered to a third reading.

Said bill was then read the third time, having been printed and upon the desks of the members in its final form at least three calendar legislative days prior to its final passage.

Mr Speaker put the question whether the House would agree to the final passage of said bill, and it was determined in the affirmative, a majority of the members elected to the Assembly voting in favor thereof, and three-fifths being present.

Ayes 77, noes 54

Ordered, That the clerk deliver said bill to the Senate and request their concurrence therein.

(New York Assembly Journal v. 2, p. 427-28, 1255, 1811, 1822-23, 2250, 2269, 2348, 2503-4.)

April 25 — Received in Senate

On motion of Mr Lockwood, a bill (no. 2235, rec. no. 642) entitled "An act to amend the Education Law, by creating town boards of education and providing for the support and maintenance of schools in towns," which was read the first time, and by unanimous consent was also read the second time.

On motion of Mr Lockwood, and by unanimous consent, the rules were suspended and said bill ordered to a third reading and referred to the committee on public education, retaining its place in the order of third reading.

April 26

Mr. Lockwood, from the committee on public education, to which was referred the Assembly bill introduced by Mr Machold (no. 2235, rec. no. 642), entitled "An act to amend the Education Law, by creating town boards of education and providing for the support and maintenance of schools in towns," reported in favor of the passage of the same, which report was agreed to and said bill restored to its place on the order of third reading.

The committee on rules reported the following, namely, that Assembly bill (no. 2235, rec. no. 642), entitled "An act to amend the Education Law, by creating town boards of education and providing for the support and maintenance of schools in towns," with amendments be taken up forthwith in the Senate, be advanced to the order of third reading and be and continue the pending order of business, superseding and taking precedence over all other orders until the vote of the Senate upon the final passage thereon be taken; that debate thereon, including debate upon all amendments or motions offered for the purpose of amendments and every question arising pending its consideration, be limited to not exceeding one hour, not more than one-half of such time to the members of the majority and not more than one-half to the members of the minority; that at the expiration of such debate, the vote of the Senate shall be forthwith taken upon the final passage of the bill and the amendments offered thereto, if any, then pend-

ing; that no motion shall be entertained except for the purpose of amendment or call of the Senate and but one motion to adjourn shall be entertained and then only upon the recognition of the temporary president for such purpose; that in case a motion to adjourn is carried, the measure at that time under consideration together with the proposed amendments shall be the pending order of business when the Senate shall again convene and shall be taken up and continued as though no adjournment of the Senate had intervened and no additional time shall be allowed for debate thereon and the consideration of the measure shall be continued to the vote of the Senate on its final passage.

Debate on the adoption of this report shall not exceed one hour, not more than one-half hour to the members of the majority, and not more than one-half hour to the members of the minority, if desired.

That any and all rules of the Senate inconsistent with this rule be and they are hereby suspended until the vote of the Senate on its final passage.

The president put the question whether the Senate would agree to said report, and it was decided in the affirmative.

Said bill was read the third time.

The President put the question whether the Senate would agree to the final passage of said bill, the same having been printed and upon the desks of the members in its final form for three calendar legislative days, and it was decided in the affirmative, a majority of all the Senators elected voting in favor thereof, and three-fifths being present, as follows:

For the affirmative:

Boylan	Dunnigan	Lockwood	Slater
Brown, A. P.	Emerson	Marshall	Stivers
Brown, E. R.	Foley	Mills	Towner
Burlingame	Gibbs	Murphy	Wagner
Carroll	Gilchrist	Newton	Walker
Carson	Halliday	Ottinger	Walton
Cromwell	Hewitt	Ramsperger	Wellington
Cullen	Hill	Robinson	Whitney
Daly	Koenig	Sage	Wicks
Downing	Lawson	Sheridan	Yelverton 40

For the negative:

Argetsinger	Knight	Thompson, G. F. Walters	
Graves	Mullan	Thompson, G. L.	7

April 30

Mr. Artgetsinger asked unanimous consent that he be recorded in the negative on Assembly bill (no. 2235, rec. no. 642) entitled "An act to amend the Education Law, by creating town boards of education and providing for the support and maintenance of schools in towns," which was passed on Thursday, April 26th. (Senate Journal 1917, v. 2. p. 1343-44, 1361, 1390-91, 1468.)

April 27

The Senate returned the bill (no. 2235, int. no. 911) entitled "An act to amend the Education Law, by creating town boards of education and providing for the support and maintenance of schools in towns," with a mes-

sage that they have concurred in the passage of the same without amendment. (New York Assembly Journal 1917, v. 3, p. 2616.)

April 27 — To the Governor.

May 2 — Approved — chapter 328. (New York Legislative Index, 1917, p. 273.)

On February 23, 1917, the following letter was sent by the committee on legislation of the State Grange to the pomona and subordinate granges indicating the results of their action after having consulted with the committees in the Legislature on the township school bill:

NEW YORK STATE GRANGE, P. OF H.
SECRETARY'S OFFICE

Skaneateles, N. Y., February 23, 1917.

To the Pomona and Subordinate Granges:

Your legislative committee begs leave to advise you that, pursuant to instruction from the State Grange, such committee has been in Albany in consultation with those interested in the township school bill and that a bill has been introduced into the Legislature which embodies the recommendations adopted by the State Grange in relation to this matter. The essential provisions of this measure are as follows:

1 Every school district in the State is continued under such bill as these districts now exist. No order consolidating two or more districts may become effective until such order is first approved by a majority vote of the town board of education and thereafter approved by a majority vote of the qualified electors of each district present and voting at a joint meeting called for that purpose.

2 The town is made the unit of taxation and of administration for school purposes. Union free school districts having a population of 1500 or more are not included in the provisions of the bill. These districts will continue to be operated as separate and independent units. In towns having two or more union free school districts which maintain academic courses of study, such towns are to have two school units and therefore two boards of education, as provided in the Machold bill of last year.

3 Trustees of the several districts in a town will continue to be elected as they are now chosen and these trustees will elect the members of the town board of education. Not more than three members of a town board may be chosen from the same school district. The town board of education is charged with the administration of the school affairs of the town and will elect its own officers.

4 Under the terms of this bill a town board may provide instruction in agriculture and homemaking courses, and when schools or classes of this kind are established in any town, the town will receive the same state aid which is now given to cities and villages which maintain such courses. These courses may, therefore, be maintained, in any town which desires to maintain them, free to all the children in the town and without a burden of taxation upon the taxpayers of the town who support the schools.

SENATOR MORRIS S. HALLIDAY
Introducer of township bill

5 Provision is also made in this bill for uniform textbooks in the several towns of the State.

6 District superintendents will hereafter be chosen, if this bill becomes a law, by the town boards of the several towns comprising a supervisory school district. The district superintendents will therefore be directly associated with the boards of education who are responsible for the administration of the schools.

7 Provision is made in the bill by which town boards shall not expend a sum in excess of one-half of one per cent of the assessed valuation of the town, and in no case an amount in excess of \$5000, in any one year for the construction of new buildings or the enlargement of existing school buildings without a vote of the qualified school electors of the town.

Your committee takes this means of advising you promptly of the action which it has taken in compliance with your instruction to have the above features incorporated in the township bill.

Fraternally yours

S. J. LOWELL

W. N. GILES

Committee on Legislation

THE TOWNSHIP LAW

Chapter 328

AN ACT to amend the Education Law, by creating town boards of education and providing for the support and maintenance of schools in towns.

Became a law May 2, 1917, with the approval of the Governor. Passed, three-fifths being present.

The People of the State of New York, represented in Senate and Assembly, do enact as follows:

Section 1 Chapter 21 of the Laws of 1909 entitled "An act relating to education, constituting chapter 16 of the Consolidated Laws," as amended by chapter 140 of the Laws of 1910, is hereby amended by inserting therein a new article, to be known as article 11-a, and to read as follows:

Article 11-a

TOWN BOARDS OF EDUCATION

- Section 330 School districts continued.
- 331 Town board of education
- 332 Qualification of members of board of education
- 333 Appointment of officers by board.
- 334 Bond of treasurer
- 335 Vacancies in school offices
- 336 Board to constitute a body corporate

- Section 337 Meetings of board
 338 Duties of clerk
 339 Duties of treasurer
 340 Powers of board of education
 341 Schools to be free to children of town
 342 Transfer of pupils
 343 Schoolhouse sites
 344 Erection, repair and improvement of school buildings
 345 Annual school budget
 346 Levy and collection of taxes
 347 Borrowing money in anticipation of collection of taxes
 348 Submission of certain questions to a vote of the town
 349 Issue and sale of school bonds
 350 State funds to be used for schools of town
 351 Certain union free school districts not subject to provisions of article
 352 School district officers abolished; terms continued to collect funds, pay claims, et cetera
 353 Outstanding bonds; existing school property
 354 Election of board of education
 355 Time and place of annual meeting
 356 Notice of annual school meeting
 357 Special school meetings in towns
 358 Qualifications of voters at school meetings
 359 Preparation of list of qualified electors
 360 Nominations and ballots
 361 Inspectors of election
 362 Conduct of school meetings; challenges
 363 Canvass of votes; declaration of result
 364 Successful candidates to be notified of election
 365 Appeals to the Commissioner of Education

§ 330 **School districts continued.** Each school district in the state is hereby continued as such district exists at the time this act goes into effect or until modified as provided in this chapter. No order consolidating two or more school districts shall be effective until such order is approved by a majority vote of the town board of education of the town or towns in which such districts are located, and thereafter approved by a majority vote of the qualified electors of each district present and voting at a meeting of the districts consolidated by said order.

§ 331 **Town board of education.** 1 A town board of education in each town of the state, having jurisdiction over all the schools in the town as hereinafter provided, except in union free school districts having a population of fifteen hundred or more or employing fifteen teachers or more at the time this act takes effect, and the school districts in the several towns of a county which adjoins

a city having a population of one million or more and in which there are only two district superintendents, is hereby established to begin on the first day of August, nineteen hundred and seventeen. Such board shall consist of three members in each town in which the number of school districts under its jurisdiction is five or less and shall consist of five members in all other towns. The term of office of each member shall be three years except that, of the members first elected hereunder, in a town having three members on such board, one shall hold office until August first, nineteen hundred and eighteen, one until August first, nineteen hundred and nineteen, and one until August first, nineteen hundred and twenty, and in a town having five members, two shall hold office until August first, nineteen hundred and eighteen, two until August first, nineteen hundred and nineteen, and one until August first, nineteen hundred and twenty. The terms of office of such members shall begin on the first day of August following their election.

2 Where there are two or more union free school districts each having a population of less than fifteen hundred, each maintaining an academic department which has been admitted to The University of the State of New York and the principal schoolhouse in each is situated wholly in the same town, the district superintendent shall issue an order dividing the town into as many units as there are such union free school districts situated in the town and designating the several school districts of the town to be associated with such union free school districts to form such units. The said units shall be known as town school units and shall be numbered by the district superintendent at the time of such division. Each union free school district and the districts so associated with it in forming such unit shall have a separate board of education to be elected in the same manner as boards of education in towns are elected. Such board shall have and exercise the jurisdiction and powers, and perform the duties in respect to the schools in the districts forming said unit, conferred or imposed upon a town board of education as to the schools of the several districts in a town. Wherever in this article reference is made to the town board of education, to the school officers of the town, to the school meeting of the town, or to the school electors of the town it shall be construed as referring also to the boards of education, school officers, school meeting or school electors of such units as the case may be.

3 Whenever twenty-five duly qualified voters from each of such separate units in a town having two or more boards of education

shall present a petition to the district superintendent to have all of the schools situated within the limits of the town united under one town board of education as provided by subdivision 1 of this section, the district superintendent shall direct each separate board of education to submit to the voters of their unit at the next annual school meeting the question "Shall all the schools in the town of be placed under the jurisdiction of one town board of education?" If a majority of the voters in each separate unit, voting at such election, shall vote in favor thereof, the terms of office of each of the members of the boards of education in such town shall terminate one year from the first day of August next following such annual meeting, and there shall be elected at the next annual meeting a new town board of education as provided by section three hundred and fifty-four of this act, which board shall take charge of all the schools of the town on the first day of August following such election.

4 In a town in which there is, wholly or in part, a union free school district having a population of fifteen hundred or more or employing fifteen teachers or more, the principal schoolhouse of which is situate in such town, such district may by resolution, duly submitted and adopted as provided by law at a district meeting, determine to become subject to the provisions of this article. The board of education shall, upon the petition signed by not less than fifteen per centum of the qualified electors of such district, give notice of the submission of such resolution to an annual or special meeting, in the manner provided by law. If such resolution be adopted at such meeting, the board of education of the town in which the schoolhouse of such district is situate, shall, upon petition signed by fifteen per centum of the qualified electors of such town, residing outside of such union free school district, submit a resolution to an annual or special meeting of such town as provided in this article, for the purpose of determining whether such union free school district shall become subject to the provisions of this article. If such resolution be adopted by such town, the schools of such union free school district shall become subject to the jurisdiction of the board of education of such town and the provisions of this article shall apply to such district and the schools thereof, notwithstanding the exception contained in subdivision 1 of this section, and thereupon the terms of office of the officers of such union free school district shall terminate.

§ 332 **Qualifications of members of board of education.** A member of a board of education must be a qualified elector at the

school meetings of the town for which he is chosen. A district superintendent of schools, or a supervisor shall not be eligible to the office of member of a board of education. Not more than one member of a family shall be a member of the same board of education in a town. A person who is removed from his office as a member of a board of education shall be ineligible to appointment or election to any school office in the town for a period of five years from the date of such removal.

§ 333 Appointment of officers by board. The board of education of each town shall elect one of its members chairman who shall serve until the next annual meeting of the board, and shall also appoint a clerk of the board and a town school treasurer to serve during the pleasure of such board. Any person who is qualified to vote at a school meeting in the town may be appointed as clerk or treasurer. A member of the board or a teacher employed in a public school of the town shall not hold the office of clerk or treasurer. The board shall determine the duties and fix the compensation of such clerk and treasurer.

§ 334 Bond of treasurer. The treasurer, within ten days after the receipt of notice in writing of his appointment, duly served upon him, and before entering upon the duties of his office, shall execute and deliver to the board of education a bond, in a sum to be prescribed by the board and with sureties to be approved by it, conditioned for the faithful discharge of the duties of his office.

§ 335 Vacancies in school offices. 1 A school office becomes vacant by death, resignation, refusal to serve, incapacity, removal from the town or from office.

2 A member of a board of education who publicly declares that he will not accept or serve in the office of member of the board of education, or refuses or neglects to attend three successive meetings of the board of which he is duly notified, without rendering a good and valid reason therefor to the board of education, vacates his office by refusal to serve.

3 A member of a board of education vacates his office by the acceptance of either the office of district superintendent of schools or of supervisor.

4 A treasurer vacates his office by failure to execute a bond to the board of education as herein required.

5 A vacancy in the office of a member of a board of education may be filled by the board. A person appointed to fill such vacancy shall hold office until the next annual school meeting of the town,

when such vacancy shall be filled by election for the balance of the unexpired term.

6 When a vacancy has existed in the office of a member of a board of education for thirty days, the district superintendent of schools shall appoint a person qualified to vote at school meetings in the town to fill such vacancy and the person so appointed shall hold office until the next annual school meeting of the town, when the vacancy shall be filled for the balance of the unexpired term.

§ 336 **Board to constitute a body corporate.** The board of education of each town shall be a corporation. All property which is now vested in, or shall be hereafter transferred to, the board of education of a town for the use of schools therein shall be held by such board as a corporation.

§ 337 **Meetings of board.** The annual meeting of a board of education of a town shall be held on the first Tuesday in August of each year. A regular meeting of the board shall be held at least once in each quarter. The board may adopt by-laws prescribing the time and place where regular meetings shall be held, and regulate the conduct of such meetings. Such board shall also prescribe a method of calling special meetings. The meetings of the board shall be open to the public but the board may hold executive sessions at which business may be transacted which should not, in its judgment, be transacted in an open session, at which sessions only members of the board or persons invited shall be present.

§ 338 **Duties of clerk.** The clerk of the board of education of each town shall have the powers and perform the duties of the clerk of a school district as provided in this chapter. In addition to such powers and duties, such clerk shall

1 Act as clerk at all meetings of the board and record the proceedings of such meetings, and the orders and resolutions adopted thereat, in proper books.

2 Draw and sign warrants upon the treasurer for all moneys to be disbursed by the town for school purposes and present them to the chairman to be countersigned by that officer. Each warrant shall specify the object for which it is drawn, the fund from which it is payable and the name of the individual or corporation to whom the amount thereof is payable.

3 When directed by the board of education, prepare all reports required by law and forward the same to the proper officers.

4 Perform such other duties as are or shall be required by law or by the board of education.

§ 339 Duties of treasurer. The treasurer shall have the powers and perform the duties of a district treasurer as provided in this chapter, and in addition thereto shall

1 Be the custodian of all school moneys of the town and be responsible for the safekeeping and accurate account thereof.

2 Pay all orders or warrants lawfully drawn upon him out of the moneys in his hands belonging to the funds upon which such orders or warrants are drawn.

3 Keep accurate accounts of all moneys received and disbursed by him, the sources from which they are received and the persons to whom, and the objects for which, they are disbursed.

4 Prepare and submit as required by law annual reports of receipts and disbursements, and render at such times as may be required by law or directed by the board of education, a report or statement relative to the school funds of the town.

§ 340 Powers of board of education. The board of education of each town shall, in respect to the public schools and school officers of the town,

1 Exercise the powers and perform the duties conferred or imposed by law upon boards of education or trustees of school districts, so far as they may be applicable to the schools or other educational affairs of the town and not inconsistent with the provisions of this article. Any power, duty, liability or obligation which is conferred or imposed by this chapter, or any other statute, upon the board of education of a union free school district or the trustees of a school district, shall be exercised or performed by the board of education of a town, and such board shall be subject to such liability or obligation, in respect to the schools in the town, in the same manner and to the same extent as in the case of boards of education in union free school districts or trustees of school districts.

2 Determine the number of teachers to be employed in the several schools of the town and to contract with principals and teachers for the maintenance and operation of such schools pursuant to the provisions of this chapter; employ or appoint medical inspectors, nurses, attendance officers, janitors and other employees required for the proper and efficient management of the schools and other educational affairs under their direction and control.

3 Provide transportation when necessary for children attending school, under regulations to be prescribed by it.

4 Have the care, custody, control and safekeeping of all school property or other property of the town used for educational, social

or recreational work and not specifically placed by law under the control of some other body or officer, and prescribes rules and regulations for the preservation of such property.

5 Purchase and furnish such apparatus, maps, globes, books, reproductions of standard works of art, furniture and other equipment and supplies as may be necessary for the proper and efficient management of the schools.

6 Establish and maintain elementary schools, high schools, vocational, industrial, agricultural and homemaking schools or classes, night schools, or such other schools and classes as shall be deemed necessary to meet the needs and demands of the town.

7 Establish and maintain school libraries which may be open to the public as provided by law.

8 Prescribe courses of study which shall be followed in the schools or classes established and maintained in the town.

9 Contract with boards of education of other towns, and of union free school districts and cities for the instruction of pupils of the town, and when any such contract is made the public money or state tuition apportioned for such instruction shall be paid to such town.

§ 341 **Schools to be free to children of town.** Each school maintained in a town under the supervision and control of a town board of education, and each department of such school and each course of study maintained therein, shall be free to the children of school age residing in such town.

§ 342 **Transfer of pupils.** Where pupils of school age residing in a town may be more conveniently instructed in the school or schools of an adjoining town, or of a union free school district or city, the board of education of such town may provide for the transfer of such pupils to the school or schools in such adjoining town or an adjoining union free school district or city in or out of the town. The board of education making such transfer shall send notice thereof to the board of education of the town, union free school district or city to which it is proposed to transfer such pupils, and provisions shall thereupon be made by the board of education of the town, union free school district or city wherein such pupils are to be instructed, for the accommodation of such pupils, upon the approval of the Commissioner of Education. The Commissioner of Education shall not approve the transfer of such pupils, when such action shall require the town, union free school district or city receiving such pupils to provide additional teachers or other school accommodations, without the consent of the board

of education of such town, district or city. Whenever pupils have been transferred as herein provided, the board of education of the town, union free school district or city to which the transfer is made shall submit, through its chairman and clerk, to the board of education of the town where the pupils reside, a verified statement of the cost of the instruction of such pupils. The cost of the instruction of such pupils shall be a charge against the town wherein such pupils reside, and the board of education thereof shall direct the payment of the cost of such instruction out of the school funds of the town, in the same manner as other charges upon such funds are paid.

The amount charged for such instruction may be determined by agreement between the board of education of the town wherein the pupils reside and the board of education of the town, union free school district or city in which such pupils are to be instructed, or if such boards are unable to make such agreement the matter may be referred to the Commissioner of Education for determination; and in making such determination the per capita cost of the instruction of the pupils of the town, village or city to which such pupils have been transferred may be used as a basis.

§ 343 **Schoolhouse sites.** The board of education of a town, whenever in its judgment it is necessary for the interest of the schools of the town, may designate a new site for the schoolhouse, or enlarge the site of an existing schoolhouse. Whenever a new site is designated, or an existing site is enlarged, the board shall pass a resolution stating the necessity therefor, described by metes and bounds the land to be acquired for either of such purposes, and estimating the amount of funds necessary therefor. Such resolution must be adopted by the votes of at least a majority of the members of the board of education. When such resolution is adopted the land described therein may be acquired by the board of education in the manner provided by law for the acquisition of real property for school purposes.

§ 344 **Erection, repair and improvement of school buildings.** The board of education of a town shall provide for the repair of school buildings in the town, or other buildings under its control and management, and shall expend therefor an amount not exceeding the amount included in the annual school tax budget. The board may also remodel, enlarge or improve such school buildings or other buildings under its control and management, and may construct new buildings, whenever required, for the proper accommodation of the school children of the town. The board of

education shall not expend in any one year for the remodeling, improvement or enlargement of existing school buildings or for the construction of new buildings an aggregate amount in excess of one-half of one per centum of the assessed valuation of the town and in no case an amount in the aggregate in excess of five thousand dollars without a vote of the school meeting of the town, except as hereinafter provided.

§ 345 *1* Annual school budget. On or before the first day of July in each year the board of education shall prepare in triplicate an itemized tax budget containing the amounts required to be raised by tax for school purposes in the town for the ensuing school year. Such tax budget shall contain a statement of the probable amount to be received by the town in the next apportionment of school funds from the State and the estimated amount to be received from all other sources, and shall specify the several amounts to be raised for the following purposes:

a The salaries and compensation of principals, teachers, medical inspectors, nurses, attendance officers, janitors and other employees appointed or employed by said board of education.

b All necessary incidental and contingent expenses of the schools of the town, including transportation, the purchase of fuel and light, supplies, textbooks, school apparatus, furniture and other articles and services necessary for the proper maintenance, operation and support of the schools of the town.

c The ordinary repairs of schools buildings and other buildings under its control and management.

d The remodeling, improvement or enlargement of existing buildings, and the construction of new buildings and the furnishing and equipment thereof.

e The amount required to be raised for the payment of the interest and principal of bonds and other indebtedness lawfully incurred or to be incurred for school purposes and which are a charge against the town.

f The amount which may be required for the payment of any other claim against the town arising from the support and maintenance of the schools of the town.

g The amount voted at the annual or a special school meeting in the town on a proposition or question lawfully submitted at such meeting.

h The amount determined upon as the proportionate share of the cost of maintaining a school in a district partly in two or more towns, required to be paid by said board.

2 The clerk shall cause such budget to be published at length once in each week for the four weeks next preceding the first day of August, in two newspapers if there shall be two, or in one newspaper if there shall be but one, published in such town. A written or printed copy of such budget shall be posted in at least five of the most public places in the town at least twenty days before the first day of August.

3 Such tax budget shall be signed in duplicate by a majority of the members of the board of education. On or before the first day of September such duplicate tax budgets shall be filed as follows: one in the office of the clerk of the board of education and one in the office of the clerk of the town.

4 The board of education of a town may in the manner herein provided, prepare a supplemental budget to raise money for any lawful purpose,

a When authorized by a vote of an annual or special school meeting in the town,

b When the amounts stated in the annual tax budget for the purposes specified are insufficient therefor and such amounts may be raised by tax without a vote of a school meeting in the town.

Such supplemental budget shall not authorize the levy of a tax for the purposes therein specified, or be effectual for any purpose unless there shall be endorsed thereon the certificate of the district superintendent of the supervisory district in which such town is situated, to the effect that the purposes for which the amount therein specified is to be raised are lawful. Such supplemental tax budget shall be prepared in the same manner and filed with the same officers as the annual tax budget.

5 The Commissioner of Education may prescribe the form of such budget. He may adopt regulations not inconsistent with law, providing for the examination, review, correction and the modification of such budgets and the instruction and assistance of school authorities in the performance of duties in respect thereto.

6 District superintendents shall, during the month of August in each year, examine the tax budgets on file in the office of each clerk of the board of education of each town in his supervisory district, and shall advise with and aid boards of education in the preparation and correction of such budgets, and perform such other duties in respect thereto as may be prescribed by the Commissioner of Education.

§ 346 **Levy and collection of taxes.** 1 The board of education

of the town shall, within ten days after the first day of September in each year, cause the amounts specified in such tax budget and supplemental tax budgets, if any, to be levied and assessed against the taxable property within that portion of the town which is subject to the provisions of this article. The board of education shall immediately upon the completion of its tax list annex thereto a warrant for the collection thereof, which shall direct the collector of the town to collect the tax so levied and assessed and to pay over the amount thereof to the town school treasurer. The town collector of taxes shall have the same power and jurisdiction in respect to the collection of such taxes as he has in respect to the collection of other taxes levied upon taxable property in the town, and the provisions of law relative to the collection of such taxes, except as otherwise provided in this chapter, shall apply to the collection of such school taxes.

2 The town collector shall before receiving the warrant for the collection of such taxes execute a bond to the board of education of the town, with one or more sureties to be approved by the board, and in the amount to be prescribed by such board, conditioned for the due and faithful collection of the taxes under such warrant and the return thereof to the proper officer.

3 The provisions of article fifteen of this chapter relating to the assessment and collection of taxes shall apply to the assessment of school taxes in a town by the board of education thereof, and to the collection of the taxes assessed and levied as herein provided, except so far as the provisions thereof may be in conflict with the provisions of this article.

4 If a district is situated partly in two or more towns, the taxable property in that portion of such district lying in a town other than that in which the principal schoolhouse is situated, shall be assessed for school purposes at the same rate as the taxable property of the town in which such principal schoolhouse is located. The valuation of the real property in the portions of such district lying in two or more towns, as appearing upon the several assessment rolls of such towns, may be equalized by the supervisors of such towns upon the request of the boards of education of such towns, or of three or more persons liable to pay taxes upon real property in either of such towns, and the provisions of section 414 of this chapter shall apply to such equalization. The taxable property in the portions of such district located in a town or towns other than the town in which the principal schoolhouse

of such district is located, shall not be assessed for school purposes in such towns.

§ 347 Borrowing money in anticipation of collection of taxes. The board of education of a town may borrow money in anticipation of the levy and collection of a tax, for any of the purposes specified in a budget or supplemental budget filed with the clerk of the board of education and the other officers with whom the same is required to be filed as herein provided. Certificates of indebtedness may be issued by such board of education which shall be signed by the president of the board and countersigned by the treasurer thereof. Such certificate shall not be issued for more than one year from the date thereof, and shall bear interest at a rate not exceeding six per centum per annum. The money borrowed shall be placed in the custody of the treasurer and shall be paid out by him on the order of the board of education in the same manner as money collected by taxes levied against the taxable property of the town.

§ 348 Submission of certain questions to a vote of the town.
1 Whenever the board of education of a town shall deem it necessary to expend an amount exceeding the sum of five thousand dollars for the repair, remodeling, improvement or enlargement of existing school buildings or the construction of a new school building it shall submit a proposition therefor to a vote of the qualified school electors of the town at either an annual school meeting of the town or a special school meeting called for such purpose.

2 If a school building in the town shall have been condemned by the district superintendent as unfit for use and not worth repairing and the amount required to be raised by tax therefor shall exceed the sum of five thousand dollars the board of education shall submit a proposition for the construction of such new building to the qualified school electors of the town as above provided. If the amount to be raised for the erection of a new building in place of a building which has been condemned is less than five thousand dollars the amount thereof shall be included in the annual school tax budget of the town. Except as herein provided the board of education of a town shall be subject to the same powers and duties in relation to the erection of a new schoolhouse, when the schoolhouse in a district in such town has been condemned, which are imposed upon trustees of school districts under the provisions of the Education Law.

3 The board of education of a town may in its discretion submit a proposition to the qualified electors of the town at an annual

or special school meeting of the town for the voting of a tax in an amount not less than one thousand dollars for the erection of a new building, the repair, remodeling, improvement or enlargement of an existing building, the purchase of a new site or of an addition to an existing site.

4 When the electors at a school meeting in a town adopt a proposition for any of the purposes specified in this section they may direct the levy of a tax to meet the expense incurred thereby either in one levy or by instalments.

5 The provisions of section 467 of this chapter relative to the notice of the meeting and the levy of a tax by instalments in a union free school district shall apply, except when inconsistent with this act, to the submission of the propositions herein authorized and the levy and collection of taxes for the purposes specified.

§ 349 **Issue and sale of school bonds.** Whenever a tax shall have been voted to be collected in instalments for any of the purposes specified in the preceding section the board of education of the town may borrow so much of the sum voted as may be necessary at a rate not exceeding six per centum per annum. The board may issue bonds or other evidences of indebtedness for such purposes which shall not be sold below par. The interest and principal of such bonds or other evidences of indebtedness shall be a charge upon the town and shall be paid when due. Such bonds or other evidences of indebtedness shall be sold by the board of education in the manner provided by section 480 of this chapter.

§ 350 **State funds to be used for schools of towns.** Funds hereafter apportioned by the state under the provisions of this chapter to school districts under the supervision and control of a town board of education shall be apportioned on the basis provided in this chapter, but the funds so apportioned to the several school districts of a town shall be paid by the county treasurer to the town school treasurer. Funds apportioned for teachers' salaries shall be paid on the order of the board of education of the town for the payment of the salaries of teachers employed in such town and funds apportioned for school libraries, apparatus, maps or works of art, shall be paid respectively in like manner for school libraries, apparatus, maps or works of art, in such town.

§ 351 **Certain union free school districts not subject to provisions of article.** This article shall not apply to a union free school district having a population of fifteen hundred or more or employing fifteen teachers or more at the time this act takes effect

unless a resolution shall have been adopted by such district making such article applicable to such district as provided in section 331 of this article and the provisions of such article shall not apply to the school districts in the several towns of a county which adjoins a city having a population of one million or more and in which there are only two district superintendents. Unless such resolution shall have been adopted, a school tax in a town in which the whole or any portion of such a district is situate shall be levied only against the taxable property in the town outside of the boundaries of such union free school district and the inhabitants of such district shall not be permitted to vote for candidates for members of the town board of education or upon any proposition or question submitted at an annual or regular school meeting in the town. School districts which, under the provisions of this section, are exempt from the provisions of this act shall continue to be subject to and regulated by the provisions of law which now regulate and control the affairs of such districts.

§ 352 School district officers abolished; terms continued to collect funds, pay claims, et cetera. 1 All trustees, members of boards of education and other school officers of school districts subject to this article, in office when this act takes effect shall continue in office to and including the thirty-first day of July, nineteen hundred and seventeen, when the offices of trustees, members of boards of education, district clerks, collectors, treasurers and other school district officers of such districts shall be and are hereby abolished and the terms of such officers shall cease except as herein provided.

2 The trustees, boards of education and other officers, of each district, enumerated in subdivision 1 of this section are hereby continued in office with all the powers and duties conferred on such officers by the education law or other statutes, including the power to levy, assess and collect taxes for the purpose of closing up the business and financial affairs of such district and of satisfying its obligations, except bonded indebtedness, adjusting its claims, collecting funds due it and paying its just debts. After liquidating all outstanding obligations except bonded indebtedness, and settling or adjusting all claims against such district, and closing up all its financial affairs as a district, such officer shall apportion any funds remaining in the treasury, except moneys received from the State, among the taxpayers of the district in the manner now provided by law. Such apportionment shall be

based upon the relation of the assessed valuation of such taxpayers to the aggregate assessed valuation of the district. The portion of such funds which consists of moneys received from the state shall be paid into the town school treasury.

§ 353 **Outstanding bonds; existing school property.** 1 The bonded indebtedness of the school districts in a town which are subject to the provisions of this article, including a union free school district having a population of fifteen hundred or employing fifteen teachers or more, which has adopted a resolution pursuant to the provisions of section 331 of this article, existing and outstanding at the time of the taking effect of this article shall be a charge against the property which is subject to tax for the maintenance of the schools in such town or union free school district.

2 Within one year from the taking effect of this article the value of the school property in the several districts which are made subject to the provisions hereof shall be appraised and determined by a commission consisting of the supervisor of the town, the chairman of the town board of education and the district superintendent of schools.

3 The value of the school property in each district as so appraised shall, after deducting the outstanding bonded indebtedness of such district, be credited to such district and charged against the town. The total amount charged to the town as a result of such appraisal shall be raised by tax upon the taxable property of the town in the same manner as other school expenses are raised. Such tax shall be levied and collected in five equal, annual instalments and the amount required shall be included by the board of education in the annual tax budget of the town.

4 The commission hereinbefore created shall, upon appraising such property and determining the credit to be allowed to each district, apportion the amount so credited to such district among the owners or possessors of taxable property in the district in the ratio of their several assessments on the last corrected assessment-roll of the town. The said commission shall report to the board of education of the town the apportionment so made and the board shall cause to be issued to each of such owners or possessors, a certificate of credit stating the amount so apportioned. Such certificates of credit shall be transferable by the persons to whom they are issued, and shall be payable only out of moneys raised by tax as herein provided for the payment of the charge against

the town on account of the school property acquired by such town. They shall be issued in such denominations and shall be due at such times as to provide for their payment out of the moneys raised by tax for the payment of such charge.

5 The Commissioner of Education shall prescribe rules governing the commission in the appraisal of school property as herein provided and regulating the distribution and apportionment of the credits and charges herein referred to and the form and denomination of such certificate. An appeal will lie from such appraisal or from any act of such commission or board of education in respect to the apportionment of credits, the distribution of charges and the levy and collection of a tax on account of such school property to the Commissioner of Education in the same manner and under the same conditions as in the case of other appeals to the Commissioner of Education. A like appeal will lie from the apportionment of the bonded indebtedness of any town.

§ 354 **Election of board of education.** 1 The first board of education of each town thereof shall be elected by the trustees and members of the boards of education of the several school districts in such town, subject to the provisions of this article. The said trustees and members of boards of education shall meet for such purpose on the second Tuesday in June, nineteen hundred and seventeen, in one of schoolhouses in the town to be designated by the district superintendent of schools. The said trustees and members of boards of education shall organize by the election of a chairman and clerk. They shall thereupon proceed to elect members of the board of education of the town to hold office for the term specified in section 331 of this article. The persons elected as members of such board shall be residents of the town and qualified electors at school meetings therein. Not more than three of the members of such board of education shall reside in the same school district, except in towns in which there are less than three school districts. The chairman and clerk of the meeting shall canvass the votes cast for the candidates for the offices to be filled and the candidate receiving a majority of the votes cast shall be elected. The chairman and clerk of the meeting shall thereupon notify the district superintendent in writing of the persons declared elected as members of said board, and the district superintendent shall give notice of such election to the persons so elected. As the terms of office of such members expire their successors shall be elected at the annual school meeting.

The district superintendent of schools shall call a meeting of the board of education of each town in his supervisory district, elected as above provided, on the first day of August in nineteen hundred and seventeen, at the principal schoolhouse of the town, for the purpose of organization and the transaction of any other business which may properly come before such board. Upon the election of a clerk of such board, the chairman and clerk of the meeting held for the purpose of electing members of the board of education shall file the minutes of the meeting with such clerk.

§ 355 Time and place of annual meeting. 1 The annual school meeting in each town shall be held on the first Tuesday in May in each year, at which members of the board of education shall be elected and such business as may legally come before such meeting shall be transacted. Such meeting shall be held at the schoolhouse in the town which is the most conveniently accessible to a majority of the qualified electors of such town. The board of education shall designate the schoolhouse at which such meeting shall be held.

2 The board of education may divide the town into school election districts, whenever it deems it necessary for the convenience of the qualified electors, because of the territorial extent of the town or the number of such electors. If a town is divided into school election districts, the board shall designate the schoolhouse in each district where the annual meeting shall be held.

3 The polls for the election of members of the board of education at such meeting shall be open from nine o'clock in the morning to four o'clock in the afternoon.

§ 356 Notice of annual school meeting. The clerk of each board of education shall give notice of the time when and the places where the annual school meeting in the town is to be held, by publishing such notice once in each week for the four weeks next preceding such meeting, in two newspapers, if there shall be two, or in one newspaper, if there shall be but one, published or circulated in such town. If no newspaper shall be published or circulated therein, such notice shall be posted on the door of each schoolhouse in the town and in at least ten other public places in said town, at least twenty days before the time of such meeting.

§ 357 Special school meetings in towns. The board of education of each town shall have power to call a special meeting of the qualified electors of the town, whenever it deems necessary and proper, and whenever required by law, in the manner prescribed

for the giving of a notice of the annual meeting. Such special meetings shall be held at the schoolhouse or schoolhouses at which the annual school meeting of the town is required to be held.

§ 358 Qualifications of voters at school meetings. 1 To be eligible to vote at annual or special town school meetings, a person must possess the qualifications prescribed in section two hundred and three of this chapter, except as provided in the following subdivision:

2 In a school district located in two or more towns, those persons possessing the qualifications required under subdivision 1 of this section shall be entitled to vote at annual or special town school meetings in the town in which the principal schoolhouse of the district in which they reside is located, irrespective of the town in which they reside. A person entitled to vote under this subdivision, at an annual or special town school meeting in a town other than the town in which he resides shall not be entitled to vote at such meetings in the town in which he resides.

§ 359 Preparation of list of qualified electors. 1 The clerk of the board of education in each town shall, on or before the first day of April in each year, prepare a list of the persons qualified to vote at annual or special school meetings held in the town. If the town is divided into school election districts, a separate list shall be prepared, as herein provided, containing the names of the qualified electors, residing in each district. The names on such list shall be arranged alphabetically, according to the surnames of such electors, and shall contain a statement as to the place of residence of each elector.

2 Such list shall be placed on file in the office of the clerk of the board of education or at some other place, to be designated by the board, where it may be examined by any person interested therein, from four to eight o'clock in the evening of each Friday and Saturday of the four weeks immediately preceding the annual school meeting. The clerk of the board of education or some person to be designated by the board, shall attend at such office or place, at such times, and permit public inspection of such list. A person, whose name is not upon such list, who is or will be a qualified voter at the annual meeting, may submit to the clerk of the board, evidence, showing such fact, and the clerk shall correct such list, by inserting his name therein. If the name and residence of a qualified elector are incorrectly stated upon such list, the clerk, upon satisfactory evidence being presented to him, may correct such errors.

3 A qualified voter at the annual school meeting of the town may, upon the examination of such list, file with the clerk of the board, a written challenge of the qualifications as an elector of any person, whose name appears upon such list. The board of education of the town shall meet on the Monday preceding the annual school meeting and may, upon satisfactory evidence being presented to it, correct the errors in such list of qualified electors and add thereto the names of persons, ascertained by it to be qualified electors at such annual meeting. The board shall also indicate upon the list of qualified electors, the persons whose qualifications as electors have been challenged.

4 If the annual school meeting is held in election districts, a separate list for each district, revised and corrected as above provided, shall be delivered by the clerk of the board of education to the inspectors appointed, as hereinafter provided, to conduct such school meeting in each of such districts.

§ 360 **Nominations and ballots.** 1 Candidates for members of the board of education in a town shall be nominated by petition. Such petition shall be directed to the clerk of the board of education of the town and shall be signed by at least twenty-five qualified electors thereof. It shall state the names and residences of the candidates and whether such candidates are nominated for full terms or for the unexpired portion of such terms. Each petition shall be filed with the clerk of the board of education on or before the fifteenth day preceding the day of the annual school meeting.

2 The board of education shall cause to be printed official ballots, containing the names of all candidates nominated as above provided. Such ballots shall separately state whether the persons named thereon are candidates for full terms or for portions of terms. The names of the candidates shall be arranged alphabetically according to their surnames, in columns under titles or designations, showing whether they are to be elected for full terms or portions of terms. Blank spaces shall be provided so that persons may vote for candidates who have not been nominated for the offices to be filled at such election. Such ballots shall have printed thereon instructions as to the marking of the ballots and the number of candidates for the several offices for which an elector is permitted to vote.

3 Whenever a question is required to be submitted at an annual or special school meeting, the ballots therefor shall conform as

nearly as may be to the ballots required to be used, under the election law, for the submission of questions or propositions, at a general election.

4 The number of ballots to be used at an annual or special school meeting shall at least equal the number of qualified electors in the town, as appears from the list of qualified electors thereof. The clerk of the board shall cause to be delivered to the inspectors in each of such election districts, on the day of the meeting, a sufficient supply of such ballots for the use of the qualified electors thereof. Such ballots shall be printed at the expense of the town and the cost thereof shall be paid out of school funds, in the same manner as other school expenses. An election of a member of a board of education shall not be declared invalid or illegal because of the use of ballots which do not conform to the requirements of this section or to the provisions of the election law, provided the intent of the elector may be ascertained from the use of such irregular or defective ballot and such use was not fraudulent and did not substantially affect the result of the election.

§ 361 **Inspectors of election.** The board of education shall designate three inspectors of election for each election district into which such town has been divided. The clerk of the board of education shall give written notice of appointment to the persons so appointed. If a person, appointed as inspector of election, refuses to accept such appointment, the board of education may appoint a qualified elector of the district to fill such vacancy. Such board of inspectors shall before opening the polls in the election district for which they are appointed, organize by electing one of their number as chairman and one as poll clerk. Each inspector shall receive for his services a compensation of three dollars, to be paid out of the school funds of the town and in the same manner as other expenses are paid.

§ 362 **Conduct of school meetings; challenges.** 1 All elections, held as provided herein, shall be conducted, so far as may be, in accordance with the provisions of the election law relative to general elections, except as otherwise provided herein. Suitable ballot boxes shall be provided by the board of education, to be used at such school meetings. Such ballot boxes shall conform as nearly as may be to the provisions of the election law relative to ballot boxes at general elections. All persons, whose names appear upon the list of qualified electors, as residing in the town or election

districts, shall be permitted to vote and shall be given ballots for such purpose. Persons whose names do not appear upon such list may be permitted to vote, upon satisfactory evidence being presented showing that they are qualified electors of the town or district and upon making the declaration hereinafter prescribed. The ballots when presented to the inspectors shall be folded so as to conceal the names of candidates for whom or the proposition or question for which the elector has voted. All electors entitled to vote, who are in the places where the election is held at or before the time of closing the polls, shall be allowed to vote. The poll clerk shall keep a poll list, containing the names of the qualified electors who vote at such election for the candidates or propositions or questions voted for thereat.

2 Any qualified elector may challenge the right of a person to vote, at the time when he requests a ballot. All persons, named upon the list of electors as having been challenged prior to the day of the meeting, shall also be challenged before ballots are given to them. The chairman of the board of inspectors shall require the person so challenged, or a person whose name does not appear upon the list of qualified electors, and who requests the privilege of voting, to make the following declaration: "I do declare and affirm that I have been for the thirty days last past an actual resident of this town and that I am qualified to vote at this meeting."

If such person makes such declaration, he shall be permitted to vote at the meeting but if he shall refuse to make such declaration he shall not be permitted to vote for candidates or upon any question or proposition at such meeting.

3 A person who wilfully makes a false declaration as to his right to vote at such meeting, is guilty of a misdemeanor. A person who is not qualified to vote at such meeting but who shall vote thereat, shall be subjected to a penalty of fifty dollars which may be recovered in a suit brought therefor by the board of education for the benefit of the schools of the town.

§ 363 **Canvass of votes; declaration of result.** 1 Immediately upon the close of the polls, the board of inspectors shall count the ballots found in the ballot boxes, without unfolding them, except so far as is necessary to ascertain that each ballot is single. They shall compare the number of ballots found in the ballot boxes with the number of persons recorded on the poll list as having voted for the candidates or the questions or propositions submitted at such meeting. If the number of ballots found in the ballot boxes

shall exceed the number of names so recorded on such list, such ballots shall be replaced, without being unfolded, in the boxes from which they were taken and shall be thoroughly mingled in such boxes and one of the members of the board of inspectors designated by such board shall publicly draw out as many ballots as shall be equal to the number of excess ballots. The ballots so drawn out shall be inclosed, without unfolding, in an envelop which shall be sealed and indorsed with a statement of the number of such excess ballots withdrawn from the box and shall be signed by the inspector who withdrew such ballots. Such envelop shall be delivered to the clerk of the board of education and shall be preserved by him for a period of at least one year.

2 The ballots shall be counted or canvassed by the inspectors in the manner provided for the canvassing of ballots at a general election, except as otherwise provided herein. The votes cast for each question or proposition shall be tallied and counted by the inspectors and a statement shall be made, containing the number of votes cast for and against each question or proposition submitted at such meeting. Such statement shall also give the number of ballots which are declared void and describe the defects therein and shall also specify the number of wholly blank ballots cast. Such statement shall be signed by the inspectors. A ballot shall not be declared void unless the defects are such as to clearly indicate that the ballot was marked for indentification or that the intent of the elector in voting such ballot can not be ascertained therefrom. The ballots which are declared void and not counted shall be inclosed in an envelop, which shall be sealed and indorsed as containing void ballots and shall be signed by the inspectors. Such envelop shall be filed with the clerk of the board of education and preserved by him for a period of at least one year. After the ballots are counted and the statements have been made as required herein, such ballots shall be replaced in the ballot boxes. Each box shall be securely locked and sealed and deposited with the clerk of the board of education. The unused ballots shall be placed in a sealed package and be returned to the clerk of the board of education, at the time when such ballot boxes are delivered to him.

3 The inspectors shall deliver the statement of the votes cast at such meeting, in each election district, to the clerk of the board of education on the day following such meeting. The board of education shall meet at the usual place of meeting, at eight o'clock in the evening of the day following such election and shall forthwith examine and tabulate the statement of the results of the

election in the several election districts of such town. The board of education shall canvass the returns as contained in the statements of the inspectors and shall determine the number of votes cast for and against each candidate at such election and for and against each question or proposition voted upon in the several election districts of the town. The board shall thereupon declare the result of the canvass of the votes in each election district.

4 The candidates receiving a plurality of the votes cast respectively for the several offices shall be declared elected. The clerk of the board of education shall record the result of the election as announced by the board of education, in the minutes of the meeting.

§ 364 **Successful candidates to be notified of election.** The clerk of the board of education shall, within twenty-four hours after the result of the election has been declared, serve a written notice either personally or by mail upon each person declared to be elected as a member of the board of education. A person upon whom such notice has been served shall be deemed to have accepted the office unless within five days after the service of such notice he shall file his written refusal with the clerk.

§ 365 **Appeals to the Commissioner of Education.** An appeal may be taken to the Commissioner of Education from such election or from any of the acts or proceedings of a school meeting or the board of education, in the same manner and with the same effect as in the case of an appeal to him from the acts or proceedings of a school meeting or election or of a board of education, under the provisions of this chapter. The Commissioner of Education may, in his discretion, order a new election in any town.

§ 2 **Repeal of inconsistent provisions; effect of repeal.** All acts or parts of acts, general or special, inconsistent with the provisions of this act are hereby repealed. The repeal of the acts hereinafter specified or of such inconsistent acts or parts of such acts shall not affect any right existing or accrued or any liability incurred prior to the passage of this act. This act shall not affect a pending action or proceeding brought by or against a trustee, trustees or a board of education of a school district but the same may be prosecuted or defended in the same manner and for the same purpose by the board of education of the town of which such district forms a part, as though this act had not been passed. All contracts entered into by a trustee, trustees or the board of education of a school district prior to the taking effect of this act,

under and pursuant to the provisions of the education law, shall be carried into effect according to the terms thereof by the board of education of the town of which such school district forms a part, in the same manner and for the same purpose as though this act had not been passed. Any right, existing or accrued, or any liability incurred by a trustee, trustees or board of education of a school district, prior to the passage of this act, may be asserted and enforced by or against the board of education of the town of which such school district forms a part, in the same manner and to the same extent as though this act had not been passed.

§ 3 Sections renumbered. Sections 340 and 341 of the Education Law are hereby renumbered sections 364 and 365; sections 360, 361, 362, 363, 364 and 365 of such law are hereby renumbered respectively sections 370, 371, 372, 373, 374 and 375.

§ 4 Time of taking effect. This act shall take effect immediately.

It was very apparent to the State Education Department that in many of the communities there would be considerable difficulty in changing from the old system that had been in operation to the new system of school management and organization. To avoid this the following bulletins were sent to the district superintendents and to the various local communities in order to help them in the readjustment and in the interpretation of the law:

Township School System

To District Superintendents and Town Boards of Education:

On May 2, 1917, Governor Whitman approved the Machold township school bill. With such approval this measure became chapter 328 of the Laws of 1917. This law provides an entirely new plan for the administration of the rural schools of this State. The old school district system which was adopted in 1795 is abolished and the schools of an entire town are placed under the control of a town board of education. In making this change the State of New York is doing what the leading states of the Union have already done in administering the affairs of their rural schools. There are certain provisions of the measure which should be well understood at the outset, in order that its administration may accomplish the intended purpose and be as free as possible from friction and embarrassment. The attention of superintendents and town boards is therefore directed to the following important provisions:

School Districts

Each school district in the several supervisory districts of the State is continued as such district existed on the second day of May last.

The provisions relating to the consolidation of school districts should be clearly understood. If it appears desirable to consolidate two or more districts in any town, the district superintendent having jurisdiction may take the initiative by issuing an order of consolidation. After the district superintendent issues such order, he must deliver a copy thereof to the town board of education for the consideration of that body. The town board of education may, at a regular or special meeting, consider such order and determine whether it should be approved or disapproved. If the town board disapproves such order, no further action may be taken in relation to the consolidation. If the town board of education approves such order, a meeting of the voters of the several districts affected by such order should be called. The town board of education should direct its clerk to give at least six days' notice of the time and place of such meeting to each of the voters residing in the school districts affected by such order. The meeting should be held at the most central and convenient places for the voters of the several districts. A record of those voting on the proposition should be made and such record should show the district in which each voter resides, and how each voter voted on the proposition. It is suggested that a separate record be made of the votes cast by residents of each district as this will aid in making a canvass after the polls have been closed. After all persons have voted who desire to vote, a canvass should be made of the votes cast. The order of consolidation does not become effective unless a majority of the votes cast in each district is in favor of such consolidation. A district superintendent should not therefore include in an order of consolidation a district in which he knows the sentiment to be opposed to consolidation. The unfavorable vote of one district would defeat the entire proposition. It is wise, therefore, to include in the order of consolidation those districts only in which it is known that public sentiment is in favor of the consolidation.

After the proceedings are completed, the district superintendent should file his original order, the original approval of the town board, the notice of the meeting at which the voters of the several districts voted on the confirmation of such order, and the record of the proceedings of such meeting, properly certified, in the office of the clerk of the town. Copies of all such original papers should be filed in the office of the clerk of the board of education of the town, and also with the Commissioner of Education.

Districts Not Included in Township Law

There are certain school districts which are not included within the provisions of the township law. These districts are as follows:

- 1 All union free school districts having a population of 1500 or more.
- 2 All union free school districts employing fifteen teachers or more.
- 3 All of the school districts included within the county of Nassau.

To be exempt from this law school districts must have satisfied the above exceptions on the second day of May, when the law became operative. Union free school districts which may hereafter reach a population of 1500 or more or which may hereafter employ fifteen teachers or more are not exempt from the provisions of the township law. All school districts which did not meet the exceptions above stated on the second day of May

last, when the township law went into effect, are included within the provisions of such law.

Those school districts which are not within the township law will continue to be operated and regulated under the provisions of the Education Law relating to union free school districts. In other words, there is no change in the management and administration of the schools in such districts by reason of the enactment of the township law.

Town School Units

District superintendents were directed in a circular letter issued from this Department on May 17th last to divide certain towns into town school units in accordance with the provisions of the township law.

There are in many of the towns throughout the State two or more union free school districts which come within the provisions of the township law. The law provides that in all such towns the district superintendent shall divide the town into as many town units as there are such union free school districts. Full directions relative to the method of dividing towns and numbering the units were given in the circular of May 17, 1917. Each separate unit thus organized and numbered must be considered in every respect, in the administration of the township law, as a town.

Attention is directed to the provisions by which two or more separate units in a town may be consolidated into one unit. Subdivision 3 of section 331 outlines fully the procedure which must be taken to consolidate two or more town school units into one.

The attention of superintendents and boards of education is also called to subdivision 4 of section 331 which authorizes the voters of a district which is not under the township law to take the necessary action to place the schools of such district within the provisions of the township law. A union free school district having a population of 1500 or more or employing fifteen teachers or more may, at either an annual or special meeting, properly called, vote upon placing such district under the provisions of the township law. After favorable action is taken by such district on this proposition, the board of education of the town shall, upon a petition signed by fifteen per cent of the qualified school electors of such town, not including the electors of such union free school district, submit the question to the voters of such town at either an annual or special school meeting to determine whether or not such town and the union free school district shall combine and have but one board of education. A majority vote of those present and voting is required of the district which desires to come under the township system and a similar vote is also required of that portion of the town which forms the township unit within the town. The initiative must be taken by the district which is not included within the provisions of the township law and, unless affirmative action is taken by that district at the meeting, no further action may be taken. If affirmative action is taken the question must then be submitted to the voters of the remaining portion of the town and receive affirmative action by such voters. In other words, the district which is not under the provisions of this law and that portion of the town which is under the law must each vote in favor of the consolidation, if such consolidation is to be made.

Qualifications and Number of Members on Town Board of Education

The qualifications of voters at town school meetings are the same as they have been for several years for voters at school district meetings. These are as follows:

General Qualifications

- 1 A citizen of the United States.
- 2 At least 21 years of age.
- 3 A resident within the district for a period of at least 30 days next preceding the meeting at which he or she offers to vote.

Any person who possesses all of the above general qualifications *and any one* of the four following special qualifications is entitled to vote.

Special Qualifications

1 One who owns or hires or is in the possession under a contract of purchase of real property in such district liable to taxation for school purposes.

2 One who is the parent of a child or children of school age, provided such child or children shall have attended the district school in the district in which the meeting is held for a period of at least eight weeks within the school year preceding such school meeting. (Under this provision both father and mother may vote.)

3 One who, not being the parent, has permanently residing with him or her a child or children of school age who shall have attended the district school for a period of at least eight weeks within the school year preceding such meeting. (Under this provision but *one* person may vote, namely, the head of the household.)

4 One who owns any personal property assessed on the last preceding assessment roll of the town exceeding \$50 in value, exclusive of such as is exempt from execution. [See Education Law, § 203.]

Qualified voters may vote on *any* question brought before any annual or special school meeting; *it is not essential that a person be a taxpayer to vote on propositions for raising money by tax on the district.*

Women possessing any of the above qualifications are entitled to vote.

To be eligible to membership on a board of education a person must satisfy the above qualifications of voters at town school meetings. Neither a superintendent of schools nor the supervisor of a town is eligible to election as a member of the town board of education. Not more than one member of a family shall be a member of the same town board of education. Members of one family residing in the same household are regarded as members of the same family. In the case of a father and son who live together as one family in the same dwelling, only one of such persons would be eligible to serve on the same town board of education. The question is frequently raised as to whether or not a teacher in a town may be a member of a town board of education. Section 285 of the Education Law prohibits a trustee from being personally interested either directly or indirectly in any contract which he makes in behalf of the district. The township law subjects members of town boards of education to all duties, obligations and responsibilities which the provisions of the

Education Law impose on trustees of school districts. Teachers are not, therefore, eligible to membership on a town board of education. If no provision were contained in the Education Law in relation to the matter, the two positions—as teacher in a school and as a member of the controlling board of such school—would be incompatible. If a person who is a member of a board of education is removed by order of the Commissioner of Education, that person is not eligible to membership on the board of education or to any other school office in the town for a period of five years from the date of such removal. No other person is prohibited from serving as a member of a town board of education.

In a town having five school districts or less the number of members on a board of education shall be three. In all other school districts the number of members shall be five.

Meetings of Town Board

The law provides that each town board of education shall hold an annual meeting on the first Tuesday in August. For the year 1917 this meeting must be held on the first day of August. At this meeting the first action to be taken by the board is the election of one of its members as chairman of such board, who shall serve in that capacity for the ensuing school year. Upon the expiration of the term of office of such chairman at the next annual meeting, another chairman is to be chosen.

Meetings of the board must be held at least once in each quarter. It is suggested that for the current year provision shall be made for holding meetings at least once each month. It is further suggested that the district superintendent confer with boards of education and arrange with such boards to fix the time of their monthly meetings on such days and at such hours as to enable the district superintendent to meet with the several town boards at their regular monthly meetings.

Provision should also be made for calling special meetings. Each board may adopt such method for calling special meetings as it may desire. The method adopted, however, must provide for giving personal notice of ample time, in some way, to each member of the board.

Clerk of Town Board

At the first annual meeting of the town board of education on August 1st next the board should appoint a clerk. The law does not specify a definite term for such officer but provides that he shall serve during the pleasure of the board. In appointing such clerk, however, the board may exercise its pleasure in this respect at the time of the appointment, by specifying a definite term of one year. It is recommended that such action be taken. No member of the board of education may serve as clerk, neither may a teacher employed in any public school of a town be appointed to the office of clerk. The person appointed to this position must be a qualified voter at school meetings in the town. The law does not fix the amount of the salary for such officer. The salary which such officer shall receive must be fixed by the board of education. The Education Department has been requested, in a number of cases, to suggest the salary which should be paid the clerk of a town board of education. It is not feasible to fix a uniform

salary for this office. The salary to be paid a clerk must be determined by the amount of work which such officer will be required to perform. The work which a clerk must do in connection with this office depends largely upon the number of school districts in the town, the population of the town, and the extent of its territory. An efficient man, familiar with clerical duties and with fiscal affairs, should be selected for the office of clerk. The business management of the affairs of the board will depend in a large measure upon the skill and efficiency of the clerk. That officer should be a man whose judgment the board of education would respect. The town board should feel free to assign to the clerk many of the business affairs for investigation, on the understanding that such officer will look into these matters, obtain data in relation thereto, and submit the results of his investigation, together with recommendations thereon, to the board for action. The clerk of the board of education will also be required to make out the tax list, to attend to correspondence between the board, the district superintendent, the Education Department and others.

Section 338 of the township law states specifically what duties the clerk of the board of education must perform. In addition thereto, such officer must perform all other duties which the board of education imposes upon him. It is important that the clerk shall keep accurate and complete records of all the transactions of board meetings. The board should provide suitable books for such records.

Town School Treasurer

At the first meeting of the town board of education to be held on August 1st next, such board should also appoint a treasurer. It is suggested that the term of the treasurer be fixed for one year. No member of the town board of education and no teacher employed in the schools of the town may serve as treasurer. The treasurer must be a qualified voter at school meetings in the town. The salary of such officer is not fixed by law and it is the duty of the board to determine what compensation shall be allowed such officer.

Section 339 states specifically the duties of the treasurer of the town and this officer must also perform such additional duties as the board of education of the town may require of him. The Commissioner of Education will specify the form in which the accounts of the treasurer shall be kept. The law further provides that the budget prepared by the board of education shall be in the form prescribed by the Commissioner of Education. The accounts of the treasurer should be kept so as to conform to the requirements of the budget. The form in which such budget shall be submitted is specified later in this document.

After a board has designated a treasurer, it should also determine the amount of the bond which that officer is required to give. Within ten days after the treasurer receives a written notice of his appointment, he should execute a bond in the amount required by the board, with proper sureties, and submit the same to the board for its approval.

Powers and Duties of Town Board

Section 340 of the township law specifies the powers and duties of the board of education. These are the broad general duties and powers of

the board and are sufficiently stated in this article to give the board of education the general power, control and management of the school affairs of the town. The men and women who are chosen for membership on the first town board of education, under the provisions of this law, are charged with important duties and have an opportunity to render a great service to the State. The success of the administration of this law, and the progress which may be made in rural education depends wholly upon the spirit in which the town boards discharge their official obligations and responsibilities to their constituents and to the State. It is recommended that the members of these boards immediately familiarize themselves with the school conditions in the several districts of the town. These boards should have definite knowledge of the type of school which has been maintained in each district in their respective towns, of the number of children to be educated in each district, of the needs of such children from an educational and social standpoint. It is suggested that an inspection of all school property in the town be made at an early date with the district superintendent.

It is further suggested that it would be unwise to attempt to make very material changes in the administration of these schools during the ensuing year. It is believed that it would be much wiser for a board of education to make a careful study of school conditions in the entire town, to consult the district superintendent in relation to the same and determine upon the broad policy which is later to be pursued in providing educational facilities for the children of the town.

It is specially recommended that district superintendents and boards of education proceed with great deliberation in the consolidation of school districts. It is recommended that school districts shall not be consolidated until town boards have had ample opportunity to examine into the needs of the schools of the town and to formulate a general policy with respect to the location of school centers to be maintained within the town.

It is not possible at this time to touch upon all the questions which will be raised by the one thousand school boards in the State. The interests of communities vary. The outlook which men and women have upon educational needs is not the same in all towns. It is not possible, therefore, to anticipate all the questions which will arise under the administration of this law. It is the desire of the Education Department, however, to cooperate with boards of education in every way possible, to give them any information upon educational questions which they are seeking, to furnish them with any literature which is available for distribution, to have representatives of the Department meet them upon special occasions to discuss special subjects in which the particular community is interested, and to render any other service which may be possible in the advancement of the schools which are under the management and control of these boards.

Contracts Between District Trustees and Teachers

In districts having a sole trustee, the trustee chosen at the annual meeting in May last has the legal right to contract with a teacher for the ensuing school year. If such trustee has made a contract with a teacher it is binding upon the town and must be respected by the town board. If such trustee has not contracted with a teacher it is the duty of the board

of education to contract with such teacher or teachers as may be necessary to operate the school in such district. In districts having three trustees or more, or a board of education, such officers also possess the power to contract with teachers for the ensuing school year. In all cases where teachers have been employed by such trustees or boards, the contracts are binding and must be respected by the town board. Any vacancies which occur in the teaching force of the schools of the town should be filled by the selection of teachers by the town board. No teacher should be employed who is not in possession of a certificate of qualification issued by proper authority.

Janitors, Truant Officers, Medical Inspectors, Physical Training Supervisors

It is also the duty of town boards of education to appoint truant officers, janitors, medical inspectors, and physical training supervisors.

The board of education should provide a janitor for each school maintained in the district. The janitors should be required to see that fires are started sufficiently early in the morning to have the buildings in suitable condition to receive the children at the hour when children generally reach the schoolhouse. The janitor should also be required to keep the building clean and in a sanitary condition.

The attendance upon the rural schools should be improved and town boards now have an opportunity to render this service. A truant officer should be appointed who will look after the enforcement of the compulsory attendance law for the entire town. He should be a man of courage, who will look into violations of the law, bring to the attention of the town board the names of parents who should be prosecuted for persistent and wilful violation of the law. All children, within compulsory school ages, should be in attendance upon school when school is in session unless there is a legal excuse for their absence.

There has been much laxity in the enforcement of the medical inspection law. In many districts the expenditure made for the enforcement of such law has not brought adequate returns. In many districts throughout the State more has been expended in the enforcement of the medical inspection than should have been expended for such purpose. One medical inspector should now be employed for the entire town. An agreement should be reached as to the salary to be paid such inspector. The board of education, and the district superintendent, should see that the person employed to do this work performs it in such a manner that the children of the town will receive the service which the law contemplates they shall receive through such inspection.

In many towns of the State at the present time, full time school nurses have been employed. A registered nurse who has been admitted to practice in this State may be employed as a school nurse. Our experience shows that the best service will often be rendered through the employment of a full time nurse who may do very much of the work required under the medical inspection law in the physical examination of school children, in following up cases of children who are ill or physically defective, and in providing proper treatment for such children. School nurses should be employed during the entire year, including the vacation period as well as during the time school is in session. In some cases registered nurses who have also had training along the lines of physical education and who are

qualified under the law to give instruction in that subject may be employed to do the work required under the medical inspection law and the physical training law at a salary which will make it economical to combine these phases of educational administration and at the same time render the best service possible to the children. Where competent, trained persons may be employed in such a combination of service, it is recommended that such course shall be pursued.

School Must be Maintained in all Districts

A board of education has not authority to discontinue a school in any district in the town. The law contemplates that school shall be maintained in each district in a town, except such districts as may have contracted for the education of their children prior to August 1, 1917, under authorization of a vote of a district meeting. If there is not a sufficient number of children in a district to warrant the continuance of a school therein, the course of procedure must be the consolidation of the district with an adjoining district. Such consolidation must be made as provided under section 330 of the Education Law and as described on pages 1 and 2 of this document. A town board has not the authority to determine that a school shall be closed in such district.

Schools Maintained by Contract

School districts were authorized under the provisions of section 580 to 586 of the Education Law to contract with school districts or cities instead of maintaining home schools. Before such contract could legally be made it must have been authorized at a district meeting. Trustees of school districts, therefore, which authorized such contracts previous to August 1, 1917, could legally enter into such contracts and these contracts are binding upon the town board. The terms of the contracts thus entered into should therefore be carried out in each case. Before such contracts become effective, however, they must be approved by the Commissioner of Education. The procedure of former years should therefore be followed, and in cases where the contracts have been executed, they should be forwarded to the Commissioner of Education for consideration. If approved by the Commissioner of Education, town boards will be notified. If such contracts are not approved, the board of education will also be notified and it will then be the duty of the board of education to employ a teacher and maintain a school in the districts where such contracts had been authorized.

Transfer of Pupils

The attention of town boards is called to the provisions of section 342 of the township law which relates to the transfer of pupils from the schools of one town to the schools of an adjoining town, or union free school district, or city. There are many cases where children living in a certain section of a school district might more conveniently attend school in an adjoining town, or union free school district, or city. In such cases the town board of education may arrange to have such children attend such adjoining school. The school system is regarded as a State system and the State is required to provide for the education of all its children. The State

makes an annual contribution to every community toward the maintenance of schools. If the town of A affords school privileges which are more convenient for the children living in certain sections of the town of B the board of education of the town of A must accept such children from the town of B, provided the education of such children does not necessitate the employment of additional teachers or the providing of other school accommodations on the part of the town to which such pupils are assigned. In such case the board of education of the town of B may transfer the children in question to a school or schools in the town of A, or of a union free school district not under the township law, or even to a school in an adjoining city. The board of education of the town of B should immediately forward to the board of education of the town of A, or to the union free school district, or to the city to which such children have been transferred, notice of the action which it has taken. To prevent one town from imposing upon another, the law requires the approval of the Commissioner of Education where pupils are thus transferred. The board of education of the town of A must, when a transfer is properly made and approved, make provision for the education of the pupils thus transferred.

It is assumed that the two boards of education will talk such proposition over in advance and come to an agreement upon the compensation to be paid for the education of such children. If such agreement is not reached, the board of education receiving such children should forward to the board of education in the town where such children reside a verified statement of the cost of the instruction of such pupils. The town wherein such children reside must pay the expense of their instruction. The board of education is authorized to make the necessary payment for such instruction out of the school funds of the town.

Transportation

When the children of a district attend another school under contract, or when such children are transferred from the school of one town to a school in another town, union free school district, or city, and the distance which the children are required to travel to attend school is too great to permit their walking to and from school daily, it is the duty of the town board of education in which such children reside to provide for the transportation of such children.

In consolidated districts which have already been established, or in other cases where it is apparent that the distance which children are required to travel to attend school is too great for such children to walk to and from school daily, transportation should also be provided. Town boards of education have ample authority to make provision for transportation in such cases.

Schoolhouse Sites

A town board of education may designate a new site for a schoolhouse to be erected in a town and it may also enlarge the site of an existing schoolhouse. To designate a new site or to enlarge an existing site, the board is required to pass a resolution which should state the necessity for such action and it should also describe the land to be acquired for such purpose by metes and bounds. An estimate of the amount of funds necessary for

the purchase of the same should also be stated in the resolution. The resolution must be adopted by a majority vote of the board. After the board of education has adopted such resolution, it may acquire title to the property described in the resolution as provided by the Education Law for the acquisition of real property for school purposes, provided funds have been properly appropriated for the purchase of the same.

It is recommended to boards of education that a careful study of the school facilities of the town, the existing school necessities and the prospective demands upon the schools shall be carefully considered before any action is taken in designating new sites or acquiring additional property for the enlargement of the present school accommodations.

Erection and Repair of School Buildings

The board of education of a town is charged with the general care of school property, with the repair and improvement of such property, and with the duty of erecting school buildings and other buildings for educational purposes in the town. The board may take such action in relation to any of these matters as may be required in order to provide the proper accommodations for the education of the children of the town. The board of education, however, is limited in the amount of money which it may expend in any one year for the remodeling, improvement or enlargement of existing school buildings, or for the construction of new buildings. A town board may not expend in any one year an amount in excess of one-half of one per centum of the assessed valuation of the property of the town. In no case may such board expend for these purposes, except in a case where a school building has been condemned by the district superintendent, an amount which in the aggregate exceeds the sum of \$5000, unless such excess has been authorized by the voters of the town at a town school meeting.

If the board of education desires to expend an amount in excess of one-half of one per centum of the assessed valuation of the property of the town, or if the assessed valuation of the town exceeds one million dollars and the board of education desires to expend an amount in excess of \$5000, for remodeling, improving or enlarging existing school buildings or constructing new buildings, the board must submit such proposition to either an annual or special meeting and receive authorization to make such expenditure. A board may expend a sum which does not exceed one-half of one per centum of the assessed valuation of the taxable property of the town, and in a town which has an assessed valuation in excess of one million dollars, the board may expend \$5000 for these purposes without a vote of the district. If it is necessary to make an expenditure in excess of \$1000 for any of these purposes, the board of education may, in its discretion, submit the question of such expenditure to the voters of the town at an annual or special meeting.

Condemnation of School Buildings

A district superintendent may condemn a school building whenever, in his judgment, such building is not fit for use and not worth repairing. In condemning such building the district superintendent must express in the order of condemnation the amount necessary for the erection of a new

building. When a town board of education has been served with a district superintendent's order condemning a schoolhouse in the town and such order specifies that the amount necessary to erect a suitable building in place of the one condemned is not in excess of one-half of one per centum of the assessed valuation of the property of the town, or if the assessed valuation of such property is one million dollars and the amount expressed as necessary for the erection of the building is not in excess of \$5000, the board may proceed to erect a new building in place of the one condemned without a vote of the district. If the amount stated in the order of the district superintendent as necessary for the erection of a new building is in excess of the amount above stated, it is then the duty of the town board of education to call a meeting of the school electors of the town for the purpose of voting an appropriation for the erection of such building in compliance with the order of the district superintendent. If the meeting authorizes such appropriation and directs, in the resolution making the appropriation, that the amount shall be raised by tax to be collected in instalments, the board of education may proceed to issue school bonds in the same manner that bonds are now issued by school districts under the provisions of the Education Law. If the meeting does not authorize a tax for the erection of such buildings, to be raised in instalments, it is then the duty of the board of education to proceed to erect such building and to raise the necessary sum therefor by *one* tax upon the property of the town. In other words, the law regulating the condemnation of school buildings by district superintendents and the erection of new buildings in place of the condemned buildings is not changed under the township law. The town board of education is to exercise the same powers and is subject to the same official obligation in erecting a school building in place of a condemned building as trustees of school districts under the provisions of the Education Law.

The same recommendation is made in relation to the erection of school buildings and in relation to material improvements or the remodeling of existing buildings that is made in reference to the designation of new sites or the enlargement of existing sites. Before expenditures are made in the erection of buildings or the remodeling of existing buildings, the board of education should have a definite school policy in mind in reference to the maintenance of schools in the various districts of the town.

Schools to be Free to Children of Town

The schools which are now maintained in a town are open to the attendance of all children in such town. Section 341 of the Education Law provides that each department of a school and each course of study maintained in a school shall be free to the children of school age residing in the town in which such school is maintained. If a school of academic grade is maintained in a district of a town, all the children of the town meeting the requirements for admission to an academic school are entitled to attend such school without the payment of tuition. No charge may be made to any pupil of the town attending an academic or vocational school maintained in such town. Children residing in a town which does not maintain an academic school may attend an academic school in an adjoining town, and

the State will continue to pay to such school the same apportionment of \$20 a year which is now paid. Children residing in a town in which an academic school is maintained, but not within the school district in which such department is maintained, will entitle the town to receive the same apportionment which has been paid for years under the nonresident tuition law, viz: \$20.

Textbooks

The textbooks used in the several schools of the town are to be designated by the town board. It is recommended that town boards make as little change as possible in the textbooks to be used. There should, however, ultimately be a uniformity of textbooks in the schools of a town. If modern textbooks are not in use in any of the schools of the town, the board of education should, in due time and after due consideration, authorize modern textbooks for the use of the schools of the town.

The question is raised as to whether or not a board of education has the authority to provide free textbooks for the children of a town. The law does not confer this power upon the board of education. The voters of the town, however, do have the authority to vote upon the question and if free textbooks are authorized by a vote of the school electors of the town at either an annual or special meeting it becomes the duty of the town board to provide free textbooks.

Tax Budget

The law provides that, on or before the first day of July each year, the board of education shall prepare an itemized tax budget. This budget must be in triplicate. It must contain the amounts required to be raised by tax for school purposes in a town for the ensuing year. The budget must also contain a statement of the probable amount to be received by a town from the State in the apportionment of State funds, and also the probable amount to be received from other sources. It is not possible, of course, this year to prepare this budget on or before the first day of July. This provision of the law is directory and not mandatory. The failure to prepare such budget on the first day of July does not prevent the board of education from preparing the budget on a later date. In the future this budget should be prepared on or before the first day of July each year. Since the board of education does not assume the functions of its office until August 1st this year, it is not possible for such board to prepare a statement by July 1st. The board should, however, prepare a budget for the ensuing school year as soon as may be possible after assuming its functions on August 1st.

In the preparation of this budget the town board should consider the expenditures which have been made during the previous year by each of the several districts of the town. It should also give careful consideration to any budget which was authorized at an annual meeting of a school district on the first Tuesday in May last. It is recommended that the district superintendent be prepared to furnish the town board with complete data in relation to the expenditures made by the several districts of the town in recent years for school purposes. With this information at hand, the board of education should proceed to prepare its budget on the basis outlined in section 345 of the Education Law. Under the provisions of this section the board should include such amounts for the several schools of the town as may be

necessary to meet the various purposes outlined in paragraphs *a* to *h* inclusive of subdivision 1 of said section 345.

As soon as this budget is prepared by the board of education, such board should publish the same at least once each week for the four weeks following the date on which it is prepared. The publication of such budget must be in two newspapers if there are two in a town, or in one newspaper if there is but one published in a town.

It is suggested that boards of education familiarize themselves at once with the needs of the several school districts for the ensuing school year. The whole financial needs of the schools of the town should be understood by members of the board and the budget should be formally prepared, ready for adoption at the meeting of the town board to be held August 1, 1917. It would then be possible for the board of education to adopt the budget and to give notice immediately as specified above to the voters of the district. Much time will be saved if this action is pursued by boards of education and it is urgently recommended that they shall follow such course.

The law authorizes the issuance of a supplemental budget. If it should be necessary later in the year, to meet contingent expenses, the board of education would have the power to issue a supplemental budget. It is strongly urged that boards shall include in the budget adopted at the annual meeting sufficient funds, so far as they are able to ascertain at that time, to meet all expenses during the year. It is suggested, however, that after the budget for the ensuing year is adopted on August 1st next, it shall be submitted to the district superintendent for his formal approval in the manner required for a supplemental budget.

The following form of budget is hereby prescribed:

ESTIMATED RECEIPTS

- Public money for teachers wages
- Public money for library and apparatus
- Public money for academic quota and attendance
- Public money for nonresident tuition
- Other tuition receipts
- Receipts from other sources
- Balance to be raised by tax

ESTIMATED EXPENDITURES

1 General control (Regulative and executive service)

- Salaries of clerk of board
- Other expenses of board of education
- Compulsory education — salaries
- Compulsory education — other expenses
- School census

2 Instructional service (Supervision and teaching)

- Salaries of teachers
- Textbooks
- Other supplies used in instruction

3 Operation of school plant

- Wages of janitor and other employees
- Fuel
- Water, light and power
- Janitor's supplies
- Other expenses of operation

4 Maintenance of plant (Upkeep)

- Upkeep of grounds (repairs)
- Repair of buildings
- Repair and replacement of equipment

5 Fixed charges

- Insurance
- Contributions and contingencies

6 Debt service

- Payment of bond
- Redemption of short term loans
- Payment of interest—on bonds
- Payment of interest—on short term loans
- Refunds of taxes and tuition

7 Capital outlay (Acquisition and construction)

- Land
- New buildings
- Alteration of old building (not repairs)
- Equipment—heating, lighting, plumbing and electrical
- Equipment—furniture
- Equipment—instructional apparatus

8 Auxiliary agencies and other sundry activities

- Libraries—salaries
- Libraries—books, repairs and replacements
- Libraries—other expense
- Health service—medical inspection
- Health service—nurse service
- Health service—dental service
- Health service—other expense
- Transportation of pupils
- Care of children in institutions
- Provision of lunches
- Community lectures and social centers
- Recreation
- Payments to private schools and schools of other civil divisions

Relation of District Superintendents to Town Boards of Education

District superintendents should meet with town boards frequently to advise them of the needs of the several schools in their respective towns and to discuss with such boards the educational policies which it is advisable to pursue. The district superintendent is the professional school officer of the town.

His official relation to the town board of education is intended to be the same as the relation of a city superintendent of schools to a city board of education. The district superintendent is to cooperate in every way possible with town boards of education to relieve such bodies of as much of the details of administration as may be possible. District superintendents should, therefore, take up in advance of board meetings, matters which are to be presented to the board and should go over such matters with the clerk of the board, getting the business affairs which need consideration by the board in such form that they may be presented to the board of education without prolonging the board meetings. The board of education is expected to give its time to the large problems involved in the administration of the schools and to the determination of the general school policy of the town. It is recommended that boards of education shall frequently consult the district superintendents in relation to matters bearing upon the school interests of the town.

Before selecting teachers the town board should make inquiry into their reputation and qualifications. The district superintendent will be able to render much service to town boards of education in recommending teachers who have been successful in the schools where they have been employed. It is recommended that boards of education shall not contract with teachers until such teachers have been approved by the district superintendent.

Boards of education will also find that district superintendents will be able to be of much service to them in making suggestions relative to the adoption of textbooks and in providing suitable libraries adapted to the needs of the schools and the interests of the community.

Assessment and Collection of Taxes

The clerk of the board will prepare the tax list. All of the taxable property in each of the school districts under the jurisdiction of the board of education will be placed upon the tax list. The valuations of such property will be taken from the town tax roll. Where a school district is located partly in two or more towns it is to be regarded, for the purpose of taxation as well as for all other purposes of the township law, as lying wholly within that town in which its principal school house is located. Therefore, where the schoolhouse of a district is located in town A but such district extends partly into town B, it will be necessary for the clerk of the board of town A to obtain the assessments of that portion of the district which extends into town B from the tax roll of the latter town. It will also be necessary for the clerk to obtain the list of apportionments of franchise taxes made by the assessors with respect to such joint district. Where there are two or more town school units in the town the town board of assessors must apportion to each unit its share of the franchise taxes as required by section 40 of the tax law. An apportionment must also be made as between the town unit and any union free school district in the town not subject to the township law.

After the tax has been levied by the board of education the same will be extended upon the tax roll by the clerk and when completed the board of education will annex to the tax list its warrant for the collection thereof. The tax list and warrant will then be delivered under the direction of the board of education to the town tax collector who is required to collect the same and to pay over the amount thereof to the town school treasurer.

Books and Property of School Districts

All school records, all books and all other district property, together with the keys of all school buildings, should be turned over by the trustees of the several districts of a town to the board of education of the town. The clerk may act for the board in receiving such records, books, property, keys etc.

Annual School Meeting

A special pamphlet will be prepared in relation to the annual elections, giving full information as to the registration of voters, appointment of inspectors, method of conducting annual meetings, etc., for the annual meeting which will be held on the first Tuesday in May.

Valuation of School Property

Later in the year information will be forwarded to district superintendents and boards of education in relation to fixing the value of school property which is turned over by the several districts to the town. It is suggested that no action be taken in this matter until a further communication is received from the Department in relation thereto.

The officers of the Education Department will be gratified to be of service at any time to the local school officers who are required to organize the rural schools of the State under this new system. The change marks an important event in the history of the State's school system. We have the opportunity of rendering a great service to the State in the administration of this important work. We offer such aid as we shall be able to give in solving any of the problems which confront you and we solicit that cooperation from you which is essential to the success of the school system.

Very respectfully yours

THOS. E. FINNEAN

July 2, 1917

Deputy Commissioner of Education

Election of Boards of Education in Towns and Town School Units

To District Superintendents:

Chapter 328 of the Laws of 1917, entitled "An act to amend the Education Law, by creating town boards of education and providing for the support and maintenance of schools in towns," requires the performance of certain duties by district superintendents of schools in respect to the division of towns into town school units and the election of members of boards of education of towns and of such town school units. It should be noted that the law does not apply to union free school districts having a population of fifteen hundred or more or employing fifteen teachers or more at the time the act took effect, that is, May 2, 1917. Special attention is called to the following features which will require immediate action by district superintendents:

1 Enumeration of population of certain union free school districts. If it appears from available information that there is doubt as to whether a union free school district which employs less than fifteen teachers has a

population of fifteen hundred or more, the board of education should be advised to take an enumeration of the population within the district, using as a basis therefor, so far as possible, the state enumeration of 1915. Such enumeration should be made with care, by either the clerk of the board or some person designated by it. A written statement of the result of such enumeration should be prepared by the clerk or person taking it and the original should be filed in the office of the town clerk. A certified copy thereof should be delivered to the district superintendent and another certified copy be transmitted to the Education Department. The presumption will be in close cases that the union free school district is within the provisions of the township law. An enumeration should not be directed except in a doubtful case.

2 Division of towns into town school units. The law provides that where there are two or more union free school districts, each having a population of less than fifteen hundred and each maintaining an academic department which has been admitted to the University of the State, and the principal schoolhouse in each of which is situated wholly in the same town, the district superintendent must by order divide the town into as many town school units as there are such union free school districts situated in the town. The district superintendent should make such division immediately. In dividing the town, the district superintendent should take into consideration the accessibility of the outlying districts to the school in the union free school district. The academic department of the union free school district will be available to all the pupils residing in the town school unit. No school district may be divided in forming a town school unit. Each town school unit will have a separate board of education, to be elected by the trustees and members of the board of education of each district in such town school unit. The order dividing the town should designate the union free school districts and the common school districts comprising each town school unit. The order may be in the following form:

ORDER DIVIDING TOWN INTO SCHOOL UNITS

IN THE MATTER

of the

Dividing of the town of

....., county

of, into

town school units.

It appearing that there are.....
union free school districts in the town of county
of, each having a population of less than
fifteen hundred and each maintaining an academic department which has
been admitted to The University of the State of New York, and the principal
schoolhouse in each of which is situated wholly in the said town
of

Now, therefore, pursuant to the power conferred upon me by section 331,
subdivision 2, of the Education Law, as added by chapter 328 of the Laws of
1917;

It is hereby ordered that the said town of,
county of, be and the same hereby is

divided into town school units, containing the following school districts and to be numbered and designated as follows:

Town school unit no. 1 shall contain and comprise the territory now included in union free school district no., town of, county of and school districts nos. town of

Town school unit no. 2 shall contain and comprise the territory now included in union free school district no., town of, county of and school districts nos. town of

[Provide similarly for other town school units if there are more than two of such union free school districts.]

This order shall take effect immediately.

Dated June, 1917

.....
District Superintendent of Schools of the
 *Supervisor of*
District, County of

This order should be executed in triplicate, one of which should be filed in the office of the town clerk of the town, one should be transmitted to the Commissioner of Education and one should be retained by the district superintendent of schools.

3 **Notices of meeting for election of members of boards of education.** The members of the town board of education in each town which is subject to the provisions of the act, and in town school units as established by district superintendents, are to be elected at a meeting of the members of the boards of education of the existing union free school districts and the trustees of existing common school districts on the second Tuesday in June, that is, June 12, 1917. Members of boards of education and trustees now in office are to participate in the election of members of the town boards of education and the boards of education of town school units. *The members of boards of education and trustees elected at the annual meeting held on May 1, 1917, do not participate in such election.* District superintendents should forthwith serve a notice, in substantially the following form, upon all the members of the board of education of the union free school district within the town or town school unit, and on each trustee of each common school district in such town or town school unit:

To

Trustee of (or Member of Board of Education of Union Free School District)

District No.

Town of

You are hereby notified, pursuant to the provisions of chapter 328 of the Laws of 1917, known as the township law, that a meeting of the trustees and members of the board of education of the town of, (or of town school unit no. town of) is hereby called and will be held at the school house in district no. of said town, at on the 12th day of June

1917, at..... o'clock in the noon, for the purpose of electing a board of education of said town (or of school town unit no. of said town), consisting of members.

Dated June, 1917

.....
District Superintendent of Schools of the
*Supervisory*
District, County of

Such notices may be served at least five days before the meeting either personally or by mail upon the members of the board of education or the trustees of the districts.

4 **Number, terms of office and qualifications of members.** Where the number of school districts in a town or in a town school unit is five or less, the board of education is to consist of three members. Where the number of school districts in a town or town school unit exceeds five, the board will consist of five members. If there are three members, one is to hold office until August 1, 1918, one until August 1, 1919, and one until August 1, 1920. If there are five members of the board, two are to hold office until August 1, 1918, two until August 1, 1919, and one until August 1, 1920. The term of office of each person elected should be designated at the time of the election. Not more than three members of a board of education shall reside in one school district. It is to be expected that the larger and more populous school districts will be given adequate representation on the board. The board in determining the representation should deal fairly with each district.

Any person who resides in the town and is qualified to vote at a school district meeting is eligible to the office of member of a board of education, except the supervisor of the town and the district superintendent of schools. Not more than one member of a family shall be a member of the same board of education.

5 **Conduct of election.** Upon convening at the time and place named in the notice, the trustees and members of the boards of education present must organize by the election of a chairman and a clerk. A quorum should be present at the time of the election of members of the board. A quorum consists of a majority of the trustees and members of the boards of education of the several districts in the town or in the town school unit. The members present may adjourn to a specified time and place for sufficient cause. The trustees and members present should vote by ballot for the candidates for members of the board of education. The ballot should designate the term of office for which each candidate is voted. The candidates for the offices of members of the board, the terms of which are to expire at the same time, may be voted for upon one ballot. The chairman and clerk of the meeting shall canvass the votes cast for members of the board of education, and the candidate receiving a majority of the votes cast shall be elected.

The clerk of the meeting should keep a record of all the proceedings of the meeting and should keep a poll list containing the names of all persons who voted for candidates for the offices to be filled. He should include in the minutes a record of the votes cast for the respective candidates.

The minutes of the meeting should be written out and certified to by the chairman and clerk of the meeting, and a copy thereof be delivered to the district superintendent. The district superintendent should thereupon give notice of the election to the persons elected as members of the board of education. The original minutes of the meeting should be filed with the clerk of the board of education of the town or town school unit, when such clerk is elected.

6 Districts in two or more towns. A district which is located partly in two or more towns is deemed to be wholly within that town in which its principal schoolhouse is located. A person who resides in that portion of the district in another town is qualified to hold the office of member of the board of education of the town in which the principal schoolhouse is located.

7 Time of taking office. The members of a board of education of a town or of a town school unit elected as provided in the township law do not take office until August 1, 1917. Such board has no official duties or powers until that time. It is suggested, however, that the members as soon as they are elected confer or meet for the purpose of informally discussing the school affairs of the town. They may also properly confer with trustees and members of boards of education of existing districts, and with district superintendents, with a view to providing for urgent school repairs, supplies and accommodations.

Respectfully yours

THOS. E. FINEGAN

Assistant Commissioner for Elementary Education

The University of the State of New York

The State Department of Education

September 5, 1917

To Town School Boards:

Questions relating to the interpretation of the township law having been raised in certain counties of the State, particularly in relation to the powers and duties of former trustees of school districts, the preparing of school budgets and the levying and collection of taxes, the Education Department wrote the Attorney General for an opinion upon these points. The Attorney General has written such opinion. For the information of town boards and others interested in these questions, the opinion of the Attorney General is given in full.

Very truly yours

THOS. E. FINEGAN

Deputy Commissioner of Education

STATE OF NEW YORK

Office of the Attorney General, Albany

School Taxes — Township Law — Westchester County Tax Act

Chapter 328 of the Laws of 1917 known as the township school law adding article 11-a of the Education Law repeals chapter 105 of the Laws of 1916, known as the Westchester county tax act, in so far as it is inconsistent therewith.

The provisions with respect to the time of performance of acts required by sections 345 and 346 of the Education Law should be regarded as directory and not mandatory.

Inquiry

Should school taxes in the county of Westchester for the year 1917 be assessed, levied and collected under chapter 328 of the Laws of 1917, chapter 105 of the Laws of 1916, or partly under one and partly under the other?

Opinion

Chapter 105 of the Laws of 1916 provided a scheme for taxation in the county of Westchester somewhat different from that in force under the tax law in the rest of the State. Chapter 328 of the Laws of 1917 provided a scheme for the administration of all the schools in the State outside of the city of New York, and the raising and distribution of taxes for the purpose of maintaining them. The two acts are inconsistent with respect to the methods of assessing, levying, collecting, holding and disbursing school tax moneys and the question has been raised whether the act of 1917 would create in Westchester county exception to the special scheme for taxation provided by the act of 1916, or whether Westchester county should continue to act under its local law and present in itself an exception to the general scheme provided for the whole State by the 1917 amendment.

Section 2 of the township school law provides that:

"All acts, or parts of acts, general or special, inconsistent with the provisions of this act are hereby repealed"

But this provision is really only a declaration of the common law: which it has become customary to include in new legislation and which is here valuable principally as a preamble to the saving clause which follows it, protecting existing rights under former statutes. It is a general rule that a local statute is not deemed repealed by a general act unless it is clearly the legislative intent to effect such repeal. But there is no rule of law which prohibits the repeal of a special act by a general one without the use of express words, and the question whether a repeal has been made is always one of legislative intent. If the statutes are so inconsistent that the prior special act cannot operate when the general act is given the fair construction required by its language, the former must be deemed abrogated. The inconsistency, in such a case, sufficiently indicates an intent to repeal the statute. Thus the intent to repeal a former special law may be shown when the legislature enacts a revising law designed to cover the whole subject and furnish the only rule on the subject. *Pratt Institute vs. City of New York*, 183 N. Y. 151; *City of Buffalo vs. Lewis*, 192 N. Y. 193.

I am satisfied that the intent of the Legislature in passing the township school law was to institute a uniform system of school government throughout the State under the supervision of the Commissioner of Education. As part of this system of school government it includes a system of taxation. Should we say that the intent was to institute a system of government but to allow the taxation to be controlled by the local Westchester statute in that county, we would come to a situation where it would be impossible to determine which of the statutes should control as to certain details. In

resolving all such conflicts in favor of the township school law, I think we would carry out the true intent of the Legislature and that, therefore, in any proceedings for the assessment, levy or collection of school taxes in Westchester county we should look first to the township school law and only to the Westchester county tax law when the former is silent.

In this way where the township school law provides for collection by tax collectors and we find that there are no tax collectors in Westchester county, we look to the Westchester tax law and find that the receivers of taxes in that county perform the same functions and are selected in the same way as the collectors of taxes in other counties—in fact they are the same with a different title—and it is clear that, after the completion of its tax list under section 246 of the Education Law, the town board of education should issue a warrant for the collection thereof, in Westchester county, to the receiver of taxes.

It has been suggested that the township school law can not take effect this year because the provisions for school budgets contained in section 345 *et seq* fix specific days and times at which certain acts must be performed. Many of these days are necessarily before the first of August while the statute specifically provides that the new town boards of education only come into existence as such on the first day of August. Under section 354 the first board of education of each town should have been elected on the second Tuesday of June 1917, and should have convened on the first day of August for the purpose of organization and the transaction of business. Section 345 provides that on or before the first day of July in each year the board of education shall make up its budget which shall be published at length at least once in each week for the four weeks next preceding the first day of August and which shall be posted at least twenty days before the first day of August. How, it is asked, can a board of education first convened on August 1st under section 354 possibly comply with these requirements of section 345?

The answer is that the requirements in the statute as to time of preparation, publication and posting of the budget are directory and not mandatory. They are not essential to the general scheme of taxation provided by the act but are inserted for the guidance of the local authorities as to when to perform their duties and for the purpose of securing more uniformity throughout the State in the time at which these acts are done.

Few rules of statutory construction are better settled than the rule that:

"a statute specifying a time within which a public officer is to perform an official act regarding the rights and duties of others, is directory unless the nature of the act to be performed or the phraseology of the statute is such that the designation of the time must be considered as a limitation of the power of the officer." (Lewis Sutherland, Statutory Construction, § 612)

As McKinney puts it (1 Consol. Laws 59)

"It is frequently the case that a statute directs a public officer to do an act at a certain time, though it is not of the essence of the act that it be done at that particular time. The direction is given for the purpose of securing system, uniformity, and dispatch in the conduct of

the public business, rather than for the purpose of making the rights of persons dependent on the doing of the act at the specified time. In such cases, the direction as to time is generally considered merely directory, and the rights of other persons are not injuriously affected by the failure of the officer to perform the duty at the time prescribed. Especially is this so when the acts are to be done for the benefit of the public, or where there are no negative words in the statute forbidding the acts to be done at any other time."

In *Looney v. Hughes*, 26 N. Y. 514, I find in the opinion of Selden, J. at page 518, this language:

"The general rule on this subject is, as stated by Marcy, J. in *The People v. Allen*, (6 Wend. 486) that 'where a statute specifies a time within which a public officer is to perform an official act, regarding the rights and duties of others, it will be considered as directory merely, unless the nature of the act to be performed, or the language used by the legislature, show that the designation of the time *was intended* (sic) as a limitation of the power of the officer.' . . .

The provision was intended, at least in part, for the benefit of the public, and it has been held with great uniformity, that the public interests are not to suffer by the laches of any public officer (*United States v. Kirkpatrick*, 9 Wheat. 720; *Same v. Van Zandt*, 11 id. 184; *Same v. Nicholl*, 12 id. 505; *Dox v. P. M. General*, 1 Pet. 325; *People v. Russell*, 4 Wend. 570)."

In that case a statute required a county treasurer to issue a warrant against a delinquent town collector within twenty days. It was held that this provision was directory and that a warrant issued later was effective. In an action against the sureties of the collector who had defaulted, the defendants pointed out that had the warrant been issued within the twenty days prescribed by the statute, it probably would have been possible to collect from the principal, and that, therefore, the delinquency in issuing the warrant should excuse the sureties. But the court held against them on the basis that the twenty day provision was for the benefit of the public, forming no part of the contract of the sureties and the delinquency on the part of public officers should not be permitted to inure to the detriment of the public.

In commenting upon the distinction between mandatory and directory language in statutes, Judge Leonard, in *People v. Supervisors of Ulster*, 34 N. Y. 268, says:

'The statute prescribes no penalty, and imposes no forfeiture in case of a noncompliance with these provisions. There is no declaration that the verdict shall be void in case of the failure to comply with any of the directions of the statute as to the form of the proceeding.

These are some of the *indicia* by which the courts have established wise rules for determining the intention of the Legislature in the enactment of laws. Statutes are held to be directory or declaratory, according to the existence or the want of certain indications of legislative intent.

These rules have been long in practice, and the legislative bodies must be presumed to have enacted statutes with reference to them, as it is in their power to use language so that the statute must be considered mandatory, thereby excluding the power of the court to construe them as declaratory. These rules do not subvert, but carry into effect the intention of the law giver as it is to be gathered from the phraseology of the statute. A strict and literal adherence to the letter and form of a statute in minor and nonessential particulars will often defeat a remedy, or destroy a right which it was the principal intention of the legislature to create or provide.

Where a statute directs an act to be done in a certain way, or at a certain time, and a strict compliance as to time or form does not appear to the judicial mind to be essential, the proceedings are held valid, though the command of the statute has been disregarded. The statute is then said to be directory."

The case which has been cited in most of our leading cases in New York upon this subject is *Pond v. Negus*, 3 Mass. 230. This case is directly in point on the principal question since it deals with the assessment and collection of school taxes. A statute was under consideration which authorized the voting, assessing and collecting of money for the building and repair of district schoolhouses. The statute provided that the tax assessors should assess the tax within thirty days after the vote of the meeting was certified to them. No negative words restraining the making of the assessment after the time specified were included in the statute, and the court held that on this account the naming of the time for the assessment was to be regarded as directory merely and not as a limitation of their authority.

The Pond case is cited in *Barnes v. Badger*, 41 Barb. 98, where the general rule is stated as follows:

"The general rule most certainly is, that where a statute directs a public officer to do a thing within a certain time, without any negative words restraining him from doing it afterwards, the naming of the time will be regarded as directory, and not as a limitation upon his authority. (*Pond v. Negus*, 3 Mass. 230; *The People v. Allen*, 6 Wend. 486; *Marchant v. Langworthy*, 6 Hill. 646; *Ex parte Heath*, 3 id. 43; 12 Wend. 481; 5 Conn. 268; 11 Wend. 604; *The People v. Cook*, 14 Barb. 290 to 292)."

In *People v. Cook*, 14 Barb. 259 (affd. 8 N. Y. 67), at pages 290, *et seq.*, there is a careful summary of a number of cases on this subject showing that the rule is uniform that where the time or manner of doing a thing is not of the essence it will be considered directory rather than mandatory.

See also *Matter of Broadway Widening*, 16 Barb. 572, 579.

Wetheril v. Mosher, 9 Hun 412, 415.

Thompson v. Harris, 88 Hun 478, 481.

Metcalf v. New York City, 1 New York Sup. 873.

Bradley v. Ward, 58 N. Y. 401.

Gale v. Mead, 2 Denio 160.

Thomas v. Clapp, 20 Barb. 165.

People ex rel. Locke v. Rochester, 5 Lans. 11.

The rule appears to be similar in the other states:

Williams v. School District, 21 Pick. 75 (Mass.).

State v. Harris, 17 Ohio State 608.

State v. Horner, 34 Md. 569.

Anderson v. Mayfield, 93 Ky. 230.

Smith v. Sevain, 71 N. H. 277.

State v. West Duluth Land Co., 75 Minn. 456.

Under these authorities I think it clear that the provisions in sections 345, *et seq.*, of the Education Law referring to the times at which acts should be done with respect to school budget, should be regarded as directory merely and not mandatory; and failure to perform any of these acts upon the day specified will not vitiate the act if performed afterwards. I think that the town boards of education may proceed now to appropriate, advertise and post their tax budgets for the year 1917 and to complete their tax lists and deliver their warrants to the town collectors of taxes (in Westchester county the receivers of taxes).

The continuation of the school districts by section 330 is only for the purpose of determining their territorial extent and controlling the location of schools. The purpose of this section was to give to the qualified electors of existing districts the determination of the question as to the maintenance of schools in such districts. The districts have no existence for any administrative purpose, except that the trustees, boards of education and other officers of each school district are continued by subdivision 2 of paragraph 352.

"for the purpose of closing up the business and financial affairs of such district and of satisfying its obligations, except bonded indebtedness; adjusting its claims, collecting funds due it and paying its just debts."

Subdivision 1 of section 252 shows clearly that they go out of business for other purposes on July 1, 1917. I do not see how the language of section 352, coupled with the language of section 330, can be construed to mean that the school districts shall continue to be administered under the old law for the fiscal year 1917-1918 and until August 1, 1918. It seems to me perfectly clear that that is not the intent of the statute, but on the other hand that the statute shows the specific purpose of the legislature to have the change take effect this year. Section 4 of the act (chapter 329 of the Laws of 1917) provides that it shall take effect immediately. It was signed by the Governor on May 2, 1917. Section 354 provides that the first board of education shall be elected in June 1917 and shall convene in August 1917 for the purpose of organization *and the transaction of any other business*. Section 352 provides that the school officers of the school districts, in office at the time of the taking effect of the act, should continue only until July 31, 1917, when their terms would cease and their offices be abolished. The provisions with respect to the advertising of the budget prior to August 1st, as I have shown, are merely directory, and it seems to

me clear beyond question that the legislature intended the statute to go into effect in its entirety this year.

Dated: August 28, 1917.

MERTON E. LEWIS
Attorney General

To:

*Frank B. Gilbert, Esq.,
Counsel, The University of the State of New York,
Albany, New York.*

The University of the State of New York
The State Department of Education
Albany

October 20, 1917

To District Superintendents and Town Boards of Education:

The correspondence which we are receiving indicates that there is not a clear understanding as to the provisions of the law in relation to the right of children to attend schools maintained in the town in which they reside, their right to attend schools maintained outside of such town, and the payment of tuition therefor. In order to place before all superintendents and boards of education the proper interpretation of the law in relation to these matters, your attention is called to the following:

1 *The word "town" as used in the law and in this letter means a town school unit. In a town in which there are two or more town school units, the rulings herein stated must be applied to each unit as though such unit were a separate town.*

2 No tuition may be charged a pupil for attendance upon a school in the town in which such pupil resides or for attendance upon any class maintained in a school in such town.

3 *a* The law provides that the schools maintained in a town shall be free to the children of school age residing in such town. This provision of the law must, of course, be construed in connection with other provisions of the law. This particular provision does not confer upon parents the right to determine which school in a township their children shall attend. The law specifically retains each school district as such district existed at the time the township law became operative. The purpose of this provision of law was to define in a general way the centers where, and the territory within which, a school should be maintained. A town board is given the power to determine what schools shall be maintained in a town and it may maintain a school in each of the districts in a town. The children may, of course, as a matter of right, attend the school maintained in the district in which they reside.

b If a town board maintains a course of study in a particular school under its supervision which is not maintained in the other schools of such town, the children residing in any district in that town are entitled to attend the school in which such special course of study is maintained, for the purpose of receiving instruction in that particular course of study, provided they meet the requirements for admission thereto.

c For instance, if a town board maintains an academic department in one of its schools, such department must be open to all the children residing in the town who meet the conditions prescribed for admission to such department; or, if a town board maintains an agricultural or homemaking course in a particular school, such course must be open to all the children of the town who meet the requirements prescribed for admission thereto.

d If the children residing in one district may more conveniently attend school in another district in the town, it is within the discretion of the town board to permit such children to attend that school.

e If a school in one district is overcrowded and the school in an adjoining district is not overcrowded, and the board of education may, without inconvenience or hardship, transfer some of the children from one district to the other so as to relieve the overcrowded condition in that school, the board may take that action.

4 In a pamphlet issued by this Department under date of July 2, 1917, we outlined the provisions regulating the transfer of pupils, as follows:

The attention of town boards is called to the provisions of section 342 of the Township Law which relates to the transfer of pupils from the schools of one town to the schools of an adjoining town, or union free school district, or city. There are many cases where children living in a certain section of a school district might more conveniently attend school in an adjoining town, or union free school district, or city. In such cases the town board of education may arrange to have such children attend such adjoining school. The school system is regarded as a State system and the State is required to provide for the education of all its children. The State makes an annual contribution to every community toward the maintenance of schools. If the town of A affords school privileges which are more convenient for the children living in certain sections of the town of B the board of education of the town of A must accept such children from the town of B, provided the education of such children does not necessitate the employment of additional teachers or the providing of other school accommodations on the part of the town to which such pupils are assigned. In such case the board of education of the town of B may transfer the children in question to a school or schools in the town of A, or of a union free school district not under the township law, or even to a school in an adjoining city. The board of education of the town of B should immediately forward to the board of education of the town of A, or to the union free school district, or to the city to which such children have been transferred, notice of the action which it has taken. To prevent one town from imposing upon another town, the law requires the approval of the Commissioner of Education where pupils are thus transferred. The board of education of the town of A must, when a transfer is properly made and approved, make provision for the education of the pupils thus transferred.

It is assumed that the two boards of education will talk such proposition over in advance and come to an agreement upon the compensation to be paid for the education of such children. If such agreement is not reached, the board of education receiving such children should forward to the board of education in the town where such children reside a verified statement of the cost of the instruction of such pupils. The town wherein such children reside must pay the expense of their instruction. The board of education is authorized to make the necessary payment for such instruction out of the school funds of the town.

5 The question as to what items may be included in the cost of instruction is frequently raised. Section 342 of the Education Law, as amended by chapter 328 of the Laws of 1917, contains the provision that the board of education of a town, union free school district or city shall not be required to receive pupils from a district in an adjoining town, if by receiving such pupils it is necessary to provide "additional teachers or other school accommodations" without the consent of the board of education, etc. Where reference is made to the compensation paid to a union free school district, town or city for receiving such pupils, it is to be based on "cost of the instruction of such pupils." It is clearly the meaning of this law that no hardship shall be imposed upon a union free school district, town or city in receiving pupils under this provision of law. Schools, wherever maintained, are state schools and the state contributes to their general support and maintenance. It was the theory of the Legislature that a district should receive pupils living outside its boundaries, when by so doing these pupils would be relieved of the inconvenience or hardship

caused by being required to attend school elsewhere. At the same time, it is clearly the meaning of the statute that a district receiving such pupils shall be reimbursed for the actual *cost of instruction*.

What, then, does "cost of instruction" mean as used in this law? In the plan of school accounting, prepared by the Education Department for the use of boards of education throughout the State, is a general outline of what may be included for "instructional service" under expenditures made for the operation of public schools. In determining the "cost of instruction" for this special purpose boards of education may include the items, specified in such general outline, which are as follows:

Form 3—Instructional Service

- 3-1 Supervisors' salaries. Where a supervisor gives a portion of his time to teaching, distribute the salary between 3-1 and 3-9 in proportion to the time devoted to supervision and teaching respectively.
- 3-2 Other expenses of supervisors of grades and subjects. Traveling and other expenses allowed in attending conventions, institutes, etc., street car fares, report blanks, stationery used by supervisors.
- 3-3 Principals' salaries. If principals teach, divide the salary between 3-3 and 3-9 proportionately to the relative time devoted to supervision and teaching as above.
- 3-4 Salary of principal's clerk. Supply teachers acting in that capacity in principal's office. If any of these persons teach, divide the salary as above between 3-4 and 3-9.
- 3-5 Principals' office supplies. Stationery, blank forms, report cards, class books, attendance registers, permanent record cards, etc.
- 3-6 Other expenses of principals' offices. Traveling and other expenses allowed in attending conventions, institutes etc., car fare.
- 3-7 Blank column reserved for further classification if desired.
- 3-8 Other expense of supervision. Teachers' traveling and other expenses allowed in attending conventions, institutes etc., cost of institute speakers, and other institute cost. Common sense must be used to decide just where supervision leaves off and teaching begins. In general this matter can be settled by answering the question, "Does the item paid for actually teach the children or does it make better teachers?"
- 3-9 Teachers' salaries. Exclude proportionate part of salary for time spent as supervisor, principal, principal's clerk or superintendent's assistant. This includes teachers of all grades and subjects.
- 3-10 Textbooks if furnished to pupils. If textbooks are furnished only to indigent pupils, charge in column 9-13. Include supplementary reading books.
- 3-11 Other supplies used in instruction. This includes paper, chalk, ink, pencils, other school-room supplies, laboratory supplies and materials, supplies used in teaching cooking, sewing, drawing, manual training, art, music, kindergarten and physical training, etc. It should be noted that a supply is something, the use of which involves its consumption, breakage or probable loss, while a piece of equipment is an article which is used year after year. Care should be taken to exclude from supplies used in instruction any article made of durable material which is supposed to last year after year with reasonable use. No permanent laboratory apparatus or equipment is to be included in this column. Supplies for recreation, athletics, school gardens, school lunches and all other auxiliary activities enter on form 9 and not in this column.
- 3-12 Commencement exercises and exhibits. Expense of music, palms, printing programs, renting chairs, moving piano etc., for commencement exercises or school entertainments.
- 3-13 Blank, reserved for further subdivision of instructional service if desired.

The total cost of instruction thus ascertained is to be divided by the number of pupils registered as attending school.

6 A pupil residing in a school district in which an academic department is not maintained, and who is qualified to attend an academic department, may attend school in a district in the town in which an academic department is maintained. The State will apportion to the district receiving such pupil \$20 tuition as in former years. The fund received from this source will be paid into the treasury of the town and used for the support of the schools in the town.

7 A pupil may attend school in a district which maintains an academic department but which is outside the town in which such pupil resides, provided an academic department is not maintained in the district in which such pupil resides, and the State will apportion to the district which such

pupil attends \$20 tuition as in former years. The fund received from this source will be paid into the treasury of the district, town or city and used for the support of the schools therein.

8 When a pupil attends an academic department in the town in which such pupil resides, the board of education may not charge such pupil additional tuition. The academic course or high school must be free to all children residing in the town in which such school is located.

9 If no academic department is maintained in any of the schools subject to the jurisdiction of the town board of education it becomes the duty of such board to provide academic instruction for pupils who have completed the work of the eighth grade either by contract with, or transfer to, the schools of another township, union free school district or city where such instruction is given, and provision should be made by the board for the tuition of such pupils. The difference between the tuition charged and the amount apportioned by the State is to be paid by the board of education of the town in which the pupils reside.

10 If a pupil resides in a town which maintains an academic department in one of its districts but is so located that such pupils could more conveniently attend an academic department in another town, the town board of education of the town in which such pupil resides may provide for the payment of the tuition of such pupil in the town where such pupil attends school. A town board of education of a town which maintains an academic department is not ordinarily required to pay the tuition of pupils who attends an academic department in another town. If the town board provides adequate facilities in its own town for all academic pupils, such pupils must generally attend the school in which such academic department is maintained or pay the tuition charged them by the town where they do attend.

11 If an academic department is not maintained in any district in a town, the town board of education may establish such department in one of the schools in the town which is properly equipped to give such work. No vote of the town is required upon such question, in order to give the board power to establish such department. The requirements of the Board of Regents for the establishment of an academic department must, of course, be satisfied before such department may be established. Application for the organization of such department must be submitted in required form to the Board of Regents and receive affirmative action.

Very respectfully yours

THOS. E. FINEGAN

Deputy Commissioner of Education

To understand fully the attitude of the public in regard to the township bill during the period in which it was discussed in the Legislature and the period following its enactment is best understood by a careful survey of the following newspaper clippings which include the editorials, comments and letters from various citizens in regard to this matter.

Anonymous Circulars Distributed about the State, March 1915

Information was obtained by the author of this report showing that these circulars were prepared before the bill was introduced in the Legislature and were ready to be mailed from three points in the State as soon as the bill was introduced.

SEE ASSEMBLY BILL 1503

(Introduced March 17th, 1915)

It provides for Township School Boards and the maintenance of schools by towns, except in Union Free School Districts with a population of 5,000, or more. There must be united and immediate demand upon the members of the Legislature that they

LEAVE THE SCHOOLS ALONE!

Write the Assemblymen and Senator from your District.

Assembly Bill 1731 introduced March 17, 1915, takes them away from you. It revolutionizes the entire school system from the bottom up.

- I It provides for Township School Boards of seven members, and the maintenance and complete control of schools by them.
- II It destroys neighborhood spirit, and personal interest in schools. Centralizing and undemocratic.
- III It introduces politics in schools — political boards instead of nonpartisan trustees. Political and commercial influences in teachers appointments and letting of large contracts.
- IV It means greatly increased expense. New, large, central, modern buildings and equipment. Increased valuations and higher taxes.
- V Farm values lowered because of distance from central school when neighborhood school is abolished.

Get a copy of the bill and study it. In the meantime, you can do two useful things *at once*:

- I Write or telegraph your Assemblyman and Senator at Albany, and particularly
- II Write or telegraph at Albany — Hon. Morell E. Tallett, Chairman Assembly Education Committee, asking
 - (a) Why such haste?
 - (b) Why not give the people time to think and make their thoughts known?
 - (c) Why not leave the schools alone to work out their own salvation?

DO IT NOW**THE GRANGE DON'T WANT THE BILL**

The State Grange endorsed the Township Plan (control of schools by town school boards) on February 5, 1915, before the bill establishing town school boards was even drafted.

Do the members of the Grange know the provisions of the bill, No. 1731, introduced on March 17?

Have *they* figured what taxes they will pay under the bill as introduced? Or have they taken the figures of others presented before the bill was drafted?

Have *they* reckoned the cash value of a farm—how much less it will bring—when the nearby school is done away with? When the nearest school is several miles away? Experts say values will fall thirty to forty per cent.

THE BILL WANTS THE GRANGE!

BUT

WHAT WILL THE GRANGE GET?

It is not too late to correct a mistake or misunderstanding. Your Assemblymen and Senators at Albany will be glad to hear from you *now*. Write them not to act until you know what the bill is, until you figure out what it will cost *you*.

And write at once or telegraph the Honorable Morell E. Tallett, Chairman of the Assembly Committee on Education, and the Honorable Charles C. Lockwood, Chairman of the Senate Committee on Education, both at Albany.

THERE IS NO TIME TO SPARE

Report of the Committee of the Academic Principals Associations

To the Principals of the State of New York:

Your committee, appointed to cooperate with the Education Department in the consideration of a township bill, does resolve as follows:

First, That the plan in our judgment is along the line of the proper development of the school systems of the State of New York.

Second, That it is our opinion that the schools in general will be greatly benefited by the passage of the township bill.

Third, That in our judgment a plan of this sort is imperative for the welfare of the children and the people of the State of New York and the development of its resources, especially those of agriculture.

Therefore, Let it be resolved that the committee does approve of the enactment of this bill.

[Signed]

GEO. F. BARFORD

W. J. MULTER

F. G. LYON

F. W. VAN ZILE

WILLIAM F. H. BREEZE

Chairman

Grand Island, N. Y., April 9th, 1915

Hon. M. E. Tallett

Assembly Chamber

Albany, N. Y.

DEAR SIR:

I am greatly interested in the bill introduced by you, which is intended to replace the present system of school districts by a township system. I feel

fully in sympathy with the purpose of the bill because I know of the benefit of such a system by actual experience. A number of years ago the town of Grand Island, Erie county, New York, had eleven school districts, each under the usual separate organization. The people were dissatisfied with this system and procured a special law to be passed organizing these districts into a township system with one board of education consisting of five members. From that time all matters pertaining to the several schools have been directed by said board. The taxes are uniform thruout the town and are all paid to the town collector and spread on the town tax roll.

This system has been in operation for about 30 years and has proved entirely satisfactory to the people of the town. As far as I know there has never been any suggestion on the part of any resident that we return to the old district plan.

Yours respectfully,

ADAM KAISER

Supervisor of the Town of Grand Island

Resolutions by Dansville Grange

Copy of a circular letter by the Dansville Grange, No. 178, April 8, 1916 and a discussion of the resolution by J. Murray Foster, supervising principal, Dansville High School, Dansville, N. Y.

To the Grangers of the State of New York, greeting:

Dansville grange, No. 178, presents herewith her resolutions, and earnestly asks you to help get pledges from the members of the Legislature to support a bill that will give the people a right to vote upon such important questions as are referred to in the resolutions. Kindly do your best to get favorable replies, and mail to us. As soon as a majority is reached the bill will be introduced. Let us see what the granges can do for what is right. Personal letters also suggested. Kindly acknowledge receipt of these resolutions (with suggestions) by postal card.

Dansville Grange No. 178 proposes to place a copy of these resolutions with every grange in the State, requesting its consideration and adoption. The "one man school law" is an insult to the intelligence of the people of the country, it enforces confiscation and taxation without representation.

See resolution of H. Fay Hethaway, chairman committee on common schools, state grange report for 1916, adopted (p. 137), then ask yourself how we can do it, when a law is enforcing the opposite all over the State.

Also if your grange is in sympathy with this movement and care to send a small remittance (postage stamps will do) to help finance the campaign it will be thankfully received.

Should it become necessary for this committee to attend a hearing at Albany on this issue, they propose to get there if they have to go on foot.

There was such a mixup of amendments and laws presented at Jamestown on this question that their only way out was to wait a year and think about it.

A publicity campaign has been going on in "Live Issue of the Day" for the repeal of the "one man law," the last four months in metropolitan papers, and not a single word was received in its defense, only one side to it.

Address all communications to Dansville Grange Executive Committee, G. C. Stone, Chairman, Dansville, N. Y. The remittances may be made payable to L. C. Gottshall, Treasurer, Dansville Grange.

Dated April 8, 1916.

Preamble and Resolutions

Whereas, For example: In 1914, district no. 4 of Dansville, N. Y., possessed a nearby school with modern equipment, 16 pupils, no debt, a graduated teacher, forty weeks, taxes \$350; in 1915, the district was forcibly consolidated with district no. 1, a school two miles from the grange hall, school building, school grounds and equipment representing an outlay of \$5000, no longer the property of the district, bonds covering the district for \$30,000, a debt the people of the district had no voice in making, taxes raised to \$1750. The inhabitants of the district (small farmers among the hills) who pay the tax had no voice or vote or notice of the transaction; and

Whereas, The school laws of the State of New York allow a school superintendent to dissolve a district or consolidate the same with remote districts, thus depriving the country of its nearby schools without notice, voice or vote of the people of the district affected, thus decreasing the value of their farms, on account of long distances to a school, incurring a great increase of taxation and inconvenience of parents getting their little children so far away to school, therefore,

Resolved, That while we are in favor of good schools, school improvements and competent teachers, we will not submit to being ignored and humiliated by the enforcement of the "one man school law" that does not recognize any right of participation on our part without protest.

Resolved, That this grange do hereby petition and demand a law that will restore to school districts of the State their constitutional right to vote upon the question of dissolution or consolidation of their schools, and the result of such vote shall decide whether it shall be done or shall not be done, and extend this privilege to districts that have been consolidated by force.

Resolved, That this grange forward a copy of these resolutions to its representatives in the Legislature, inclosing a stamp and requesting a reply.

Resolved, That we will use our best efforts to get the right to vote, then unite with the Department of Education in making the rural schools the best in the world, and save the convenient and nearby little red schoolhouses in the country, and paint them white.

Granges are requested to adopt these resolutions and send them forward as soon as possible.

Adopted by..... Grange No.....1916
.....MasterSec'y

Discussion of Resolutions by Mr Foster

I knew that the grange appointed a committee two years ago to fight consolidation. The first move was to secure Senator Newton to do the fighting and all were very enthusiastic over the proposed fight until they learned the Senator's rate of fees. This acted as a very wet blanket on their ardor and a new attack was planned.

For awhile it took the form of letters in the Rochester newspapers. Then I learned they were going to write every grange in the State. That was a year ago. This committee did not send these letters out with an idea of fighting the township bill, but rather to get the consolidation law repealed. I know that the chairman is in favor of the township bill — at least he says he is and I believe he is an honest man.

In the preamble, line 2, the statement "modern equipment" is made. Mr Collister told me one reason why he was very glad to consolidate that school was the fact that he could not get the district to make the changes and add the equipment necessary for a good school.

In line 3 a "graduated teacher" is mentioned. Yes, she was graduated from our school with no professional training. She was a slip of a girl who prepared for college and by virtue of the fact that she had earned an academic diploma she taught. She had no more of an idea of how to teach children to read than the memory of how she was taught would give her.

In line 5 the distance of our school is given as two miles from the grange hall. This is a misleading fact. The district schoolhouse is but a mile from our schoolhouse. The committee might have given the distance of their school from a so-called hotel of very unsavory reputation which is but a few rods, but they didn't.

In line 7, the debt of our district is exaggerated. It is now approximately \$24,000.

In line 10 the statement "no notice of the transaction" is not entirely true. Mr Collister notified the trustee of this district that he intended to consolidate and asked him to notify the inhabitants. If there should be any objections he would hold hearings. He heard nothing from the trustee and consolidated the district. It seems that the trustee said nothing to his people, and when they heard of it there was a wail to heaven. He then held hearings after the deed was done. This fact is what stirred up the farmers.

In line 15 the allegation that farm values have been decreased has been met by Mr Oberdorf's letter which I sent you about a week ago. He represents the largest holdings in the district.

In line 17 it is stated that the present system inconveniences parents. This point has been covered before but I shall do so again. The children have no farther to walk than they had when the district school was open. Now they have to walk to the old district schoolhouse which is opened and warmed for them by one of the mothers. Here the children wait for a closed auto 'bus which meets them there at 8.35. The journey to our school is covered in five minutes. At night the same 'bus returns them to the school house from whence they came. From there they walk home or are met by the parents as the case may be.

In line 19 it is alleged that the district is in favor of good schools. Mr Collister's experience led him to believe the contrary. It is certain that the district would never have given their children the advantages they now enjoy. They could not because the cost would have been prohibitive. I have been in Dansville six years and I can not remember a single child from that district that earned a preliminary certificate. I do know that about 85 per cent of those trying Regents examinations from that school failed. This is a good indicative of how good a school they kept.

Educational Legislation 1917

The editor of the *School Bulletin* sat in one of the boxes near the speakers' stand in Madison Square Garden on July 3 last at the opening session of the National Education Association, and listened to the address of welcome delivered to that body by Governor Whitman of this State. It had been a long time since he had heard a man in public life, not specifically identified with public education, give a stronger, more effective or more sympathetic address upon public education than that delivered by Governor Whitman.

During the two years that Governor Whitman has served as the chief executive of the Empire State he has given ample proof of his interest in and devotion to the public school system. It is not too much to say that no man who has ever preceded him in the executive chair of this State has done more, or as much even, for public education as Governor Whitman has done during the two years he has served as Governor of the State. It may even be truthfully said that no governor of an American state has approved so many important educational measures having as far-reaching effect upon the future development, organization, and administration of the public schools of a great state as Governor Whitman has approved.

The physical training law which was advocated by Governor Whitman and passed by the Legislature of 1916 was sufficient in itself to preserve the reputation of a governor, because of the influence which such measure will have upon the future generations of the State, even if no other great measure had been enacted during his term. The far-reaching effects of this measure are only just beginning to be felt, but under the wise administration of the law by the State Education Department the results which will be accomplished within the next five or six years will be almost unbelievable.

There are so many large educational measures to the credit of Governor Whitman's administration for the year 1917 that it is impossible to treat each of them fully in an article of this kind. Any one of the great reforms which will be inaugurated in the school system through the adoption of these important measures would give character and standing to any governor's administration, and yet Governor Whitman has seventeen important measures to his credit in the important educational laws which he has signed this year.

The *School Bulletin* takes pleasure in carrying in this issue pictures of the governor and members of the Legislature who took conspicuous part in the enactment of educational legislation. It believes that the educational workers of the State should know who these men are and what they have done for improving educational facilities in the State.

It is difficult to single out the men who are entitled to special commendation for the service which they have rendered in the enactment of these laws. There are some men, however, who should receive special commendation in this article and chief among these is Senator Elon R. Brown of Watertown. Senator Brown has long been a commanding figure in the Senate and he has been one of the men upon whom the educators of the State could rely for support in any important proposition involving their interest.

It would have been impossible to pass the township bill in the Senate of the Legislature of 1917 if it had not been for the support given it by Senator Brown, and for the influence which he exerts in that body. Senator Brown has for many years been interested in the township bill and came to the Legislature of 1917 determined to make a fight in its behalf. No man knows rural conditions in this State or rural schools better than Senator Brown. He knew there was strong opposition to this measure, but he is not a man who abandons a proposition because there is opposition to it. Nearly twenty years ago he was one of the leaders in the Legislature to support the movement for good roads although he knew at the time that the farmers generally were opposed to the plan. He was invited to address the State Grange upon the township bill last winter. He accepted the invitation and Dr Bugbee, principal of the Oneonta Normal School, who heard the address, is authority for the statement that he never listened to a sounder, more forceful or eloquent address in behalf of the rural schools of the State than the one delivered by Senator Brown before the State Grange at Oneonta in February last. It is generally conceded that the address which he delivered before this body modified to a great extent the opposition which the State Grange had manifested toward the township bill. The body believed that there would be legislation along the lines of the township and believed it was wise to compromise and agree upon a measure they could support. The Grange therefore recommended the enactment of a township law but suggested certain amendments to the bill which had been proposed in previous years. These amendments were nearly all incorporated into the law and the State Grange then gave the measure support before the Legislature. Through the generalship and influence of Senator Brown but six votes were recorded in the Senate in opposition to the township bill. He also gave cordial support to the city school bill and every other educational measure which passed the Legislature. Opposition on his part to the city school bill would have defeated that important measure.

Senator Halliday of Ithaca was made the chairman of a special committee of the Senate to consider legislation in relation to the rural schools. He introduced the township bill and did much work in perfecting the measure. He brought much strength to the support of the bill. His support and the explanations which he gave of the results to be accomplished by the bill reduced the opposition in many of the agricultural sections of the State. Speaker Sweet, Majority Leader Adler, Assemblyman Machold of Jefferson county, who introduced the township bill in the Assembly, and Minority Leader Callahan were sponsors for the township bill in the Assembly. The bill had a harder road to travel in the Assembly than it had in the Senate. The opposition was thoroughly organized in the Assembly and under skilful leadership. The influence, however, which Speaker Sweet has long wielded in the lower house of the Legislature, was exerted in behalf of this measure. It is quite probable that any one of these four men in the Legislature could have defeated the bill had he been opposed to it.

Mr Machold of Jefferson county is personally popular in the Assembly. He knew rural school conditions and had mastered the provisions of the township bill. He was quick and ready in debate and prepared to meet all arguments which the opponents of the measure advanced. He represented

a rural county which was in sympathy with the bill. The local granges of his county supported it. The educational workers in the State know of the interest which Senator Lockwood has manifested in educational legislation as he was chairman of the committee of public education during his preceding term in the Senate, and all measures which have passed the Senate relating to public education in the last three years have had his unqualified support. The chairmanship of the committee on public education is one of the dignified and important chairmanships of the Senate committees. Senator Lockwood has work ahead of him for next year in protecting the important educational measures which have been exacted this year from interference by interests which are hostile to them.

The legislative program of the Education Department on public education which has been carried to such a successful conclusion means a practical reorganization of the entire State. The successful carrying out of this program is beyond the expectations even of those who hoped some day to see these great reforms enacted into law.

The following is a brief description of each of these measures:

1 The full text of the township law has already been given in the last issue of the *School Bulletin*, and its provisions have been commented upon from time to time. The editor has observed that local newspapers throughout the State which opposed the township bill before its enactment are now since the bill has become a law and its provisions are being understood pointing the strong features of the bill and the things which are to be accomplished for rural education under the new plan, and are generally giving the measure cordial support. Neither the men in the Legislature who espoused the cause of this measure nor the Governor who has signed the bill will ever regret the part which they have taken in the enactment of a law which will revolutionize the organization of the rural schools of the State and place them upon a more practical and efficient basis, thus enabling them to meet more fully the needs of present rural life conditions in this country.

The School Bulletin extends its hearty congratulations to the Governor and to the members in both branches of the Legislature who had the courage to stand for this great educational reform.—*The School Bulletin*, June, 1917

Our Hope for the Public School

"Having chosen democracy as our form of political organization, the public school must be our hope." This sentence is taken from an article entitled "What Remains of Child Labor" in the last issue of the New Republic. We quote it because we believe it is true. Democracy means government by the people, direct or representative. The United States has chosen this form of organization, but democracy with us is yet an ideal not an accomplished fact. The people will not govern until they are able to, they will not be able until the education of our citizens averages higher than the sixth grade of the grammar school. The form of the government of New York State is capable of expressing the will of the people, that it seldom does so, or when it does the fact that the will is often a weak one is because the 460,020 illiterates, and a large portion of the remainder of our population has not been educated beyond the sixth grade.

The public school is our hope, but we will be disappointed by our hope unless the whole citizen body takes real and intimate interest in the school. Placing hope in the public school as it is now is leaning upon a broken reed. Neither the character of the education given nor the efficiency with which it is taught is likely to develop the self-reliant and intelligent citizen body required to govern a great nation.

Let us examine briefly the public school as it is represented in Rhinebeck. It is compelled to teach a curriculum outlined by the State University, but few of the children of Rhinebeck ever reach that end, and there is little in the grammar and high school course to prepare them for life in a country community. The whole tendency is to educate them away from Rhinebeck towards the university. If they can reach it well and good, if not their arrested educational development leads them towards the city. There is nothing to inspire or train them to make a happy and profitable life out of their native environment. This is the fault of the State.

There would be something to commend if what we do were well done. What is outlined by the State University is good education of its kind, not the best for the community, but still good if well done. Our village school might be an excellent one of its kind if the community gave enlightened and energetic support to the principal, but we seem to regard our duty performed when we appoint a master, it seldom occurs to us to hold up his hands, we do not always give him the tools to work with.

Not even this can be said for our country schools. Usually a recent graduate from a high school with little or no training as a teacher is sent to take charge of a school and teach eight grades with no assistance. The best trained teacher in the world cannot teach single handed more than two grades, an untrained or partially trained teacher can hardly even attempt it.

What must we do? We cannot afford to have a full corps of teachers in every district school, but why not have one good school, say in the village and bring the pupils to it. Let each district purchase one or two Ford busses and gather the children each morning, bring them to the school in the village and take them home in the afternoon. Sleighs might be used in winter. We believe this could be done without increasing the present budget. In this way it would be possible to center attention on one school and make it effective.

Think it over! This plan works well in the West.—*Rhinebeck Gazette*, November 18, 1916.

A Bill That Should Be Passed for the Good of the Schools

The New York Assembly has before it now a measure which should by all means be enacted into a law for the sake of the rural schools of the State. Hardly anything else could be devised that would so greatly help the country schools, especially those in thinly settled and relatively poor districts, as what is known as "the township school bill."

The most important feature of the new measure is that it makes the town, instead of the district, the unit, and places the control of the schools for the town in the hands of a board of directors, instead of having a trustee for each particular school. It is not a consolidation law, as some

of its opponents have been trying to make the public believe, though consolidation would be possible where deemed advisable.

The board of directors would consist of seven members, each elected for three years, so arranged that their terms would expire at different times. It would exercise for all the schools **practically the same powers** as are now conferred upon trustees and boards of education.

A moment's consideration will show that there are many advantages to be derived from the proposed plan. As an example, when a district was relatively small, with a low valuation of property, it would not be necessary to boost the taxes to the point of practical confiscation in order to keep the school running. The expense of that school, with a new building or whatever else it needed, would be shared by the more thickly settled and more prosperous districts of the town. The result would be that the children of the poorer, sparsely settled districts would have **practically the same educational advantages** as those more fortunately situated, as they ought to have. Another advantage would be uniformity of textbooks, and, very likely, fewer changes in the textbooks.

So far as we have been able to investigate it, there appears to us but one defect in the proposed measure. We are not aware that any provision has been made for separate control of schools of an incorporated village in the various townships. In some cases it might work well to have the schools inside of an incorporated village under the control of the board elected at large in the township of which the village was a part, but in many cases we fear it would not. Pennsylvania, after whose system the new law is closely modeled, found it did not work, and so her schools in an incorporated place have a different board from that of the township in which the corporation is situated, though they are permitted to cooperate in whatever way they please.

Practically the only opposition to the present bill seems to come from the textbook companies, and it is not open and above-board. Circulars misrepresenting the measure have been scattered broadcast over the State, but whoever sent them out was either afraid or ashamed to sign them, for they bear no signature. It is pretty certain, however, that they were sent out by the textbook companies. Many of them were addressed to grangers and some subordinate granges, relying on the representations in the circulars, have taken action against the bill. The State Grange, however, participated in the framing of the bill through its legislative committee, and is supporting it.

It is quite likely that there are some flaws in the measure, but very few perfect laws were ever enacted. It is at least a long step in the right direction.—*Cuba Patriot and Free Press, April 16, 1915*

Rural Schools and Proposed Machold Bill

(By Susie C. Minard)

We have been asked as a grange to consider at one meeting the proposed Machold bill on the township system of taxation and administration of our rural schools.

This question should be discussed freely from the teachers', parents and

taxpayers' point of view. I would like to say something from the parents' viewpoint:

We have always watched closely the man who worked for us; we have carefully supervised the maid in our kitchen, but we have ignored our schools and the teacher who guided the little feet that are to walk forever down the centuries.

We are living in an age of progress and while no one who is vitally interested wishes to stand in the way of true progress, yet, as we look over the past and see what a tremendous influence our present school system has had on the development and growth of our nation, we can not help thinking that our old-fashioned methods are not so bad despite all the mistakes that have been made.

The Board of Education of New York State is determined to have a change in our school system and a change it will have of some kind. It may be better and it may be worse, but through the educational committee of the State Grange, they have given us, as granges, an opportunity to tell something of what we want.

Without doubt there is need of some change in our school system. In this section we have good schools; we have many first-class teachers, but there are many sections where the schools are very poor and inefficient. It is better to go slowly and not sanction, without serious thought, something that may mean very radical changes.

The township system as laid out in the Machold bill is a long step in the direction of consolidation of schools. In a speech made by Thomas E. Finegan, Assistant Commissioner of Education, before the New York State Agricultural Society, he said:

"While the township system and consolidation of rural schools are closely related, they are somewhat different. Consolidation may take place without the township system, but the adoption of the township system would do more toward the facilitation of the consolidation of rural schools than any other action which could be taken."

I am not in favor of consolidation of schools in this State. Our weather conditions and roads make the transportation problem too great and I firmly believe there should be a school within walking distance of every child in New York State.

With the awakened interest in education that has come in the last fifteen years our present district school system could be made as efficient as a centralized school. Of course we must pay the price, but why cry economy for our rural schools, when our Nation could spend hundreds of millions of dollars in digging a big ditch, that is a monument of folly or again, our own State spends millions of dollars for a canal that will benefit our State but little, a piece of missionary work for the west or the thousands of dollars spent annually on our State roads much of which is wasted in graft, in unnecessary and poor work?

Why must we, in face of all this extravagance, economize in our educational facilities? We should have more State aid for our schools, and the farmers need not cry about high school taxes when they can trade off an automobile every year for the latest model.—*Auburn News*, December 7, 1916

Measure Aims at Better Facilities for Instruction in Rural Districts

Albany, Feb. 22.—Bills to promote the better education of children of residents of rural districts were introduced in the Legislature today by Senator Morris S. Halliday of Ithaca and Assemblyman S. Edmund Mac-hold of Ellisburg.

The measures would permit the consolidation of small, isolated districts where the expense of educational facilities are a burden upon taxpayers, into larger township districts, and the construction of larger and better schools with advantages offered for higher education not possible in the present district schools.

The measures have the support of the State Department of Education, the State Grange and Majority Leader Elon R. Brown of the Senate.—*Elmira Star-Gazette, February 22, 1917*

Want Nassau Exempted from Township Bill

It was the unanimous opinion of the members of the various boards of education, school trustees, superintendents and principals, of Nassau county, who were in Hempstead Saturday afternoon at a meeting in the Hempstead High School building that Nassau county should be eliminated from the provisions of the so-called township bill, and a resolution unanimously carried by the meeting to that effect.

The township bill was discussed in the columns of the last issue of this paper and a brief outline at this time will suffice. The provisions that the Nassau county school authorities object to are that it makes the boundaries of all incorporated villages of over 1500 population and the school districts the same, and that all other school districts shall be under the control of a town board of education and not the local school boards as is now the case.

There were present at the meeting on Saturday, representatives from sixty-nine school districts in the county about nine-tenths of the total districts. Superintendent J. T. P. Calkins of Hempstead acted as chairman of the meeting and A. J. MacElroy of Rockville Center recorded.

Assemblyman Thomas A. McWhinney addressed the meeting and stated that the bill which had been introduced by Senator Halliday was being fathered by the State Department of Education and that both Dr Finley, Commissioner, and Dr Finegan, Deputy Commissioner, had assured him that Nassau county would be exempted from the bill's provisions. The bill of course would not specifically eliminate Nassau county but would be worded in such a way that this county would not be obliged to operate under this act.

It was decided by the meeting that one member from each school district should comprise an advisory committee to confer with the assemblyman not only in relation to this present bill but also in regard to other proposed laws affecting educational matters. The appointment of a member from each district to be left with the various boards in the districts. The chairman of the meeting was instructed to call a meeting of this committee at the earliest possible moment.—*Hempstead Sentinel, March 15, 1917*

Township School System Disapproved in Chemung

The following resolutions were unanimously passed at the school meeting in district no. 4, town of Chemung, May 1, 1917:

Whereas, The Education Department has made a political deal with Tammany Hall to abolish the district system of schools and deprive us of the management and control of our school, and has granted concessions to Tammany in the bill for the management of the schools of New York City, and received in return the solid vote of Tammany for the notorious grab bill known as the township system, and

Whereas, Our State senator has repeatedly been requested by the board of supervisors and others to oppose such legislation; and

Whereas, He introduced the township bill in the Senate and supported the Finegan-Tammany deal in defiance of the expressed wishes of his constituents; therefore be it

Resolved, That we use every legitimate means in our power to elect a senator who will work for the restoration of the management of our school and protect it from the designs of those who want to abolish the majority of schools because they desire to escape the bulk of the labor of supervision.

— *Elmira Gazette*, May 4, 1917

W. H. HILLMAN,

Chairman

Township School System

The action of the State Grange in unanimously indorsing the township school system on its closing day was somewhat affected by the admirable address of Senator Elon R. Brown in setting forth and indorsing the plan. The grange did not go into details, but it did indorse the principle, leaving the details to the action of the people of towns and so preserving the principle of home rule. Legislation was urged recommending making the town the unit of school supervision and leaving the question of consolidation with the people themselves. Uniformity of textbooks was recommended and the composition of the town board of trustees was to be made up so that no one section of a town could control the board's action. It was recommended that the legislative committee of the State Grange draft a bill embodying the recommendations of the committee.

This means better rural schools and the grange admits that they are needed. After three years of discussion the principle is adopted and the details will work themselves out. It will most probably end in a board of education for rural towns having supervision over all the township schools and probably leading on to the establishment of rural high schools which would be of great benefit. However, all this is left to the people of each town to decide. Under the action of the State Grange adopting the principle one may look for a rapid increase in the growth of efficiency of rural school systems. At present, to gain a higher education, the farm boys and girls have to seek refuge in the union school of villages or high schools of cities, where they are educated away from the farm instead of toward it. The farm is, therefore, all the time drained of what comes out of its soil and is not put back. Good rural schools are a necessary conservation measure. The State Grange has long seen it, but also seen many obstacles, which are gradually disappearing, so that it can take a definite stand on this

question. It is a great movement which will have a large effect upon country life and the State Grange is to be congratulated on having at length reached a conclusion toward a definite plan of action.—*Watertown Times*, February 10, 1917

Against Centralization

The following communication speaks for itself:

Rock Stream, N. Y., Feb. 15, 1917.

Hon. Morris Halliday, Albany, N. Y.

DEAR SENATOR:

We, the undersigned taxpayers and residents of school district no. 7, town of Reading, Schuyler county, most earnestly protest against the ridiculous school laws now in force and proposed—laws that no doubt would be applicable to congested districts, cities and villages—are not at all necessary to the general welfare of scholars in rural districts. It is unnecessary to refer to the compulsory vaccination law and yearly examination by physicians, etc.

We have now foisted upon us this new physical training fad. Imagine our boys and girls being in need of such—simply rank nonsense. Hardly a boy but what has some chores to do at home. This in connection with the usual exercise of all school children should be sufficient physical "training" for any scholar in normal condition.

We have just finished paying a large tax because of being compelled to practically rebuild and refurnish our schoolhouse, with toilets, etc. Now we hear the new "sanitary closet" has arrived at a cost of only about \$150, or more. Probably some one particular closet picked out as being the best one (for some ones pocket at Albany) which spells graft. There has not been an epidemic in our section in the memory of our oldest resident, and why the taxpayers in rural districts should be burdened with oppressive taxation for such utterly needless innovations is a matter we propose to look into.

Now, senator, regarding this centralization of schools, who wants it? Certainly we of the rural districts do not! and were the matter put to a vote of the people it would be defeated by 90 to 1. Think of small scholars being compelled to travel six, seven or eight miles to school with the mercury about zero.

What would be the effect on farm values were the same located on the outer edge of the school zone? It would be a difficult matter to procure a good tenant on one of these farms if he had children of school age, with the result that such property would depreciate in value and many farms in the remote distance from the centralized school would lay idle.

This central school proposition has already had a trial and it has proven unsatisfactory—in fact a failure.

Why force laws on the people they do not need or want, but yet are compelled to pay for? It is quite evident that our legislators are either not familiar with rural conditions and the requirements, or that these laws are brought forward in such a manner as to escape their notice as anything of importance. The highway laws have centralized our roads at Albany,

our schools are rapidly passing beyond our control, but we still continue to pay the freight.

We earnestly request your influence defeating any legislation toward centralization of schools.

Creates Township System of Schools

Albany, Feb. 22.—Bills creating the township system of schools were introduced in both houses of the Legislature today. The main feature of the proposed law is that hereafter an order consolidating two or more school districts must have the approval of a majority of a town board and a majority of the electors of each district affected. The bill does not include in the township system union free school districts having a population of 1500 or more. In a town having two union free school districts maintaining academic departments there shall be two boards of education. Not a single school district in the State is abolished.

One of the benefits of the proposed law will be the equalization of taxation for school purposes.—*Utica Herald-Dispatch, February 22, 1917*

Better Schools

Albany, Feb. 22.—Bills to promote the better education of children of residents of rural districts were introduced in the Legislature today by Senator Morris S. Halliday, of Ithaca, and Assemblyman E. Edmund Machold, of Ellisburg.

The measure would permit the consolidation of small isolated districts where the expense of educational facilities are a burden upon taxpayers, into larger township districts, and the construction of larger and better schools with advantages offered for higher education not possible in the present district schools.

The measures have the support of the State Grange and Majority Leader Elon R. Brown, of the Senate.—*Corning Journal, February 23, 1917*

The Township School Bill

Assemblyman Machold introduced in the Assembly yesterday and Senator Halliday in the Senate the bill creating the township system of schools. Mr Machold made the following statement in relation to the bill:

"This measure is similar in many respects to the one which I introduced last year. It contains amendments which were recommended by the State Grange. The officers of the State Grange have been in Albany this week in consultation with members of the Legislature and the Education Department in reference to this measure. The bill contains all the recommendations made by the State Grange. The principal features of the measure are as follows:

"1 Not a single school district in the State is abolished. Every district is continued as it now exists.

"2 The bill provides that hereafter an order consolidating two or more school districts must, before it becomes effective, have the approval of a majority of the town board of education and must thereafter be approved by a majority vote of the qualified electors of each district affected.

"3 The bill does not include in the township system union free school districts having a population of 1500 or more. In a town having two union free school districts maintaining academic departments, there shall be two boards of education and, of course, two units of school administration for the town.

"4 The administrative body in charge of the schools of a town will be a board of seven members. The bill provides that the trustees chosen at present in the several school districts of the State shall elect a town board of seven members, and this board is to have general control and administration of all school matters in a town.

"6 Under the provisions of this bill a board of education in a town may provide courses of study adapted to the needs of the rural communities. It will be possible to teach agriculture in all the school districts of the State and to give corresponding courses in home-making to the girls attending such schools. It means educational opportunities for the country boy and girl in courses of study adapted to their needs equal to the educational facilities now afforded boys and girls living in the cities and populous centers.

"7 It is claimed by the advocates of this measure that if the schools are operated under the township system the administration of the schools will be more economical and at the same time more efficient.

"8 District superintendents who are now chosen by school directors having no other function to perform and having no other relation to the school system whatever, will be chosen under this bill by the town boards of the town forming a supervisory district."—*Troy Times*, February 23, 1917

Consolidation Bill for Schools Ready

Albany, Feb. 22.—Bills to promote the better education of children of residents of rural districts were introduced in the Legislature today by Senator Morris S. Halliday of Ithaca and Assemblyman H. Edmund Machold of Ellisburg. The measures would permit the consolidation of small, isolated districts, where the expense of educational facilities is a burden upon taxpayers, into larger township districts, and the construction of larger and better schools with advantages offered for higher education not possible in the present schools. The measures have the support of the State Department of Education, the State Grange and Majority Leader, Elon R. Brown of the Senate.—*Binghamton Republican*, February 23, 1917

For Better Rural Education

Albany, Feb. 22.—Bills to promote the better education of children of residents of rural districts were introduced in the Legislature today by Senator Morris S. Halliday of Ithaca and Assemblyman H. Machold of Ellisburg. The measure would permit the consolidation of small, isolated districts, where the expense of educational facilities are a burden upon taxpayers, into larger township districts, and the construction of larger and better schools with advantages offered for higher education not possible in the present district schools. The measures have the support of the State Department of Education, the State Grange and Majority Leader Elon R. Brown of the Senate.—*Troy Times*, February 22, 1917

Rural Education Bill

Bills to promote the better education of children of residents of rural districts were introduced in the Legislature Thursday by Senator Morris S. Halliday of Ithaca and Assemblyman H. Edmund Machold of Ellisburg.

The measures would permit the consideration of small, isolated districts, where the expense of educational facilities are a burden upon taxpayers into large township districts and the construction of larger and better schools with advantages offered for higher education not possible in the present district schools.

The measures have the support of the State Department of Education, the State Grange and the majority leader, Elon R. Brown of the Senate.—*Dansville Breeze, February 24, 1917*

The Country Schools

There is a bill before the Legislature at Albany the purpose of which is to abolish the country schools and to establish in their stead central high schools to be erected at distant points. The present system of rural schools needs a thorough change for the better but whether high or academic schools located many miles distant from each other, is desirable, or not is a very grave question. It should receive the careful consideration of the educators of the State before its final adoption. It has been very evident to all interested in the educational affairs of the State that our entire system of public instruction is largely without practical results. Essential changes are necessary to make it more effective and useful.—*Seneca Falls Reveille, February 28, 1917*

Proposed Change in School System

The proposed township school system will undoubtedly come up for action in the Legislature very soon. Under the provision of the proposed law a town board of seven members, elected by the people at a meeting held for the purpose, will have charge of all the schools of a town, exercising the same functions as those of the present school district trustees. High schools in villages of less than 1500 inhabitants would come under the jurisdiction of the township board.—*Afton Enterprise, March 8, 1917*

Features of the New Township School Bill

A letter has been addressed to the granges of the State outlining the essential provisions of the township school bill which has been introduced into the Legislature. The following are extracts from this letter:

1 Every school district in the State is continued under such bill as these districts now exist. No order consolidating two or more districts may become effective until such order is first approved by a majority vote of the town board of education and thereafter approved by a majority vote of the qualified electors of each district present and voting at a joint meeting called for that purpose.

2 The town is made the unit of taxation and of administration for school purposes. Union free school districts having a population of 1500 or more are not included in the provisions of the bill. These districts will continue to be operated as separate independent units. In towns having two or more

union free school districts which maintain academic courses of study, such towns are to have two school units and therefore two boards of education, as provided in the Machold bill of last year.

3 Trustees of the several districts in a town will continue to be elected as they are now chosen and these trustees will elect the members of the town board of education. Not more than three members of a town board may be chosen from the same school district. The town board of education is charged with the administration of the school affairs of the town and will elect its own officers.

4 Under the terms of this bill a town may provide instruction in agriculture and homemaking courses, and when schools or classes of this kind are established in any town, the town will receive the same state aid which is now given to cities and villages which maintain such courses. These courses may, therefore, be maintained, in any town which desires to maintain them, free to all the children in the town and without a burden of taxation upon the taxpayers of the town who support the schools.

5 Provision is also made in this bill for uniform textbooks in the several towns of the State.

6 District superintendents will hereafter be chosen, if this bill becomes a law, by the town boards of the several towns comprising a supervisory school district. The district superintendents will therefore be directly associated with the boards of education who are responsible for the administration of the schools.

7 Provision is made in the bill by which town boards shall not expend a sum in excess of one-half of one per cent of the assessed valuation of the town, and in no case an amount in excess of \$5000, in any one year for the construction of new buildings or the enlargement of existing school buildings without a vote of the qualified school electors of the town.—*Tully Times, March 16, 1917*

Retain the Rural School, Urges Writer

Editor Republican-Journal:

If you will grant space for the sentiment of some of the mothers in district no. 24, in Lisbon, I will set them down as they have come to my knowledge.

Are we for higher education?

Yes—most decidedly. For a high school in Lisbon; yes again, and gladly would pay our increased taxes for the sake of educating our children near by. All we ask is that our rural schools may remain intact for those little ones not of high school age. There are some, who, being childless or having no little ones under their care, profess indifference as to the outcome of this agitation, but for the sake of the little ones of our friends and neighbors we cannot afford to be silent in this matter. It is not only for the present year, but for the years to come that we must fight, for children will be born as the world moves on.

Our plea for the rural school is based upon the observations we have made of the surroundings in which our children receive their first glimpse into the great world of letters. Have you ever attended a rural school meeting?

Have you heard the plans for the betterment and beautifying of the building and grounds and for educational facilities for our children's use by these honest and sincere men, and—yes, it should be, women? Have you attended the exercises and little entertainments at these schools and noted the efforts of the children in their different line of work, their decorative ability, the sunny windows and general cheerful aspect and good fellowship prevailing? Well, if you have you are with me in thought.

We believe in the compulsory education law and wish the age limit were 18 instead of 16. We would like to see a graduate from the normal school at the head of our rural schools, while we acknowledge in wonder the results achieved by the teachers from the training class. We believe in domestic science, in manual training and the fine arts, but when my girl is 16 I will guarantee she will know how to bake as fine a loaf of bread as any teacher of domestic science I have ever met. It is the girls of the village who need training in this line, not the girls of the country, you may observe as I have, how people of the village carry home their suppers from the stores in paper bags. Where would the woman of the country land if she attempted to feed the several hearty mouths of her family out of paper bags? Every girl and boy, too, should know what H O contains and its uses inside and out, the relative of different foods to her body and the proper kinds of food to serve at each meal, but in these days of splendid magazines and libraries no one need remain ignorant in these matters nor is a special school needed, while in itself, it is a splendid idea to introduce into our schools of today.

From this little schoolhouse of ours have gone forth boys and girls who have progressed in directions that have made them noticeable in the work of the Nation. You know them, no need to name them. Have you stood on your veranda and watched your small boy, with his pail of luncheon, gaily starting out for "his first day of school?" Your eyes filled as you realized he now was leaving your loving care and that his fight in the battle for existence had really begun. But you were comforted as you thought that he went from your care to that of a young woman who has known and loved him from infancy and who has not so many but that she could spare some love and attention for each child. If they are ill, we soon may reach them; if they grow weary, they easily may reach home and mother. Have you forgotten the days when your fat legs dangled from the hard seats and you longed to be out where for several years you roamed, and reigned supreme?

Township Plan is Proposed

Creation of the township system of schools to better equalize school taxes throughout the State, is sought in a bill introduced in the Legislature by Senator Halliday and Assemblyman Machold. The bill would tend to place the administration of the schools on a more economical and efficient basis. The distribution of taxes would be made on relative strength of the districts.

Under the provisions of the measure a board of education in a town may provide courses of study adapted to the needs of the rural communities. It will be possible to teach agriculture in all the school districts of the State and to give corresponding courses in homemaking to the girls attending such schools.

It means, its introducers claim, educational opportunities for the country boy or girl in courses of studies adapted to their needs equal to the educational facilities now afforded boys and girls living in the cities and populous centers.

The bill does not include in the township system union free school districts having a population of 1500 or more. Not a single school district in the State is abolished, and every district continues as it now exists.

The measure is similar, in some respects, to the one introduced last year. The officers of the State Grange have been in Albany the past week in consultation with the State Education Department in reference to the measure and the bill contains all the recommendations made by the grange.—*Securities Post*, February 28, 1917

The Township School Bill Favored by the State Grange

The secretary of New York State Grange has issued a circular to pamaona and subordinate granges advising them of the action taken by the legislative committee which has been in Albany in consultation with those interested in the township school bill, and that a bill has been introduced which embodies the recommendations adopted by the State Grange. The essential provisions of the measure are as follows:

Every school district in the State is continued under each bill as they now exist. No order of consolidating two or more districts may become effective until such order is first approved by majority vote of the town board of education and thereafter approved by the qualified electors present and voting at a joint meeting.

The town is made the unit of taxation and of administration. Union free school districts having a population of 1500 or more are not included in the provisions of the bill. These districts are to continue to be operated as separate independent units. Towns having two or more union free school districts maintaining academic courses are to have two school units and two boards of education.

Trustees of the several districts in a town will continue to be elected as they are now and these trustees will elect the members of the town board of education. Not more than three members may be chosen from the same school district.

Under the terms of this bill a town board may provide instruction in agriculture and homemaking courses, and when such classes are formed in a town the town will receive the same State aid as is now given in cities and villages which maintain such courses. These courses may be maintained in any town which desires them, free to all children in the town and without a burden of taxation upon the taxpayers.

Provision is also made for uniform textbooks.

District superintendents will, if the bill becomes a law, be chosen by the town boards of the several towns comprising a supervising school district, and will therefore be directly associated with the boards of education who are responsible for the administration of the school.

Provision is also made in the bill by which town boards shall not expend a sum in excess of one-half of one per cent of the assessed valuation of the

town, and in no case an amount in excess of \$5000 in any one year for the erection of new buildings without a vote of the taxpayers.—*Honeoye Falls Times*, March 15, 1917

No Township School

To the Times

For the first time in its history the educators of St Lawrence county have put themselves squarely on record as being willing to give the farmer a better educational system. We also have the disgraceful record of the farmers of the town of Lisbon going flatly against it.

When a farmer votes against a school system whose purpose and object is to give his own children a better education he might just as well come right out openly and say, we don't want our children to have the advantage of an education. We want them to grow up in ignorance. We want them to go through life as a mark for the grafter and the vagabond. Let us not forget that the state grange has gone on record in favor of the township school. If the position taken by the farmers of Lisbon on the township school is not a travesty on everything that the grange pretends to teach or stand for, then what do you call it?

Is there any better service that the farm bureau of St Lawrence county could render to farmers as a class than to find out if those men are grangers? If they are grangers then why not start an organized movement to have them voted out of the grange? I would also head a subscription list for 50 cents to raise the money to buy them a leather medal.

—*Watertown News*, March 14, 1917

A Model Rural High School

Deputy State Commissioner Thomas E. Finegan, who has charge of the rural schools of this State, speaking to the district superintendents at their convention recently held in Rochester, said:

I am going to ask every one of the 207 superintendents in the State to do just one big thing this year, and that is to organize a model rural school in a supervisory district and articulate it with the living conditions of rural life—a school which will administer to every intellectual necessity of that community.

Select a good agricultural community. Make a survey of it. Put together eight little schools that are unable to minister to the needs of the people. Get at least \$250,000 of assessed valuation for the support of this model school. Every school should serve the needs of the entire community and should be a real institution of democracy. Bring these eight schools into one school. Get as a principal a graduate of the State College of Agriculture. Pay him \$1200 a year. Have courses in agriculture for the boys. Hire a woman graduate of some school like Mechanics Institute at \$800 a year to give homemaking courses for the girls.

Obtain a health director and five grade teachers at \$600 yearly salary. Teach the boys and girls who are to do the farm work and the home work

on the farm to respect their own work. Do this and you will be entitled to a place on the roll of honor.

It seems to the writer that the tendency of the Education Department is toward centralization of the rural schools. This would be a splendid idea if some safe method of conveying the small pupils to the central school could be devised. But lacking comfortable means of transportation, would it not be best to keep the district schools where they now are for the use of the smaller children, say through the first five grades. By and by, when there is need and a demand for a rural town high school, let all the school districts of the town unite and build and equip a model rural high school such as Mr Finegan suggests. To this school could go the sixth, seventh and eighth grades from all the schools of the town, and also all the older boys and girls who might wish to take up high school studies. Let part of the high school work embrace some economics and some of the science of the different fields of activity in agriculture, and credit all work done by the pupil toward an academic diploma. This would give the country boys and girls the distinction of being high school graduates, and at the same time be fitted to cope with the problems of country life—to appreciate the fact that the best place on God's green earth is the farm when right conditions prevail. Whatever we may think about the present as past methods of getting an education, the country school is at the door of a great revolution. Existing conditions do not satisfy the present needs of the nearly grown up boy and girl in the country. The remedy that is about to be applied is consolidation of school districts into rural high schools, in which shall be taught, along with books, agriculture and home economics.

Since consolidation means the loss of the local district school, it behooves those who wish to retain their home school for their little children, to see that the most necessary things are provided for the health and comfort of the pupils. One of the bad features of country schools is the filthy, outdoor toilet, breeder of disease and bad morals. Chief Inspector of School Buildings Frank H. Wood, of the Education Department, in a recent speech before the Newville chautauqua, said that within the next two years all schools must have nothing less than an inside chemical toilet. The bad ventilation of schoolhouses must be remedied by a jacketed stove that will furnish 30 cubic feet of pure air per pupil each minute, warmed to a temperature of 65 to 68 degrees. Hereafter all schoolhouses should be lighted, as provided by law, and not permit the continuance of cross lights which prevail in many schoolhouses in the country. Seats that are not fitted to the age and size of the pupils are the cause of much of the deformity more or less pronounced in the rural school children. The dust of the schoolroom from the soft, cheap crayon, wooden blackboards and bad methods of sweeping and dusting is a prolific cause of colds, grippe and consumption. The water which the children drink must be carefully protected from dust, flies and disease germs. Finally the trustees must make every effort to place over their schools teachers especially prepared to lead the children into those paths of knowledge which will educate them toward the country and not away from it."

In the light of the foregoing extracts from the speeches of Mr Finegan and Mr Wood, it would seem that those who wish to retain their country schools had better take an inventory of stock. Is the school building in good

condition, good foundation, good windows, well painted. If not, better attend to it. Have wooden blackboards? Get slate. Have you an old unjacketed stove, without proper means of ventilation? Then comply with the law as mentioned in Mr Wood's speech at Newville. Are the seats graded to the use of the pupils? If not, attend to them. Are the children drinking from an open water pail with a common drinking cup? Then know that there is a fine for having an open water pail in a public place. Is there a cloud of dust floating in the schoolroom every time it is swept? See to it that there is no more dust in the schoolhouse than in the neatest private home. Is your teacher a live wire—a community builder? Is she the most influential person in the district? If she is, keep her. If she is not, get one that has these attributes. In short, measure up to the standards of the present, and make an effort, at least, to keep part of the best blood in the country.

The writer of this article is a farmer, who attended the old-time district school. He believes that the time has not yet come when the district school should be discarded in those districts which would experience difficulty in transporting pupils. And yet the writer is not so wedded to the past that he can not see the handwriting on the wall. And in closing this rambling article he wishes to again urge upon trustees to better the conditions of the rural schools before the strong hand of the law is set to work in the interest of the boy and the girl in the country school.

A FARMER

—*Little Falls Times*, March 3, 1917

Much has been said concerning the disadvantage of transportation, volumes remain unsaid. No one can control the weather, nor the drifted roads, nor the pitch-holes from North's Corners to Lisbon. At least it appears not. We must convey our children to the meeting place. How can we know the hour when they will arrive at this place in the evening, having four miles to face through wind and weather, too severe for us old women to face more than three times in one winter? A farmer's evening work and supper must start at 4 o'clock if he is to finish before 8. I believe the farmers to be the hardest worked people in the U. S., editors, doctors and ministers not excepted. We already have more than we can well endure. Must we add more to these tired shoulders? Do you know if it were not for the unpaid labor of women and children on the farm the average farmer never would see his land free from debt and countless numbers live and die without ever seeing it. We men and women of the soil love our children as much as do the city dwellers. Can we afford to give them the advantage we never had, but would like them to have? How many of us could enjoy a Corot, a Landseer, a Matys and others of this stamp, but may never enjoy any picture finer than the sun setting seen through the old apple orchard. Well, thank the Lord, they can't transport that scene of beauty, either with taxes or consolidation. It is the deadly monotony of farm life that drives so many farmers' wives to the insane asylums. More farmers' wives there than any class, you will find if you care to inspect. A farmer loves his wife as much as any man, but under the present system he can do no better than see her perform the office of cook, seamstress, laundress, dairy

maid and gardener. Is it any wonder we do not want to see our girls become wives of farmers when we note the easy lives of the women of the village? If we had just a little of the money so lavishly used in directions not nearly so useful, but which we farmers must hand over cheerfully as our taxes, we could bring things into our homes that would make life on the farm more attractive. Give the men and women a little chance, too, so that they may keep step with the children who enjoy the advantages of higher education.

I almost lost track of my plea in my thought of the men and women. Just one thing more in closing. One man told me that he moved in this neighborhood just as the district was dissolved. He had one child, and through mud and rain, snow and blow, hot or cold, he has been forced to drive to district no. 24 with that child. The boy finishes in the rural school in one more year, but the interest of his father in the fate of the other children does not cease. He remarked that not for \$500 added to the value of his farm would he repeat the experiment nor wish it on any child in the community.

By all means there should be a high school. Lisbon has found out her mistake long ago in this matter.

But before we are forced into a calamity of the sort proposed, men and women, let us recall the words of him who said, "This government is a government of the people, for the people and by the people."

MRS O. J. DEZELL

—*Ogdensburg Journal*, March 10, 1917

Rural Union Schools

The old red schoolhouse of more than a quarter century ago gave place to the more modern district school. Now the rural union school is likely to take the place of the district school in Rensselaer county. Residents of the town of Sand Lake are pioneering for an arrangement which would unite eight district schools under one roof. The union school would have many advantages over the scattered schools of the districts. There would be better accommodations, the teachers would be better qualified for their duties and many essentials which can not be enjoyed by the pupils in the present small schools would be assured. A high school course would be added to the union school. When one considers the fact that advanced courses can not be followed under the present arrangement, he will easily appreciate the advantage of the present movement.

There is some fear that the transportation problem will present obstacles which may not be easily overcome. The good folk of Sand Lake should not worry over this question. Rural union schools have been in existence in various parts of the west for a considerable period. In all sorts of weather the children and their teachers are carried to school and back home. With proper vehicles and adequate accommodations for clearing the roads in inclement weather, the pupils should miss very few sessions of the union schools. In this part of the country the pioneer movement is in the nature of an experiment. It will assuredly succeed if the public goes about the matter in a practical manner.—*Troy Evening Record*, March 22, 1917

Rural Schools Merger Discussed in Sand Lake

Believing that its educational expenses would be lessened and that its children would be afforded better and more practical courses, the town of Sand Lake is pioneering, in this section of the State, a movement to have its eight district schools consolidated into one central union school. Early next month a meeting will be called to discuss the matter informally and if sentiment is found favorable the question will be voted on as soon as possible. The establishment of such a school and the resulting elimination of eight school districts as they are now operated would be a bold stroke in a complete change of rural educational methods, and it is not at all certain the idea will receive unanimous approval.

Although the consolidation would, it is pointed out, result in a better school building, better furniture at the use of the pupils, better working apparatuses, a better library, better teachers and more interest in school activity on the part of virtually every resident in the enlarged district, there enters against all these the problem of transportation. For it would be necessary for some of the pupils to travel several miles through all kinds of weather.

But the State, realizing that this would be the biggest objection to the idea, has taken the transportation problem into hand. It will furnish means of carrying the pupils back and forth and assume the costs, believing the rural union school a big improvement in all ways over the many district schools. The children would congregate in a certain place at a certain time every morning and would be met here by auto-buses, probably. At the close of the day they would be returned in the same way.

This method would seem practical and entirely satisfactory except, it is declared by some, in times of heavy snow fall when many of the country roads are more or less impassable. Along highways built in the old-fashioned way, dug below the level of adjoining ground and parallel on each side by rail fences and stone walls, the snow sweeps in and settles into drifts that blockade all traffic. Yet there may be means to overcome such conditions.

However, those interested in the movement balance this objection against the advantages which would result and contend that the latter are infinitely greater. For instance, in the curriculum of the new school there would be a high school course—a fact which would convenience several young people now attending High school in this city and make it possible for many more of the town children to have the advantages of such an education. They are prevented from anything more than a district school training now because of the expense of traveling back and forth between country and city. The pupils making the trip now would be saved this expenditure.

In addition the building would be of the strictly modern type and far more sanitary than the small ill-ventilated wooden structures now serving each district. Its cleanliness, its better furniture and working apparatus would act as an incentive to study and educational interest in the children. Its library would contain a volume and variety of books unattainable now. Its teachers would be much better equipped and the courses of study would be larger and more practical.

Agricultural and homemaking training would be one of the features, and in view of the fact that the school would be situated in the center of a

farming community the value of these things is readily realized. Because the pupils would be more or less connected with agricultural pursuits, education along these lines is pointed out to be needed more than in urban localities where in likelihood the bulk of the pupils would not follow farming as their life work.

After the erection of the building—which would also be utilized as a place of community meeting—it is claimed that the cost of the town's educational maintenance would be less than it is at present. The keeping up of the eight individual buildings would be eliminated and less teachers would have to be hired.

There are no schools of this type and nature in this section of the State at present.—*Troy Evening Record*, March 22, 1917.

Township School Bill a Law

Governor Whitman yesterday signed the Machold township school bill, one of the most important educational measures enacted in many years. It aims at the improvement of rural schools and with that in view both Assemblymen Fancher and McGinnies supported it, though there has been some difference of opinion relative to the wisdom of some of its provisions. From a synopsis of the bill prepared by its introducer, Mr Machold of Jefferson, and forwarded to the *Morning Post* by Assemblyman Fancher, we quote the following facts in relation to its principal provisions:

The purpose of this legislation is to create a town unit for the organization and maintenance of the rural schools of the State, to take the place of the present district system. The present system was organized under an act of 1795, and continued by a general act of 1812, since which time no change has been made in the organization provided for the rural schools of this State. This is about the only institution in the State whose organization has not been revised to meet the demands which this progressive age has placed upon it.

The bill provides for the continuance of every rural school district in this State as is at present constituted. Under the existing Education Law, the superintendent of schools of a county has the power by order, to consolidate two or more districts of a town, which order is subject to an appeal to the Commissioner of Education of this State, whose decision is final. The exercise of this authority given in the Education Law has given rise to a great deal of dissatisfaction in many of the rural communities of this State. In order to overcome this dissatisfaction I have provided in this bill that no order consolidating two or more school districts shall be effective until the town board of education shall approve the same, and that thereafter a majority of the qualified electors of each district shall approve of the said order to consolidate the districts.

Under this provision, not a single school district of the State can be consolidated until a majority of the electors of the district vote for it. It is very apparent to anyone who has studied the conditions confronting the improvement of the rural schools of our State, that in many localities the small assessed valuation makes it prohibitive to maintain the type of school which would be for the effective instruction of the children residing there.

We have 10,000 school districts outside of the villages and cities of the State, and of these 8500 are one-room schools; 1900 of these district schools have an average attendance of less than 7, and 1600 other districts have an average attendance of less than 10; of these districts, 1300 have an assessed valuation of less than \$20,000 and 1500 have an assessed valuation of from \$20,000 to \$40,000. This means in the districts having an assessed valuation of \$20,000 or less, five farms of the value of \$4000 must maintain a school,

and in districts of from \$20,000 to \$40,000, eight or ten farms must support the school. This is a very patent reason why it is not possible to maintain as good a school in these districts as can be maintained in districts having a larger assessed valuation, and is one of the vital weaknesses of the present system.

The unit of taxation for every other purpose today is and always has been the town. If the town is made the unit of taxation, and the properties of the town paid their proportionate share for the maintenance of schools, and if the inequality for school facilities for the boys and girls on the farms is to be corrected, there must be an adjustment of the inequality of taxation for school purposes. You all know that large corporate interests pay taxes for the support of schools in districts in which they extend. In many towns such properties pay taxes in two or three districts and pay no taxes in ten or twelve surrounding districts.

Take for example the cases of the railroad and telegraph companies who only pay taxes in the districts through which they run, and while no one would maintain that the people living in the districts surrounding those through which they run do not contribute supplies and produce for their maintenance, and should receive for the maintenance of schools a like proportion of taxes the same as they receive for the support of other town activities. My contention is that under a township system, uniformity of taxation for school purposes will make uniformity of educational facilities. The boys and girls living in the rural sections are entitled to just as good facilities as the boys and girls living in the cities or villages. I do not think anyone will even pretend that they have much facilities now, nor do I think anyone will pretend that such facilities are possible under the present organization.

We think no one can read this statement of Mr Machold without being impressed with the reasonableness of his argument for the improvement of the rural schools by the equalization of the tax burdens among the districts in a single town. The provision that the qualified school voters of each district to be consolidated must approve the plan after the town board of education has favorably acted upon it will remove the principal objection that has been made to the township plan.

Mr Machold argues also that families will remain on the farms to a larger extent if suitable provision is made for the education of the children in the rural districts. Under a township system it will be possible to maintain the district schools and to place good academic schools within reach of almost all the children of the town, so that they can attend and return home each night.

One physical director and one medical inspector can do the work for the whole town, while at present every district must make separate provision. There is no more real reason for dividing townships into separate self-governing districts than there is cities, where the school administration is always unified, however great the number of schools. Years ago the towns were divided into road districts with pathmasters, but the town highway system has resulted in eighteen years in the construction of 12,000 miles of improved highway under local superintendents.

So long as a district continues in existence, an elementary school must be maintained under the general Educational Law. The town board of education must provide the teacher. Mr Machold points out that this plan or a similar one now prevails in Massachusetts, Connecticut, New Jersey, Pennsylvania, Ohio, Indiana, Michigan and Wisconsin. The Middle West makes much better provision for the children of the farmers than this great

Empire State with its enormous expenditure for the schools. It is a matter of gratification that the weak point in our educational system has finally been corrected by the enactment of so good a law.—*Jamestown Post*, May 4, 1917

Town Government for Schools

The *Union* believes that the Machold school bills which passed the Legislature last week and are now in the hands of the Governor mark a long step in advance for efficiency in the rural schools of the State.

They abolish the old school district system, which never had any reason or logic behind it, and establish the town as the unit for school taxation and school government. We believe it is and is intended to be another step toward school consolidation and school consolidation we believe to be the best solution yet discovered of the rural education problem.

It has taken us a long time to get this public school problem clearly in our minds. It wasn't so many years ago that taxpayers without children used to complain because they had to contribute toward the support of the schools which were educating their neighbor's children. They looked upon the schools as being maintained for the benefit of the children only. They failed to see, as Germany has seen for many years, that the children are the greatest assets of the state and nation; that the education of the children is for the benefit of the state and nation primarily.

We are beginning to see that now, but we have been mighty slow about it and mighty clumsy and inefficient in the way we have gone about our school work in the meantime.

The *Union* applauds the American spirit which declares that we are going into this war without malice. We sincerely hope that when the war is over we will go very speedily about adopting some of the excellent ideas of public education which Germany has practiced for years and which have made her not only efficient in war but efficient in everything which she undertakes.—*Norwich Chenango Union*, May 10, 1917

Doesn't Like Provisions of Machold Bill

Lisbon May 27, 1917

Editor News:

Your article in a recent number explaining the provisions of the Machold school law deserved careful reading on the part of all country folk. Your view of its probable operation seems derived from prejudiced sources, however, and is, I believe, unwarrantably optimistic. The law is long and complicated, not to say ambiguous, and it is to be feared that many will be unpleasantly surprised when, by the actual operation of the measure they learn its true character and find that a complete revolution has been effected in our school system without consulting those most interested in school matters, the people who furnish the children and the money.

The State Department of Education desires to do much for the farmer. Some of its present plans will be jokes in five years, but this is certain: It can not help us so long as it does not have our confidence and it can not have that until it takes us into its confidence. At the time of the passage of the Machold bill not one person in a thousand knew anything about it.

Nothing had appeared in the press. Yet the bill had been in the Legislature nearly all winter. The Department sent several representatives to Lisbon last winter. The business of all but one was at that time unknown to the public. That one, Prof. Hawkins, addressed a special town meeting upon educational matters. He showed us pictures of chicken coops, onion beds and talked of other matters as interesting, but never intimated that the Department had at that very time before the Legislature a scheme for robbing us of the last vestige of control of our elementary schools. No wonder that Dr Finegan didn't advertise such matters among us ruralites. He was forced to drop some of the worst features of the bill in order to get it past the Legislature and the Governor. But it is bad enough yet. In the first draft seen by the writer it took the election of all school officers out of the hands of the people. It gave the town board of education power to consolidate schools at will though endeavoring to fool the public by stating expressly in the first paragraph that districts must not be consolidated without consent. These provisions were removed by subsequent amendments. But they show the purpose for which the act was framed, and Dr Finegan's purpose is unchanged. He loves power for its own sake and doesn't care much how he gets it. He is a true bureaucrat and hopes to effect at least a part of his purpose by what is left of the township law. Farmers certainly do well to distrust him until he proves the contrary. If anyone thinks that this is only the ravings of a bumptious hayseed let him find out about the Deputy Commissioner and examine the charges made against him within the last few months by the papers and people of Syracuse and Buffalo.

We checked him for the time in Lisbon last winter because his affairs in other parts of the State required delicate handling and couldn't bear the loud noise we made. But he did it sullenly and reluctantly and the order reinstating the dissolved districts and abolished officers said something about the first of August that has never been explained and he has no doubt plans for our welfare just as benevolent as those so fortunately (for us) disconcerted.

The present law leaves an excellent opening for such an attempt. For the next two years it proposes to keep the control of our board of education out of the people's hands. It provides that this board shall have power "to establish and maintain elementary schools, high schools, vocational schools," and any other old sort it sees fit. It gives it power to spend five thousand per year for building new schools without consent of the people and by following "barge canal methods" and adding here a little and there a little, it will be possible to spend some money and build some school.

We have to fear not only the action of the Department at Albany. There are some Lisbonites who are determined to make the town build and maintain a high school no matter whether the majority need or favor such an institution. We offered to submit the question to a special town meeting. The petition for the meeting was prepared. The requisite names obtained and the document placed in the hands of the town clerk. Then we heard no more about it. Under the new law if a high school is built it must be built and maintained by the whole town. The board of education can establish a high school or vocational school. It can as already shown, provide the funds, if that is not included in the power to "establish," and it has unlimited power to "maintain" it after establishment.

Were there some of our townsmen who knew more about this law last March than most of us did? Was that why the special meeting was dropped? There is at least room for suspicion.

The citizen who reads and ponders the above will agree that the people of the whole town should elect our first board of education. We should know first what each member thinks of these matters before he becomes a member. We wish to give the law a fair chance the coming year and that is impossible unless the people choose those important officers. Any room for clique or local favoritism or graft will overbalance any good that may be in the township system.

A caucus of all the legal school voters in the town should be held a few days before the 12th of June, when the new board is to be chosen by the trustees, and five men nominated for the offices. The trustees in this part of this town declare that they consider this the best way to meet the situation and say that they will gladly ratify the choice of the people. A majority of our thirty trustees will be glad to do so rather than take the entire responsibility of such election upon themselves. If there are any who prefer candidates of their own it will be interesting to know who such trustees and their candidates may be.

Respectfully

JAMES D. MOORE

The Township School Law

Following are the chief features of the Machold township school bill enacted by the last Legislature:

The town board of education consists of five members, unless the town has five or less districts, when it shall consist of three members, and is established to begin the first day of August 1917. The term of office is three years, beginning the first day of August, following election and is so arranged that the terms of not over two members shall expire at the same time.

A member of the board of education must be a qualified elector at the school meetings of the town for which he is chosen. A supervisor is not eligible and two members of the same family can not be on a board.

The first town school board shall be chosen by the present district trustees of each town who will meet on Tuesday, June 12th, for that purpose. Thereafter the members of the town school board will be chosen at the annual town school meeting to be held on the first Tuesday of May. In electing members of the board printed ballots shall be used and regular nominations must be made by petition, 25 signatures being necessary to get a candidate's name on the ballot. The election must be held between 9 a. m. and 4 p. m. and be conducted by three inspectors named by the board of education for that purpose. The town may be divided into districts for school election purposes if deemed expedient.

The town board of education is to hold its annual meeting the first Tuesday in August, when one of its own members must be elected chairman. A clerk and treasurer are to be appointed but they must not be members of the board or teachers. Regular quarterly meetings of the board are to

be held, and special meetings whenever necessary. Members of the town board of education serve without pay.

Boards of education shall exercise the powers and perform the duties conferred or imposed by law upon boards of education or trustees of school districts, so far as they may be applicable to the schools and other educational affairs of the town and not inconsistent with the provisions of this act.

On or before the first day of July in each year the board of education shall prepare an itemized tax budget containing the amounts required to be raised by tax for school purposes for the ensuing year. Such budget shall contain a statement of the amount of state funds apportioned to the town and the estimated amount to be received from all other sources, and shall fully specify the amounts to be raised for the various purposes.

Full publication is required both by publishing in the newspapers and by posting in at least five of the most public places in the town.

The board of education shall, within 10 days after the first of September, cause the amounts specified in the budget to be levied and assessed against the taxable property of the town. The town collector shall collect the taxes and pay over the amount to the town school treasurer.

Hereafter the town boards of education will employ all the teachers in their respective towns, but they must recognize all contracts made by present trustees in force when they assume office.

The town school board will also attend to all repairs to school buildings, purchase all equipment, etc. It can not, however, expend more than one-half of one per cent of the assessed valuation of the town for new buildings, enlargements and improvements without a vote of the school meeting.

Each school and each department of such school shall be free to the children of school age residing in the town.

Where pupils may be more conveniently instructed in the school or schools of an adjoining town, village or city, the town board of education shall provide for the transfer to such school. The cost of such instruction shall be a charge upon the town in which the pupils reside.—*Yates Co. Chronicle, Penn Yan, June 6, 1917*

School Trustees Disprove of the New School Law

Pursuant to the provisions of the new school law the trustees of the rural schools of the town met at the South Side school building Tuesday afternoon, June 12th, and elected five persons to act as the town board of education. Fred Compitello was selected to act as chairman of the meeting and Smith G. Horton was elected clerk. H. H. Benning and Mrs Lewis Jordan were elected as members of the board to serve for one year; Ray Watson and F. S. Kelsey were elected for two years, and Henry Cross was elected for three years.

Before the meeting closed the provisions of the law were discussed and a vote was taken protesting against the new school law as it applies to rural school districts. The protest is well taken. As the law now stands the control of the schools is in the hands of five persons who, without doubt, will do the best they can to promote the welfare of the schools of the town, but they can not possibly be in as close touch with the problems and conditions of each and every school in the town as could the trustees as

they have heretofore been elected. In addition to this the new law provides that the patrons of the schools shall meet at one or two places within the town at the annual school meeting in May to elect the members of the board of education. This will mean that the greater part of the legal voters at such election will have to travel many miles to attend the meeting and the result will be that nine-tenths of the voters will be practically disfranchised. There may be some advantages to be derived from the new order of things but it is doubtful if they will offset the disadvantages above mentioned.—*Clyde Times, June 14, 1917*

Lisbon Town Trustees Name School Board

Lisbon June 13.—The Lisbon town trustees selected strong men for the board of education under new township law at their meeting here today. Strong resolutions in favor of continuing old school districts were passed. The following officers were elected: William Rowen, one year; James H. More, one year; Samuel Toyo, two years; H. L. Jones, two years; Joseph Hargrave, three years.

The following resolutions were passed unanimously:

Whereas, The Education Department of the State of New York by their action with the Legislature have succeeded in passing the educational bill known as the Machold bill into a law, which is now in effect, having for its object the consolidation of rural schools.

We, the trustees of the several districts of the town of Lisbon here assembled, do hereby resolve, that the said law is calculated to take away from the rural communities the right to conduct their affairs, whereas the right to manage the educational affairs of our rural communities should at all times be vested in the common people and the parents of the children, to be educated.

Be it further resolved, that any attempt to usurp the authority of the common people is not in keeping with our form of government and is detrimental to the agricultural interests of the state of New York.

Any attempt to discourage agriculture and the farmer in the production of food at this critical time in the world's history is a grave mistake on the part of the Educational Department and we, the said trustees of the town of Lisbon, do further resolve, that we believe the best interests of our town and State will be conserved by the maintaining of our district schools and the proper attention of the quality of teachers to teach these schools by the Department and superintendent in charge will do more to improve the country schools than consolidation with the necessary inconveniences which it involves.—*Ogdensburg Journal, June 14, 1917*

Clarkstown Elects Board of Education

Under the provisions of the new town board of education law representatives of the various schools of Clarkstown met yesterday at West Nyack with Dr John T. Gilcrest of Upper Nyack as chairman.

The present trustees of the several school districts are done away with under the recently enacted statute and in future five men will serve as a town board of education, each district sharing the taxes.

The new law met with much opposition and it was voted that the secretary of the meeting send to the State Commissioner of Education a resolution in which it is set forth that the statute is one of the worst ever enacted in New York State.—*Rockland Co. Democrat, Nyack, June 15, 1917*

Rebel Against New School Law

Babylon is the only town in this, the third supervisory school district of Suffolk county, to rebel against the new educational law, consolidating the districts wherein their population is less than 1500.

At a meeting in West Babylon on Tuesday night of the trustees of the Copiague, Deer Park, West Babylon and North Babylon districts, the only districts in this town affected, they were unanimous in their declaration that the new law is unconstitutional, and refused to elect a town board of education, as provided under the law. Henry A. Brown, of Deer Park, was chairman, and Henry S. Johnson, of West Babylon, was clerk. Of the eighteen trustees in the four districts all but two were present.

The law provides that where this new town board of education is not elected by the trustees at the election called for that purpose, then either the district superintendent may appoint the board or the Commissioner of Education may call another election. It is not decided yet as to what action will be taken in the Babylon mix-up, but meanwhile the trustees of the four districts are proceeding along the old lines.

The new educational law, as passed by the recent Legislature, provides that after August 1 these small school districts shall be consolidated under one town board of education, whose membership is limited to five. Where there are more than five districts five members of the board are to be elected, but where there are five or less than five districts the membership is limited to three. Babylon town having four of these small districts is entitled to only three members, while Huntington with fifteen districts has five members on its board and Smithtown with eight districts has five members on the board.

Under this consolidation the tax rate in all the districts will be the same, to be based upon the aggregate valuation of all the properties in the combined districts. While this will lower the rate in some districts it will raise it in others. The school tax will be paid to the general town tax collector instead of a district collector, as before.

This central board of education will control all expenditures in the several districts and engage the teachers and do under the one general head what was before done by the individual boards. It centralizes all the former duties and powers of the present boards in one body.

With the membership of this central body limited to three or five it leaves many of the present districts without personal representation on the board, which, it is believed, is contrary to the spirit of the constitution.

While the Huntington town meeting also furnished a lively debate on the new law, the trustees from their fifteen districts elected the following new board: J. B. Morrell, of Centreport, for three years; John Soper, of lower Melville, and John Dean, of Greenlawn, for two years; J. Whitson Valentine and Mrs J. B. Jennings, of Cold Spring Harbor, for one year. The meeting was held in East Northport, and J. Whitson Valentine was chairman, and James Schofield, of West Hills, clerk.

Smithtown elected as its board of education William Flynn, of Kings Park, for three years; Andrew Madison and Frank Brush, of Smithtown Branch, for two years; Everett Smith, of St James, and Alvin Smith, of Fort Salonga, for one year. The meeting was held at Smithtown Branch. G. B. Purick was chairman and Herbert Hallock was clerk. Both hail from Smithtown Branch.—*South Side Signal, Babylon, June 15, 1917*

Not Satisfied

South Scriba, June 21.—The general opinion of the people here is to the effect that the election of the directors for rural schools will not be accepted here. We are well enough satisfied with the old way of running the district. We have a good school building, equipment etc., and the people here feel that it is not necessary to have to pay taxes to build up districts in a run-down condition. A meeting is to be called soon and members from adjoining districts will be invited to be present. In the recent election of directors this part of the town was not represented by one, while it is understood that north of state road are three, on state road one and river road one. We have four schools in this section of the town and if there are to be directors each territory should have representation.—*Oswego Palladium*, June 21, 1917

Protest School Merger

West Islip, L. I., June 22.—Forty residents of the West Islip school district attended a special meeting to protest against the amalgamation of this district with four other school districts under the terms of the recently enacted law. The union of the schools was consummated a week ago at a meeting held in Brentwood, at which time Samuel J. Wagstaff of West Islip and Dr William H. Ross of Brentwood were elected trustees. The taxpayers of this district protest against the unfairness of the new order of things. They pointed out at last night's meeting that their tax rate is now about 20 cents and under the new system will be 60 cents. The result of the meeting was the adoption of resolutions of protest, which will be taken to the State Educational Department at Albany by Mr Wagstaff.—*Brooklyn Eagle*, June 22, 1917

Hurley Aroused Over School Law

Hurley, Aug. 21.—There was a meeting of the board of education of town in this village on Monday. Mr Scribner, of West Hurley, was elected to fill the vacancy caused by the resignation of Mr Walton. The new township school law in equalizing the school tax over the entire town, instead of each district managing its own matters as heretofore, has about doubled the tax in the two school districts of the town; no. 5 in West Hurley and in our village. On the other hand, the tax in district no. 8, will be greatly lessened from its former rate of \$2 per hundred dollars of valuation to 71 cents per hundred. Naturally this village with a doubled tax in view, is much concerned about it; under the law, there is no change to be expected excepting by reducing expense. Four hundred dollars of the \$4700 voted, was for the employment of a physical director and visiting nurse, made mandatory by law. The Department of Education at Albany has recommended a salary to the clerk and treasurer on account of the duties placed upon them by the law, duties which were not even thought of under the old trustee system. In view of this recommendation, the board voted \$100 to the clerk, and \$75 to the treasurer. Considerable comment has been made on account of these salaries and the matter was talked over at length at this meeting with residents of the village present. The \$100 granted to the clerk makes a difference of one cent per hundred dollars of valuation. School no. 2 in West

Hurley, has but one or two scholars and at the next meeting to be held at West Hurley, August 31, the question of abolishing this school will be taken up with an opportunity for those interested to be present.—*Kingston Leader*, August 22, 1917

The School Tax Muddle

The new school law is still puzzling the brains of the best legal talent in the county. Attorney General Lewis says he is going to sustain the law, but even if he does, it will not remove some very knotty problems.

According to the school law, the town school boards must prepare their budgets and advertise them for four weeks in two papers in the town. The boards must also prepare the assessment roll, extend the tax and issue the warrant to the town tax collector. Then the taxes are to be collected under the school law which means that the taxpayers in the town districts will have to pay one per cent for the first thirty days and five per cent thereafter.

This is unfair to the taxpayer for the town collector is paid a salary to collect without fee. He will, without a doubt, turn the fees over to the town, but that won't relieve the unfairness to the taxpayers who happen to live outside the villages.

After the collector finishes collecting taxes, he must make a return to the county treasurer, who will pay to the district the amount of uncollected taxes and then make a return to the supervisors who will have to assess them against the property when the next town taxes are collected.

Then another muddle is that where there are adjoining districts. The law provides that the tax must be collected in the township where the schoolhouse is located. This means for instance that if Ossining and Mt Pleasant have a joint school district and the schoolhouse is in Mt Pleasant, that John J. Hughes, who is elected by the voters of Mt Pleasant, will collect taxes in the town of Ossining. Mt Pleasant has joint districts with Ossining, North Castle, New Castle, and Greenburgh. It is plain to be seen what a mix-up it is. Then there are joint districts between the counties of Westchester and Putnam. What will happen there? No one knows yet.

The law also provides that when two such districts are joined for collection that the assessments must be equalized and if they are not, then three weeks' notice must be given before the assessment roll can be prepared. This means that in every joint district three weeks' notice will have to be given, for no two towns have the same rating in the equalization table.

The worst feature of the law to our mind is the combining of the several districts into one and making the small districts bear the burden of the large. For instance, if the tax rate in the Sleepy Hollow district is \$5 per thousand and the rate in Valhalla is \$10 per thousand, then the rate will be \$7.50 per thousand, a great injustice to the taxpayers in the Sleepy Hollow district.

It is possible that the collection of taxes in the town school districts will be delayed until after the Legislature is convened so that the law can be amended.

The present school law is one of the "brightest" things the State Board of Education has pulled off in some time.—*Tarrytown Argus*, August 24, 1917

Opposes School Law

Whitesboro, Oct. 18.—School district no. 5, on Hart's Hill, registered its opposition to the new town school law at a largely attended meeting in the handsome new schoolhouse of the district and practically every taxpayer signed a petition in opposition to the law. R. H. Kroll was chairman of the meeting. Nearly all present took part in the discussion and it was the consensus of opinion that the new law works an injustice to nearly all districts. The petition will be sent to Assemblyman Louis M. Martin.

Among the points brought out was that it is generally supposed that district no. 5 is benefited by the law because it has a brand new schoolhouse erected at the cost of \$6500. The fact is if the district paid its just dues on the bonded indebtedness it would pay 63 cents per \$100, but as an actual fact it pays \$1.16 per \$100.

The law, which has recently gone into effect, is that the entire town shall pay equal proportions of school taxes throughout the entire town, regardless of districts, with the exception of districts having a population of 1500. Whitesboro and Middle New York Mills are the excepted districts.

Another point brought out was that each district has a trustee and these trustees at a May meeting elect the school board of five members for the town. Now, it so happens that Oriskany district, which is most benefited, has a representation of 12 trustees against nine for the remainder of the town, so that when it comes to May meeting the remainder has no voice.—*Utica Herald-Dispatch, October 18, 1917*

Taxpayers to Know What Is Done with Their School Money

There is one feature of the new township school law which will be appreciated by the common people who pay the money to run their schools in the way of taxes. That is the provision of the statute whereby they are to be informed where their money goes—what it is spent for, how much is devoted to the various items that go to make up school expenses.

That has been one of the marked defects of the old system, so far as country schools are concerned. In cities and incorporated villages the taxpayers have all along been told where their money went. Each year, if the law was obeyed, there was published a detailed account of the receipts and expenditures of the schools. These reports were scanned carefully by the people who were paying the bills. They saw how much of their money was spent for fuel, how much each teacher received, how much went for janitor service, and just what was spent to keep their educational plant running, down to the last penny. But it was not so in the case of the district school. There was no provision for rendering to the people who paid the bills any detailed account of the expenditure of the money. Those who could attend the school meetings usually found out in a general way, but there were quite a few who could not, and these had to trust to hearsay. It was a very unbusinesslike way of doing business. Fortunately the trustees were almost invariably strictly honest, and so could be trusted to do the business of the district in this loose fashion. But it was a poor plan nevertheless.

The new township law, however, provides that the people shall be taken into the confidence of the school authorities to the fullest extent in the

transaction of the public business. The clerk of the board is directed to publish each year a budget showing just what the board desires to raise for each purpose in connection with the schools. This budget shall show, first, the estimated receipts to the school fund—the moneys from the State or other sources. It shall also show how much of this money is to be devoted to each purpose—for expenses of the board, for compulsory education, for teachers, for books and other supplies, for janitor services, fuel, light, repairs, upkeep of grounds, insurance, medical inspection, transportation of pupils, tuition of pupils sent to other districts, etc. The total of these items, less the amount received, will naturally indicate the sum to be raised by taxation. Thus the taxpayers will know exactly why their taxes are what they are, and will know where the money goes. Such a budget for the town of Cuba was published in the *Patriot* last week and will appear in this and two subsequent issues, as directed by law, in order that there may be no excuse for any one failing to have the information. The budget for other districts will also be forthcoming shortly. It is new work, and some of the boards have not been able to get their budget completed yet. This being the first year, the State authorities have advised that some leeway will be allowed in the matter of time. In the future, however, this budget is to appear before the 1st of August.

This matter of publicity is regarded as one of the best features of the new law. It is right in line with the rapidly spreading theory that every taxpayer of a municipal corporation of any kind is a stockholder in that corporation, and as such is entitled to know down to the smallest detail how its business is conducted. School directors will undoubtedly be pleased with the provision, for it gives them an opportunity to explain to their constituents just what they are doing. They recognize that the money they handle is not theirs, but belongs to the taxpayers, and they will be glad to let the taxpayers see that they are conducting their business honestly and carefully.—*Cuba Patriot, August 24, 1917*

High Taxes Cause Much Complaint

Rural communities, particularly in Washington county, complain of increased taxes caused by the operation of a new law which places rural schools of a township under the management of a single board of education. It is claimed that the increase in small districts will be heavy, due to the fact that they will be forced to assist in paying for expenses incurred in larger districts. Ordinarily the taxation in small districts has been very light, but the new group system means that many changes must be made in the school managements. The same condition applies to Rensselaer county, but it is said that the residents of the various towns favor the law because additional educational facilities can be afforded.

In the town of Greenwich, Washington county, the average tax rate for the little "one teacher" school districts scattered about the town will in all probability be doubled this season. In the districts where a high tax rate has been collected heretofore the increase will be less marked, but in no instance will a lower tax rate than that of last year prevail. The school budget for the current season calls for the raising of \$10,511.12 by taxation. This amount will fall on the districts outside of the village, and it will

require a tax rate above \$8 on \$1000 to raise the money. The tax will be levied and collected this fall, the work being taken care of by the town collector.

An example of where the larger districts benefit by the law is shown in the case of the Thompson district in the town of Greenwich. A modern school building has been erected there and three teachers are employed. This district, as well as the one at Middle Falls, has some bonded indebtedness, the burden of which is now shifted on the entire township. There has been an increase in the cost of operation. Teachers' wages have materially advanced and it is thought possible that some of the district schools may be eliminated.

There is no doubt the operation of the new law will give rise to some severe criticism on the part of taxpayers in the smaller districts, and in some towns the objections are already showing up. In the town of Fort Edward an appeal has been taken to the State Commissioner of Education for a ruling upon the law. Fort Edward has one large district, located near the Washington county fair grounds, that comes under the operation of this law. The district has six or seven teachers and a modern school building for which the district is bonded.—*Troy Record, September 8, 1917*

Harvest of the Township School Bill of Senator Brown

Today being the date set for the collector of school taxes to receive the same, makes it an appropriate time to note a few reflections on this much heralded scheme of Senator Elon R. Brown. Many residents of the town of Ulster have this day paid nearly twice as much in school taxes as they did last year, and this will probably make them inquire why this great increase when they have been given nothing in return for it. It has been said by someone that the best way to get a bad law repealed is to enforce it, and possibly this large increase in taxes will have the desired effect. This is also a good time to draw attention to the fact that our regular tax bill is going to be much larger than it has been before, for it is impossible for us to have \$500,000 spent on a State constabulary without feeling it in our tax bills. It is impossible for us to have \$25,000 spent by a Wicks committee, without the farmers growing so many more potatoes to pay for it. We can not enjoy the great privilege of having a special session of the State Legislature, at an enormous cost, without doing a lot of hard work to meet the bill. And when the farmer reflects that all these enormous expenditures were absolutely unnecessary, it does not add to the joy of living or ease his aching limbs. Nor does it add to his peace of mind when those responsible for all this squandering of the hard earned money of those who have to work for it are told to get up a little earlier, work a little harder, go to bed a little later, and be patriotic.

Brother grangers and fellow farmers, is the harvest of the Brown school bill sufficient to arouse you to action? Or will it be necessary for you to wait until you receive your next general tax bill with its large increases on account of the above mentioned unnecessary expenditures, together with your share in the cost of the unseemly wrangle between Brown, Barnes and Whitman with the million dollar appropriation for Brown's last food bill.

The following telegram was sent by the legislative committee of the

National Grange to Senator Simmons concerning the scope of taxation to pay for the war:

"National Grange is not satisfied with amount proposed on incomes and excess profits. Poor people pay the bulk of tariff and internal revenue taxes. The soldiery must largely come from the same class. You have conscripted men; you should now, in fairness, conscript excess profits."

The following interesting letter criticizing the attitude of Lake Katrine Grange on its action in regard to taxation is worth studying by all who have had this question before them. The last paragraph, with the exception of the last sentence, is so correct logically and so in line with the conclusions of the Grange Committees having this work in hand, it is most remarkable the writer did not see how this statement contradicts his previous ones. As this writer says, these are knotty problems, but they are not unsurmountable. A little careful thought with a single eye for the truth will enable anyone to arrive at a clear understanding of them.

I welcome Mr Hansen's criticism and give him a cordial welcome to Lake Katrine Grange, where he will be given a full opportunity to lay before the members his conclusions.

Mt Marion, October 2.

Should taxation be based upon the individual ability to pay or should it be based upon the benefits society gives to the individual.

These are knotty questions. The Lake Katrine Grange have decided in favor of taxing the benefits.

From all accounts farms around Lake Katrine are worth a little less than the buildings and improvements could be replaced for, and taxing the land irrespective of improvements would therefore exempt the farm from taxation altogether.

The farmers in New York State do not pay any direct taxes to either the state or national government, and having only to pay taxes on the farm for the maintenance of roads, schools, jails and poorhouses within the county. Taxes, it seems to me, are the last things which should worry the farmer.

The taxes which oppress the people are not the taxes which are collected from improved real estate, but those taxes which the consuming public is forced to pay in the form of indirect taxation. Rent is another big item which makes a big hole in the pay envelop.

The annual production of a farm, I believe, is divided fifty-fifty between the man who owns the farm and the man who works the farm, and the ability of the man who gets the rent should not be taxed. And the owners of tenement houses should have the rent free from taxation, I suppose, which would be the case when the property is worth less than the cost of replacing the buildings.

The value of the land should be used to pay social expenses and this value they say is the result of services rendered.

How can it be true that the value of a coal mine is the result of social services? What has the value of fertile soil got to do with social services.

Does anybody believe that the value of the land fronting New York harbor is produced by the social activities of the people parading up and down Broadway?

The Lake Katrine Grange and the Pomona Grange are on the wrong track.

Social services, like police and fire protection and all other kinds of public services rendered by the government, are in most cases brought about by public necessities resulting from the presence of the people and land values wherever they are found must be the result brought about by an increased demand for the land due to an increase in the population and it has nothing to do with social services.

J. H. HANSEN

R. F. D. 4, 180, Saugerties.

—*Troy Evening Record*, September 8, 1917

New School Law Applied in Sullivan

Callicoon, Oct. 2.—A misrepresentation of the newly enacted township school law insofar as it applies to parts of districts lying in two or more towns, seem to have been made in one or two instances that have been called to the notice of the Democrat.

In such instances, the old law stated, in substance, that taxes were to be levied and collected in the town in which the principal schoolhouse of the district was situated. Some seem not to be of the opinion that the township law altered such districts by making their boundaries the same as the town boundaries and, therefore, in many instances, restoring to the town many districts which had been consolidated with districts lying in other towns. The opening sentences of the new law will disprove this opinion. Section 330 opens thus: "Each school district in the State is hereby continued as such district exists at the time this act goes into effect."

From this it is easily gathered that the boundaries of town districts are not altered by the change in the law.

Now as to the plan of levying and collecting the school taxes. The last sentence of paragraph four of section 346 of the new education law reads: "The taxable property in the portions of such districts located in a town or towns other than the town in which the principal schoolhouse of such district is located, shall not be assessed for such purposes in such towns."

A concrete example of the application of these sections is that of the Kohlertown school district which was consolidated by order of the Department of Education two years ago with the Jeffersonville district. Some of the residents of what was formerly the Kohlertown district had thought the new law restored them to the town of Delaware, for school administration purposes; but the section first quoted in this article makes it plain that such is not the case. The schoolhouse of this particular district is, therefore, in Jeffersonville, and the section last quoted in this article makes it fully as clear that school taxes are to be levied and collected by the Callicoon town board of education.—*Port Jervis Gazette*, October 4, 1917

Repeal of School Law

Yorkville, Oct. 9.—Even before the new township school law, passed last May, has had a try-out, the taxpayers of Yorkville want it repealed, as emphatically expressed at the open meeting of the board of trustees last

night. Edward Jones was chairman of the meeting and Village Clerk Edward Ellmore secretary. There were about 75 present.

It was brought out during the discussion that under the old law, when the Yorkville district did business by itself, the tax rate was \$5.29, and this year, under the town act, it is \$11.65. Members of the old board were present and asked why the increase; also, the members of the town board were present and contended for the new tax rates as necessary, which are for the entire town, except the districts of Whitesboro and Middle New York Mills, the population of which exceed 1500.

A large majority present favored the repeal of the new law, which is statewide and has been in operation for several years in adjoining states. Those opposed to the law based their opposition on the information that Assemblyman L. M. Martin had voted against it and had informed them that it was passed by but one majority. A letter from the assemblyman asking the wishes of the district was read.

Frank Butterworth of the town board explained the workings of the new law. M. C. Copeland of the old board opposed the new law. Robert Cooper also objected to the higher tax rate.

Mr Butterworth read the school budget adopted by the town board in August, calling for \$30,768, of which \$27,627 is to be raised by tax, and explained the purposes for which it is to be expended. He said the Yorkville school was the poorest in the town and the poorest equipped, and that an inspection of the schools on Hart's Hill or at Oriskany would prove it.

Mr Cooper moved that it be the sense of the meeting that the law should be repealed and that the chair appoint a committee of five to confer with the senator and assemblyman of this district on the matter. The majority wanted the law repealed.

Mr Hughes condemned the local school and favored the new law. Robert Bryson wanted the new law given a fair trial; John G. Evans said he was satisfied with the old law, but the new law seems to be working satisfactorily in other states; Dr H. M. Mitchell said that better schools under the new law would be provided and would cost more money; Mr Taylor favored the increased cost if the money was to be spent in Yorkville.

J. Wesley Hayes, who was a member of the old board, asked if the town board expected to expend the increased amount on the schools in Yorkville. Mr Butterworth replied: "We have been in office about 60 days and you expect a new school. The old board was in office 14 or 15 years and not only built no new school, but it did not keep the roof on the old one."

Mr Cooper's motion was carried and the chairman announced that he would appoint the committee within three days.—*Utica Dispatch, October 9,*

1917

Assemblyman Lord and the Schools

The good judgment of Assemblyman Lord is again vindicated by his vote against the township school law and by his efforts to prevent its passage. At this time when the taxpayers in this county are paying their school taxes the thought comes fresh to their minds. In most instances this law, which as we say was opposed by Assemblyman Lord, by combining all school districts in a town in one tax district has resulted in a marked increase of school taxes, and this increase has not brought a corresponding

improvement of service. Another new school bill which has caused an increase of expense in the country districts is the requirement that a physical training teacher shall attend at intervals each country school. The ordinary boy and girl in the country receives sufficient physical training by being permitted to do chores from six o'clock in the morning until school time, and by walking in some instances one or more miles to school without the necessity of indulging in calisthenic exercise.

Assemblyman Lord was one of the chief sponsors of a bill to do away with this physical training teacher in the country districts. Through his efforts of the bill repealing this was passed in the Assembly, but was not passed by the Senate. It was through Assemblyman Lord's efforts, possibly more than any other member that this measure which would have resulted in a great saving to the taxpayers was brought out upon the floor of the Assembly from the committee on education which had refused to report it, and it was passed by the Assembly, but failed of passage in the Senate.

We hope that our assemblyman during the coming winter will continue his efforts to alleviate the unnecessary expense of this new bill so far as possible, and we congratulate him upon his opposition to it in the past session.—*Bainbridge Republican, October 11, 1917*

The School Question

The nominees for supervisor in the several districts of Albany county are requested to come out with plain statements, before election, in the *Altamont Enterprise*, as to their exact position on the obnoxious amendment to our existing school law that has been forced upon the farmers of New York State, and is being tried out in our county to see if we will take up with it is one, vastly increasing our taxes, with exactly the same service as before, as regards the efficiency of the schools; and the writer might add here, the "Department of Education" has licensed and sent out some pretty rotten teachers, that we have taken up with in the past and made little or no complaint. And now the Department, as the originator of this law, is attempting to make our schools a political issue. Are we Germany? The schools are state affairs there and the people have paid taxes on even their cats, and every hen and chicken, in fact, every stick and "dud" they dared to own, until they have become—what? The world knows, at bitter, bitter cost, and we, the people of the United States, must help pay, IN TAXES, for that blunder of the German people!

The cost of the school, one of the lowered priced, where the writer lives has been raised in teachers' wages and janitor work alone about \$100 more than under the regular system, with exactly the same service. Add to this the extra expense of clerk, treasurer, and cost of schools throughout the districts of the town where more teachers are required, and we have been correctly informed our taxes will be raised 75 per cent. Who can pay it? The writer knows of more than one case where a farm, if sold, would not bring \$3000, and the school tax will be over \$50! One-third of the value the property for schools!

The Department of Education several years ago put over a plan to give to every high school graduate who passed a certain per cent in examinations, \$100 a year for four years toward a college education. So these would-be

scholars not only obtain their college tuition from us taxpayers, free, but we are paying each one \$400 to live on while they are getting it! Are we really so rich and liberal? The writer knows personally of numerous cases, where these young people are the children of rich and well-to-do parents who are amply able to pay their own bills, some of them even attending exclusive and high priced colleges, which farm children sigh for in vain.

When the legal adviser of the Department of Education — sitting in his magnificent office in the Education Building in Albany (no other state in the Union has such a building on so grand a scale) — answered the writer's question why this new idea was being forced upon us, he said among other things: "The country districts are so penurious, we were compelled to do it to obtain greater efficiency." Are we mean, stingy hogs? Do the 60 odd millions each year we have been helping to give to those fellows in the "government employ," heaven save the mark, look as if we have been stingy? They have the money to pay the teachers — but we have not paid any taxes for that purpose this year. Where did they get it? From the 40 millions alleged to have disappeared last year in the capitol?

It is time we farmers wake up as to exactly where all this money we hand out every year goes to. Government is one thing, but should it require more than 60 million every year to run the government of New York State? A certain stenographer in the capitol once made this remark to the writer: "It would make the taxpayers' hair stand on end, if they knew where their money goes." And when that "abomination of desolation," the barge canal bill, was passed, one of the originators of it said to the writer, "Even when we were framing it, we did not expect the farmers of the State would stand for it!"

Who represents us in the government? Several years ago, when a bill was brought up to exempt farms that were mortgaged from full taxation, the monied men from New York City came up with thousands of dollars and killed the bill. How did they kill it, and why do we still have to pay full value in taxation when actually we own only half? Ask yourselves how these things are done! Through suckers in the employ of the people!

Make no mistake about it, those who are to be supervisors: we farmers mean business. We will have enough WAR TAX to pay without excessive school taxes that, in the end, after all only tend to wean our youths away from the farms. Our old schools — when the boys and girls worked at home fall and spring, and attended school winters until they were twenty — made honorable farm men and women. We are living today to attest to the fact.

TAXPAYER

—*Altamont Enterprise*, October 12, 1917

The Township School Law

Very many people have asked me to make a statement in regard to the township school law, that is causing so much complaint in this town owing to the unjust tax levied and now being collected. When this bill was before the Assembly, I did all I could to defeat it and voted against it. The bill was advocated and presented by the Department of Education, and was backed in the Legislature by the assemblymen from the city of New York,

composed of 26 Democrats and 12 Republicans. They held a conference and acted together, claiming it would reduce the number of country schools for the cities to support. Using this argument, they obtained the votes of the members from Buffalo, Troy, Albany, Greater New York, The Bronx, Westchester and Nassau counties, and five up-state men. This carried the bill over our protest by one majority.

I have sent out letters to 126 former school trustees in the assembly district and so far 49 of them have replied. Of this number 45 districts are thoroughly in favor of the repeal of this law and four for its modification so as to eliminate the larger schools.

This law works a great hardship on the town of Kirkland—in fact, the greatest in this assembly district—as it compels the outside districts to contribute to the support of the Clarks Mills school and to assume that school's indebtedness.

The Clinton High School district is not within this law at all, so no blame can be attached to legislation for the high tax here. But the valuation of this district is not in the other school tax district and this leaves an unjust burden on all the taxpayers in the small school districts of the town.

I am collecting all necessary data on this matter, and if reelected to the Assembly, shall take it up with all the country members of Assembly and the Governor and either repeal the law, or so amend it as to protect the taxpayers of the country districts.

LOUIS M. MARTIN

Member of Assembly, Second Oneida District.

—Clinton Courier, Oct. 17, 1917; Vernon News, Oct. 18, 1917

Explains Township Law

Yorkville, Oct. 18.—At a meeting of the committee appointed by President Edward J. Jones, chairman of the last citizens' meeting, Hon. Louis M. Martin of Clinton appeared and discussed in an informal way the new township school law and increased taxation.

James A. Smith, chairman of the investigating committee, in introducing the speaker, in part said: "Our worthy representative at Albany, Hon. Louis M. Martin, has kindly consented to confer with this committee regarding the advisability of repealing or so amending the township school law as to relieve the congested conditions and difficulties arising through this method of outrageous and burdensome increased taxation."

Mr Martin stated that this bill was fathered by Tammany as election ammunition to show that they were saving about \$70,000 to New York City at the expense of the up-state counties. That was frankly admitted on the floor of the Assembly by Tammany leaders. It was to be managed by freezing out about 800 small country schools, which now receive about \$150 apiece from New York State at large.

The New York City and Buffalo representatives together with five scattered up-state men, none of whom were from Oneida county, carried the bill by a majority of one vote, 76 necessary to carry. The Senate being strongly controlled by the cities readily passed the bill. Governor Whitman fully

determined that the theory of the bill was correct, signed it, not realizing the outrageous taxation created.

Mr Martin says that Oneida Castle, Clarks Mills, Vernon, Kirkland and New Hartford are in equal or greater difficulties. In his younger days Mr Martin taught school for eight years and has been chairman of his district school board for 14 years, so should be well qualified to amend or work for a repeal of this unjust law.

Mr Martin further explained a clause of this new school law which has been completely overlooked by the local people, as follows: Each school is to be appraised and that amount is to be divided among the taxpayers of each respective district. Twenty-five per cent to be paid back in the form of due bills to be applied on future school taxes, for each of the next four years. The town board district at large to pay these moneys. This, in a wealthy district with a relatively inexpensive school, like Yorkville, taxes will be still greater than they are this year with no further educational benefits derived.

Mr Martin stated that as a representative of the people from his district, he is solely interested in their best welfare and that from the individual standpoint he has every reason to be intensely interested as he himself, in his home town, was hit hard by the increased taxation. He took a firm stand and stated that if he is returned to the Legislature he will do everything in his power as a senior at Albany and a member of the judiciary and ways and means committees, to repeal or so amend the law as to prevent the tail wagging the dog in the future. He assured us that a solution of this problem could be worked out even if it had to be done by uniting the smaller units which he felt would be necessary as in all probability the law as it now stands working hardships on the people at large could be easily repealed by their representatives at Albany, as pressure would be brought to bear and a realization of high and outrageous taxation, rather than the theory of the bill, would now receive due consideration.

The following members of the committee were present: Chairman James A. Smith, Secretary Robert R. Jones, Edward S. Trosset, Charles Hiller and John Wesley Hayes.—*Utica Press, October 19, 1917*

Hart's Hill is Indignant

Whitesboro, Oct. 17.—An indignation meeting in opposition to the new township school law was held tonight in Hart's Hill, school district no. 5 of the town of Whitestown, and practically all the taxpayers signed a petition asking for the repeal of the law. The meeting was held in the schoolhouse and R. H. Kroll was named as chairman. A discussion of the law was engaged in by nearly all present, and at the close of the meeting it was the consensus of opinion that the law works an injustice on various districts and is not a just measure. The petition will be sent to Albany through Hon. Louis Martin, assemblyman, of Clinton.

Among the points brought out was, that it is generally supposed that district no. 5 is benefited by the law, because it has a brand new schoolhouse erected at the cost of \$6500. The fact is if the district paid its just dues on the bonded indebtedness it would pay 63 cents per \$100, but as an actual fact it pays \$1.16 per hundred dollars.

The law, which has recently gone into effect, is that the entire town shall pay equal proportions of school taxes throughout the entire town, regardless of districts, with the exception of incorporated villages of a certain population. Whitesboro is the excepted village in this town.

Another point brought out was that each district has a trustee and these trustees at a May meeting elect the school board of five members for the town. Now, it so happens that Oriskany district, which is most benefited, has a representation of 12 trustees against nine for the remainder of the town, so that when it comes to May meeting the remainder has no voice.—*Utica Press, October 18, 1917*

To Test New School Law

Justice Tompkins is to decide an action brought by the former trustees of school district no. 8 of the town of Greenbush to test the constitutionality of the new town school act. The defendants are cited to appear before the Nyack jurist at Goshen on Friday.

The papers attack the validity of chapter 328 which legislated the old boards out of office and created a new town school board. The court is asked to restrain the receiver from collecting taxes and the town board from usurping any of the powers of the district.

Ever since the new town school law went into effect there has been much dissatisfaction because it is considered unjust. Small school districts generally have had their taxes increased because they had to share the burdens of the larger ones.—*Nyack Democrat, October 19, 1917*

The new school law is going to bring trouble over in Caledonia. In towns where the village has less than 1500 population the debts of all the school districts are bunched together and assessed against the town. Now no. 6, the Caledonia High School district, has a debt of \$20,000 which people who had nothing to do with voting, must now help to pay as well as those of their own district. It is understood that ex-Congressman J. W. Wadsworth, who owns the Street farm of 2000 acres just across the river from here and who will have to pay many hundreds of dollars of this \$20,000 debt, objects and may test the constitutionality of the law. But he will not be alone, for others likewise object. The situation in Avon is entirely different.—*Avon Herald, October 18, 1917*

Farmers Kicking

Farmers are kicking on the new state school law, which provides a town board of education and claim it will materially increase their school tax. Each school now must be provided with all necessary supplies, which are specified. In the past they were furnished if the money was available. Very often it wasn't. The schools also have to have a physical director and the high school tuition mounts up. A tax of \$60 is levied for each of these pupils. Of this the State pays \$20 and the remaining \$40 is levied against all of the taxpayers in the district in which the pupils live. Besides, the school board has to pay salaries to its clerk, the truant officer and the treasurer. Previously the town paid the truant officer and the others gave their services free.—*Oswego Palladium, October 20, 1917*

The Township School Law

The political opponents of E. Corning Davis are directing much criticism against him because he was one of the large majority which voted for the township school law at the time of its presentation to the State Legislature. Mr Davis's interest in this forward step in public school administration was such that his present candidacy for member of assembly deserves the support of every parent of a school child and the support of every voter who believes in better things and better days for the schools.

That the township system for schools is a good one and that it has the approval of the public is shown in the fact that *every state east of the Mississippi, except Illinois, is administering its rural and village schools under this system.* Massachusetts adopted the system more than fifty years ago; Michigan more than forty years ago; Ohio more than thirty years ago. A system that has proved so successful and satisfactory in all of our neighbor states is exceedingly unlikely to be the wrong system for the Empire State.

It is claimed by Mr Davis's opponents that the new system has brought about an undue increase in school taxation. There has been an increase in school taxes in certain townships, but this is not due to the system itself. The township law does not specify or make compulsory any increase whatsoever in taxation.

The increase is due to the action of the boards of education. These groups of men, chosen according to law, have seen the only too manifest needs of the rural schools and have attempted to supply some of these needs. These needs could not be supplied without money; to secure this money taxes had to be levied.

The boards of education have nothing at all to gain from any increase in taxation, since there is not one cent of salary to compensate any board member for his work and responsibility. He gives his services, and they are many, to his town.

Where there has been an increase in taxation, it is because the boards have believed, as every thoughtful citizen is bound to believe, that country children in country schools are entitled to some consideration. *Boys and girls in the country need as healthful, sanitary surroundings, as decent a working environment, as long a term of schooling as boys and girls in the city have.* Country pupils need the benefits of a more closely organized system of education. They have too long been somewhat the sufferers of the eighteenth century, hit-and-miss, go-as-you-please district system, under which they missed examinations (school being closed), lacked materials to work and study with (though expected to gain promotion), did without sanitary and moral surroundings (though in need of these as much as any city child), studied in poor light and cross lights which strained their eyes, sat in seats which have made many stooped shoulders and crooked backs, breathed air filled with dust from a timehonored floor, wiped wet hands on a common, dirty towel, drank from a tin dipper, used by sick and well alike, lived through a good part of the year in a room only too often ugly, dismal and dirty, and finally left school not knowing why the city seemed to them a place where comfort and opportunity and every pleasant thing was to be found.

That has been the history of the country school child's life in some thousands of rural schools in this State. That is the failure of the antiquated, cumbrous district system. And the township system is the remedy, the promise of a better day to come for our rural boys and girls, the day which has come to the boys and girls in every neighboring state. The man who has supported this measure has well earned the support of every voter who believes that the country boys and girls of this State, a very great asset in the State's wealth, are entitled to as fair a chance as their play-mates in the city.—Amsterdam Recorder, October 23, 1917

Assemblyman Davis Took Right Stand

N. Berton Alter, superintendent of schools of district no. 1 of Montgomery county, which is composed of the five western towns, upholds the position of Assemblyman E. Corning Davis in voting for the township school law, despite the fact that he differs with him politically, Mr Alter being an ardent Democrat. In a letter on the subject to the *Morning Sentinel*, Superintendent Alter says

I have noticed with considerable regret the articles in your paper in opposition to the township law for administering rural school affairs, which went into effect August 1st. It seems that the only real point of opposition to the law is that it has increased taxes. This may or may not be true.

It is true that taxes are higher this year than they were last year, and if the war continues there is every reason to believe that next year taxes will be still higher. The increased cost of milk and other farm products increased the amount that the teacher must pay for board, and then the teacher must have more salary, which salary, of course, must come from the farmers who are selling the milk, eggs and other farm products at advanced prices.

While it is true that the increase in tax, where there is an increase, is due largely in the first supervisory district to the increased amounts paid to the teachers and that these teachers were nearly all engaged under the provisions of the law governing the old system, still some of the increase is due to improvements of a sanitary nature—the installation of sanitary toilets in the schools. We in the first supervisory district now have twenty-nine of the fifty one-room buildings equipped with sanitary toilets. Adequate drinking facilities are being provided and suitable facilities for washing the hands, etc., are being installed in the schools. In this day when every person practically can afford an automobile, or at least a Ford, it seems that the boys and girls, the most important crop produced on the farm, ought to have adequate housing facilities.

In the town of Minden last year the highest rate was \$13.60 per thousand of assessed valuation; the lowest was \$3.98. The rate for the whole this year is \$8 per thousand assessed valuation. Ten of the fifteen teachers in this town are receiving larger salaries than they received last year. Five schools have been or will be equipped with sanitary toilets at a cost of \$1400, this item alone accounting for a rate of more than \$1 per thousand. The district paying the lowest rate of taxation has had its schoolhouse improved to the extent of a roof at a cost, if paid for by the individual district, of \$1 per thousand.

The benefits that are being derived from the law are so numerous and so distinctly visible that it seems a waste of time to enumerate a few. In many towns the term of school has been increased from 36 to 40 weeks. Certainly four weeks ought to be worth one-tenth as much as forty. Certain needed supplies never before furnished to teachers and pupils are now being supplied at the expense of the town boards to the schools. This item includes chalk, ink, erasers and in many cases drawing papers and supplies needed in the teaching of drawing. Paper towels and toilet paper are also being

furnished to the schools. I can remember the time when any person advocating providing the school with paper towels would have been set down as an escaped patient from the state hospital "somewhere in New York."—*Amsterdam Recorder, October 24, 1917*

The New Township School Law

Now that the township school taxes are due, and apparently some higher than in former years, taxpayers are vigorously protesting.

The reasons for the advance can be easily explained. In years past it was considered bad taste to "kick" on high school taxes, but this year with an advancement of 100 per cent or better it is said that some farmers can not drive past a "little red schoolhouse" without frowning.

When the schools outside the village had its own one trustee and a teacher would ask for needed supplies or repairs the trustee could not furnish it because no provision had been made for it. Now the school board has to have the money, as the law compels them to and the law specifies just what the schools must be supplied with.

Some of the taxpayers object to the "new fangled" things for the schools. Each must have a physical director now. Romping back and forth between home and school no longer is considered sufficient exercise for the children.

The board is not permitted to borrow on next year's revenues. Under the new law all the money needed this year must be obtained this year.

Don't blame the board or the collector, they are simply complying with one of the hundreds of new laws that were enacted at Albany last winter.—*Red Creek Herald, October 25, 1917*

Farmers Kicking

Farmers are kicking on the new state school law, which provides a town board of education and claim it will materially increase their school tax. Each school now must be provided with all necessary supplies, which are specified. In the past they were furnished if the money was available. Very often it wasn't. The schools also have to have a physical director and the high school tuition mounts up. A tax of \$60 is levied for each of these pupils. Of this sum the State pays \$20 and the remaining \$40 is levied against all of the taxpayers in the district in which the pupils live. Besides, the school board has to pay salaries to its clerk, the truant officer and the treasurer. Previously the town paid the truant officer and the others gave their services free.—*Norwich Union, October 25, 1917*

Jas. D. Moore Urges Repeal of Machold Law

Lisbon, N. Y., Oct. 25, 1917

Editor, News:

Come up ye jolly farmer men and pay your Machold-township-school-system taxes. Don't be ugly if they happen to be a few hundred per cent higher than the old fashioned sort. Remember that, as everywhere else, so in educational matters, you can't be strictly highbrow and up-to-date unless you are willing to pay the price. Moreover, what is your loss is perhaps other people's gain. Inquire and you will probably find that in the

union free school districts nearest you the burden of taxation is lighter than under the old order of things. This is the intent of the Machold law, that a uniform tax rate by compelling you to help pay for the more expensive buildings, teachers and equipment of the village school and thus making the expense the same to you whether you send your children there or to their own district school will in time pry you loose from that "little red schoolhouse" and make you willing to be consolidated and centralized.

But get the taxes paid and off your mind and be ready to welcome the appraisers when they come around to put a value upon your district property preparatory to its becoming town property. In Lisbon the supervisor, superintendent and chairman of the board all reside in one school district. No. 5, Oswegatchie is two-thirds as fortunate. It will be strange if the appraisers are not similarly distributed in other towns having village schools, since officials tend to collect in villages. This will prevent the farmers from putting off any gold bricks on their native towns, a wise provision.

As soon as this transfer is once made it will, on account of its difficulty and completely never, never be unmade. But the law doesn't require that the towns take possession before next May if those who prefer the old law to the new law, get busy, there is no reason why the Machold law should not be repealed before that. As soon as the fall work is out of the way let the campaign begin. If this unjust and impractical system is not to be fixed upon us now is the time to act. Meetings should be held in every district. Town boards of education should be urged to use their influence. Town meetings should be held to protest. Our board of supervisors helped us individually and petitioned collectively to help us out. Petitions to your assemblyman and senator should be thoroughly circulated if it is to be hoped that the grange will line up more positively than before.

Finegan had a hard fight to squeeze the measure through the Legislature last spring when not one farmer in ten knew what was afoot. Now that the measure is understood an aroused public sentiment will easily secure its repeal if everyone whom the law affects injuriously will do his part.

If some of us who are holding offices created by the Machold law find it hard to part with our new emoluments of honors, our neighbors and fellow citizens should know how to assist us and persuade us to take the right side.

Finally let those of us who are working against this law in the several towns, get into communication as soon as possible. The writer will be glad to hear from any such and to inform them in regard to what we are doing in Lisbon.

JAMES D. MOORE

—*Ogdensburg News*, October 26, 1917

Township School Bill

Hon. M. E. Tallett, our member of assembly, asks us to publish the following letter, which we think will interest the people of Madison county:

DeRuyter, N. Y., Oct. 27, 1917.

"Mr Charles H. Skelton,

Editor Canastota Courant, Canastota, N. Y.

"MY DEAR MR SKELTON:

"The *Courant* of October 26, under the heading 'The School Law,' makes

a very fine apology for me, which obliges me to make a statement and ask you to correct that editorial, in which you say that I finally supported the bill. Here are the facts:

"The township school bill is a department measure, drawn by the State Education Department. It was, together with other measures, given me by the Department to introduce, because I was chairman of the committee on education and was expected to handle the legislation of the Department. It was introduced by me in 1914 and again in 1915, but met with so much opposition that my committee refused to let the bill out of committee and therefore it did not come before the house for passage.

"In 1916 I informed the Department that, owing to the opposition to the bill, I preferred not to introduce it. The bill was then given to Mr Machold of Jefferson county to introduce and it met the same fate as in 1914 and 1915.

"In 1917 Mr Machold again introduced the bill and my committee again refused to let it out, the same as in the previous three years.

"A rule of the Legislature provides that at a stated time, to be named by the Legislature, about one month previous to adjournment, all bills still in the hands of the several committees of the house, which have not been passed, are taken over by the rules committee and such legislation as that committee deems of importance and for the best welfare of the State, is let out and placed on the calendar for final passage, or a vote of the house. The township bill was let out by the rules committee in the last days of the session and received, as I remember it, seventy-eight 'ayes,' while seventy-six 'ayes' is the least that will carry any bill. I did not vote for the bill and felt that I could not properly represent the rural portion of my county if I did so.

"While the measure was favored by the State Grange, there was but one local grange in the county in favor, so far as I could learn. All other granges in the county, from which I heard, were opposed.

"The rural part of the State was against this measure, but Buffalo, Rochester, Albany and enough of New York City came across to get the seventy-six votes necessary to carry the bill.

"While I have conscientiously opposed the measure for four years, I consented under pressure to become the chairman of the township board of DeRuyter, and am using my best efforts to make it a success. There are several amendments which I have in mind that will make the measure more workable and less burdensome and should I be returned to the Legislature, I hope to be able to have them adopted.

"It has been my highest aim to represent the majority of my constituents in all matters, and so long as I am honored by being made their representative, their will and not mine, will prevail with me.

"Thanking you for your courtesy, believe me,

"Very sincerely yours

"M. E. TALLETT"

November 1, 1917

Did Not Vote for Township School Bill

When the township bill was passed in the Assembly both of the Steuben county representatives, Hon. R. M. Prangen of Hornell and Hon. S. E. Quackenbush of Corning voted against the measure. Reports have been circulated by unscrupulous persons that Mr Quackenbush voted for the measure and in order to put at rest such rumors especially in the first district where the circulation is more persistent Mr Quackenbush has issued the following letter:

Corning, N. Y., Oct. 19, 1917

Editor Corning Daily Journal:

It having come to my knowledge that a report was being circulated that I voted for what is known as the township school bill; Assembly bill no. 2235, int. no. 911, I hand you a copy of official vote taken on that measure which as you will observe records me in the negative.

In justice to myself and also to the people of the first assembly district of Steuben, I felt it my duty to send for copies of this vote that it might be known that such report now being circulated was absolutely false and unwarranted.

I am loath to believe that anyone in this district would maliciously circulate such a report but am rather of the opinion that it is an honest misunderstanding of two separate and distinct school bills which were before the Legislature at the same time. I did vote for what is known as the Senate Lockwood bill, no. 2147, int. 491, which relates to boards of education in cities and has nothing whatever to do with township or rural districts.

Believing the people of this district should be given the facts and being desirous of correcting an honest misunderstanding if such, I respectfully ask you to give this space in your valuable paper.

I will add further, that I confidently look for the repeal of the township school bill, at the coming session.

Very respectfully yours

SAMUEL E. QUACKENBUSH

—Addison Advertiser, November 1, 1917

Disapprove of School Township Law

A public meeting was held Saturday afternoon at 3 o'clock in the common council chambers for a discussion of the school township law, of which the farmers of the county do not seem to approve. Assemblyman E. Corning Davis, who supported the bill, was present, as was also Walter D. Elwood, superintendent of the second district. There were about 60 farmers present, and up to 3.30 o'clock fully ten had spoken at greater or less length, all being against the law as it operates in their districts. They were especially bitter against the introduction of physical culture in the rural schools, and the whole trend of opinion was that while the law might be good, and the township system beneficial, if all its provisions were introduced gradually, the arbitrary manner in which the increased expenses are forced upon them all at once, by the supreme power of the Board of Regents, is unbearable. The general sentiment was that the law ought to be repealed. A letter was read from the secretary of the State Grange, saying that the law was

originally framed and approved by the grange, but was so amended that the original ideas were lost, and as it stands it is not a grange measure.—*Amsterdam Recorder*.—*Cobleskill Index*, November 8, 1917

Dislike New School Law

Canandaigua, Nov. 16.—The provisions of the new township school law is causing much discussion among grangers of this county and some drastic action may be taken as a result of various meetings being held both within the granges and without. The next meeting of Canandaigua Grange, to be held November 28th at Woodmen's hall, will be given over almost entirely to a discussion of the law, and a committee consisting of Warner J. Simons, Sidney J. Hickox and R. Melvin Pierce, appointed at the last grange meeting, will report at the coming meeting after holding a conference with a committee from the eastern part of the county.

The annulment of the law is sought by many of the grangers for the reason that it has saddled heavy tax burdens on many of the residents of rural school districts which they are unwilling to bear because they have no benefits additional to those they hitherto enjoyed, and on the contrary many of them are put to much trouble and expense in that their children have to go farther to school than they previously did.—*Rochester Democrat*, November 17, 1917

Royalton Shies at New School Law

Lockport, Nov. 19.—The first of the Niagara towns to take public exception to the new township school law passed by the last Legislature is Royalton, where strong opposition has been brewing the past few weeks since it became known among the taxpayers in the small school districts that they would have to pay from two to five times as much school tax as under the old law, by which each district paid its own tax separately.

At a meeting of over 200 taxpayers from various parts of the town held at Good Templars hall, Royalton Center, at which vigorous addresses were made by well known residents, resolutions were adopted condemning the new law and calling for a committee to take steps to secure its repeal at the coming session.

A committee consisting of Prof. Wallace F. Droman of Griswold street, Herbert Sprout of the Lewiston road and Carlos Campbell was named. W. J. Kennedy of Middleport was chairman of the meeting and Ernest Campbell acted as secretary.—*Buffalo Courier*, November 20, 1917

Farmers Raise Objections

Farmers are kicking on the new state school law, which provides a town board of education and claim it will materially increase their school tax. Each school now must be provided with all necessary supplies, which are specified. In the past they were furnished if the money was available. Very often it wasn't. The schools also have to have a physical director and the high school tuition mounts up. A tax of \$60 is levied for each of these pupils. Of this the State pays \$20 and the remaining \$40 is levied against all of the taxpayers in the district in which the pupils live. Besides,

the school board has to pay salaries to its clerk, the truant officer and the treasurer. Previously the town paid the truant officer and the others gave their service free.—*Palladium*.—*Mexico Independent*, November 1, 1917

Kicking Over School Law

The people of Sullivan county are generally kicking over the township school law. In some localities it has doubled the taxes. It has taken the management of the schools from the people of the locality and put it in the hands of a committee, and the committee in some cases is unsatisfactory.

Who is responsible for that law? The Republican Governor; the Republican Senate and the Republican Assembly.

Merritt, the Democrat from Sullivan, voted against it.—*Liberty Gazette*, November 1, 1917

Richford's Stand on New Law for Township Schools

In response to a letter from the secretary of the Dairyman's League to John J. Richford, the Fusion candidate for member of assembly, asking him for a statement of his position on the new township school law Mr Richford has written the following answer:

"Elmira, N. Y., Oct. 31, 1917

"Mr Archie Turner, Sec'y,
Horseheads, N. Y.

"DEAR SIR: I am in receipt of your letter in regard to the new township school law. I am enclosing a copy of my answer to a letter from Mr M. H. Hewitt on October 22d. My opponent is endeavoring to make capital for himself by extensively advertising his answer to a similar letter.

"Personally I intend to be perfectly frank with the voters. I would rather state my lack of information on issues with which I am not familiar and trust to the fair-mindedness of the voters to see that a man who comes before them for public office, if he is square and honest, will be equally fair with his constituents after he is elected. I have said in reply to letters on other subjects that the wishes of my constituents would have first consideration in determining my attitude on matters of this character.

"As I have talked with others about this school law I find only opposition to it on the part of the people in the rural districts. This is borne out by the feelings which you state exist in the Grange and Dairyman's League. If this accurately represents the feeling of the taxpayers and have no reason to feel that it does I would vote and work for restoration of the old law if an opportunity presents itself.

"Trusting that this information covers the point in question, I am,

"Sincerely yours

"JOHN J. RICHFORD"

The following is the letter to Mr Hewitt, referred to above:

"Elmira, N. Y., Oct. 24, 1917

"Mr M. H. Hewitt.

"DEAR SIR: Your letter of the 22d at hand this morning. In reply would say I spent some time out in the country yesterday and in conversation with a farmer learned for the first about the change in the school law. This

gentleman and others with whom I talked informed me that the new law was working an injustice upon them by doubling their school tax and giving them no better school facilities than they enjoyed under the old plan. If this is the fact, and it should also appear that under the old plan the funds raised were adequate to support the school system, the new plan must be working an injustice. Knowing nothing about the matter, as I do, I am unable to answer your question intelligently. But of this you may be sure. I would not favor the retention of the new law if in its practical operation it is shown to be unfair to the people in the rural districts. I am glad you have called this matter to my attention as I regard it as very important.

“Very sincerely yours

“JOHN J. RICHFORD”

—*Elmira Advertiser*, November 2, 1917

Not the Right Time for Radical Rural School Changes

Rural centralized school law has been opposed by country people from the outset. Theoretically it has seemed good in some respects, but in practice it is proving costly and unsatisfactory — and it is only getting into operation. Assemblyman Brush, who has been in conference with some of his colleagues, is prepared to introduce a bill for the repeal of the law. The measure is too radical in what it contemplates and should be laid aside for consideration after the war, when those affected will have an opportunity to weigh its merits and demerits and decide whether they want it put into effect. —*Newburgh News*, November 3, 1917

Brickbats for Education Law

The meeting of representative taxpayers of the county, which was held at the common council chambers yesterday afternoon was largely attended.

The following officers were elected: J. H. Faulknor, of the town of Glen, president, and Charles E. DeGraff, of this city, secretary.

The township education law was given a severe grilling by the men present. Arguments, pro and con, were advanced, but the most of the pro arguments came from Assemblyman E. Corning Davis, who tried to defend his position on the bill by saying that he gave it his support, inasmuch as he did not receive any letters from the Montgomery county taxpayers asking him to do otherwise. District Superintendent of Schools Walter Elwood, was present and answered several questions as to what was done with the money raised by means of the school tax. It was brought out that while the salary budget has been increased by a considerable margin, the salaries of few of the teachers have been increased.

Organizations are being formed in every county of the State, with the object in view of getting before the next Legislature, measures calculated to either reduce this law, or cause its repeal entirely, and a committee was appointed to meet with the representatives of these other county organizations and frame up some measure of relief. No petitions are to be circulated or presented to the Legislature.

The local committee is composed of the following men: W. Barlow Dunlap, Amsterdam, chairman; Frank Hotaling, Amsterdam, and Boyd H. Devendorf. —*Amsterdam Sentinel*, November 4, 1917

Careful Study of New School Law

The new township school law, its promoters and advocates, are being subjected to much unjust and unfair criticism. A little thoughtful study of the intents and purposes of this law would remove much of the prejudice, in certain quarters, against it.

This law provides for a single board of education which is responsible for all of the schools in a township. This board has a much heavier responsibility than the former district trustees had in their respective territories. A board with twelve or more districts to look after has a much bigger task than a trustee with a single district. The law consequently places a larger measure of power, both financial and supervisory, into the hands of this new board than could justly have been placed into the hands of the district trustees. Since tax is levied to cover the needs of all the schools in the town, according to a town budget, the rate of tax logically becomes uniform throughout the town.

Some assert that it is unconstitutional and unfair for small districts to have to help support larger and more expensive schools. Here is a district with a one-room school; adjoining it is a district with a two-room school. Both schools have the same assessed valuation. It is asserted that the one-room district's obligation, under the township law, to help support the two-room school is inherently unfair. To begin with, this is an exceptional case. Almost without exception, the larger school has a correspondingly larger valuation. Let us suppose, however, that all the districts, whether with large schools or small schools, had an equal valuation, and that the small school districts generally had to contribute toward the upkeep of the larger schools. Let us suppose that this arrangement is unfair. Our first step, then, is to refuse the \$2000 or so of public money to which the town is entitled. By accepting it we are working an injustice of the rankest sort upon the people in the cities of this state, for they furnish eighty per cent of the public money given to the rural schools. If it is unfair for the small school, in this hypothetical case, to help support the larger school, it is equally unfair for the people in the cities to help support the rural schools. We hear no complaint, however, from the cities about the eighty per cent of public money which they contribute to the country schools.

It is all a question of responsibility. If we are responsible for the education and welfare of the children only in our district, why is it that the state tries to help the poorest districts most by giving them a much larger amount of public money? According to the argument of those who say that the township system is unjust because they have to help support districts other than their own, and who say that poor and neglected schools should take care of themselves, it is wrong that our districts with the least valuation should receive the most public money; it is wrong that any district should receive any public money. Let each district take complete care of itself.

According to this same argument, it is wrong that we should pay anything toward the building of roads over which we are not likely to travel. If each district had been left to build its own roads, New York State's splendid system of macadam roads would be what today? According to the argument, we have no responsibility either for the bridges, hospitals, prisons, normal schools and state colleges outside our own district. What

would New York State be today, if the people objected to paying anything for public institutions outside their own district?

If our responsibility for the sick, the poor, the criminal, the insane, the tubercular, and for our public wealth as found in river, forest, fish, and game, extends beyond the boundary lines of our own district, why shouldn't our responsibility for one of our very greatest forms of state wealth, our boys and girls, extend beyond our small school district? Anything that we can do to help the children, whether in our school district or out of it, is a public benefit; the community will enjoy the reward. And in this day and age, our community is something much bigger than our school district.

Some assert that our rural schools today are in a very poor condition, that the children don't learn as they used to in the good old days, that teachers of quality are no longer obtainable as they were in the golden age, some thirty or forty years ago. If that is true, what is to blame but the old district system itself? The old district system was in effect throughout the State until August 1, 1917. Certainly the township system is not to blame for any poor scholarship or poor teaching that may be found in the rural schools today. The township system can't accomplish in three months what the old district system could not accomplish in one hundred and twenty-two years.

Some claim that the district system, being such a good, old system, established in 1795, is good enough for anybody today. If a 1795 school system is so good, just because it is so old-fashioned and venerable, why don't we go back to equally old-fashioned and venerable systems of transportation, farming and living? If the township system is too modern for any common use, because it promises a more efficient school system and somewhat better schools, why do we so disregard the hallowed past as to buy ourselves automobiles, harvesters, reapers, gas engines, as to have telephones in our houses and macadam roads past our doors, as to travel in railway coaches and on steamboats? When we discard all of these modern conveniences we can consistently object to the township law on the grounds of its being too modern, and consequently too expensive.

These modern conveniences cost money. We have no objection. Why should we object because a modern school system with decent schools is going to cost some money? It will be our schools and our children who will receive the benefit, just as we receive the benefit of our automobiles and good roads, and up-to-date machinery.

And our children are entitled to a good schoolhouse as much as the family car is to a good garage or the choice blooded heifer to its comfortable quarters. A painted schoolhouse is no worse than a painted dwelling; a schoolhouse with modern toilets is no more a crime than a private house with a bath room, for instance.—*Amsterdam Evening Recorder, November 5, 1917*

Rural School Question

The democrats have started an eleventh-hour hunt among rural voters against republican members of assembly in this section of the State, who voted for the township school bill. The bill itself is a move in the right direction. It has been apparent for many years that with changed conditions the district school was not giving to the rural section as good an

opportunity for education as children had in cities and villages, although public schools are largely maintained by state funds. This was unfair to the country districts and destructive of the best interests of the State. Nothing is more essential than the maintenance of a high standard of citizenship among the rural population. In no other way will the rural population consent to continue to perform its duty on farms.

This bill, originally prepared by the Education Department at Albany, was amended and modified to suit the wishes of the rural interests and was indorsed by the State Grange before it was passed by the Legislature. Experience will undoubtedly show that it is one of the greatest steps forward in education taken in many years.

The same system prevails in Massachusetts, Illinois and many other states, which have gotten ahead of New York in the matter of rural education. If the burden incident to changing the system is noticeable, it will be readjusted so that it will be no greater than before. Experience has shown that under the township system the number of schools decreases, the size of the schools increases, and with larger schools opportunities are improved.

Mr Machold, the Republican candidate in this county, and Mr Grant, the Republican candidate in Lewis county, are both representative farmers and taxpayers, and are entitled to the gratitude not only of the rural voters, but of the voters of northern New York for rendering this service to education. They should receive the support of everybody who is interested in the public welfare. The act simply provides for the unification of school managements in the country districts just as it has been unified in the cities, where there is a general board of education instead of a separate trustee and separate school districts and separate tax roll for each ward school. The trustee of the old school districts is done away with and the old school district lines are not abolished nor is the school closed. The town school board employs a clerk, a treasurer, a medical inspector, and a physical training teacher, and the board looks after the affairs of every school district in the town employing teachers and purchasing supplies. The taxes to pay the expenses of all the schools of the town are levied upon the town, paid over to the town school treasurer, and he pays it out on order of the president and clerk of the town board. At first some districts will have to pay a slightly increased rate, other districts will pay a decreased rate, but there will be a uniform rate and greatly increased efficiency in school management and education, and in the town as a whole a greater economy. It does not destroy the unit of a school district having over 1500 population unless the people thereof vote for it to be included in the town unit, and the town board votes to receive it. Where there are two union free school districts and academic departments each district becomes a unit and the smaller schools are grouped in these two main units. The schools are not abolished, they can not be closed except by a vote of the people of the district. The act will ultimately mean the schools of one, two or three pupils will be closed by the desire of the people of the district themselves, for they will see the advantage of a larger and better school for their children.—*Watertown Times, November 5, 1917*

Condemns Machold's School Act

Lisbon, Nov. 4, 1917

Editor Republican-Journal:

At its meeting Oct. 31st the Lisbon board of education unanimously passed a resolution condemning the Machold township school law and demanding its repeal at the next session of the Legislature. A petition calling upon the board of supervisors to use their official influence to secure this result was drafted and the clerk was directed to send copies to the former district trustee of the town with the request that signatures be obtained. It is hoped that other town boards will adopt this plan.

Respectfully

JAMES D. MOORE

Remarks on School Law on the Books

Hammond, R. F. D. 1, N. Y.,

Oct. 31, 1917

Editor Republican-Journal:

A word about our new school system.

We have a new school system in our State and the farmers in general are very much pleased with it. Why shouldn't they be? Their taxes are very much higher and just as soon as the new system gets into good running order they will soar still higher. Of course farmers enjoy taxes, especially when they do not benefit one iota therefrom. One of the city papers printed a slurring piece about farmers making a kick about his taxes and about some teachers receiving the munificent salary of \$9 per week and having to pay \$5 or \$6 for board. They seemed to think it highway robbery. Now I know a few schools pay but \$9 per week but I do not know of a teacher who pays even \$5 a week. If that paper can name such a one I wish it would. Even if they did pay \$5 a week they would clear about as much as the girls who clerk in city stores. Of course the farmer ought to charge about \$1.50 per week (they used to) because he raises his own provision. It grows while he looks on and yet I've actually heard farmers declare they had to buy what sugar they used, also flour, tea, coffee, etc., just as the man who lives in the city does and at the same rate per lb., and they actually paid \$1 a bushel for seed potatoes, too. Still it's strange that a farmer should expect to get for board what it actually costs him, isn't it?

About this new school system. According to the old way each one of the 65 districts about here had its own trustee, clerk and collector. The trustee hired the teacher, raised the amount of tax needed, bought the fuel, hired the fires built, bought school supplies, gave the teacher her orders and she collected her money from the collector or supervisor and everything ran smoothly and the men served their district free of charge.

How it is done there is a board of trustees which as near as I can find out is simply an advisory board, the power being invested in one man, a clerk, overseen by a superintendent. The clerk will need to be paid and I think when this year is up he will think he needs good pay. Think of 65

schools all clamoring for wood or coal and chalk and brooms, and fire builders, etc. No wonder school houses are cold and dirty and chalkless.

The superintendent told the teacher in one district to order a load of wood when the supply got low. Where will she order it from? Who wants to sell even if they have it when they don't know where to look for their pay.

Of course we ought to be thankful for the privilege of paying extra taxes, for keeping up the high schools of our own from which we derive no benefits, for the awful muddle school affairs are in instead of our old smooth system. But then the farmers are a thankless lot anyway and the bigger the school muddle and the higher the taxes the harder they kick. Queer, isn't it?

A FARMER

The Cost of Country Schools

The Jamestown school tax for 1917 is out and a study of the yellow slip which the city treasurer sends to the taxpayers for their information compared with the assessment roll of the township of Harmony is sufficient to convince one that the little red schoolhouse days in the country towns is over—at least in so far as Harmony is concerned.

It's an interesting comparison. Jamestown has an assessment in round numbers of \$12 per thousand assessed valuation. Harmony has an assessment in round numbers of \$10 per thousand.

We mention this circumstance not for purposes of criticism but rather for congratulation of the taxpayers of Jamestown. When war expenses and modern educational methods have reached the point where it requires an assessment of \$10 per thousand to educate those of school age in a township which with the exception of two small villages is exclusively farming community, we have reason to feel thankful that it only costs two dollars per thousand more to educate those of school age in the city of Jamestown.

Probably this somewhat heavy tax in Harmony is justified, we haven't a single comment to offer on the whys and wherefores and assume that it would be impossible to take care of the pupils in the rural regions for any less and maintain that standard which has been imposed, but we will venture to suggest that Jamestown has certainly more to show for its expenditures in the way of tangible property.

Ten dollars a thousand in Harmony as compared with twelve dollars a thousand in Jamestown makes us feel pretty good.—*Jamestown Journal*, November 13, 1917

They Want the Machold Law Repealed

Lisbon, Nov. 17, 1917

Editor News:

Every man and team available in Lisbon the past week have been busy plowing for the crops that are to feed ourselves, our soldiers and our allies, if necessary, through another year of war. Nevertheless the sentiment against the Machold law is so strong that somehow former trustees from over half of the districts in town have circulated the petition sent out

by our board of education and during the last few days have sent in the names of about three hundred taxpayers who wish the law repealed. Others have sent word that they will forward their lists soon. The form of petition as drawn by Clerk Stocking does not admit signatures of any but taxpayers, while it should include all qualified school voters. The number of names secured has thus been reduced one-half.

We have some people in Lisbon who do not wish the law repealed. Their reasons in many cases are easily surmised, but that usually given is that the law should have at least one year trial. But as this would mean that the transfer of district property would in the interval be effected, most of us prefer to act before it is "everlastingly too late." We hope that the present week will bring returns from the remaining districts.

It is encouraging to note that Messrs Hatch, Sweet and Hitchcock of the board of supervisors, who as members of the committee on education reported adversely the resolution in favor of the Machold law last fall, are again in their places, while Mr Bancroft of Edwards who opposed them has been retired.

Some former trustees applied to me for petition forms as Clerk Stocking for some reason has not supplied them. For the benefit of any others who may have been omitted or of others than trustees who may wish to use it, a short form is subjoined. It is hoped that anyone in the county who approves of its object will cut it out, sign, circulate it and forward to their supervisor at Canton.

To the Board of Supervisors of St Lawrence Co.

We, the undersigned qualified school voters, believing that the Machold township school law is opposed to the best interests of our schools and people do hereby petition your honorable board to use your official influence to secure its repeal by the coming session of the Legislature.

All lists from the town of Lisbon should be forwarded to the address below:

JAMES D. MOORE

More on the School Law Discussion

Lakeside, Nov. 27.—Some more on the school subject. What is the matter with Oswegatchie, Morristown and Hammond? Lisbon is busy as busy can be. Why don't the other towns get busy too and hold meetings and get up petitions and get signers and at least give vent to their pent-up feelings on the Machold law. They are just as sore and just as much opposed to the law as the Lisbonites and I think we have just as many intelligent taxpayers as Lisbon has. There let us come out for our rights and reinforce the forces of Lisbon. Some say give the law a year's trial? Yes, and by that time our district property will be town property and it will be too late. Heuvelton High School can spread out, build on and add to and why not—the farmers of the town of Oswegatchie will be taxed to pay for it. If we had half the courage of our colonial forefathers we'd

be up and doing something to break the chain that has been thrown around us.

Instead we endure this unjust taxation also the satisfied smiles of the villagers, whose tax is much reduced and although we say a great deal we do nothing.

Morristown has two high schools in the town and their school taxes are about double what they were last year and this is only a beginning. If they are going to submit tamely this time it will be easier next time to spring new laws equally objectionable and raise the taxes a little each year and give us a poorer school service and finally crush the spirit out of us entirely.

Are we going to submit?

FARMER

—*Ogdensburg Journal*, November 28, 1917

Wants School Law Repealed

To the Editor of The Post-Standard:

The people of St Lawrence county did not like the manner in which the Machold township school bill became a law; they did not like its provisions when these were made sparingly public. Now that the law has been in effect six months they like the resulting conditions even less than the Finegan methods and theories to which they are due. Teachers say that they never had so much difficulty in getting school supplies and salary. Pupils endured weeks of cold weather with no better fuel than fence rails.

Members of town boards of education travel long distances after a day's work to transact business for which they receive no pay and little thanks. The clerk finds that the amount of work connected with his office and the lack of cooperative spirit among the people make his life a hard one.

The taxpayer finds that the uniform rate of taxation that was to ease the burden of school support for poorer districts under the present law really lowers taxes for the wealthier village districts at the expense of the surrounding farmers. The superintendent alone considers the change a source of present and future benefit. More power is placed in his hands.

We would be willing to give the law a couple of years' trial in the hope that conditions would improve did it not provide that before next May all district property shall be transferred to the towns and the unjust and complicated installment-plan scheme of repayment will be inaugurated. Then the law would be fixed upon us.

Last fall our superintendents persuaded our board of supervisors to recommend the Machold bill to the Legislature. At present we are circulating petitions asking our supervisors now in session to take action in favor of repeal. The board of education in the writer's town has sent such petition into each of its thirty districts and the response is wonderfully encouraging. We hope that farmers throughout the State will take action along similar lines.

JAMES D. MOORE

Ogdensburg, November 26.

—*Syracuse Post-Standard*, November 29, 1917

Want Law Repealed

There seems to be a strong movement in the rural districts to bring about the repeal of the school law passed by the last Legislature. It had the backing of the State Department of Education. The new law makes the town the unit and provides for a town board of education in place of district boards. The change has increased the school taxes of many people in the country and they are very much in favor of returning to the old system. — *Penn Yan Democrat*, November 30, 1917

Opponents of Machold Law Will Assemble

Lisbon, Nov. 29, 1917

Editor of News:

The Lisbon board of education met pursuant to the call of the chairman and clerk at the town hall on the afternoon of the 28th. After concluding the volume of business the board took up the matter of the petition anent the Machold law addressed to the board of supervisors and circulated throughout the town by the board's order. Returns from twenty-three school districts showed a total of four hundred and fifty taxpayers' signatures.

It was decided that the board should visit Canton and present the petition Wednesday, Dec. 5. They will be at the American House at noon on that date.

They earnestly request that members of other town boards, former trustees and citizens from all parts of the county who are interested in securing the law's repeal shall meet there to concert plans for county campaign.

In Allegany county they are holding meetings in each town to choose delegates to a county meeting where a committee is chosen to visit Albany when the Legislature meets and work for repeal.

Now Mr Farmer, this means your growling at the milk station and blacksmith shop won't effect anything. If you really wish to see the end of the foolish and vicious Machold law come to Canton Wednesday and see your supervisor and let us talk the matter over. If you cannot come write at once to your supervisor. Our supervisors and our assemblymen, both wish to represent us in this matter. It is our business to let them know what we want. Come to Canton next Wednesday.

JAMES D. MOORE

— *Ogdensburg News*, December 1, 1917

Opposed to the Bill

Elsewhere in *The Journal* will be found a summary of the action of the granges of Chautauqua county on the proposed school bill. Of those which reported, three granges favor it, three took no action, and 14 opposed it.

This situation seems to indicate that the country residents of Chautauqua county do not think their school system needs revision. The proposed bill if enacted into law will create a township system in this State, and is brought forward by the Department of Education as a relief from a school system which they assert is not up to the standard set by higher educational institutions, or by other states.

If the above record of the grange actions of this county can be taken as

indicative of the belief of the residents of the country in this county, and this county can be taken as typical of the State, then there is a very large divergence of opinion between the school organization of the State and the rural people of the State on this topic. It would not be strange if this is true. The schoolmen see the schools from an organization view point, the parents of the children see the schools in their effect on the individual child, and these two points of view are apt to be divergent.

The best organization possible may lack the qualified employes to carry out the intents and purposes of the organization, and this is particularly true of schools. In the present case this observation is particularly pertinent. It is a very large question if any form of school organization in New York State will give better rural schools until the quality and the pay of the rural teacher is materially improved. This is probably what the granges have in mind when they vote down a new and untried form of organization. The patrons see the teacher and the school in the concrete, and know that improvement must come from within instead of from without, from better teachers; not from more organization and more officials, and more reports and more red tape.—*Jamestown Journal, December 4, 1916*

A Teacher Talks

MY DEAR MR MCINTOSH:

I have read with a great deal of interest the articles recently printed by you in regard to the township school law, and have also observed that the rural newspapers are nearly all considering the question of whether or not it should be repealed or amended at this session of the Legislature. As a teacher in a rural school I think that I have a right to be interested in this question from the standpoint of the teacher. As my father is a taxpayer and consequently bears his share of the expenses of running the schools I think that I also have a right to be interested in the question from the standpoint of a taxpayer. Personally I want with all my heart to see the country schools of New York the equal in every way of the city schools. Working as I do with children every day I have become acquainted with their hopes, their ambitions and their plans. I want to see these children have a chance, the best possible chance to make something of themselves, and I want to see them have that chance regardless of any reasonable expense, consequently I believe that the township law should not be repealed but should be left as it is.

You may ask me why I believe that the new law makes the condition of the schools any better than they were previous to its passage. I will be glad to tell you. In the first place we know that the old system was a pitiable failure, for in the majority of districts it was almost impossible to find a capable man to serve as trustee. We know that generally the office was saddled on the first man who came handy and that eight times out of ten he was a man absolutely unqualified to hold the office. In the last two school meetings held in our town five men were elected trustee who were not interested enough in the schools to attend the meeting, and who only accepted the office when notified by the clerk because they were afraid that they would be fined if they refused. Some of these men had not even the qualification required by law; that they be able to read and write. It was

very seldom that an educated man could be induced to serve. In our town not one of the rural trustees elected at the last two elections had ever had a better education than that afforded by the ordinary district school. I ask you to tell me fairly if you think that these men were able to give the school the kind of attention and the kind of care that it should have had even though they were men of the highest character and of unimpeachable integrity.

But even when a qualified man was elected it made but little difference, as the chief aim of the old trustee, forced upon him by public sentiment, was to keep down taxes. We know that generally, not one penny more was spent than was absolutely necessary to keep the school going. A purchase of maps, books for the library, necessary equipment, pictures, etc., was nearly always accompanied by arguments, and efforts on the part of teacher worthy of a congressman trying to get an appropriation for his home town. We know that school buildings were allowed to run down. Paint, paper, and suitably decorated interiors were more often than not entirely unheard of. Children were sent to school buildings nearly always built with no attention to sanitation or the common rules of physical and esthetic well-being. We know that the condition of the outbuildings was nearly always a disgrace to the idea of sanitation and decency. We know that one of their characteristics was the covering of obscene markings, which did more to degrade the moral sensibilities of the children than anything else, because the trustee in his fear of the criticism of his neighbors would not spend the money necessary to buy paint to cover them. I have taught, myself, in a district where I have offered to buy the paint to cover the outbuildings, but the trustee refused to allow me to do so, claiming that the people of the district would say that he was spending money foolishly.

And we know that the majority of the old trustees economized on teachers. The cheapest teacher, too often cheap in more ways than one, got the job. Professional efficiency counted for but very little. The low wages paid the rural teachers of the State of New York have been a scandal for years and in my opinion the main reason for them has been this false economy on the part of the trustee. The result has been shown when our rural students entered high school. Poorly prepared, poorly trained, they have struggled against those children from the village who have had superior training from superior teachers, and as a result the great majority have dropped out before their course was half finished. These were some of the bad conditions of the old system and are enough to prove my point that it was a failure. I need say nothing of the "politics" often played at the annual school meeting, of the undue authority often exerted by residents of the district which forced timid teachers to be unjust and partial in their treatment of children, nothing of these and kindred evils which every student of school conditions knows to have been in existence. Readers will know that I have not exaggerated in the least, but have rather made things milder than they were. So much for the Old, now for the New.

Our town board of education is composed of five men. For the chairman we have a practical business man, who himself has been a teacher and who knows the needs of the schools, and who is also a heavy taxpayer. The rest of the men are farmers, everyone of them up-to-date and progressive, and while none of them spend money foolishly they are not the

penny-pinching sort of men that will not buy the things that are absolutely essential for the health and comfort of our future citizens. They are all of them men of the highest character, of proven integrity, and of suitable education. Are not men of this kind better fitted to have charge of the schools than the kind of men that were ordinarily elected trustee?

We also have a clerk who attends to all the clerical work of the schools of the town, a little task which used to call down the most hearty curses of the trustees, on the rare occasions when they condescended to attend to it, without the aid of the district superintendent. Certainly our clerk gets a salary, the magnificent sum of 300 dollars a year, which I presume is one of the useless salaries upon which opponents of the law place so much emphasis. There is also a treasurer, who gets 100 dollars. Four hundred dollars a year in useless salaries. No wonder we don't like the new law. Those useless salaries must add at least ten cents a thousand to the taxes of every taxpayer.

Now we come to that part of the new law which has caused the people to rise in wrath and which if the truth is told is at the bottom of all the opposition. The taxes have doubled. Yes, they have and that is one of the best features about the new law, for it shows that the schools are getting the attention they need. Every school-building in this town has had repairs made which should have been made long ago. Our buildings have been painted and repaired. We have had books and maps and equipment that has been needed for years. The wages of teachers have in many cases been raised to something like a living wage. My own school has added thirty dollars worth of new books, all of them needed, to the library, without an effort on my own part. If I had suggested such an idea to the trustee last year he would have died of shock, and incidentally I would not have gotten the books. No wonder the taxes are high. If a man leaves his farm buildings without repairs and his farm without equipment for ten years and then pays for all needed in a lump it naturally will hit his feelings and his pocketbook more forcibly than it will if he attends to it every year as he should. We have let the school buildings go with just as few repairs as we could and now we have to pay for them all in a lump. Naturally then they take money and lots of money, but we must remember that the repairs are now nearly all made and will not have to be paid for next year. It is a good thing for us to remember also that all of our town boards are taxpayers and therefore are hit as hard as any of us.

This is the first time in the history of the State when the taxes have been fair. Why should people of the village be forced to support a high school for the people of the farm. Yet this is what has been done for years. If the farmer wanted to send his boy or girl to high school in the village he could do it and it cost him not one cent additional taxes, while the village dweller was compelled to pay heavy taxes to support the high school. To be sure the State paid something but it came nowhere near paying the total expense of that pupil to the village. Now for the first time every person is bearing his just share of the common burden of the taxes and that is as it should be. The high school now belongs as much to the farmer as to the villager and should be equally as much a source of pride and interest. Now no one district is forced to pinch and deny itself, struggling with a high and unbearable tax rate of perhaps thirty dollars a thou-

sand, while its neighbor sailed easily along with a rate of six or seven dollars a thousand. That was one of the features of the old law and it is something that no man who has any idea of fairness will wish to return to. Our American republic was founded upon principles of fairness and justice. Have we become so fond of the Almighty Dollar that we are forgetting those principles.

I have seen the new law referred to many times as an obnoxious piece of kaiserism. Such talk is sheer foolishness without reason or logic back of it. Was not the first unit of government in this country the town? Has it not been around the town that all of our political institutions have been built? Is not all of our local government carried on with the town as a unit? Then why should it be kaiserism if we turn over the affairs of our schools to the same unit? Will we not still have our votes at school meeting? Will we not still select the men who have charge of our schools and will we not be able to reach them just as easily as before? Kaiserism — nonsense.

I believe that the new law will result in better work by the teachers of the rural schools. Under the old system good work counted for very little. A teacher might gain a good reputation in one or two districts, but it would help her very little toward getting a better position, and we all know that the hope of advancement is one of the strongest incentives for good work. Under the new law the town board knows what every teacher is doing. They know the ones who are best fitted for advancement and I believe that a system will soon be perfected by which the deserving teachers will be promoted to better schools and those who are not deserving dropped from the profession. This alone will be productive of better schools and better teachers, a result which alone will justify the entire expense of the new law.

It has been said and perhaps with some degree of truth that the new law will result in throwing the schools into politics. There always has been and probably always will be a degree of political manipulation in school affairs, but I do not believe that the effect can be any worse than it was under the old plan. Cleaner politics can always be procured by placing cleaner men in office. The same remedy for politics under the old system may be applied under the new.

Consolidation has been the great fear of some of the people who oppose the new law. No one will deny that the Education Department probably intended to make consolidation more easy where desirable. Likewise no one will deny that consolidation in many cases is a very desirable course to pursue. But under the new law no districts may be consolidated without the assenting vote of the district concerned while under the old law the district superintendent had full power to dissolve a district and unite it with another. This then is a change for the better, and renders consolidation less liable instead of more so.

Finally, may I ask if it is your opinion that the law has had a fair chance to demonstrate whether it is for the best or not? It has been in force only a few months and we have certainly not had the time to tell whether it is for good or for evil. We must remember that it is the product of the thought of men who have grown gray in the service of the schools of the State and who we know have the best interests of the schools at heart. We

all of us know Dr Thomas E. Finegan, a product of our neighboring county of Schoharie, and we know that he understands the conditions of rural schools from beginning to end. He is one of the men who were responsible for having this law passed and put in practice. Are we going to discredit him and the able men who are his helpers without giving them every opportunity to show us whether or not he is working for our benefit. Would that be fair? And are we who have no means of knowing all the ins and outs of education in this State going to say that we know better than those who have, what should be done. I leave the answer to these questions to any thinking person. I say give the new law a fair trial. Give our leaders a chance to show us that they are worthy of our confidence. And then, after we have done this, if we are still of the opinion that the new law should be repealed, we can take the necessary steps and go back to the old system. The law can be repealed just as well two years from now as now and will it not be wiser to wait. At any rate let us be careful lest we put our Empire State, the State that now marches at the head, years behind the other great states of Vermont, New Jersey, Ohio, and many others who have the township law, in educational progress. We are not living for the present, we are living for our children and for their children after them. Let us give them every opportunity to be so trained and so educated that they will live to be a credit to the new and greater country life in the new and greater age that is dawning upon us.

A RURAL TEACHER

Rural District School Will Go if Whitman Acts

Albany, May 1.—The Machold township educational bill now before Governor Whitman for his signature is one of the most important bills affecting the educational policy of the State passed by the Legislature in many years.

It abolishes the school district and the district trustees and it makes the entire township the unit for the administration of school affairs and for the assessment and collection of school taxes, all of which is placed in the hands of a new township board of education of five members.

The passage of the bill in the Assembly was marked by a bitter debate in which Assemblyman George R. Fearon of Syracuse took the leadership of the opposition. It passed the Senate Saturday on a special report of the rules committee on a short roll call and without debate.

Present indications are that Governor Whitman will sign the measure. The opposition to it is not dead, however, and it is not improbable that if there is a concerted effort made to reveal to the Executive the weaknesses of the measure he will not sign it.

Those who favor the bill and effected its passage through both houses of the Legislature assert that the school district and the district trustees are relics of an ancient system; that as the unit of school administration and taxation the old district is entirely too small, and, that the limited resources of the small school district mean limited educational facilities.

Those who opposed the bill asserted that the country schools are being put into politics; that, under the provisions of the bill, the union free school district actually controls the school affairs of the entire township and that the quality of instruction and school administration generally will deteriorate

because the five commissioners for the entire township will not display the personal attention to school affairs displayed by the district trustees.

One of the most important features of the new legislation is found in its effect on the textbook question. Under the present law there is no uniformity of textbooks. District trustees have always been reluctant to require farmers to purchase for their children the most modern textbooks as soon as they come off the presses and in most country schools the teacher has permitted each child to use the textbook it owned. Sometimes there would not be two alike in the classroom.

Under the new law the township board of five commissioners has the power to prescribe what textbooks shall be used, their prescriptions being subject to the approval of the district supervisor of education. As soon as the new law becomes operative the thousands of textbooks of all types and ages now in use in the district schools will be thrown out and new books which conform to modern standards will have to be purchased by the parents of school children.

Because of this circumstance the charge was made while the bill was under debate in the Assembly that too many textbook changes were made; that the benefits to be derived from changes do not compensate for the additional expense thus incurred. This debate led to a proposed amendment to the bill, which, however, was not pressed.

The amendment provided that the State Department of Education shall, under the direction of the Board of Regents, compile as to form and contents all textbooks used in the public schools of the State, and that these textbooks shall be dedicated to the public use, free from copyrights.

If the amendment had become law it would be possible for every city and every school district to print its own textbooks.—*Syracuse Post-Standard*, May 2, 1917

Township System in Rural Schools

After having had the matter under consideration since 1914, the State Grange Patrons of Husbandry, in session at Oneonta last week, gave its approval to the proposed change in the government of the country schools of New York, whereby the township system would be introduced. It was easily the biggest question before the convention. There were submitted during the week something over a hundred different resolutions from subordinate and pomona granges. They were on both sides of the question. Among the subordinate granges the resolutions in opposition were largely in the majority, but more of the pomonas favored than opposed the change. Early in the meeting the gulf was apparently so wide between the opposing sides that any compromise seemed hopeless. But fortunately as the matter was thrashed out in lengthy public hearings before a committee, a better spirit was engendered and finally an agreement was reached on several of the fundamental principles, the others being left to the master and secretary of the state grange, who were appointed a committee to assist in framing the law and to see that the wishes of the membership of the order were carried out as far as possible.

The body gave its unqualified indorsement to the township plan of taxation and administration; that is, under it the taxes would be levied by a township board of education and would be the same all over the township, while

the administration of the schools, in the way of engaging teachers, caring for property, keeping buildings in repair and erecting new ones, and the work of looking after the schools of the whole township generally, would be attended to by the board.

As to how that board should be formed there was a decided difference of opinion. It is known that the educational authorities of the State favor the plan in successful operation in other states, whereby the board is a small one of some five or seven members elected from the township at large. The "home rule" element was very strong in the convention, however, and it expressed a preference for a board made up, at the beginning at least, of a representative from each district, chosen at school meetings as the trustees now are.

Another point insisted upon was that the power of consolidating schools should be taken entirely out of the hands of the superintendents and the state authorities and the convention recommended that "no consolidation order shall hereafter be effective until confirmed by the board of education of the town or towns which are affected."

The convention declared for the establishment wherever practicable in the rural districts of township high schools with courses in agriculture and home making, and asked for liberal help from the State for such schools.

It declared for uniform textbooks throughout a township, to be adopted by the board of education at the suggestion of teachers and superintendent.

It recommended a change in the method of electing district superintendents, and would have them hereafter chosen at a joint meeting of the boards of education of the various townships composing the district.

There were some other recommendations, but these were the principal ones. In view of the fact that they largely coincide with the views of the Educational Department at Albany, it is believed the present Legislature will pass an act creating the township system. Senator Elon R. Brown of Watertown, leader of the upper house at Albany, was at Oneonta to confer with those interested in the question, and said the Legislature was only waiting to hear from the State Grange in order to act, as far as possible, in line with its wishes, in passing an educational law, as it was felt there must be some change from the present system, under which the rural schools of the State have been steadily decreasing in attendance, while larger numbers of pupils are carried to the village schools each year.—*Cuba Patriot, February 16, 1917*

Opposed to School Bill

The *Journal* is in receipt of communications from 20 of the 34 granges in Chautauqua county, containing a record of the action taken by those granges on the proposed rural school legislation. As this matter is to be the subject of formal action and resolutions by pomona grange which is to meet at Brocton on Thursday and Friday, a review at this time of what the various subordinate granges have done, is of interest.

Three of the 20 granges from which reports have been received failed to take any definite action.

Three of the granges reporting, are in favor of the proposed legislation, with minor changes.

Fourteen of the granges are definitely and decisively opposed to the proposed law.

A brief explanation of the school bill and of the situation may assist in understanding just what is proposed.

It is proposed to enact a law during the coming winter in which the department of education, and the representatives of the grange and other rural interest may unite, to assist in improving the rural schools of the State. The proposed bill which is now before the granges for discussion is not drawn on hard and fast lines for introduction in the legislature, but by the positive statement of the officials of the Department of Education will be amended in any needed respect whenever rural interests may agree upon the desired changes. But subject to this possible change it provides for a new system of school administration in New York State.

First, it provides for township school boards to administer all the schools within the geographical limits of such township.

Second, it provides for a uniform township tax for school purposes, the amount to be decided annually by said township board.

Third, while it is not a consolidation measure, in that not a single school consolidation is provided for in the bill, it provides powers to said township school boards, to discontinue schools in any district or districts in the township and to provide for the education of pupils in such districts in other schools.

This is mentioned, not because it is one of the chief features of the bill, but because it is the chief objection now urged to it. Several granges in the county have based their opposition entirely on this feature.

It should be said that the power of consolidation now rests in the hands of the district superintendent, with the approval of the Department of Education, and without providing for the opportunity of court review.

The effect of the bill, were it enacted into law as it stands, would be to equalize the school tax of an entire township, give the township school board the right to say where each pupil in the township should attend school. The members of the township school board, by the provisions of the present bill, are to be elected by the voters of the township with an equitable distribution between present school districts, whose lines are to remain intact.

So much for the outstanding features of the school bill. Now for the action of the granges of this county.

Those which report unqualified opposition to the bill are as follows: Dewittville, Clymer, Fredonia, Chautauqua, Sherman, Sinclairville, Kennedy, Hanover, Cherry Creek, Portland, Gerry, Cassadaga, Stedman, and Findley Lake.

Those which favored the bill, with suggested amendments: Volusia, Busti, and Union.

No action taken: Ripley, Sheridan and Ross.

The 14 granges which have not responded to requests for information as to their action either to the *Journal* or to the secretary of the county grange are Westfield, Stockton, Ellery, South Harmony, Panama, Ellington, Villenova, Centralia, Charlotte Center, Ashville, South Ripley, Niobe, Arkwright and Frewsburg.

Really constructive resolutions were adopted by Lombard grange and Union

grange. Two suggested amendments proposed by Union grange will undoubtedly attract much attention. The first is to remove all union free schools from the operation of the law, leaving them to be operated and maintained under the present boards of education and taxation system.

The second is to draw the teeth of the proposed bill by a provision for real home rule, providing that the school in a district may not be annulled and closed by any township board without the vote of a majority of the voters of such district at a meeting called to consider such proposed annulment.

Some few resolutions adopted by the granges have been forwarded the *Journal* for publication. Two or three are typical.

Sherman grange resolution is as follows:

Whereas, The proposed school bill as it now stands does not meet with our approval,

Resolved, That we are in favor of a bill that will give to each district the right to control its own business.

Portland grange:

Resolved, That Portland Grange No. 2 is opposed to the passage of the tentative school bill, believing it would be an injustice to the patrons of rural schools, and would increase the taxes upon people least able to pay them, without bettering the school system as a whole.—*Jamestown Journal*, December 5, 1917

Wilson Taxpayers Protest Against New Township School Law

Wilson, Dec. 7.—One hundred taxpayers living outside the union district in the town have adopted a resolution of protest against the provisions of the township school law. Criticism of the law was made by speakers on the ground that the uniformity of the school tax throughout the town increases the tax for residents living outside the union district. These residents object to assisting those living within the confines of the district to maintain the high school.

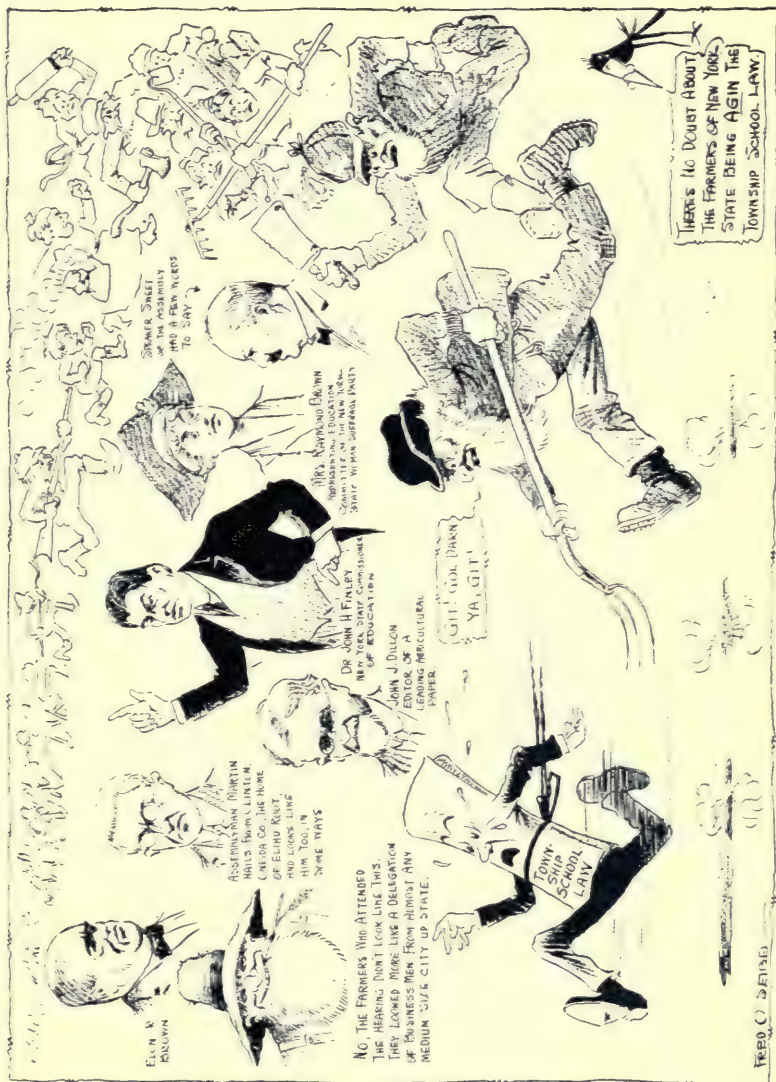

Protest was also made against the law requiring the services of a physical training instructor at a salary of \$1000 a year and also that inside chemical lavatories be installed in all district schools before September 1, 1918, at an expense of \$3500.

A committee consisting of W. Glenn Swick, Charles A. Wilson and G. E. Burmaster will confer with an attorney and plan a course of action. This committee will report at an adjourned meeting to be held on Saturday afternoon.—*Lockport Union Sun*, December 7, 1917

Ruralists Object to Provisions of New School Law

Albion, Dec. 4.—A meeting of the town boards of education of the towns of Orleans county was held at the court house, Albion, yesterday to discuss various features of the new school law which provides for boards of education in rural schools, instead of trustees in each district and has other features that appear to be causing general dissatisfaction among the rural taxpayers and citizens.

There are fifty town board of education members in Orleans county where each town has five representatives. The speakers were members of the various boards represented. S. M. Wyman of Shelby presided at the meeting at which Leslie Tanner of Knowlesville was secretary.

Speakers included Dr Frank H. Lattin of the Gaines board, who is assemblyman from this district; Mrs Charles Jackson of Clarendon; G. E. Snyder of Murray; Howard Pratt of West Gaines, and others.

In most of the rural school districts the tax rate has been considerably increased by the workings of the new law which it was contended is beneficial principally to districts that have a large union school.

There are many joint districts in the town where dissatisfaction exists, especially in those localities where taxpayers were forced to pay more than under the old law. In cases where the schoolhouse is located in a town, that town receives all the money collected in that joint district.

Resolutions were adopted to endeavor to secure legislation this winter to repeal many objectionable features of the new law, under which each town is required to pay from \$250 to \$350 for a clerk for its new town board of education; \$50 or more for services of its treasurer. It must provide a truant officer and each school must now be provided with all necessary supplies, which are specific.

Formerly the supplies were furnished if money was available, it is contended. Other features of the bill that the local county representatives will seek to have abolished is the employment of a physical director for each rural supervisory district.

Orleans county has three such physical directors receiving \$1200 each and expenses, which costs annually over \$4000, to be paid by the taxpayers in rural districts, and it was the opinion of those at the meeting that the office is an unnecessary one and each teacher could include that work in her regular school course of instruction.

Another objectionable feature of the bill is the section requiring physical examination of students in the rural schools, which costs from fifty cents to one dollar for each scholar, it is said. The town is required to pay the physicians for such examinations where the parents do not. The high school tuition mounts up in the more sparsely populated communities. A tax of \$60 is levied for each of these pupils. Of that sum the State pays \$20 and the remaining \$40 is levied against all the taxpayers in the district in which the pupil lives.

The resolution adopted at the meeting requests Assemblyman Lattin and State Senator George F. Thompson of the Orleans-Niagara district to introduce legislation at the coming session of the legislature to abolish these objectionable features.—*Buffalo Courier, December 5, 1917*

That New School Tax Law

It is difficult to find farmers anywhere who take favorably to the new town school law which has resulted in doubling school taxes in most localities without yielding any greater benefits. A move is on foot in some sections to work for a repeal of the law. Assemblyman Lattin tells us that he has heard of an effort to crystalize sentiment so as to effect a repeal at the coming legislative session.—*Orleans County Republican, Albion, December 5, 1917*

Home Rulers in Orleans

There are rumblings in the rural regions over the workings of the Finegan-fangled country school legislation that was put through the Legislature last

spring by strong-armed, log-rolled methods. It appears the folks at home do not like so much Albany rule in their school affairs.

Down in Orleans county, for instance, where there are ten town boards of education instead of the old-time school trustees, members of the boards have been holding a meeting and drafting a petition to the Legislature, praying that certain obnoxious provisions of the Finegan act be eliminated or modified — especially those provisions that compel the local taxpayers to raise money to pay salaries fixed at Albany. As an illustration, the local authorities object to paying to three physical directors \$1200 each and expenses without having anything to say on the subject of salary or the needs of the service. And they object to other charges fixed at Albany instead of at home.

It is encouraging to know that there is still home rule sentiment in the towns of Orleans county. But it can not do much at Albany unless the genuine home rulers in other counties are aroused to organized action. The manipulators of the statewide school machine will not surrender their power without a fight.— *Buffalo Courier*, December 6, 1917

For Sanitary Buildings

To make our schools efficient, we will have to build many new school-houses in place of some that have been standing one hundred years or more. Many can be remodeled to comply with health and sanitary requirements for light and ventilation. We will need to have larger school grounds and fuller equipment. We must be willing to give good pay to good teachers.

The old district school has had one advantage never taken in account and that is the teacher, who has been retained in one school for a number of years. None but a good teacher is kept so, and such a teacher leaves a wonderful impression on the minds, morals and manners of her pupils; an influence we can not estimate. In a small school, a teacher is in much closer personal touch with her pupils than in a larger graded school where there is one and sometimes two teachers for each grade.

If we could combine our present district system with the township system of taxation and administration without any fear of consolidation, our schools could be made much more efficient than they are now.

We have been given our opportunity to say what we want; shall we use it or let it pass?—*Auburn News*, December 7, 1916

Don't Like School Law

Wilson, Dec. 6.—One hundred taxpayers living outside the union district in the town have adopted a resolution of protest against the provisions of the township school law. Criticism of the law was made by speakers on the ground that the uniformity of the school tax throughout the town increases the tax for residents living outside the union district. These residents object to assisting those living within the confines of the district to maintain the high school.

Protest was also made against the law requiring the services of a physical training instructor at a salary of \$1000 a year and also that inside chemical lavatories be installed in all district schools before September 1, 1918, at an expense of \$3500.

A committee consisting of W. Glenn Swick, Charles A. Wilson and G. E. Burmaster will confer with an attorney and plan a course of action. This committee will report at an adjourned meeting to be held on Saturday afternoon.—*Buffalo Express, December 7, 1917*

Disapproves School Law

The following resolutions regarding legislative matters were presented by Mr Webb and passed:

"Whereas, The new school law known as the township school bill has been tried in this county with the result of markedly increasing taxation without improving service and,

"Whereas, The employment of a physical training teacher to drill pupils physically in the country districts is in our opinion unnecessary; now therefore,

"Be it resolved, That we request our representatives at Albany to seek the repeal of both statutes, and introduce bills before the Legislature asking the repeal thereof and be it further resolved that we approve the attitude of Hon. Bert Lord on these questions as heretofore expressed by him in his votes thereon."—*Norwich Sun, December 7, 1917*

The Rural School Trouble

After years of agitation and debate a general education law was enacted last spring. It was called the Finegan bill when on its passage. That was because Dr Thomas E. Finegan, Assistant Commissioner of Education, was the chief draftsman of the bill and its most conspicuous expounder and defender, although the bill was drawn under the eye of Commissioner Finley and approved by the Board of Regents.

The point of the law that is of most in the towns is the change from the old district system to the town system. There were from eight to thirty-six districts in a town, according to the size of the town, and each district had a board of trustees who considered nothing but their own district. Now the town is the district, with single school board and power over both the tax levy and the placing of pupils in the schools.

It is the complaint of a number of districts that the plan increases their taxes. That is not disputed. One result of the law is the union of many districts so that better teaching and better housing may be secured than was the case in many of the former districts, some of them with no more than 10 pupils and those of all ages within school limits, so that a teacher must handle all the grades in the course of the day, and thus be able to give hardly more than ten minutes to a recitation.

It is needless to say that too much of the rural teaching was too poor to be endured and the effort at reform began years ago with the substitution of the county superintendent for the school commissioner who was hardly ever an educator but usually a good fellow, with a warm heart and hearty handshake, and delight in "mixing." In short, a politician liking the money far oftener than he was a competent school leader and inspiration to study.

Without going into the subject at length today it may be said with perfect truth that the school law is the result of many compromises. It is the

purpose of the state authorities in education to find out wherever the law is at fault in its application, taxes and all, and to correct it as quickly as the legislature can be moved to cure defects discovered. Where a district used to pay too little to have a good school and finds its taxes raised by the new law, there is a protest of vigor. Where the opposite effect is the case, and is the majority of districts as far as reported, there is approval or silence.

Every district should seek to have the right thing done and it will be done in time.

The School District Issue

Every rural county has more or less of a school district question under the new township law on the subject. The sore point with many districts is taxes, since there is an increase in taxes in the districts from which complaints arise.

The reason for higher taxes in certain districts is due to the fact that in a former district with large valuation the school tax was naturally small. In the smaller district with less property to tax, the rate for schools was higher than in the big district, for the teaching itself must be up to State standard in all districts, large and small.

Now that each town is made one district for school purposes as well as others, there is one rate for all property owners in the same town. But equalization works both ways, that is, to raise taxes in a district that was especially favored before, and to lower them in districts with the opposite fortune. At once there is an outcry from persons in low tax districts and protests fill the air, though the great majority of both citizens and districts make no complaint.

Some critics of the law have not read it or have but half read it. They insist, for instance, that the little red schoolhouse, long the refuge of the spellbinder when he had no ideas to express, shall not go. The law reads that "each school district in the State is hereby continued as such district exists at the time this act goes into effect or until modified as provided in this chapter. No order consolidating two or more districts shall be effective until such order is approved by a majority vote of the town board of education of the town or towns in which such districts are located, and thereafter approved by a majority vote of the qualified electors of each district."

So the sacred little red schoolhouse stays until the district itself changes it. Not a hair of its old gray head is touched except by the deliberate action of those who live in it. They are ill informed or very careless of the truth who assert the contrary, that is, if they are able to read the statute quoted above.

Some solid objections have been raised to the working of the law but none to the principals of it. The defects can be cured and will be remedied as fast as the Legislature will permit. But the objections of the mossback who is lost in admiration of the shanty that bore the name of schoolhouse are unworthy of consideration. Without grades, or equipment, or ventilation, or good teaching, except for short intervals, and then by chance, without much of anything except four walls, four windows and a door, the shame of the State in hundreds of districts is passing away not to return.—*Geneva Daily News, December 12, 1917*

The Township School Law

To the Editor of the Recorder:

SIR: No legislation enacted in recent years has been so bitterly attacked in certain quarters as has the township school law, lately put in effect in the rural districts of the State. It has been assailed by interested individuals as being a monstrous, unjust and oppressive tax law, discriminating against the farmers and adding to the already heavy financial load which they are carrying in these trying times. Attacks on new legislation are to be expected during the heat and rancor of a campaign such as we have just passed through. The principal ammunition of the party in opposition is obtained by assailing and misrepresenting new and untried legislative enactments, but even after the election clamor has died down, the self-centered opponents of this law are determined to carry on with their efforts to destroy it, and secure a return to the old school district system. Though the law does not in any way affect the city of Amsterdam, the opposition seems largely to have centered there. Meetings have been held in the city to denounce the bill, committees organized and statements sent forth through the press, which have no doubt influenced many well-meaning persons to misjudge the character and effect of the law. I feel free to say that the law has never been expounded as to its scope and effect in any of these statements. It has been denounced as an unjust and tyrannical means of taxation weighing heavily on an already overburdened section of the community. There is not an atom of truth in this contention. The school law is in no sense a tax measure. It simply consolidates the weak and scattered school districts in each country town under one board of education, just as all the schools are in the city, thereby strengthening them, giving them uniformity of government, and absolutely equal treatment in all matters educational. This is what the law does, and all it does. The question of expenditures, that is, the amount raised and spent on the schools is left entirely to the town board of education, within certain prescribed limitations just as it is with the board of education in your city. This board in the country towns will naturally be controlled by the non urban population as the majority of the inhabitants who have the power to elect members of the board reside outside of the villages. At least this is so in the town of Mohawk, where only two of the five trustees live in Fonda. If the tax rate is too high in any town for educational purposes, it is in the power of the voters to regulate that, by electing at the annual school meeting, trustees in sympathy with their views. As a matter of fact the additional taxation of which complaint is made is not an imposition but a rectification of a condition which had become almost intolerable in the State outside of the cities. For years the small villages have kept ahead of the other school districts in the township. The educational standard has been raised, graded schools and high schools have been built and maintained at heavy sacrifice financially. The burden on these small communities has been a severe strain but has been nobly and uncomplainingly carried for the benefit of the coming generations. The farmers have had all the advantages of these village schools with none of the cost. The farmer's child had the same educational opportunities as the village child. Indeed, at the annual graduating exercises in the Fonda High School it is no uncommon sight, as happened last year, to see a majority

of the graduates from the outlying districts of the town, where not one dollar was raised for the support of the school. This condition is remedied under the new school law. There are no separate districts. The town board of education controls and maintains all the schools in the township from the Fonda High School to the little red schoolhouse at Albany Bush, which is just as it should be. All children are on the same plane and the taxpayers of the town are assessed equitably for the support of the schools.

Possibly coming at this time, in an era of high taxation such as we have never before experienced, this change may strike rather hard on those whom it most effects. However, with absolute control over the educational expenditures of his township and perfect equality in educational opportunity for his children the farmer cannot justly charge the new education law with being in any way unfair, unjust or oppressive. It is a good law and a great step forward in the country districts.

Yours sincerely,

HENRY KELLY

Fonda, N. Y.

—*Amsterdam Evening Recorder, December 12, 1917*

A big kick is being registered by rural residents on the new school law and we understand one Geneseo land owner has decided to contest the constitutionality of the law in the courts. Under the new law each town has a school board and the town becomes a unit, except in districts of over 3000 inhabitants where high schools are located and taxes in county districts are very materially increased. Each school now must be provided with all necessary supplies, which are specific. The schools also have to have a physical director and the high school tuition mounts up. A tax of \$60 is levied for each of these pupils. Of this the State pays \$20 and the remaining \$40 is levied against all of the taxpayers in the district in which the pupils live. Besides, the school board has to pay salaries to its clerk, the truant officer and treasurer. Previously the town paid the truant officer and the others gave their services free.—*Mount Morris Union, December 13, 1917*

The New School Law under Finley

The Legislature will be called upon to make a revision of the new school law. Strong protest against some of its provisions has gone up in the country districts, especially. The Cayuga county board of supervisors favors its revision. People generally in the townships appear to be dissatisfied with its operation.

One of the main objections is found in the unwonted increase in school taxes under the new law. One farmer in this county is said to have paid on 200 acres of land a school tax of \$50. Elsewhere extortionate increases are cited. In the town of Clay, Onondaga county, the rate advanced from \$2.30 per thousand to \$7.43 per thousand. Farmers object to going on the same plane of heavy taxation their city brethren have long occupied, even if the benefits could be measured in tangible improvements in the schools.

But the objectors maintain that improvements in the schools are not commensurate with the increased cost. The idea of combining the district schools and sending pupils from a wide territory to a central school is

declared not to work out in practice. School officialdom is asserted to have been complicated, the new law having added two salaried employes to each district board—a departure that helps boost the taxes. The number of superintendents has been greatly increased, Cayuga county having numerically more superintendents than under the old regime, which many declare to have been more satisfactory.

Educators who claim to have studied the situation still maintain that the new law is bound to prove beneficial and that time should be given to determine results. Educational conditions in the country districts, they urge, long have been below par; and they say the law was designed to place country and city children on a footing more nearly equal.

In short, the "little red schoolhouse" has received some very severe jolts from the professional educators, who maintain that the instruction received there has not been sufficient to equip sturdy young America from the farms for competition with the product of city schools. No good reason has been cited why an industrious student could not obtain the rudiments of an education as well in a "little red schoolhouse" as in the higher halls of learning; and to protests that presidents have been educated in loghouses and captains of industry have graduated from the plow-handle and the country store they say with great superiority that all this has changed. No longer may captains of industry be bred without a sheepskin, and as for presidents, they graduate from college chairs.

The contest between the educators and the farmers who are sour on soaring school taxes, modern education and the trimmings, promises to wax warm at the forthcoming legislative session.—*Auburn Advertiser*, December 13, 1917

The Township School System

The board of supervisors has gone on record as opposed to the existing township school system and asks the legislative representatives to obtain its repeal.

The township school law certainly has operated to increase the taxes of many of the residents of the country towns. The *Journal* some time ago called attention to the fact that the school taxes in the town of Harmony were over \$10 per thousand while the taxes in Jamestown were only a trifle over \$12 per thousand, and the contrast between what Jamestown has to show for this expenditure and what Harmony has to show, really suggests the question as to why the Harmony taxes should be so high.

As a matter of fact the Harmony taxes are as reasonable as the taxes of many of the other country towns which are working under this township system. Consequently it is no wonder that the taxpayers of the back districts are not specially enthused over the existing situation.

In Harmony for example there is a long stretch of the lake front covered with summer cottages, all of which are assessed at relatively as high a figure as any property in Jamestown. This summer property has to help pay for the maintenance of the excellent schools of Panama and Ashville and in one of the districts the children of school age are actually sent to the Chautauqua school which is more convenient and easy of access, their street car fares being paid of course from the school funds. Under such circumstances the benefit of the Panama and Ashville schools to this particular locality does not seem very great.

This of course is only a single locality. Residents of Panama and Ashville and vicinity derive a benefit from this plan because the summer property of Chautauqua lake is helping to pay for the maintenance of their schools. To be sure the summer property is expected to help pay for the maintenance of schools somewhere but in the case cited if assessed by the school district for the actual expense of sending those of school age to school it is safe to say the assessment would be considerably less.

We are not saying that the township system is wrong. We should be glad to know that it is the most desirable, but so far as cursory observation goes, it does seem as tho the rural schools might be conducted for less than they are conducted at present. It is true the country school districts are scattered over a wide stretch of territory and the Jamestown school districts are compact and thickly populated, but it is equally true that the expense of equipment and maintenance of the rural schools is, or should be, much less than the expense of equipment and maintenance of the Jamestown schools. As a matter of fact in some of the large villages the buildings are as elaborate and the equipment as expensive as in Jamestown but all the people of the country towns can not have the advantages of the large schools in the villages. They must still use the little old red schoolhouse and it does not seem quite just that they should be required to pay for the educational facilities provided their neighbors more fortunately located.—*Jamestown Journal, December 14, 1917*

Rural School Reforms

Attention is called to the article on the township school law reprinted from the *Jefferson County Journal* of Adams. It appears in full on this page today. The article seems to be one of the best statements in behalf of the new school law that has been published. Numerous adverse comments have been printed from time to time. Most of them have been based on the increased tax rate occasioned by the new order of things, but the *Journal* article presents the question in a broad way and should receive careful study.

The township school law, now in operation about four months, is a reform that should have come many years ago. It can not be expected that it will supplant the old system without complaint on the part of many. We always revere the old order and are slow to take on the new, especially when we have to pay more for the new. We are wont to say that the old was used a hundred years, consequently it is good enough for a period of years to come. This logic is hardly well founded. The fact that the old district school law continued so long does not argue that it should not change now. We have advanced far during recent years. The country schools have remained practically stationary. The district school dates back nearly to the pioneer days. It is time that a change came.

The law probably has its defects. But defects like those urged against this measure should not condemn the whole law. The Legislature the coming winter can amend. That is what the St Lawrence county board of supervisors asks. The Canton board has gone on record as against the repeal of the law. Four months is too short a trial to condemn any measure of this character, especially in view of the fact that there seems

to be general admission that the efficiency of the country schools has advanced far under the Machold law.

It is unfortunate that the measure did not become a law long ago, or at a time when affairs were in a more settled state than now. But this is no argument against the measure itself. All prices are higher, fuel, the salary of the teacher, the school supplies, and a higher tax rate would have been necessary under any condition at this time, although probably not as much as the inauguration of this new system has resulted in. But this is no argument against the measure. The fact that the Jefferson county educators frankly say the efficiency of the country schools has increased 25 per cent during this short trial is a stable argument for the merits of the new measure. Schools are to educate and to educate well. Good systems always cost more than poor systems, but the country dweller will see the desirability of paying for the best.

No law is perfect as passed. But this law is improving rural education, and that was why it was adopted. It is entitled to a fair trial. It is confidently believed that with that fair trial the system will be given its proper place as a most beneficial piece of legislation. The condemnation now seems to be based not upon any charge that the educational advantages and efficiency have not been increased, but upon the fact that in some districts tax rates have been increased. Yet the rural children seem to need the high school education, and it is not just clear why the village districts should furnish the buildings and equipment and hire the teachers, the State pay the tuition of the rural children, and rural patrons bear none of the burden of maintaining these academic schools. It is, however, much to be regretted that the township system was not adopted 25 years ago, before the great majority of our academic schools were established; then many of them would have been located where they would better accommodate the rural children of the township or unit. Just how much of this outstanding bonded indebtedness in the union free school districts should now be assumed by the other districts in the township or unit is a question worthy of careful study.

In comparing tax rates in any district under the new law comparison should be made with what would have been the tax rate in that district under the old law this year, and not with the tax rate of last year.

The new law is hardly to be blamed because there is a serious shortage of teachers this year and teachers' salaries in rural schools are from \$1 to \$3 higher per week than last year; nor is the new law to blame because coal and wood are hard to get at all and cost much more than last year; nor because all lines of school supplies cost more than a year ago. We fail to find only a small percentage of the increase in school tax rates due directly to the new law. But under all the wartime conditions this year we wonder what would have been the school tax rates in many weak districts under the old law. About 1300 districts in the State had each only \$20,000 or less of taxable property to support a school; and about 3800 districts had each only \$40,000 or less of taxable property; now, if the township law is repealed, what will be the school tax rates in those districts? What relief is proposed for them in place of that afforded by the township law?

Some feel that the township law results in a loss of local control over the community school, while others take the view that the power of the

school meeting voter has really been extended, and he now has a voice at the annual town or unit school meeting in the school affairs of the whole township or unit, instead of simply his local district. The board of education is hereafter to be elected at the annual town or unit school meetings, and if the opponents of the new law have as much interest in school matters as they profess it ought not to be difficult to secure the election of boards of education that will conserve rural interests.

In these days of automobiles, state roads, telephones, rural mail delivery, etc., boards should be able to look after every school reasonably well if they will work through committees, like the union free school boards. It ought not to be necessary to call the whole board together every time a box of chalk or a new broom is needed.

The township law has been in full effect only about four months now and this during the trying times of war. It looks like child's play to demand the repeal of the law before it has had anything like a full and fair trial. Some amendments are doubtless needed; we fail to recall many new laws that have been entirely satisfactory without some changes. It would seem worth while to remember that every adjoining state has had a township school law for years, and not one of them has ever returned to the district system. The district system originated in Massachusetts, but was discarded there for the township system about 35 years ago, and the master of the state grange wrote us last winter that he would regard a return to the district system as a long stride backwards.

The state constitution makes it the duty of the Legislature to provide a "system of free common schools wherein all the children of the state may be educated." Public schools are state institutions, not merely local ones. The State is regulating them more and more closely, and school expenses, like all others these times, are on the increase. Why not quit fighting the township law and all unite in one big campaign for an increase in the amount of public money paid by the State for the support of our schools? While New York State pays much toward the support of her schools, you may be surprised to know that she is not one of the most liberal states in her per capita allowance for educational purposes.—*Watertown Times*, December 15, 1917

The Township School Law

Our local union free school district having more than 1500 population does not come under the new township school law, hence we have no particular prejudice in the matter. But what concerns many of our readers interests the *Journal*, and numerous criticisms of the law appearing in some of our daily papers have led us to consider the matter somewhat.

The principal objections raised against the law seem to be: 1.—That rural school tax rates are higher. 2.—That the bonded indebtedness of a union free school district should not be assumed by the township or unit of which it is a part. 3.—That local control is lost over the community school. 4.—That it is difficult to administer the law so as properly to care for each and every school.

The question seems to us a little different in a town or unit having no academic school from what it is in a town or unit having one or more of

such schools to support. Where the schools of a township or unit are all of the same grade, all elementary, why isn't a uniform school tax rate just as fair and equitable as a uniform tax rate for roads and bridges, the support of the indigent poor, and other usual town expenses? There were some gross inequalities in school tax rates under the old district system, due largely to the great differences in the amount of taxable property in the different districts; wealthy rural districts generally had a moderate or low tax rate, and most of these are now paying a substantial increase under the new law. We have in mind two schools in the same township, each employing one teacher, where, without any considerable amount of unusual outlay last year in either district, the tax rate in the wealthy district was only 10 cts. per \$100 of assessed valuation, while in the weak district the tax rate was 32 times that, or \$3.20 per \$100 of valuation. This year both districts are paying the same rate, much to the relief of the weaker one; but very likely the taxpayers in the wealthy district are not all enthusing over the new law.

We find, too, that under the district system a number of rural districts contracted and some of them paid all their school expenses out of the "public money" received from the State, and did not raise a cent of local school tax. Naturally, some of the taxpayers in these hitherto fortunate districts do not like the new law which compels them to pay the same school tax rates as other taxpayers in the same town or unit; probably we should favor the old law were we in their places—it is so natural to want the "long end of the evenner."

The equitable distribution of the bonded indebtedness in some of the union free school districts is a puzzling problem, especially where the academic school is so situated as to be conveniently accessible to only a part of the rural children living in the township or unit. It seems pretty well settled in the minds of intelligent, thinking people that such are the demands of the modern business and professional world today that a high school education is relatively no better preparation for one's life work than was a good common school education fifty years ago. There was strenuous objection by many taxpayers 50 years ago when our common schools were first made free and were required to be supported by public taxation; and many rural taxpayers object now to being taxed to support the village high schools. Yet the rural children seem to need the high school education, and it is not just clear why the village districts should furnish the buildings and equipment and hire the teachers, the State pay the tuition of the rural children, and rural patrons bear none of the burden of maintaining these academic schools. It is, however, much to be regretted that the township system was not adopted 25 years ago, before the great majority of our academic schools were established; then many of them would have been located where they would better accommodate the rural children of the township or unit. Just how much of this outstanding bonded indebtedness in the union free school districts should now be assumed by the other districts in the township or unit is a question worthy of careful study.

In comparing tax rates in any district under the new law comparison should be made with what would have been the tax rate in that district under the old law this year, and not with the tax rate of last year.

The new law is hardly to be blamed because there is a serious shortage of teachers this year and teachers' salaries in rural schools are from \$1 to \$3 higher per week than last year; nor is the new law to blame because coal and wood are hard to get at all and cost much more than last year; nor because all lines of school supplies cost more than a year ago. We fail to find only a small percentage of the increase in school tax rates due directly to the new law. But under all the war-time conditions this year we wonder what would have been the school tax rates in many weak districts under the old law. About 1300 districts in the State had each only \$20,000 or less of taxable property to support a school; and about 3800 districts had each only \$40,000 or less of taxable property; now, if the township law is repealed, what will be the school tax rates in those districts? What relief is proposed for them in place of that afforded by the township law?

Some feel that the township law results in a loss of local control over the community school, while others take the view that the power of the school-meeting voter has really been extended, and he now has a voice at the annual town or unit school meeting in the school affairs of the whole township or unit, instead of simply his local district. The board of education is hereafter to be elected at the annual town or unit school meetings, and if the opponents of the new law have as much interest in school matters as they profess it ought not to be difficult to secure the election of boards of education that will conserve rural interests.

In these days of automobiles, state roads, telephones, rural mail delivery, etc., boards should be able to look after every school reasonably well if they will work through committees, like the union free school boards. It ought not to be necessary to call the whole board together every time a box of chalk or a new broom is needed.

The township law has been in full effect only about four months now and this during the trying times of war. It looks like child's play to demand the repeal of the law before it has had anything like a full and fair trial. Some amendments are doubtless needed; we fail to recall many new laws that have been entirely satisfactory without some changes. It would seem worth while to remember that every adjoining state has had a township school law for years, and not one of them has ever returned to the district system. The district system originated in Massachusetts, but was discarded there for the township system about 35 years ago, and the Master of the State Grange wrote us last winter that he would regard a return to the district system as a long stride backwards.

The state constitution makes it the duty of the legislature to provide a "system of free common schools wherein all the children of the State may be educated." Public schools are state institutions, not merely local ones. The State is regulating them more and more closely, and school expenses, like all others these times, are on the increase. Why not quit fighting the township law and all unite in one big campaign for an increase in the amount of public money paid by the State for the support of our schools? While New York State pays much toward the support of her schools, you may be surprised to know that she is not one of the most liberal states in her per capita allowance for educational purposes.—*Jefferson County Journal*; reprinted by *Sandy Creek News* and by *Watertown Daily Times*.

Asks Fair Trial for Township School Plan

To the Editor of the Morning Post:

In a recent issue I noticed that the board of supervisors passed a unanimous resolution attacking the new school law of 1917, known as the township law. Their action should be considered seriously because a grave question is involved. We have to educate the children of today for future citizens. Undoubtedly they have heard some disgruntled farmers complain of a few dollars higher tax.

The issue the supervisors have taken is that some disgruntled farmers shall escape taxation, and others shall bear all the burden of maintaining the schools at a higher standard. I have the fortune and misfortune of living in a central high school district and know the hardship we have met with in educating these disgruntled people's children for \$10 per year for each pupil who did not hold a preliminary certificate and for those who did hold a preliminary certificate the State paid to our school the sum of \$20. So practically some of the people have had their children educated for nothing while it has cost the taxpayers of high school districts from \$65 to \$75 per year for each pupil and in some cases much more. I would like to say to the supervisors and disgruntled farmers that by repealing the township school law they will lower the standard of education in the State, as the high school districts can not stand the heavy taxation required to maintain their schools to the required standard. The present law has reduced our taxation six mills and put it on an equal basis all over the town, of which I do not complain.

If you succeed in repealing the present law, we are done once and forever educating your children for \$10 a year—honorable board of supervisors, why not join hands and work for higher education, equal taxation and equal rights to our schools and our citizens. All children should have an equal chance for an education to fit them for citizenship. Give the new law a fair trial. I attended a centralized school 45 years ago. It gave satisfaction to all and in my opinion it was superior to the old system in this State.

AUGUST ANDERSON

Ashville, Dec. 14, 1917.

—*Jamestown Post*, December 17, 1917

Mr Moore Wants Action

Ogdensburg, N. Y.,

Dec. 15, 1917

Editor Plaindealer:—Our board of supervisors has favorably taken action recommending among other things the two important amendments to the Machold law asked for in their resolution of the day of the hearing; one preventing the combination of union free schools with common school districts in the same unit, the other dispensing with the transfer of school property. At the hearing the superintendents present seemed to consider these amendments important and desirable. Mr Seaker appeared to be of the same opinion. Those members of the board who have since by vote put themselves upon record as opposed to repeal have by the same act declared for these two alterations in the law.

It almost seems that we have overlooked the fact that the important question is not what we, our supervisors, our superintendents or our assemblyman may think in regard to this matter; but what does Thos. E. Finegan think?

In reference to the second of the amendments mentioned above at the hearing Superintendent Clark claimed to speak for the Deputy Committee, but no one seemed willing to assume like responsibility with regard to the first and most important one. Why should this be? At the close of the coming legislative session at Albany one of three things will have happened to the Machold law, amendment, repeal or nothing.

Dr Finegan should be as much interested in the outcome as any man in the State. If, for the sake of avoiding waste of time in discussion of the matter by our State Legislature in order that they may give more attention to the war problems that must come before them, we who favor repeal should be willing to compromise and consent to further trial of the school law on condition of the passage of these two amendments recommended by the board, what are we to expect from the Department of Education? Those who stand for the law as Messrs Hanmer and Seaker and Supt. MacDonald should be able to give the answer. They should have been able to tell us whether or not the Department would support, not one, but both of the amendments, before the board took the matter under consideration.

Is Dr Finegan fooling his partizans or are they trying to fool the rest of us? A telegram to Albany should do the trick if fair play is intended and all St Lawrence county and the State should know before the end of the week what the Department means. If the event shows that, as in the past Dr Finegan prefers darkness to light where his plans are concerned; if he still refuses to take us into confidence and clings to what is his apparent idea that he is a divinely appointed guardian and other than a servant of the people, then it almost seems that men like Supt. MacDonald, Mr Hanmer and Mr Seaker should acknowledge themselves deceived and join in the demand for repeal.

Come out of your hole, Doctor, or the farmers of the State are likely to start a campaign the slogan of which will be "A long vacation for Finegan."

Those supervisors who have opposed the Department on this point in the past should take the lead in action for the future. Messrs Hatch and Sweet are veterans in the cause and there are others. A county meeting of those opposed to the present law should be held to choose and provide for the expenses of a representative from St Lawrence county to look out for our interests when this matter comes up at Albany.

Take up this responsibility, gentlemen, and we farmers will support you.

JAMES D. MOORE

Ogdensburg, N. Y., R. D. 1.

—*Canton Plain Dealer, December 18, 1917*

What a Supervisor Says

"About half of the taxpayers in my town are for the law and the other half are against it. That is because about half of them have had their taxes raised by it and the other half have had theirs lowered. That is all the

argument most of us over our way need. My taxes have been lowered a little and I need hardly state that I am in favor of the law as it stands."

Another supervisor from the southern part of the county said, "I am in favor of it, but think the town boards should make some sort of arrangements whereby urgent repairs could be made without the delay of sending to the town superintendents. If the chimney falls off or a window gets broken there should be somebody in the district with authority to go ahead and fix it up and send in a bill. I don't see any reason why the teachers could not be empowered to act in such emergencies. That is the worst complaint we hear outside the question of taxes."

One supervisor who hails from a section where real estate values are rather low explained one of the purposes of the law that he thought was all right, "Take my district for instance. We had under the old system to pay about as much to support our school as other districts with twice the assessed valuation that we have, and we did not have near so much to pay with. The new law distributes the tax over the whole town and we pay our share, according to our assessment and still have just as good a school."

"Why can't you throw your district into one adjoining and carry your children to school? There would only be one school to support and you could afford to hire a better teacher."

"The average farmer hasn't the time to go to school twice a day. And even if we hired someone to do it, there would be lots of days in the Winter when the roads were blocked and the children could not get to school. Besides it would kill a good many communities. People with children will not move into a locality where there is not a school handy. I think the law is all right if the town superintendents will use common sense in handling it. There is a good deal of kicking about it but as near as I can find out it is the ones who have the most valuable real estate and find that there has been a few cents added to their taxes who are doing the kicking."—*Auburn Citizen, December 19, 1917*

The New Township School Law

Just preceding the election in November, the dissatisfaction of certain taxpayers with the new township school law was used as a means of forwarding selfish political ends, but fortunately the effort was unsuccessful. The Republican candidate for the Assembly, Mr George M. Tyler, promptly checkmated the attempt, promising that if elected he would use his best endeavor to secure the correction of any unjust provision in the new statute, and the voters took him at his word. The dissatisfaction alluded to, however was not allayed and recently has found expression in resolutions adopted by some of the local granges demanding the repeal of the law.

The *Times*, with the aim of sifting the matter to the bottom and securing information that might be useful in an attempt to repeal or amend the law, has asked a number of representative citizens in different parts of the county to state, either over their own signatures or otherwise, the facts in regard to the operation of the law and their opinion as to its advantages and disadvantages. Below are printed a number of replies to this request, which show that there is a great difference of opinion in regard to the wisdom of the law and not a little misapprehension as to its provisions and prac-

tical working. In the next issue of the *Times* we plan to review these and other criticisms and to report the result of inquiries made of those who have given the matter careful attention and study.

No Improvement Over the Old Law

Springwater, N. Y., Dec. 10

Mr C. F. Milliken, Canandaigua, N. Y.

DEAR SIR:—In reply to your letter of the 7th inst., I would say so far as the new town school law affects Canadice that there is no improvement over the old law in any respect and it has these disadvantages:

First. An expensive physical director must be hired to teach physical culture. This is given once in two weeks, and the teacher makes the rounds of all the schools in one day, staying hardly fifteen minutes in a school. This work is not needed or wanted in our rural schools where often children are walking two and more miles to school.

Second. The secretary and treasurer of the school board are salaried officers, thereby creating added expense.

Taxes in some districts are more than doubled and the schools are not being looked after as well as under the old system. It would be a change for the better to go back to the trustee system and let each district take care of its own school.

Very truly yours

C. A. GIBBS

The Last Straw

Editor Times: The town school law, about which there is so much discussion, is the proverbial "last straw" to break the back of the rural taxpayer. The immediate cause of trouble is the equalization of taxes in the several districts of the town. Of course the districts with a large assessed valuation are the most aggrieved by the raising of their tax rate, there being one tax rate for all the districts of the town. But to my mind this is not the worst feature of the law. The centralization of authority by the Education Department in regard to rural schools has by successive steps reached a point under the new law that is practically intolerable. Under this law the taxpayers and voters of the district have nothing to say as to the management of the school, the hiring of the teacher, or the upkeep of the building. The centralization of authority makes it easier to consolidate the districts which in many cases works great hardship to the children of tender years who are compelled to wait at corners and by the roadside for conveyances which carry them to and from school. In fact this law is a bold stroke against Democracy—for which this nation is spending billions of dollars and will sacrifice thousands of lives to perpetuate.

RALPH M. SIMMONS

New Law Sustained is Just in the Main

Farmington, N. Y., Dec. 9

Mr C. F. Milliken, Editor Times:

MY DEAR SIR:—I am sending at your request a brief statement expressing my knowledge and views with reference to the new township school law as it affects the taxpayers of this town.

The reason for the taxes being higher, and in some cases double those of last year in some districts, is largely due to the distribution of the corporation property, such as railroad, franchises etc., throughout the town under the new law, which heretofore has been apportioned to the school districts through which they passed, thereby reducing the taxes in those districts to a minimum. It is mainly the taxpayers of these districts that are making a noise.

I believe this change is just and a great improvement over the old system, as it now makes a uniform rate throughout the town and it relieves to some extent those districts that were bearing the greater burden of taxation in support of the free schools of the town. Then again those in a town who are located in a joint district where the schoolhouse is in an adjoining town and in which there is a high school, their taxes have also increased under the new law, by reason that they have to pay toward the maintenance of the high school. But in that case they have free patronage of the school and in cases where there are pupils to be sent the tuitions saved will offset the additional taxes.

There are two items of expense, however, that affects the taxpayers in general that might be considered unnecessary and unjust: First, the appointment or election of a school board at a salary; second, the payment of tuitions by the town of non-resident pupils to the several high schools. I believe this last item is unjust and that the expense should be borne by the state or individual, as it would create a burden upon towns. The school taxes or expenses are a trifle higher in this town this year, and they are bound to increase with the times.

E. J. GARDNER

Thinks the Law Has Come to Stay

Mr Milliken, Dear Sir: The "township school law" is receiving a great deal of criticism from the taxpayers of the rural districts and justly so in some of its provisions. The salary of the clerk is one of the chief items of expense, but I will say for the work he has to do he is not overpaid. He has to look after all the schools of the town, the same as the trustees under the old law were supposed to do with the schools in their respective districts.

Another bill of expense that we have made provision for in our town is the expense of sanitary closets and their installation which is not a provision of the new law, but an order of the State Board of Education. I think any sober-minded person who knows anything about the condition of most of the outdoor closets of the rural schools will agree with me when I say it is money well expended.

I think the taxpayers do not take into consideration we are working under war conditions. It is true the taxes in some instances have been increased to an alarming extent, especially in districts where they come under the unit system, and have to help pay the bonded indebtedness of a high school building recently built in the unit to which they have been assigned. I have in mind the Shortsville unit, which takes in a small part of the town. Last year their rate was about \$3 per M., this year about \$11 per M. I think that is one part of the law that should be changed and many other parts of the law should be changed which I will not mention at this time.

I notice those who are criticizing the law the most are those who, perhaps, never went to an annual school meeting. I know of one instance when there were only three at such meeting. No business could be transacted. Such indifference, in my opinion, is one thing that brought about the enactment of this law. The township school law, I think, has come to stay, but not in its present form.

Township School Bill Makes Heavy Taxes

To the Editor of The Morning Post:

I noticed in your paper of December 17th an article from Mr August Anderson in regard to the township school law, wherein he states that the supervisors must have heard some disgruntled farmer complain of a few dollars higher tax. Now, I for one do not complain of the tax, if it would in any way improve the chance for my children to get a better education, but it does not in my present location.

It seems to me when a man lives in a high school district and enjoys that privilege without having to transport his children, that man would be willing to pay a higher tax than the man who has to send them away from home to secure an education.

I live six miles from the nearest high school. If my children attend that school it will be no small expense for me either to hire their board or transport them back and forth. I don't blame Mr Anderson for taking the stand he does as it has reduced his tax and he can get his children educated at the expense of his fellow men, but I shall have to take the stand with the disgruntled farmers, of whom there are many.

Brooklyn Pays for Up-State Schools

To the Editor of The Standard Union:

I trust that your Sunday editorial upon "The Children of the State," will attract the attention it deserves and inform some of our newspapers, leaders of public opinion. I see only one statement to which we can take exception, and that is only by reading the editorial literally instead of, as I believe it was written, more or less figuratively. The statement that "One-room schoolhouses with less than a dozen children are no more," unfortunately, is not literally correct. Within an hour and a half's ride of Buffalo many one-room schoolhouses are still trying to do work, and the same is true all over the rural part of the State.

We shall see a struggle in the Legislature in behalf of money to get the township school law repealed, that these poor, inefficient, out-of-date one-room schoolhouses may be maintained at the expense of the State rather than at the expense of the taxpayers of the district. In such districts the teacher is paid as little as possible, that, as near as possible, the State may contribute enough to support the school and the taxpayer be

called upon only for the deficiency; in other words, taxes are levied in Greater New York to support just such inefficient schools. Doubtless the township law has defects, and amendments to remove or better the law should be met with reason and sympathy, but attempts to repeal it with opposition as unyielding as flint.

X. Y. Z.

—*Brooklyn Union*, December 21, 1917

There is considerable opposition in the rural districts of Niagara county to the new school township law. In the town of Wilson a large meeting has been held to advocate its repeal. A petition was signed and will be presented to Senator Thompson and Assemblyman Franchot urging them to do what they can for the repeal of the law in the State Legislature which meets shortly after the beginning of the new year. It is understood that one of the taxpayers present at the meeting will refuse to pay his school taxes so as to have a test case for the courts to pass upon and the decision of which might test the validity of the township law. The rural districts have heavy school taxes and this seems to be the general subject of conversation.—*Niagara Falls Journal*, December 21, 1917

Give it a Fair Trial

In some sections of the State there is considerable agitation for the repeal of the township school law passed by the last Legislature. It is conducted mostly by those who have had their taxes increased by it, and in a few instances they have persuaded boards of supervisors to take formal action asking for the repeal or radical amendment of the law.

Doubtless the law should be amended in some particulars, and doubtless, too, it will be as the necessity for change is made certain. Nobody supposes it is perfect. But it would take a very wise individual indeed to tell in just what particulars it should be changed with only two or three months' trial.

As to the matter of higher taxes, there never was any claim that the new system would lower the cost of education, except in some cases where, owing to the poverty of the district in taxable property, the tax rate was abnormally high. As a matter of fact, the rate has been lowered in a number of such districts, but of course they are not the ones that are making a noise about the change. There has been a considerable increase in some few districts where school tax was ridiculously low, and where the children were being educated largely at the expense of residents of other districts.

The first year of the new law's operation has seen quite a number of expenses that will not be repeated, while there has not as yet been opportunity to put into effect any economies. For example, a school bus has been purchased by the town of Cuba to provide for the transportation of pupils of a contract district in a manner that will be more comfortable and healthful than in the past. That cost several hundred dollars, but it ought to last many years.

Taxes would certainly have been higher this year even if there had been no change, if the old district system had remained in force. The State had insisted that this year there must be physical training instruction in the country as well as in the village schools, and that requires an additional instructor. Fuel and everything else is higher.

The first and greatest consideration is the improvement of the schools. If that is accomplished, we do not believe there are half a dozen readers of the *Patriot* who will begrudge a little higher school tax. The township system has brought about such a result in other states. It has in no case failed to do so. Let us give it a fair trial in New York. A fair trial will require at least two or three years. Better still, five years or longer. If it does not by that time bring about the results hoped for, it will then be time enough to go back to the old district system, which practically every other state of the union has abolished long ago.—*Cuba Patriot, December 21, 1917*

Township School Law is Discussed

"The township educational law as it operates in New York causes an increase of between 200 and 300 per cent in the taxes of the farmer. It decreases the taxes of the villages, and increases those of the real farmer, giving him in return the privilege of sending his children to the village school, which however he can not exercise on account of climatic and topographical conditions. It ought to be repealed and every effort of the farmer be bent towards that direction."

The above in brief is the opinion expressed at a meeting of the taxpayers of the county held in the common council chambers this afternoon. There were about 40 in attendance, mostly representatives of the rural districts. W. Barlow Dunlap addressed the meeting as spokesman for the committee recently appointed to investigate conditions. DeWitt Boyd Devendorf and Frank Hotaling were the other members of the committee.

Judge Dunlap said that the opposition all over the State is growing, and that hundreds of letters are being received daily by the *Rural New Yorker*, a farmer's paper, against the law. He stated, that although the Department of Education has said that it is for the benefit of the small school and that taxes would not be increased, there have been no benefits, and that the actual investigations show that there is not a single case where the tax of the real farmer out in the districts, has not been increased, and that only the tax of the villages and those of the farmer adjoining the village or city have been increased. He urged all present to write, without delay, to Senator James W. Yelverton, Elon R. Brown, leader of the Senate, and E. Corning Davis, telling them what is thought of the law, how it operates, and asking them what they will do if a bill to repeal it is introduced.

Physical culture in the rural schools was ridiculed and characterized as "utter nonsense," introduced at considerable expense, and it was stated that the pupils of the country schools, up to the eighth grade, are as good or even better than those of the city village schools, the advantages of which are supposed to be given them in return for all this increased cost.—*Amsterdam Recorder, December 22, 1917*

Obect to School Law

Eden, Dec. 16.—At a special meeting of the taxpayers of school district no. 8 of the town of Eden, it was decided to protest against the Finegan school law as un-American and not in keeping with true democracy. Petitions were circulated among the nine districts in the town and were signed by about 400 protesting taxpayers.

The rural districts object to paying the high school tax of the town, whereby their taxes have been increased more than 300 per cent. Objection is made to the appointing of physical instructors for farmers' children in district schools. Whoever heard of a farmer's children needing physical instruction, was asked.

Another objection to the law is the installation of chemical lavatories in district schools at an expense of \$200 or \$300 per school, an innovation which so far has not proven hygienically satisfactory.

Other neighboring townships are showing a keen interest and a wish to join in the fight to have this law repealed and the old system again adopted. This means strong pressure will be brought to bear on the legislative officials at Albany.—*Buffalo Express, December 17, 1917*

School Taxes Are More Than Doubled

Dundee, Nov. 28.—Harry W. Carpenter of Glenora, collector for the town of Starkey, who is also collector of the school taxes for the town under the new school township law, which went into effect this year, has just completed the collection of the school taxes this week. Mr Carpenter states that the farmers throughout the town are highly indignant at the passage of the new school law and in practically all of the cases throughout the township of Starkey the taxes of the farmers have been more than doubled. One farmer, whose taxes last year were \$17, paid \$46 this year. Another farmer who paid \$24 last year was obliged to pay \$52 this year. This comes somewhat as a result of the surrounding country being obliged to help pay for the maintenance of the Dundee schools. Most people thought that the operation of the new law would be to lower the taxes in the village from what they had been under the old system, but it is found that the rate in the village this year is somewhat higher than it was last year. Some of the extra taxes come as a result of extra expenses under the new law, such as salary of the clerk of the board of education, and new apparatus in some of the schools, etc. It is said that a determined effort will be made at the coming session of the State Legislature to overthrow this law as it is generally unsatisfactory, both to the people in the rural districts and in the village.—*Elmira Star-Gazette, November 28, 1917*

Patrons' League Organizes for School Bill Fight

Albion, Jan. 24.—The Orleans County Patrons' League was organized here today by nearly 100 prominent residents of the rural communities who are opposed to the new town rural school law which is proving so unsatisfactory and expensive to all communities. Justice of the Peace Charles H. Porter of Albion presided at the meeting and W. Reed Curtis, a prominent Carlton farmer and former nominee for assemblyman, was secretary.

Prominent among the features of the present school law that are considered objectionable and which it is desired to have abolished, because they are unnecessary features that have created jobs for a few, jobs which could be eliminated and the work done by the district teachers and several thousand dollars saved yearly to the county, are the three physical trainers in Orleans county rural schools whose salary is \$1200 each and expenses; and the three

district superintendents of rural schools who now are said to cost the county about \$5400 yearly with salaries of \$1200 each and expenses.

In their stead the ruralites would go back to the old system of one school commissioner who could be employed at not to exceed \$1500 annually; urging the abolishment of the town boards of education and going back to the former method of district school trustees and the office of town school board clerks, now said to cost from \$300 to \$500 in each town of Orleans county.

Various other objectionable features were discussed which will be taken up by those who are solidly united in the fight to secure the best results and keep down taxation.

Among the speakers were Frank Mason and G. E. Snyder of Gaines; Le Vant Parker, Charles Porter, Carl Parker and others, of Albion; Mr Watson of Barre, W. Reed Curtis of Carlton and others.

Petitions were circulated in each district, requesting the repeal of the present town school law, together with the incorporation in the law created to replace it, of methods of handling the school problem more economically. In the sixteenth district of Carlton the petition is said to contain the name of every legal voter in the district and in the sixth district of Carlton, where the petition was circulated yesterday afternoon, everyone of the 124 voters seen signed.

In each of the school districts an organization will be formed with a president, secretary and treasurer. On February 2 the voters of each district will elect delegates to represent their respective district at a county convention to be held at the court house, Albion, on Saturday, February 9. About 200 delegates will be present at that time to discuss the matter of securing legislative action to repeal the present law and recommend to Assemblyman Dr Frank H. Lattin and Senator Geo. F. Thompson changes that would prove more satisfactory to those who have children to educate and those who foot the bills.—*Buffalo Courier, January 25, 1918*

New Town Board School Law a Success

The rate of taxation fixed by the town board of education for the schools of this town outside the union school districts of Huntington and Northport, is 42 cents per \$100, which is three cents less than the average of the several school districts in the same territory last year. This in spite of the fact that numerous repairs have had to be made on school buildings and the standards of instruction have been raised.

The town board of education have issued an annual report which is full of interest and shows a highly intelligent grasp of the needs of the schools and opportunities for their development which was not to be expected of the various district boards under the old law as they were men often of little experience in educational matters.

Under the management of the present board children in the remotest district of the town will get as good an education as those living in the larger villages. These children will have an opportunity to acquire not only a first-class grammar school education, in most cases in their own schools, such as is prescribed by the Department of Education of the State of New York, but they will also be privileged to take an academic course in the high

schools of the Huntington and Northport union districts. They can get in either the benefit of a college preparatory course and in the high school of this district a commercial and manual training course with the use of the fine athletic equipment.

In some cases the smaller districts may be united and the children farthest away from the school building taken to the school by means of a publicly hired conveyance.

The charge that the low rate is maintained only by increasing the rate in some of the districts in order to help others is not a valid argument against the system. The increase is not very great in any district and there is no just reason why the charges for the maintenance of schools should not be as generally distributed as the cost of highways and bridges and other administrative expenses of the township. Those persons in the territory who are paying the largest taxes we are informed are raising little or no objection.

It is the intention of the board to supply the children with the best up-to-date textbooks free of charge. Musical training has been introduced, which is pleasing to both children and parents.

The conferences of all the teachers of the several districts have led to many valuable interchanges of ideas and improved the efficiency of the schools.

Teachers get necessary supplies more promptly, sanitary conditions are improved. The truancy law is being enforced as never before. A few modifications could be made in the law which would somewhat improve it, but from what we can learn the residents generally of districts affected are greatly pleased with its workings and hope that the new system has come to stay. It is one of the most advanced steps for the benefit of the rural school that has ever been taken by the Legislature and the State Department of Education.—*Long-Islander, December 21, 1917*

Town School Board Report

The time for collection of school taxes and the assembling of the State Legislature doubtless will direct attention to the operation of the new law which has been in force since August 1, having to do with the schools in our township other than those in the villages of Huntington and Northport.

At first, there seemed to be some dissatisfaction with the law, largely no doubt, because of the change in the existing order of things, but in its operation the advantages have proven so manifest that hostility has been disarmed and, speaking generally, the sentiment has seemed to be favorable in our township. The new law certainly has in it large possibilities of advantage in any town which will carefully study it and put it into operation.

Town School Law still under Fire

Protests of all kinds and from all quarters, except from the beneficiaries, are pouring in against the township school bill. The absurdity of scrapping a whole system because here and there a school was found that was in a dilapidated condition, is beginning to become apparent, and farmers all over are asking what the district superintendent received his pay for, but

to attend to just such matters. The increased cost of all the proposed new schemes do not appeal to many of those who are being called upon at this time as never before to pay out hard-earned money for all kinds of necessary efforts to help the suffering of this and other nations. And when on reflection it is brought home to the hard-working farmer that the best inducement offered by the advocates of this measure is, that his son shall have as good an education as the business man's son, it does not look good to him. He reasons that if the net result of the higher education is to produce a class of people who despise honest labor, and look with contempt on the people who uncomplainingly keep working to secure food for all, and whose highest ambition is to ride on the backs of others, then there is something wrong with the system and we had better give it a thorough overhauling before spending millions upon millions more of the people's money in salaries to be paid to teachers, whose interest it is to teach the children the exact opposite of what is needed more now than at any previous time, namely, the problem of getting a living.

Farmers should get together at once on this matter and secure the repeal of this bill.—*Kingston Leader, December 21, 1917*

But we do know that there has now been established a board of five to look after the schools, none to receive pay, but that they elect a clerk who will receive from \$200 to \$300, according to time and conditions. This in itself, with the amount drawn of state money, will run one school district of the thirty-two.

Under the old system a trustee could receive nothing, and he did a great deal of work for the schools. Now one man living far away has seven to ten districts to look after. You can not blame him for not wanting to take time to run and see to same from his work and no pay. Result, small things are overlooked. We have a physical director under another school law. What portion of her pay will come from each district we do not know. We have a school superintendent who seems to be versed in all kinds of fads and fancies along with the physical instructor, even telling us how our children should be dressed. The children's minds are now taken from their subjects, teachers' meetings are numerous, schools are closed at any trivial whim of our superintendents; in fact, we seem to have no voice whatever today in regard to our schools. Could not all this expense have been spared us until at least after the war is over and conditions are again normal?

The State is being covered by cards asking the farmer to save, if only a loaf a week, and yet at one blow the new school fads wipe out enough to purchase thousands of loaves. The teachers' salaries are not raised enough to cover any appreciable difference.

We are advised our children will be carried to school by teams hired for same. One team might gather the pupils of a certain district and draw them five or ten miles. Can you hire such a man and team for less than \$4 or \$5 per day? Twenty-five dollars per week and thirty-six weeks. Please figure and see if it will not cover the running expenses of one or even two of our present school districts, were formerly economy was the watchword at school meetings.

We will admit there are sections of the State where this plan might work to advantage, but in this north country, with the present cross roads in

deplorable condition in spring and fall, with snow banks many feet deep in winter and roads not passable, it would not.

Larger schools mean less personal attention to each student.

Devise some plan whereby you can keep the boys and girls on the farms and have all the farms occupied and you will then have plenty of students and few school districts will have to be closed. Tend more toward the home and farm life, less toward foreign languages and you will help the farmer, help the Nation and help win the war.

Thus we, as a school district, state the following:

First. We are opposed to increased taxation without value received.

Second. We are opposed to the consolidation of our schools.

Third. We are opposed to the present method of a board of five trustees and their employees to look after our schools.

Fourth. We are opposed to the operation of the new law until same has been voted on by all the people to know whether they want it or not.

Fifth. We do not believe it necessary for the State to compel us to hire a physical instructor. Our present teachers can cover all work needed by a child from the farm who has more outdoor air and exercise than any city child.

Sixth. That we are not in accord with the ideas of our school superintendent as to the method of running our schools.

Seventh. That we positively are not opposed to education, but are in favor of the same to the limit of our resources, but that we desire same to be such that it will cover the needs of the country and be elastic enough to fit the conditions of the children found in the community and assist them to become scientific farmers and farmers' wives instead of city clerks, teachers and street car conductors.

Eighth. That it is our desire to have all farming school districts call meetings and start a movement that will call a halt by pressure being placed on our representatives until the law is changed back or left for the people to decide what change they desire.

H. B. BAILEY
ELMER BLOUNT
ARTHUR GRANT

Potsdam, December 17

—*The Syracuse Post-Standard*, December 22, 1917

The farmers do not approve of the school township law because of various things, chiefly because putting its provisions into effect costs money. Under ordinary conditions I should give my personal opinion that it was about time more money be spent upon the rural schools, under the compulsion of law if necessary, but as things are at present it would seem the farmers are justified in asking the modification of the law until things assume the normal again. So far as the increased cost of erecting better outbuildings and purchasing equipment for the schoolroom is concerned, I am for the law. The argument that the ultimate aim of the law is to consolidate the rural schools, and that this expense will have been futile, will not stand analysis. Broadly speaking, nothing that ever was, but reached the end of its usefulness, and was replaced by something else. System succeeds system, régime replaces régime. The last of one order gives birth to the beginning of another. No one ever discovered anything all at once. The man who discovered spectacles may have been as smart as the man who invented the telescope, but the telescope was too big for him to see, although it grew out of his idea. The men who developed certain educational systems were, in their day, as brilliant

as those of the present, but their day is done. They themselves would be the first now, if they could be reincarnated for a time, to endorse the ideas of now, and they might point with pride to the fact that it was because they were, that these things are. Was the cost of the stairway in vain because it has been succeeded by the elevator?

* * * * *

Considered closer, this "cost in vain" argument seems even less reasonable. There are many children in school now who will be out by the time the consolidated system is in effect. They are entitled to the best that they can get, and the experts in the Department at Albany have said that the best that can be given under present conditions is to be had under the township law. If we are to lose as many men in the present war as there seems reason to believe we will, there is every need that the ones who are to replace them step into the field of endeavor as well equipped as possible. If the place to equip them is not the schools, why are the schools? There was never a time in the history of America when the need was greater to bend every effort to so instruct boys and girls, as to send them out of school with the ability to "produce the goods," materially and mentally. We are going to need them in the field of labor and in the field of thought. America has just made the most radical departure from her traditions in her existence, and by the outlook she will be short her normal man power before two years. If that isn't a reason for maintaining the best schools possible, there is no such thing as reason. But of course, if Obadiah Jones and Zeke Zimmerman do not approve the pedagogical methods, and if it is going to cost them \$10 a year more, why do away with what the best minds in our educational system have devised as the best to suit the needs. Of course, as I said in the beginning, I do not blame them for kicking on the cost, but on the whole I should say that a repeal of the law in toto would be a retrogressive movement.

* * * * *

If there is any one phase that should be retained, it is that providing for physical culture in the rural schools. The working strength and the longevity of the farmer are proverbial, but I think that the man from Mars would prefer the clean cut, glossy, rubber muscled, high school athletic to the bowed, muscle bound, gnarled farm boy. The psychology of play, of games, erect carriage, proper breathing, the development of co-ordination of mind and muscle, of eye and movement, are things that have been deeply studied, and the findings thereon have been properly considered by Albany before installing the present physical culture system in the rural schools. I venture to say that the men in the educational building know more about these things than the average farmer. Some of them came from the farm themselves. They are smart men, too. That is why they came. But—"It's all darn nonsense. 'Taint the way I was fetched up, and see whar I be naow."—*Amsterdam Evening Recorder, December 22, 1917*

Proposed Repeal of the Township School Law

The *Reporter* has frequently criticised the State Department of Education for blind disregard of the wishes of local boards of education and the autocratic insistence that when it comes to the schools the Department has

all the say and the people no voice. So in discussing the proposed repeal of the township school law it can not be accused of partiality to the Department in Albany.

The township school law was indorsed by the New York State Agricultural Society, the State Grange, and other bodies. Every state in New England has adopted the township system. Every state bordering upon New York State has discarded the old district system and adopted the township plan. The law went into effect last May. There has not been time for a fair trial of its merits, and yet it is proposed to repeal the law before it has been tried out. The demand for a repeal has come from those who find their school taxes raised. Taxes on the more prosperous sections of a town are higher than under the old law and less in the less prosperous sections. In a way the law operates like the income tax law in that those that have must pay more than those who have not. If Walton had decided on school matters on a basis of tax saving she would never have had a school approaching the present institution. When the union free school was voted in 1868 the opposition was bitter because it would tax those without children and increase the tax rate.

No one who has the welfare of the county at heart should allow the matter of taxes to influence if the new system is an improvement on the old.

Because in the past the district school has filled an important place in education is no reason to assume that it does so now. The old carry-all has given place to the automobile, and the scythe to the mowing machine. Both were necessary things in their day, but their day has passed. The district school system was devised a century ago to meet conditions as they then existed. Forty years ago the apex was reached. There was then in the rural districts one hundred thousand more children than there are today. Right around Walton there are schools with one to a dozen pupils that formerly had from twenty-five to forty. While village schools have kept pace with the demands the old district school is in many respects where it was forty years ago, but lacking the enthusiasm of numbers.

Recent statistics show that there are fifteen schools in the State now in each of which there is just one pupil. There are 86 in which there are 2; 116 with 3 pupils; 238 with 4 pupils; 357 in which there are but 5 pupils; 600 in which there are less than 7, and 3800 in which there are less than 10 children in attendance.

Now, it doesn't need any argument to prove that a school with from two to ten pupils is hardly a school in any proper sense. It is for the elimination of these schools by consolidation, the merging of the resources of scattering districts, so that one good school will take the place of several poor ones, that the township law was passed. Doubtless there are drawbacks, but the same energy displayed in improving the law as now seems back of the demand for its repeal would correct these deficiencies and bring the country school somewhere near the standard of the village or city school.

The belief is general that the farmers want the law repealed. Unquestionably many are influenced by the opposition of the *Rural New Yorker* to the law. But it is also true that very few have given the measure careful consideration, especially those who are the most benefited. The district school performed a great service but anyone who goes over Delaware county, sees

the run-down buildings and compares the opportunities offered with those of larger communities must be convinced that the old-time district should give place to something better.—*Amsterdam Evening Recorder, December 22, 1917*

Township School Law

The *Jefferson County Journal* in a recent issue discussed the Machold law. The article shows so much study and candidness that it is reproduced here as follows:

"Our local union free school district having more than 1500 population does not come under the new township school law, hence we have no particular prejudice in the matter. But what concerns many of our readers interests the *Journal*, and numerous criticisms of the law appearing in some of our daily papers have led us to consider the matter somewhat.

"The principal objections raised against the law seem to be: 1.—That rural school tax rates are higher. 2.—That the bonded indebtedness of a union free school district should not be assumed by the township or unit of which it is a part. 3.—That local control is lost over the community school. 4.—That it is difficult to administer the law so as to properly care for each and every school.

"The question seems to us a little different in a town or unit having no academic school from what it is in a town or unit having one or more of such schools to support. Where the schools of a township or unit are all of the same grade, all elementary, why isn't a uniform school tax rate just as fair and equitable as a uniform tax rate for roads and bridges, the support of the indigent poor, and other usual town expenses? There were some gross inequities in school tax rates under the old district system, due largely to the great difference in the amount of taxable property in the different districts; wealthy rural districts generally had a moderate or low tax rate, and most of these are now paying a substantial increase under the new law. We have in mind two schools in the same township, each employing one teacher, where, without any considerable amount of unusual outlay last year in either district, the tax rate in the wealthy district was only ten cents per \$1000 of assessed valuation, while in the weak district the tax rate was 32 times that, or \$3.20 per \$100 valuation. This year both districts are paying the same rate, much to the relief of the weaker one, but very likely the taxpayers in the wealthy district are not all enthusing over the new law.

"We find, too, that under the district system a number of rural districts contracted and some of them paid all their school expenses out of the 'public money' received from the State and did not raise a cent of local school tax. Naturally, some of the taxpayers in these hitherto fortunate districts do not like the new law which compels them to pay the same school tax rates as other taxpayers in the same town or unit; probably we should favor the old law were we in their places—it is so natural to want the 'long end of the evenner.'

"The equitable distribution of the bonded indebtedness in some of the union free school districts is a puzzling problem, especially when the academic school is so situated as to be conveniently accessible to only a part of the rural children living in the township or unit. It seems pretty

well settled in the minds of intelligent, thinking people that such are the demands of the modern business and professional world today that a high school education is relatively no better preparation for one's life work than was a good common school education 50 years ago. There was strenuous objection by many taxpayers 50 years ago when our common schools were first made free and were required to be supported by public taxation; and many rural taxpayers object now to being taxed to support the village high schools. Yet the rural children seem to need the high school education, and it is not just clear why the village districts should furnish the buildings and equipment and hire the teachers, the State pay the tuition of the rural children, and rural patrons bear none of the burden of maintaining these academic schools. It is, however, much to be regretted that the township system was not adopted 25 years ago, before the great majority of our academic schools were established; then many of them would have been located where they would better accommodate the rural children of the township or unit. Just how much of this outstanding bonded indebtedness in the union free school districts should now be assumed by the other districts in the township or unit is a question worthy of careful study."—*Canton Plain Dealer, December 25, 1917*

Farmer's Wife Criticises Township School Law

To the Editor of The Morning Post:

I see Mr Anderson has already had some answers to his letter printed a few days ago; but I would like to add one more to the number and ask him just how the township system is supposed to raise the standard of our present school system?

How can a town board composed of a few men who get no pay for their work and the majority of whom usually live in the principal village, be supposed to look after the interests of all the rural schools in their town as efficiently as one trustee, usually having children, can do in his own district?

I fail to see how "some of the people have had their children educated for nothing" simply because the State has formerly paid their tuition in high school. Where did the State get its money? Didn't as much of it come from taxes paid by the farmers as anywhere?

At present my daughter is attending high school less than two miles from home, but in another town, she being able to board at home. Her tuition is paid indirectly from my taxes and those of my neighbors.

Our own town has no high school but there is talk of putting one in next year in which case I shall be obliged to help pay for a high school situated seven miles from my home where I can send my children without tuition, but they will not be able to board at home. The expense of hiring their board and the inconvenience of being away from home would be much greater than to still keep them in the nearest high school and pay their tuition myself. Where is the justice or advantage in that?

If we have supervisors who realize that the "disgruntled farmers" are of enough value to the community to have their interests looked after equally with those who expect to live on six or eight hours work a day, and then give the farmers' children whatever school advantages they see fit, and tell the farmer what he must pay for it, let them be praised for so doing. I am sure the farmers appreciate it.

And let me say to Mr Anderson that our rural communities are not composed of such ignorant people that they would complain of higher taxes could they see where they were getting anything in return. But when we realize that we have paid three times as large a tax this year as last (that is about what ours was) and then have no voice in managing our schools, we fail to see the advantage and if anyone can point it out to me I would be glad to have them do so.

A DISGRUNTLED FARMER'S WIFE

Township Trustees Disgusted

To the Editor of The Post-Standard:

The sentiment against the Machold school law in the northern part of Cayuga county was plainly evidenced some days ago when a petition was circulated calling for a repeal of the law, signed by at least nine-tenths of the taxpayers and parents to whom it was presented.

The writer, a farmer, taxpayer and a parent, has taught school a number of terms, and at the present time also holds the very undesirable office of one of the township board of education or township trustees. Under the new law this present year the school tax in this town was nearly double that in former years, and in some districts, as also in other towns in this section, more than doubled, and there does not appear to be any prospect of a let-up for future years. If we were getting results commensurate with the increased outlay it would be some consolation, but we are not. Our schools are worse off than in the past. I believe that throughout the State three-fourths of the township boards are practically "going it blind," without adequate instructions from "the powers that be" at Albany. Schools are out of supplies, and it seems almost impossible to keep all the schools in town properly equipped. When one trustee has to look after three or four districts instead of one it is somewhat difficult to keep matters on "an even keel," especially as most of us have our own business to look after, and all we do for the schools has to be time donated.

Some of the friends of this law (college professors, school superintendents, school faculties and taxpayers in villages and a few others) ask us to wait and give this new departure a trial. If any of these gentlemen purchased a horse that proved to be a kicker or balky or invested in an automobile that would not go, would they advocate keeping same for four or five years in order to give it a fair trial? Judging from the opinions expressed by most people, this law has been "weighed in the balance" and found sadly wanting, and is about the best developed specimen of a "dismal failure" that we have met in many a day.

There may be some sections where this law would work out all right, but I, for one, do not believe that the proper time has yet arrived for any such sweeping change as has been forced upon us by this high pressure, self-styled progressive State Educational Department.

DISGUSTED TOWNSHIP TRUSTEE

Sterling Station, December 23

—*Syracuse Post-Standard, December 27, 1917*

Town School Law's Repeal

Albany, Dec. 27—Repeal of the Machold township school law, which, it is declared, has evoked more protests than any law ever passed by a New York State Legislature, or a radical modification of it so that it will meet the wishes of the rural communities is one of the things that the new Legislature is expected to accomplish early in the coming season.

This measure came from the State Department of Education and bore the indorsement of the State Grange. Its object seemed entirely worthy to the legislators and Governor Whitman because it was designed to consolidate the rural school districts into one township school and give the farmer's boy the same educational opportunity for instance that the son of the immigrant landing in New York would have.

But the measure in theory and its practical operation under the law which Governor Whitman signed are apparently so at variance and complaints from all over the State are so numerous that it is regarded as practically certain the law will either be radically amended or wiped off the books altogether.

The taxing provision of the bill has not proven satisfactory and people in the rural communities have registered protests with their representatives and with the departments here. Under the operation of the law taxes in some instances, it is said, were increased to ten times the amount that was paid under the previously existing order of things.

In some localities the cost of transporting children to the one central or nearly central township school has been more than the cost of maintaining the school in their home district that was abandoned when the new law went into effect.

Under the present law in order to get children to school on time it is necessary, in some cases, to get them away from their homes almost before daylight and they are not brought back until after dark. Their mothers do not know how their offsprings are fed and the mothers are mostly voters now, so that their numerous protests on this score will be in all probability a powerful influence in the Legislature in repealing the law or so amending it that it will achieve the object sought without offending the people whom it was designed to benefit.

The statement that the law was designed to give the child in the rural community the same opportunity as the child in the city in the matter of education brought hundreds to its support. But the working of the law has alienated most of this support and the demands for its repeal or radical modification are so insistent and unanimous that early action to this end is forecast.—*Lockport Union Sun and Journal*, December 27, 1917

Machold Law Has Its Defenders

To the Editor of The Post-Standard:

From the letters in the *Post-Standard* regarding the Machold school law, it might appear that most people were dissatisfied with the law. The great objection seems to be against higher taxes. Now all towns that have had an increase in their tax rate have been making improvements, paying up old debts, or they have an inefficient town board: for the same schools con-

ducted in the same way can be run with less money under the new system than under the old.

I have been health officer for a number of years, and I know that the sanitary conditions of the rural schools are in a deplorable condition and it is next to impossible to get the ordinary trustee to clean up, fix up and keep the toilets in a sanitary condition. But few schools have had the medical inspection of the pupils until toward the close of the term and many do not comply with the law at all. The same waterpail and dipper can be found yet.

By means of the Regents examinations and the physical examinations it has been shown that the city children are surpassing their country cousins and this can only be explained by the inferior conditions of the country schools.

The country child has as good a right to a modern mental and physical development as the city child as long as the State is paying over one-half of the expense.

In lieu of these inferior conditions the State Board of Health and the State Board of Education have decreed that all schools must be provided with sanitary closets before November 1918, and that every pupil must have a physical examination and all school houses must be properly equipped. This will cost money and the taxes will be higher no matter under what system. But it is certain that these necessary changes can be made for less cost under the Machold system than under the old. (Anyone with a different opinion let him accept Mr Silfer's challenge).

In Hastings, Oswego county, there are two railroads running through the town and in the districts through which these railroads run the tax rate has been low. They have received the benefit while the whole town paid for the roads. In one of these districts the rate was only \$3.20 on the thousand, while in other districts the rate has been as high as \$25 per thousand. This year the rate was \$10 for all. The average rate was the same as last year, and with an efficient town board this should have been the case through the State, except in towns that have no high school. In these towns now the town must pay for the high school education of its pupils while in the past the parents or the pupil has had to pay this. Perhaps this accounts for the high tax rate in some towns, but this is just, as before the pupils in some towns have had advantage over pupils residing in the same state but in different towns.

Since the tax rate is the same some of the districts are already advocating joining with larger districts. This in time will reduce the cost and increase the efficiency of the school as it is well known the larger the school the more interest.

M. V. VEEDER

Central Square, December 26

To the Editor of The Post-Standard:

The Machold law has its imperfections. This is true with most laws, but the law, I believe, has in mind the betterment of the schools of the State.

"Algerose" is begging the question when he asks where I was educated. Mr Miller also dodges in his method of questioning. I am glad, however, if my article succeeded in getting the "neighborhood telephones going."

The ex-trustee from Port Byron enters into personalities and, in fact, a

great many of those who have written in opposition to the new law either enter into personalities or seem to ride the one great hobby—taxation.

I was educated first in a rural school. I did my first teaching in a rural school, therefore my sympathies have been and are largely with the rural school problem, and it is for this reason that I take the time to write in defense of any system that may better the conditions of the rural school problems.

Some of the opponents of the new law seem to think that it was made for consolidation and they are afraid that "the little red schoolhouse" will be done away with. Again turning to Hastings—less than two miles east of Hastings is a school to which children are now walking through snowdrifts, rain and sunshine, some of them over two miles. There is one less than two miles west of Hastings with a few children, and another one and one-half miles south of Hastings on a good macadam road, with good access to Hastings. Would it not be far better to consolidate these four schools at Hastings Corners and have two or three teachers, so classes could be graded and teachers would have less classes and more time for individual teaching and drills, thus getting all the benefits of the grade school? At the same time the boys and girls would be at home with their parents instead of being obliged—as many are in this State—to drive from four to six miles to high school or to board away from home at the very age when they need the home companionship most.

However, the new law does not compel nor is there anything in the law that would say that school officers have the right to consolidate. On the contrary, the law says explicitly that it must be left to a majority of the electors in the territory to be consolidated.

Those who oppose the law seem to lose sight of the fact that special and economic conditions have changed in the whole world in the last fifteen years, but the rural schools of New York State are just about in the same condition they were a generation ago.

Hastings, December 24

—Syracuse Post-Standard, December 29, 1917

Township School Law Defended

January 8, 1918

Editor, Kingston Freeman:

Many persons in Ulster county who are interested in public education were surprised that the board of supervisors should pass a resolution calling upon our representatives in the State Legislature to use their influence to secure the repeal of the township school law. This resolution purported to be based upon the wishes of the several constituencies represented by the supervisors, and persons most interested in rural educational progress are wondering to what extent the various constituencies throughout Ulster county were really consulted about this all-important matter. To most persons vitally interested in rural education the action of the board of supervisors came as a distinct surprise, and there is no little feeling in rural sections that this action was urged by a few disgruntled individuals who can no longer control school districts for their own financial gain and for the

perpetuation of their own ascendancy in neighborhood feuds, as was possible under the antiquated district system, and that the board of supervisors was induced to take action in this matter without any careful investigation into the merits of the case.

It would be interesting, therefore, to know to what extent the supervisors investigated rural educational conditions in Ulster county for the purpose of making a fair estimate of the relative value of the old district system as compared with the township system in the matter of administrative efficiency and in the more important matter of giving the country boy and girl educational opportunities to which the sons and daughters of a vigorous rural population are entitled.

Is it possible that the board of supervisors of Ulster county took action in this matter without such investigation? Is it possible that the board of supervisors took action of such momentous significance in a matter affecting the most important institution of rural Ulster county without giving it as much investigation and consideration as they gave to the question of the extermination of the black bear? The friends of the black bear had ample opportunity to be heard upon the question of his extermination, but the proceedings of the board as given in the county press do not indicate that the friends of rural education were given a hearing when action was to be taken affecting the progress of rural education. The black bear and Inspector Todd are to be congratulated! But the question of practically instructing our legislators to work for the reestablishing of a rural school administrative system conceived in the necessities of colonial New England, but long ago discarded by every state of the New England group and by many others throughout the country; the question as to whether a majority of country boys and girls shall continue to be robbed of their intellectual birthright of equality of educational opportunity by the crude machinery of a provincial system; the question as to whether rural New York shall keep in the center of the highway of educational progress through a system of administration that promises a better day for country schools or return to a system that has kept this State for a quarter of a century far behind the rest of the union in this matter—these questions are disposed of with but little apparent consideration for the wishes of the friends of rural education.

There are some significant questions that the board might have considered if it wished to be consistent in the application of general principles to this matter. If the district system is better for school administration, why is it not better for the administration of other town affairs? Why not divide the town up into districts for other business, permitting each district to elect its own officers, build its own roads, etc.? If school taxation over a whole town is "inequitable," to use the word found in the board's resolution, why is it not inequitable to use the town as the unit of taxation for other purposes? If the school affairs of a town can not be properly managed by a town school board, how is it that the other affairs of a town can be managed by a town board? To be consistent, a resolution calling for a return to the district system for school business should be followed by a resolution calling for a division of the towns into districts for other town matters, with a supervisor in charge of each district. Is it possible that those who are responsible for the formulation of the policies

of the board of supervisors would contend that road building is properly a town matter and the education of the future citizens of a town is of such slight relative importance as to be of no concern to the town as a whole? Do our county legislators believe that the training for future citizenship is a district matter in which towns have no responsibility?

Another significant question: Why did not the city supervisors ask for the repeal of the law that makes the city of Kingston a single unit for the administration of its schools? Why did they not ask for a return to the antiquated system that permitted each ward of the city of Kingston to manage its own school through a trustee or a board of trustees? If they think that such a worn-out system as that is good for rural Ulster, why not for Kingston? The answer is, that they know that the people of Kingston would not permit their school system to return to pre-Revolutionary practices. And, furthermore, the supervisors themselves would not think of taking such preposterous action in regard to the Kingston schools. Why, then, in the name of reason, do they want to foist back upon rural Ulster a system that would be an educational disgrace to Kingston? It may be answered that Kingston is more compact than the towns and can, therefore, manage its school affairs better as a unit administered by a single board. But New York City, Chicago, Boston, in fact every large city in the country is a single unit for school administration. Would anybody contend that their educational problems are less intricate than the same problem in the towns of rural Ulster county? The schools of Greater New York are administered by a board of seven members.

However, the objection to the township system was not based upon extent of territory, but on the plea that it is "inequitable." Is it equitable, may I ask, that one district should have a tax rate three or four times as great as an adjoining district simply because of arbitrary boundaries established a century ago to meet the needs of pioneer life when isolation was relieved only by ox-cart, the horse and the weekly mail? Have railroads, the telegraph, the telephone, the daily mail and the automobile done nothing to break down the geographical and intellectual barriers of a century ago? Is it "equitable" that arbitrary boundaries should give one school district in a town an assessed valuation of only \$6796, as is the case in district no. 10, town of Hardenbergh, while the assessed valuations of the other districts of the town range from \$14,093 to \$33,152, with practically identical problems to meet?

Is it "equitable" that the people of that district should be burdened with a tax rate two to four times as high as other districts in the town for the same educational advantages? Is it "equitable" that district no. 3, town of Shandaken, should have a tax rate of four mills on a dollar while district no. 13 immediately adjoining district no. 3 has a tax rate of thirteen mills on a dollar for the same educational advantages? Serious inequalities of this nature, which were prevalent in all sections of Ulster county under the district system, have been entirely removed by the equalization of taxation under the township system. Is it possible that the board of supervisors was not aware of these facts, which established beyond the possibility of a doubt the greater equity of the township system, when they called for the repeal of this law on the theory that it is "inequitable?"

Township School Law

Ulster county took a firm stand against the much-discussed township school law last Thursday afternoon when the board of supervisors adopted a resolution condemning the legislation as "oppressive and inequitable" and calling upon Senator Walton and Assemblyman Brink to do "their utmost to secure its repeal" at the next session of the Legislature. The law has been in operation less than a year, but in that short time there has been scarcely a gathering of grangers in every section of New York State that has not used the "big stick" on the measure, and Ulster county grangers have not been behind in the fight against it. The climax of it all came up Thursday and with the county officials lined up on the same side of the fence as the grangers, the bill will be given a hard run as far as Ulster is concerned during the winter months at Albany.—*Roxbury Times, December 29, 1917*

"Silk Stocking Lunkheads"

To the Editor Putnam County Republican:

I was very much interested in the letter of "Earnest Inquirer." It bristles with points of well-founded criticism. The above caption, taken from the letter, fairly describes, I believe, the managers of our public schools.

Whatever may be the purpose of the present school law, the obvious effect is to largely increase taxation without an apparent benefit. The number of high schools has not been increased, nor is it likely to be. The opportunity to secure a high school education is, and will be, practically the same as formerly, unless taxation for that purpose is to be greatly increased. The towns of Kent and Putnam Valley will serve as examples.

Statistics show that only three per cent of the beginners in high school graduate and the article turned out as having finished the course is wretched value for the money we expend. A business letter recently contributed to an acquaintance of the writer by a high school graduate of eighteen contains in two short paragraphs four errors in grammar and three in spelling, while the punctuation is purely accidental. And yet the letter shows an intelligent mind.

There is altogether too much time wasted on nonessentials and altogether too little devoted to sound elementary arithmetic, reading, spelling and English composition. It is not too much to say that most employers are obliged at their own expense, to waste a year or two teaching the boys and girls whom they employ what should have been learned in the public schools. We ask for bread and they give us a stone. The "fads" of physical culture, etc. are taking the time that should be devoted to a sound basis of teaching to enable the children to reap the reward of all true teaching, which is the ability to teach oneself.

It can not be truthfully said that teachers are underpaid or, as a rule, overworked. Why, therefore, the continual discontent? A spirit that is communicated to pupils and makes it easy for the "soap box orator" to inculcate socialistic and other doctrines subversive to sound principles of government.

That our schools are less efficient now than in former years and that the tendency is still in that direction are facts too obvious for argument. It is

high time that taxpayers and business men especially should get behind an effort to secure a proper and an adequate return for the taxpayers' money.

M. F. AGOR

Mahopac Falls, Dec. 25th, 1916

—Putnam County Republican, December 29, 1917

School Taxes

To the Editor of the Recorder:

SIR: In common with every other taxpayer in the rural parts of the State of New York, I am simply amazed at the increase which has been made in school taxes for 1917, over the school taxes for 1916. Last year I paid in Philipstown \$651.71, and have this year had to pay \$1083.28, an increase of \$467.57, or seventy-five and ninety-four hundredths per cent (75.94). This without any increase in my assessments. I am told that in Putnam Valley things are worse, but have not yet received the bill for school taxes on my lands in that township.

The total assessed values, real and personal, in Philipstown are this year \$3,224,224, and the total school taxes thereon \$30,338.24. The rate for \$100 assessment is now ninety-five cents (95c.) exclusive of the collector's charge.

The census of 1915 gave to Philipstown a population of 3571. Taken on an average, every man, woman and child in our town is therefore this year called on to pay \$8.50 for education.

In the great city of New York, with its enormous population of underbred and underfed aliens, there may be need for such fads as "physical training." But our farmer boys and girls are not housed in tenements, and do get plenty of exercise in their walks to and from school, and in helping their parents in farm work and in doing chores. Nor are the parents of our boys and girls such paupers that we have to see that their children are fed, much less is there need with us, as are some schools in the city, of actually feeding the children at the public cost. New York City also maintains, as we do not in the rural parts of Philipstown, high schools, colleges &c. Yet despite all the extravagance due to city life and city conditions, the total tax for educational purposes in the city of New York is only at the rate of \$7.89 per head of population, and somewhat less than sixty cents per \$100 of assessed values, to be exact fifty-nine cents and ninety-seven hundredths of a cent.

As no charge is made in the city for the collection of taxes and we in the country have to pay at least one per cent, education is now costing us sixty per cent more than it does in the city, per \$100 of assessment.

We are told that this increase in school taxes is due to a law enacted at Albany last winter, which our member of the Legislature, Hon. John P. Donohoe, and Republican members from other rural districts, rightly opposed. We now have a Republican Governor and a Republican majority in the Senate and in the Assembly. Every candidate for office, Democratic, Republican, Progressive or what not, except possibly a few in the large cities, always professes to be "The Farmer's Friend." Will those who are to legislate at Albany this winter repeal or amend last winter's law so as to make it in some measure fair to the owners and tillers of farm lands?

There is in last year's law one good feature, namely, that school taxes are

thereunder collected by one man throughout the whole of each township instead of as formerly by one or more men in each of our dozen or more school districts.

STUYVESANT FISH

Garrison, N. Y., Dec. 10, 1917

—Putnam County Republican, December 29, 1917

Delegates Condemn Township Law

Thirty-three men and women representing 29 school districts in Sullivan county, met in the grand jury room of the court house on Saturday afternoon and discussed the township school law. The attendance was not as large as expected, only a sixth of the county being represented.

Several speeches condemning the law were made. John Townsend, of Bethel, was elected a delegate from Sullivan county to ask for the repeal of the law. Mr Townsend accepted the duties, and in his speech of acceptance he said his town had suffered as much as any town in the county by the law; that they had bought twelve barrels of oil for the town; 12 portable toilets had been contracted for and an indebtedness of \$1584 imposed on the town. He would do his best, he promised, to have the law repealed.

A resolution was offered asking that each district subscribe \$2 for the purpose of paying delegate Townsend's expenses.

The chair appointed A. Sniffin, A. W. Robinson and W. F. Curlette a finance committee to pass upon all bills incurred by the organization.

Mrs Temple was very much against the school consolidation law, and urged that the delegates to Albany be instructed to use every legitimate effort to have the law repealed. Mr Townsend, therefore, is clothed with all the authority necessary to have the law repealed.

The meeting closed with a resolution thanking Hon. John J. Dillon, of the *Rural New Yorker*, for the splendid work he has done in opposing the law and urging him to continue his good work.

Township School Law

To the Editor of The Journal:

The township school law seems to be a serious bone of contention at present. The more it is discussed the better acquainted with its provisions will the people become. I desire at this time to discuss one phase of our school system and the township law in relation to it, and that is the financial. In an editorial in your issue of the 15th you compare the tax rate of Jamestown and Harmony and say that it would seem as though the rural schools could be run cheaper. The writer is not familiar with all the facts in relation to Harmony but as chairman of the Villenova school board I can give some facts and figures in relation to that town which would likely apply with equal force to any rural town.

Villenova has eleven schools with twelve teachers. The total registration is about 130 pupils and the average attendance would of course be slightly less or not to exceed 10 pupils on an average to a teacher. Owing to the compactness of its territory, Jamestown would be able to teach that number of pupils with five teachers. The wages of a teacher are the same,

no matter whether there are two pupils or 25. It costs as much to heat the school house, make the necessary repairs, give janitor service and pay the other incidental expenses, in a small school as in a large one. If Villenova were able to place all her pupils in five schools and eliminate the other seven schools the tax rate for the current year would be five dollars on a thousand. Or in other words, give us the same compactness of territory that Jamestown has and we would educate the children for half the money. The writer has known of more than one school that has been run with two pupils and schools with from three to six are not at all uncommon. The two pupils have a right to an education, but it is expensive to say the least to pay a teacher say \$12 a week and the other incidental expenses for that number of pupils.

The present boundaries of school districts were defined when farms averaged small in size and families large in number and rural population was about double what it now is. Any person in middle life can easily remember when most rural schools had from 30 to 50 pupils in the winter and the same schools now have from two to 10. Probably one-half the rural teachers of Chautauqua county could easily teach all the pupils. Possibly if they were consolidated to that extent it might inconvenience some, but it is safe to say with some rearrangement, possibly in a few cases move a school house or build a new one to make them more central, that at least one-third of the rural schools of Chautauqua county could be eliminated with no serious inconvenience to any one. This would eliminate one-third of the taxes, one-third the teachers would be released for other work and the pupils would be much better off for it is well known that the hardest job any teacher has, is to keep up the interest in a little school with less than a dozen pupils. If taxes seem high this matter should be given serious consideration.

Most of the objection to the township law seems to be the so-called increase in taxation. There has been some increase in some districts and a reduction in others. It has been equalized and very properly so, too. The most flagrant injustice in our whole taxation system has been the manner of obtaining the funds for running the schools. The taxpayers in high school districts have been educating high school pupils from the rural districts for \$20 a year (paid by the State), when it has been costing them upwards of \$50 and pupils in the grades that come in from the outside for eight or \$10 which has cost them around \$40. The rural taxpayer has got this benefit at the other fellow's expense. In the towns of Chautauqua county bordering on Lake Erie in the districts bordering on the lake, the bulk of the school taxes have been paid by the trunk line railroads, trolley lines, trunk telephone lines and gas lines. Why should not the taxpayer in the back districts of those towns receive part of the benefits from these foreign corporations? It is as just that the township should be made the unit of school taxation as for other taxation.

There has been however some actual increase in taxation this year but it is usually unjustly laid to the township law without any investigation.

In Villenova every teacher gets from one dollar to three per week more than the teachers in the same schools last year and mind you not a one of them get any too much. This actual increase amounts to 17 per cent of

our total tax levy. These teachers were nearly all hired by the old trustees before the township law went into effect so that the law nor even the present board are responsible for this increase. Should we go back to the old system the wages would go down. This is the first year we have had to raise money for a physical training teacher; the cost of making ordinary repairs has increased 50 per cent or more; all the common articles used such as flags, brooms, pails etc., have doubled in price. For none of these items is the township law responsible. In fact the only money that has been raised or spent for which this law is responsible is the following: Salary of clerk of the board, salary of treasurer of board, and a complete set of books (which will last for a term of years) so that all the acts of the board including their source of revenue and their expenditures may be kept in a comprehensive way so that any taxpayer may see just what has been done at any time. The total of these items of expense is \$152, a very minor fraction in the tax levy, and certainly too small an amount upon which to ask for a repeal of the law. Probably the facts as brought out in relation to Villenova would apply with equal force to any other rural town in the county. The calm observer will recall Mark Twain's story of how in the early days of the west a mob caught a supposed horse thief and while they were placing the noose about his neck and the other end over a limb of the nearest tree, some one with a reflecting mind suggested that as they had ample time they better try him before they pulled him up to make sure that they had the right fellow. But the mob shouted as one man, "Hang him first and try him afterwards." The same tactics are being resorted to in relation to this law.

H. S. SWEETLAND

South Dayton, Dec. 27.

— *Jamestown Journal*

Higher School Tax Due to Many Causes

There is considerable dissatisfaction with the new township school law growing out of the increased taxation. On all sides are heard criticisms of the law because of the increased amount of taxes. A study of the matter shows that the additional taxes are not due solely to the law but to many contributing agencies. These have been summed up and are here presented.

(1) The burden is evenly distributed. The town boards had no balance on hand Aug. 1, and in other years many districts have carried considerable balances.

(2) There are additional expenses — made by the law — such a clerk, treasurer etc., for salaries.

(3) An expense not made by the law — Physical training teacher has been employed by the town board in compliance with the law. The State will at the end of the year pay back one half of this salary. However, teachers' salaries must be paid monthly and the board had to include this in the budget.

(4) In making up the budgets, many town boards assumed that the State would not pay the tuition of any pupils residing in the town and added this amount to be made up by taxation. The boards had no information on this point and the step taken was the only logical one to be made. The State

will pay such tuition as heretofore, and has decided that towns must pay tuition for pupils attending in towns other than that in which their district is located. This will amount to a considerable figure in many towns.

Thus more money has been raised in many instances than will be used and a handsome balance will be held over for the next school year.

But as to the outlook for a reduction in taxes, this is less bright, as it is apparent that because of the scarcity of teachers, wages will be much higher and on doubt offset the balance on hand and state monies. There is a shortage to be faced of teachers apparently from 25 to 50 per cent and if the school standards are to be maintained the only way to bring about a general relief is to increase the salaries and hold those teachers who would otherwise be drawn away by more lucrative compensation for their services.

To add to the burden imposed by the educational system there is the increase in both fuel and supplies cost.—*Sullivan County Democrat, January 1, 1918*

Township School Bill

The Brown township school bill was passed by the State Legislature at its 1917 session has aroused the antagonism of people throughout the State and the chances are that at the coming session attempts will be made to repeal it. To say the least, the law is an experiment which has only been tried successfully in one or two other states of the Union—and in none in exactly the form in which it was adopted for this State. As soon as it went into effect it resulted in raising the school taxes in directions where there had not been any considerable expenditure for school purposes but which were in the same town with districts where there was a considerable school debt. Whenever the pocketbook is hit, people are liable to have their ability to appraise other values properly paralyzed to the point where they are unable to recognize those other values real or possible. In the case of the township law, it is urged that there has not been enough opportunity given to determine just how the law will work out. Educators of the highest rank maintain that in the end it can not fail to be appreciated if given the proper chance to work itself out. There should be, of course, no need in these times to spend more money than is necessary to accomplish results, and if the township law imposes extra expense which is not compensated for by improved service it is contrary to the spirit of a period of necessary economizing. On the other hand there is no place where we can so well afford to spend our money as in the education of our children and if the Brown law accomplishes better results, especially in rural education it would be a short-sighted policy to repeal the measure even if it does impose higher taxes on part or all of the school taxpayers of the State.—*Genesee Republican, January 3, 1918*

Writer Vigorously Defends New School Law

Mr Editor:

We noticed the item in your paper last week to the effect that school taxes had been doubled; we do not think that your item is just or fair to anyone and it reflects on the present management of the rural schools of this great State.

It is true that some taxpayers will find their school taxes much higher this year than they were last, but they are only getting their just dues in that; the matter is like this: Some years ago towns bonded themselves in building the O. & W. Railway to Delhi. Although these bonds are drawn on the whole town and every taxpayer had a part in meeting them, only those school districts traversed by the road got any benefit of the taxes paid by the railroad. Under the new law the railroad tax is equalized and every district fares alike. For the very same reason that river districts find their taxes increased, the back districts find theirs decreased.

In this new law this State is only following other states. Whilst we ought to be leading, Mr Editor, we are following, for the state of Ohio made the town or township the school unit more than twenty years ago and a few years later directed that the town board of education should consist of five members. There is no talk of any backward steps in Ohio and you will find that school conditions in rural districts there are much better today than they were years ago, for there are better buildings and better oversight than ever before. The state of Indiana, years ago, made the town or township the unit. There one trustee has oversight of all the schools of the town, just as the supervisors have oversight of town affairs in this State; no one hears of any backward steps in the great rural state of Indiana.

In some of our rural districts there is not enough local pride to shut the schoolhouse door and this sort of people are the ones who talk loudest about fighting the new law, etc.

It is a fact, Mr Editor, that many cow barns have been built and many others made as warm as possible, in late years; many of these are well ventilated, but it is a rare schoolhouse that has any other ventilation than a hole in the foundation, a loose piece of siding or an absent window pane. We recall attending a meeting in a Delaware county schoolhouse where there was a man who was over seventy years of age. He looked the ceiling over and looked about the room and said: "This is the same schoolhouse that I attended when I was a boy." Yet there was not a single barn in use in that neighborhood that was as old as that schoolhouse, and there the farmers took pride that water would not freeze in their barns on the coldest nights; think more of their cows than they do of their children, who spend a large part of every twenty-four hours for nine months in the schoolhouses.

We see barns with concrete foundations, others are banked carefully to keep out the cold, but how many of the rural schoolhouses are looked after in that way?

We heard one farmer, who lives back from the railroad, say, "That law requiring indoor toilets for schoolhouses is all right." That man evidently thinks his children worth more than his cattle.

We would like to ask what wisdom there is in maintaining schools within a mile of each other. Is that a wise use of taxpayers' money? Yet that is what towns have been doing for years.

Ohio and Indiana rural districts are two miles square so that schoolhouses are at least two miles apart; how much longer is a mile in Delaware county?

One school board found a school with a house, the siding of which was off in places, roof badly leaking and window glass out, the foundation was open, they found that two of the children were about half a mile from

another school and that the other three children were, by going cross lots, nearer another school than their own, therefore that school, having no teacher, was suspended, making a saving to the State and taxpayers of approximately \$400. Another board found that one of their schools had been attended the previous year by no more than two children and that a large part of the year there was only one, therefore they suspended that school and transport that one child to a nearby district, a saving to the taxpayers.

The boards found that many of the teachers had been hired at increased wages; they found that fuel contracts called for more money than in other years; they could hardly do anything but assume those contracts; they could not annul the schools. Undoubtedly there will be saving in the future in consolidation; there will be better school housing and there will be better apparatus, for this great State is not going to take any backward steps.

The law calling for indoor closets or toilets was enacted before the new boards were elected; all the new boards could do was to comply with the law.

We are suspicious, Mr Editor, that the farmers who kick, are the "curb-stone, noteshaving sort," that they are those who have already had their children schooled or else they never had any to school, or they are some of those who live along the O. & W. Railroad who now, by a just equalization, see their school tax put where it belongs.

The average Delaware county farmer is not thinking of discarding his mowing machines, his hay tedders and rakes, his reapers and manure spreaders, his corn binders, reversible sulky plows and other machinery; neither is he thinking of the schools that were good enough for his father and mother; he is wanting something more modern and more up-to-date and he is going to cooperate with other average farmers in getting it.

Mr Editor, we invite you to move to the country, send your children a mile or more to a schoolhouse with the sizzling green wood fire, with a siding off the house, cat holes in the foundation and window glass out, a leaking roof overhead. We dare say that in this zero weather, you would not last more than a week, but you would hike back to Delhi, where the taxes are probably higher and where you would have some modern conveniences and apparatus.

Mr Editor, I would like to help catch some of those kicking farmers and I would like to help put rings into their noses and to lead them into some of our rural schoolhouses and chain them up so that they might enjoy some of the things that "were good enough for Pap and Mam." They would bellow like the bulls of Bashan in a few hours and beat it back to civilization as soon as they could be loosed.

"AU REVOIR"

The writer adds a postscript which is herewith appended, as follows:

This State is just getting awake to rural school conditions; it has been asleep along those lines, but when the State gets right wide awake there will be something doing and we will have better rural school facilities than some of the states that are so far ahead of us now that they can not see us for the dust.—Wish you a Happy New Year.—*Delhi Republican, January 5, 1918*

No Friend of Red Schoolhouse

To the Editor of the Democrat and Chronicle:

SIR: In a letter on rural schools your Union Hill correspondent makes several statements which call for reply. Any law the object of which is to improve rural conditions ought to have the sanction of the farmer and rural real estate owner, even though it involves an increase in taxes. A matter of such vital importance as our rural schools should not be left to itself for the duration of the war simply because it is going to cost a few additional dollars in taxes. The burden imposed is not heavy and the benefits secured are many and of far-reaching importance.

The new township school law is a step in the right direction and the thought of turning back should never be entertained by a wise and progressive people. The small expense occasioned by the salaries paid to the clerk of the board and treasurer is negligible when applied to the township as a whole, and is calculated to be offset by greater efficiency. Under the old system each school was operated independently of the other schools in the town. Under the new system all schools of the township are controlled by one board of education. It has centralized the governing power which is certain to result in bringing our rural schools up to the highest point of efficiency possible in such schools. The work is unified in every respect and at the end of the year it will be possible to point out the strong and weak schools in each township.

Complaint is made that rural districts have now to help pay the expenses of high school districts. This is true in towns where high schools are brought under the operation of the new law, but in towns where this is not true complaint is made that those living outside of the high school district have to pay tuition for high school privileges. The ideal arrangement is where the township is made the unit. Then any poor boy or girl can avail himself or herself of high school privileges, and the expense of such schooling is a proper charge against every dollar's worth of property in the town, the same as when a new bridge or town hall is built.

The "little red schoolhouse" is out of date and has been for many years. Our entry into the war has brought out one very vital fact regarding our rural communities. Under date of December 22, 1917, the *Country Gentleman*, the farmer's own paper, has this to say editorially about rural conditions: "The United States Public Health Service presents a serious indictment against the rural communities which have failed to provide for the health of their children. Seventy-five per cent of the defects which have barred young men from rural districts from army service were caused by unsanitary conditions in the rural schools. Such defects as poor sight, flat feet, bad teeth and underweight, appeared in alarming numbers when young men from the cities and towns were examined. Seventy-five per cent of the most seriously afflicted came from the rural districts. Robbing children of health and opportunity will not be tolerated any more than German autocracy."

The new law strengthens the arm of the State Department of Education which is now in position to demand that the conditions complained of in the editorial, which have been a menace to the health and morals of our children

for so many years, be discontinued. We, who live in rural communities, would do well to heed this timely warning and make the necessary changes on our own initiative.

Your correspondent sees the day when rural schools will be consolidated but would postpone it to a time when our highways have been improved to facilitate transportation of the children. I am quite sure that the consensus of opinion of the people of the State would be that our highways are now in condition to insure transportation of our children in safety and comfort. Every day that we postpone the improvement of the rural schools we do so at the expense of the efficiency of the State and Nation.

W. L. TITUS

Irondequoit, N. Y., Jan. 7, 1918

—Rochester Democrat and Chronicle, January 8, 1918

Education Law Cases Pending

Geneseo, Jan. 8.—(Special.)—A number of actions are now either pending or soon will be in Livingston County Supreme Court, to combat the new education law of New York State, which compels the farmers to support by taxation village school districts in return for the use of the latter schools. The new law, in fact, threatens to do away entirely with the picturesque and practical district school, by organizing a scheme under which the "town school unit" does away with school taxation by each district of the property in its own confines.

The farmers' two main objections to the new law, so far, are that the advantages the comparatively expensive village school district may afford in cases where children live some miles from town are practically inaccessible to them because of the difficulty of getting the youngsters there in bad weather, and the further objection that the new law compels them to pay for village school improvements they did not vote for, thereby raising their school tax rate several fold and in some cases as much as five fold. One local man who owns extensive farm lands in Caledonia has had his school tax, thanks to the inclusion of the \$50,000 Caledonia High School expenses in the budget, raised from less than \$200 to about \$700.

The farmers in the county have heretofore educated their children up to the point where district school leaves off, at an average of less than \$2 per \$1000, and then sent on their children to village school on a tuition basis where they wished to advance them further. By that arrangement the extra cost of advanced schooling was paid only by those who availed themselves of it and not by those who were unable to.—*Rochester Times, January 9, 1918*

Maintain Town Education Law

The plaintive cry that the little red schoolhouse is being wiped out by the new town board of education law should deceive no one. The little red schoolhouse is being far better cared for under the new law than ever before. The school property is being kept up in better shape, the schools are being run more economically and a higher standard of education is being main-

tained in all of them. There is an opportunity given even the poorest pupils to get the benefits of an academic course at any of the nearby high schools of the town free of expense to themselves or their parents.

The men and women serving on these town boards are in most instances persons versed in educational matters and better qualified in most cases to manage the schools than the farmers and others composing the old district boards, who had very little time to look after such matters.

The effort now being made by the politicians in some of the up-state towns to have the law repealed this winter should be defeated. We believe the opposition to the law has largely died out in this section and we trust that our Long Island representatives at Albany will oppose strongly any attempt to repeal the present law. It may require some amendments to perfect it, but there should be no backward step. The law is in the best interests of the children of the rural districts, who are to become the future citizens who will take an important part in the management of the affairs of the commonwealth. They should be enabled to get as good an education as the pupils in the city schools.—The Long Islander, Huntington.—*Greenport Republican Watchman*, January 10, 1918

The Township School Law

Out of all the criticism and discussion of the Machold school law two things are becoming quite evident: 1. That people interested in rural schools are thinking as they have not been in the habit of doing; 2. That whatever is done about the Machold law, whether it is amended or wholly repealed, we shall not go back to the old district system we had before. No sensible person probably expected the new law to be perfect, but whether it can be perfected or must be replaced by something different, the signs of the times quite plainly indicate that the rural school question in this State will never be settled until we get a good, progressive, up-to-date system, whatever that shall finally prove to be.

It is always easy simply to find fault without pointing out any sure remedy; good, constructive criticism is all too rare. But the review of the Machold law in the *Rural New Yorker* of Jan. 26th, by Mr Richard Hall of Dunkirk, N. Y., is worthy of careful reading by every rural school patron. Mr Hall says: "Before the passage of the bill I devoted much time in debating the merits of the township plan with various state officials, and did everything possible to prevent its enactment. There are, however, some good points in it, and I believe in amendments rather than an outright repeal." Mr Hall makes very frank criticism of some of the present requirements in rural schools, and suggests some radical amendments of the law, but we earnestly urge both friends and opponents of the township plan to give his article careful study.—*Sandy Creek News*, January 31, 1918

The favorite camouflage of those who would perpetuate the district system of school administration in New York State is to pour into the ears of an unsuspecting and romantic public a silver stream of fervid eloquence on the wonder and glory of the "little red schoolhouse." The fallacy in their argument against the township law is the contention that the "little red schoolhouse" and the district system are inseparable. That the district school system was one of the chief glories of colonial New York, serving

at that time as a suitable expression of the educational ideals of a pioneer people willing to do their best to provide for the perpetuation of the intellectual and spiritual life of the colony, is looked upon by those who would continue this system into the twentieth century as a justification of their position. But the public school is the only institution to which they are willing to apply this argument. In other matters men of broad vision are content to preserve the indomitable spirit and high idealism of colonial days, and give this spirit and idealism opportunity to express themselves through the avenues of twentieth century efficiency in organization. But in rural school administration there is a determination to adhere to colonial inefficiency in organization as exemplified in the district system, even though it is apparent to the most casual observer that the perpetuation of the colonial organization has no relation whatever to the preservation of colonial educational idealism. If we can but retain and perpetuate the devotion to the cause of education that was responsible for the district system, we can safely dispense with the district system itself. This early devotion to education found expression in New England in the establishment of her first schools under the township system; but later, in 1789 the district system was legalized in response to the same sort of sentiment that is now clamoring for the repeal of the township law in New York State. Of this law of 1789 establishing a district system Horace Mann, one of the greatest of educational statesmen, said that it was "the most unfortunate law on the subject of common schools ever enacted in the State." A return to the district system in New York State at this time would be even more unfortunate. Let us learn to distinguish between democracy and provincialism in education.

WALLACE J. ANDREWS

District Superintendent

—*Kingston Freeman*, January 11, 1918

Township School Law Is Defended

A correspondent writes the *Press* in defense of the much condemned township school law and asks that his statement be published. This the *Press* is pleased to do, it being the policy of the "brightest daily" to open its columns to both sides of all questions. The correspondent writes: "Everywhere we hear complaint about the new township school law because of the increase of taxes. People ought to consider that everything is costing more than it did and that the town school boards are doing things for the districts that they would not do for themselves. Many repairs were made by school boards this year which should have been made from one to five years ago and even more.

"It is simply a case of letting everything go as long as possible and then having many repairs necessary. It is true that many districts would have gotten along without repairs or extras, but they shouldn't. If you don't believe in advantagement, why didn't you stick to the old log house. Other things besides the township law have increased the taxes. Everything is higher and consequently the teacher must have more pay in order to live. Coal is much higher in price. School supplies have all increased. Even a broom now costs a dollar.

"This new law will bring about better buildings. The State will require sanitary toilets in all buildings by September 1918. Boards are now putting them in where repairs were necessary. This is one new item of expense. I hear you saying, "The old outhouse is good enough." It might be if it was kept in decent condition, but it is cleaned once a year or once in two years, the door with a panel out is often hanging on one hinge, and the fence is falling down. Are these outhouses places to develop good morals? Not as anyone knows of. It might do some people good to pay a little more attention to their school. It might not be so hard to squeeze out an extra dollar or two tax.

"Now, let us go to the inside of the schoolhouse. Would you want to spend six hours every day there? Now be honest about it. At the back of the room is a stove with the grate broken and a crack clear around the fire-box. This attempts to heat the building. It all depends on where you sit and the condition of the weather. If you sit near the stove you roast and if over in the farther corner of the room you freeze.

"Perhaps in the afternoon it gets warm enough in all parts of the room. This may be occupied by twenty children. There is no ventilation except when someone passes through the door, so by night the air is so foul that it isn't fit for anyone to breathe. Some of these farmers who object to a ventilating system in the school, instal them in their barns for their cows. Isn't a child as good as a cow? These heating and ventilating systems have been installed by the new trustees where they have found a new stove needed.

"This new law will bring better schools. With one trustee, there is very little consideration of the applicant for a position. The best help if any was necessary, was to the 'man of authority.' Now, it will be necessary to apply to a whole board and if the teacher is a failure, three men are now liable to the consent of employing the said person; there will be a certain amount of consolidation follow from this new law.

"Now, don't misunderstand me. I said a few schools. Is it advisable to maintain a school of one or two scholars? Anyone who has experience with schools will tell you that children in the larger schools do better. There is more of an incentive to work, as there is competition. Remember, these schools do not have to be closed forever, but

"A great argument of the people opposed to the law is so hard to get supplies for the school. How about the old system? How about a trustee that said that one box of chalk and one broom were enough for one year? How about the flagpole that went for months without being fixed, until the teacher had to get one of the big boys to do it? How about the many rural trustees who would not buy books for the library? Most of these old trustees didn't want the position, and if they had it they tried to get along with as little as possible. Their main object was 'a low tax rate.'

"One great objection is the bonded indebtedness of the union free school districts. It seems hard to do, but remember when you build that new building which you need that the rest of the town will help pay for it. Also, remember that you have the privilege of using it without tuition fees. Some will say that they live too far away. How about the normal schools and colleges then? You are helping support them, but still all of you are not sending children there.

"The first of last August the township board of education came into office with a lot of rural schools in bad condition on their hands. They will not always get the work done as cheaply as they could because it had to be rushed. This school needed a new door, that a new flagpole, the next one new desks, and so on, until they had made the repairs needed for the last five to ten years in all the districts of their town. At least give the township law a trial and see if it won't work out to the advantage of education as it has in other states."

"R. H. D."

—*Lockport Niagara Press, January 17, 1918*

The Township Law

To the Editor of The Knickerbocker Press:

SIR: Although by the old system the trustees seemed all-powerful each school was overlooked by a district superintendent who has done much to raise the standard of the schools. She has stood between Albany and our schools to see that the syllabus was followed by the teachers and that the schools had needed supplies. Little troubles between teachers, trustees or parents have been adjusted by her very fairly. As to our schools being failures why should city high school teachers say, "Our best pupils are from the district schools?"

As to the schoolhouses, the situation is no better. It is worse here. The teachers dislike to nag the boards where they had only to speak to the trustee. Broken locks, broken windows, schools without brooms or chalk are common now.

As for teachers. Three close friends are teaching district schools and two will not teach under the township system longer than this year. We will lose all our good teachers, some of whom have been employed for years.

Some boards pay all teachers the same whether schools are large or small and whether the teacher makes good or not. This salary is less than good teachers can get in the city and when a good teacher leaves the country she seldom comes back.

Some districts in this section have paid big salaries to keep the same good teacher and I doubt if any of these come back as their salaries will be lowered, some of the districts not being represented on the board.

As for politics. It seems to be the politicians that are running things here and the \$400 paid to the clerk must be considered velvet for so many wanted it. If that could be divided among the teachers it would help get better teachers. When many people are looking for a position isn't that proof the position is desirable.

I visited a grange; about a hundred were present and when a paper was read closing with, "Let us all work for the repeal of the township school law," the applause was deafening.

All mothers dislike the new law if they live any distance from the proposed new schools. They know it means trouble and increased burdens; also a minimum of education for their children. This creates bitterness and unrest. It will hurt farming in the back districts. No tenement house will be occupied by a married laborer. His wife will object to living where her children have to go six or seven miles to school and perhaps walk a mile or more to meet the auto.

Could you imagine Governor Whitman allowing his little daughter to walk a mile on country roads in this weather, then stand and wait for the bus? Then be in school from nine to four and get home late after another walk. The country mothers feel grateful for his realizing that children can not endure these hardships.

I am as careful of my children as any city woman and there are many others who bring their children up carefully. Somehow a crowded bus don't seem attractive either. I could not trust my children to ride alone.

We rent a farm and expected to buy it in two or three years. We will not if the central school is built for our children must be educated without risking their health and morals. A central school will mean the children from the remote districts will lose much of their chance for an education, but it will be fine for the ones near the village.

Here, the proposed school is in the village, not far from the city. The children below always attended the city schools when old enough. They will be near a graded country school and city schools. It does not seem to matter that many of the children will have to go seven miles each day. For our children? No! We will not buy a farm until the law is repealed. We will move to the city where education is easy.

Farm property in the remote districts will lose value also.

I wish I could put on paper all the bitterness against this law. I do not know one farmer who likes the law if he is not on the board and the boards seem to have no children in the schools.

It gives a great opportunity for the board members to pay off grudges also. The trustee had to please the people.

Why not help the district schools a little more and not let the farmer feel too bitterly the feeling of taxation without representation.

The old way could have been improved but the new law is creating bitterness and discontent among the really rural districts. It is a death blow to the education of those who live "back."

A MOTHER

—*Albany Knickerbocker Press, January 17, 1918*

A Rousing Meeting Is Promised Today

Interest is increasing in the public meeting called for 3 o'clock this afternoon in the common council chambers in the city of Amsterdam, to discuss the various provisions of the new education law and their effect upon the schools and the taxpayers of the rural districts. Assemblyman Davis, who was on the committee, and who supported the measure in the last Legislature, has been invited to be present and give those who attend the benefit of his knowledge of the law.

A prominent granger is authority for the statement that the State Grange never favored the passage of the bill, and that the attempt of the supporters of the unpopular measure to place the blame upon the shoulders of the grangers is not going to work.

The general opinion seems to be that there is behind the measure a big scheme for graft and that the farmers of the State will be heavily taxed for needless changes which are being foisted upon them in the name of sanitary improvements.—*Randolph Register, January 18, 1918*

Demands Repeal of Township Law

To the Editor of The Saratogian:

Your recent report of the speech by a high salaried state department official, one whose salary runs up into thousands of dollars, one would imagine that he ought to be all that your reporter and the spellbound officials of the Westminster Club give him credit for. To say that Saratoga county farmers are indignant at the light in which they are placed is to use too mild a word.

Is it not strange that the Education Department is pushing out their best talent to defend a law to highly cultured city audiences of which they were so proud to have lobbied through the last session of the Legislature.

We are indeed glad that like the supervisors of many counties of the State you are ready through the *Saratogian*, always to give your farmer friends a square deal, and represent them in spite of their ignorance. It is the purpose of this article to try to show why the speaker at the Westminster Club was so anxious to protect his pet.

First of all the Saratoga county board of supervisors by a very large majority vote condemned the so-called township system school law, and demanded that our representatives in the Senate and Assembly work for its repeal.

Again in spite of the fact that three of the four rural school superintendents of the county are members of pomona grange, a resolution recently passed by that body demanded that their delegates to the State Grange work untiringly for the repeal of the same law through that body. Poor, weak, ignorant, "rural people" are drawing the fire of the Germans to say the least. It would look as though it would be wise for the Department to get out all their forces in "massed formation" for the boards of supervisors of Onondaga, Broome, Wyoming, Delaware, Chenango and other counties have passed resolutions urging their representatives at Albany to work for the repeal of this obnoxious law, that was put over late last year upon the country people. The writer is reminded of "Billy" Sunday's booze sermon by the great anxiety of our fat-salaried friend for the country people. "Billy" Sunday says: "Whiskey people don't care anything about resolutions, but it's when they see some resolution that they spring their model license gag."

The rural people of the State are showing some resolution and some folks are some scared.

Now why take time and space to express our dislike for this law?

First of all we are not German peasants and do not propose to be unjustly discriminated against by politicians from Albany or Berlin without protest. A few Saratogians will recall without effort the barge canal scheme—a scheme that was never intended to move coal or foodstuffs from a practical standpoint, but to create a large political patronage to feed at the public crib, and the taxpayers pay the price, but the barge canal schemers had the decency to give every voter in the State an opportunity to record his convictions.

Not so in this case, but a law pushed through by a wise(?) department.

The speaker raises his hands in holy horror and asks why should they object to sanitary toilets, and goes on to say that there are many school-

house toilets in rural communities that are a menace to the children's health and morals. Now the facts are that the law referring to sanitary and separate toilets was sent out to the school districts of the State in 1888. What a confession of the weakness and laxity of our rural school superintendents if the law is not enforced, for during all these twenty-five years they have had the power to withhold the public money from any district with the approval of the State Department.

Now we protest that the farmers of New York State have always paid their taxes without any organized protest if they could see any reasonable benefit to come from increased taxation. Our schools show no visible improvement. But the average farmer is usually bright enough, although he may have been swindled into trading off his good, tried and true farm-horse for a high stepping roadster, that will not do his work nearly so well, and costs 100 per cent more to feed, to swallow his loss, by disposing in some way of the roadster and again secure a horse adapted to his business.

Again we quote: "We give the children no choice, the strong arm of the State says they must go to school and to the parent, you must send them to school."

This magnetic speaker would have you believe that the compulsory education law was a part of the abominable 1917 rural school law.

The compulsory education law for city and country alike went into effect in 1895, and following the allusion to these two special statutes of the last century, he very eloquently says it is time for an antediluvian system to give way to some modern system. If the assets of the benefits of the 1917 law were not ninety per cent liabilities, we poor, ignorant folk would submit to an added cost of from fifty to one hundred per cent, but as it is we poor, long-whiskered "rubies" have decided to make a protest that somebody will see and feel, and we are in distinguished company, for James Wadsworth, United States Senator from the State of New York through his attorney, Elihu Root, has brought suit in the Supreme Court at Rochester, attacking the constitutionality of the law. Now we confess that we don't know anything about the constitutionality of the law, but we would like to point out some of the inconsistencies of the workability of it. Our distinguished speaker points out that these township boards of education were elected last May by the school trustees and many of them are of the same trustees now working in the several boards. This time he tells a whole truth, but let me tell you that during this first winter when these patriotic fellows are called out by the president of the board to drive six or eight miles, taking fully seven hours to settle some necessary work that he could easily have done in seven minutes as trustee of his district; when you come to consider that these men are expected to give their time and pay their own expenses, that they are beginning to feel that "the other fellow" can have it next year.

And the elections are to occur on a special day in May! In May, when the patriotic farmer is working sixteen hours a day to try to keep up the food supply of the nation, he is to leave his work undone and take the greater part of a day to go to vote at a special election. Well again our friends (?) very well know that the election of the town board will be carried by the little manufacturing village where men work eight hours a day and have some time for politics, and in a very short time the State

Department through their representatives will elect whom they please and the farmers will pay the tax.

Certainly there are some districts that could safely be consolidated as has been done for many years, but when it comes to consolidation of townships, for primary and grammar schools in townships where distances run eight and ten miles, there are problems of politics, money and morals and health, that we seriously fear that our city friends have not considered.

Our friend, the speaker from Albany, with a veiled slur, says that formerly the supervisors got one per cent for checking out school monies, and he notices that some supervisors are against the law. Yes, and supervisors are still getting one per cent for handling certain school monies, and the dear "rural people" are paying from four to ten hundred per cent more for the operation of the present law in the handling of the monies by the clerk and treasurer of the boards. Some reason for a firm protest. But this law is thrust upon us without a voice or vote, and again in the name of democracy we shall fight the Hohenzollerns to a finish whether they hail from Albany or Berlin. We cordially forgive our friends of the Westminster Club for unwittingly circulating unpatriotic propaganda, but again we submit that their bump of credulity was more highly developed than the rural people whom they are trying so hard to help.

POMONA GRANGER

Wayville, Jan. 28, 1918

—*The Saratogian*, January 29, 1918

In Defence of the New School Law

Editor, Marlborough Record:

The following was written in answer to Supervisor Sagendorf of the town of Woodstock, whose letter with clippings from the *Rural New Yorker* against the Township school law appeared in the *Kingston Freeman* of January 16:

I wish to answer that the strongest argument in favor of the new law is the supervisor's own statement, "that in his town the average tax rate, under the old law was six mills, and under the new, eight mills."

Now, will the supervisor kindly tell of a single thing that has not risen in price more than two mills on the dollar in the past year?

The new township law is correct in principle, that the tax rate should be the same in all districts of the town.

Why should a person living in a district with a large assessed valuation and a small school pay more than a person living in a small district when the expense in maintaining the respective schools is practically the same?

Take, for instance, two districts in this town (Marlborough), one with an assessed valuation of \$37,000 and the other with an assessed valuation of \$101,000; for every dollar of tax paid in one district, in the other district you would have to pay \$2.75.

Our town, county and state taxes are assessed on the town as a whole and why not the school tax?

In this town all but one of the new trustees were elected at the district school meetings held last May and only one in a district. One district having no local trustee.

Again, the West Shore and Buffalo Railroad run through districts one and two, paying this year \$660 tax. Is it "equitable" that districts one and two should divide the sum? Do not the other districts contribute to the income of the railroads and should not they receive some of the tax?

But the main objection to the law is the increased expense—increased mainly by the evening-up process, and the opponents of the law are largely in districts with a large assessed valuation and a small school.

The necessary increased expense in this town is \$325 for clerk, treasurer and election expenses, which on an assessed valuation of over \$766,000, is trifling—all other expenses should be the same and allowing only for everything being higher.

The new board bought brooms, coal, chalk and erasers at wholesale prices, which would reduce the extra expense above stated.

The new board made the estimates to cover the different items of expense as near as they could—it seems now as if in some of these items, there will be a surplus, if so, less money will be needed for next year.

In some of the clippings I read: "That though the expense is greater, no better educational results have been obtained."

At the time this was written only three months had elapsed and is it possible to see better results in that time?

The only valid objection to the law, as I can see it, is that some districts have no district representation in cases of emergency.

No law was ever enacted that did not need amendment, possibly an amendment providing for a larger board in towns having ten or more districts, would be better, and that only one member of the board should reside in a district.

The time has come when you can not expect your school trustees or any one else to work for nothing and board themselves. It is all they can reasonably be expected to do is to act as trustees and have all clerical work paid for.

The fact is, that this law will be just what the school electors make it, and if it does nothing else than to make the voters come to the school meetings, and take an interest in school matters, it will not have been passed in vain.

The states of Maine, New Hampshire, Vermont, Massachusetts, Rhode Island, Connecticut and Pennsylvania and most of the western states have adopted a similar law.

In conclusion, let us all take more interest in the education of our children and help in every way possible to improve our educational facilities, casting aside the mere item of expense.

Opposing the School Law

At a meeting of citizens, held in Canandaigua on Saturday, an organization was perfected, having for one of its objects the repeal or radical amendment of the recently enacted township school law. Charles Reese of Clifton Springs was chosen president, with Mrs Howard Converse as secretary and

J. B. Gates as trustee, and a vice president for each town. Meetings will be held in each town on Saturday to take action in regard to the school law, and choose delegates to attend a county meeting to be held in Canandaigua on February 9.—*Phelps Citizen, January 24, 1918.*

Favors Repeal of the Township School Law

To the Editor of The Morning Post:

During December several letters on the township school law were published in the *Morning Post*. In one of these the writer says "the law specifically states that a school law shall be maintained in each district and that a district can not be consolidated without a majority vote of the district in question." Now, I believe the first part of this statement to be an error and hoped to see it corrected before this. True the very first article of the law prominently provides that district boundaries may be maintained, but farther over in the law the town board of directors is given the power to conduct schools where they see fit and transport pupils to these schools. As some one has said: "What good are district boundaries without a school?"

A large part of the opposition to this law coming from the men and women of the farms of New York State lies in the fact that it is a consolidation law when sifted out. These fathers and mothers believe that the best school for their children is the small one near home and mother, located in the open country, where the contaminating influences are least and the teachers' control can be most complete. They believe that the results obtained in good habits and scholarship in these schools show them to be desirable. They also believe that the kind of school that is best for village children is not the best for theirs. They believe that this law provides for a yoking of diverse interests and that under the provisions of the law the control of the town school board will naturally gravitate to the village. This will harm the good feeling which now generally exists between farm and village.

Further, the law provides for an equalization of taxes which they believe should not be exactly equal. The resident of the remote farm should not pay as much toward the support of the high school as the person who has it right at his door.

For these reasons and more we demand the outright repeal of this law. We do not believe in the foundation principle of the law. It is not just to ask us to give it further trial. It was enacted against our wish. Its prompt repeal would cause a much smaller upheaval of the school system than a later one.

Let not the reader think that country people do not desire changes and improvements in their schools. One has only to live among them to hear them constantly spoken of. Among these improvements desired are: Special schools for the training of teachers of country schools; improved qualifications for superintendents and a better method of electing them; provisions for winter terms in some of the schools, so that those older boys and girls who cannot go the full year may attend; and a means of making more uniform tax rates which are more than township wide and at the same time retain local control of schools.

BENJAMIN PRINGLE

Stedman, Jan. 22, 1918

A Teacher Talks

My dear Mr McIntosh:

I have read with a great deal of interest the articles recently printed by you in regard to the township school law, and have also observed that the rural newspapers are nearly all considering the question of whether or not it should be repealed or amended at this session of the Legislature. As a teacher in a rural school I think that I have a right to be interested in this question from the standpoint of the teacher. As my father is a taxpayer and consequently bears his share of the expenses of running the schools I think that I also have a right to be interested in the question from the standpoint of a taxpayer. Personally I want with all my heart to see the country schools of New York the equal in every way of the city schools. Working as I do with children every day I have become acquainted with their hopes, their ambitions and their plans. I want to see these children have a chance, the best possible chance to make something of themselves, and I want to see them have that chance regardless of any reasonable expense, consequently I believe that the township law should not be repealed but should be left as it is.

You may ask me why I believe that the new law makes the condition of the schools any better than they were previous to its passage. I will be glad to tell you. In the first place we know that the old system was a pitiable failure, for in the majority of districts it was almost impossible to find a capable man to serve as trustee. We know that generally the office was saddled on the first man who came handy and that eight times out of ten he was a man absolutely unqualified to hold the office. In the last two school meetings held in our town five men were elected trustee who were not interested enough in the schools to attend the meeting, and who only accepted the office when notified by the clerk because they were afraid that they would be fined if they refused. Some of these men had not even the qualification required by law; that they be able to read and write. It was very seldom that an educated man could be induced to serve. In our town not one of the rural trustees elected at the last two elections had ever had a better education than that afforded by the ordinary district school. I ask you to tell me fairly if you think that these men were able to give the school the kind of attention and the kind of care that it should have had even though they were men of the highest character and of unimpeachable integrity.

But even when a qualified man was elected it made but little difference, as the chief aim of the old trustee forced upon him by public sentiment, was to keep down taxes. We know that generally not one penny more was spent than was absolutely necessary to keep the school going. A purchase of maps, books for the library, necessary equipment, pictures etc., was nearly always accompanied by arguments, and efforts on the part of teacher worthy of a congressman trying to get an appropriation for his home town. We know that school buildings were allowed to run down. Paint, paper, and suitably decorated interiors were more often than not entirely unheard of. Children were sent to school buildings nearly always built with no attention to sanitation or the common rules of physical and aesthetic well-being. We know that the condition of the outbuildings was nearly always a disgrace to the idea of sanitation and decency. We know that one of their characteristics was the covering of obscene markings, which did more to degrade the moral

sensibilities of the children than anything else, because the trustee in his fear of the criticism of his neighbors would not spend the money necessary to buy paint to cover them. I have taught, myself, in a district where I have offered to buy the paint to cover the outbuildings, but the trustee refused to allow me to do so, claiming that the people of the district would say that he was spending money foolishly.

And we know that the majority of the old trustees economized on teachers. The cheapest teacher, too often cheap in more ways than one, got the job. Professional efficiency counted for but very little. The low wages paid the rural teachers of the State of New York have been a scandal for years and in my opinion the main reason for them has been this false economy on the part of the trustee. The result has been shown when our rural students entered high school. Poorly prepared, poorly trained, they have struggled against those children from the village who have had superior training from superior teachers, and as a result the great majority have dropped out before their course was half finished. These were some of the bad conditions of the old system and are enough to prove my point that it was a failure. I need say nothing of the "politics" often played at the annual school meeting, of the undue authority often exerted by residents of the district which forced timid teachers to be unjust and partial in their treatment of children, nothing of these and kindred evils which every student of school conditions knows to have been in existence. Readers will know that I have not exaggerated in the least, but have rather made things milder than they were. So much for the Old, now for the New.

Our town board of education is composed of five men. For the chairman we have a practical business man, who himself has been a teacher and who knows the need of the schools, and who is also a heavy taxpayer. The rest of the men are farmers, everyone of them up-to-date and progressive, and while none of them spend money foolishly they are not the penny-pinching sort of men that will not buy the things that are absolutely essential for the health and comfort of our future citizens. They are all of them men of the highest character, of proven integrity, and of suitable education. Are not men of this kind better fitted to have charge of the schools than the kind of men that were ordinarily elected trustee?

We also have a clerk who attends to all the clerical work of the schools of the town, a little task which used to call down the most hearty curses of the trustees, on the rare occasions when they condescended to attend to it, without the aid of the district superintendent. Certainly our clerk gets a salary, the magnificent sum of 300 dollars a year, which I presume is one of the useless salaries upon which opponents of the law place so much emphasis. There is also a treasurer, who gets 100 dollars. Four hundred dollars a year in useless salaries. No wonder we don't like the new law. Those useless salaries must add at least ten cents a thousand to the taxes of every taxpayer.

Now we come to that part of the new law which has caused the people to rise in wrath and which if the truth is told is at the bottom of all the opposition. The taxes have doubled. Yes, they have and that is one of the best features about the new law, for it shows that the schools are getting the attention they need. Every school building in this town has had repairs made which should have been made long ago. Our buildings have been painted,

and repaired. We have had books and maps and equipment that has been needed for years. The wages of teachers have in many cases been raised to something like a living wage. My own school has added thirty dollars' worth of new books, all of them needed, to the library, without an effort on my own part. If I had suggested such an idea to the trustee last year he would have died of shock, and incidentally I would not have gotten the books. No wonder the taxes are high. If a man leaves his farm buildings without repairs and his farm without equipment for ten years and then pays for all needed in a lump it naturally will hit his feelings and his pocketbook more forcibly than it will if he attends to it every year as he should. We have let the school buildings go with just as few repairs as we could and now we have to pay for them all in a lump. Naturally then they take money and lots of money, but we must remember that the repairs are now nearly all made and will not have to be paid for next year. It is a good thing for us to remember also that all of our town boards are taxpayers and therefore are hit as hard as any of us.

This is the first time in the history of the State when the taxes have been fair. Why should people of the village be forced to support a high school for the people of the farm. Yet this is what has been done for years. If the farmer wanted to send his boy or girl to high school in the village he could do it and it cost him not one cent additional taxes, while the village dweller was compelled to pay heavy taxes to support the high school. To be sure the State paid something but it came nowhere near paying the total expense of that pupil to the village. Now for the first time every person is bearing his just share of the common burden of the taxes and that is as it should be. The high school now belongs as much to the farmer as to the villager and should be equally as much a source of pride and interest. Now no one district is forced to pinch and deny itself, struggling with a high and unbearable tax rate of perhaps thirty dollars a thousand, while its neighbor sailed easily along with a rate of six or seven dollars a thousand. That was one of the features of the old law and it is something that no man who has any idea of fairness will wish to return to. Our American republic was founded upon principles of fairness and justice. Have we become so fond of the Almighty Dollar that we are forgetting those principles.

I have seen the new law referred to many times as an obnoxious piece of kaiserism. Such talk is sheer foolishness without reason or logic back of it. Was not the first unit of government in this country the town? Has it not been around the town that all of our political institutions have been built? Is not all of our local government carried on with the town as a unit? Then why should it be kaiserism if we turn over the affairs of our schools to the same unit? Will we not still have our votes at school meeting? Will we not still select the men who have charge of our schools and will we not be able to reach them just as easily as before? Kaiserism — nonsense.

I believe that the new law will result in better work by the teachers of the rural schools. Under the old system good work counted for very little. A teacher might gain a good reputation in one or two districts, but it would help her very little toward getting a better position, and we all know that the hope of advancement is one of the strongest incentives for good work. Under the new law the town board knows what every teacher is doing. They

know the ones who are best fitted for advancement and I believe that a system will soon be perfected by which the deserving teachers will be promoted to better schools and those who are not deserving dropped from the profession. This alone will be productive of better schools and better teachers, a result which alone will justify the entire expense of the new law.

It has been said and perhaps with some degree of truth that the new law will result in throwing the schools into politics. There always has been and probably always will be a degree of political manipulation in school affairs, but I do not believe that the effect can be any worse than it was under the old plan. Cleaner politics can always be procured by placing cleaner men in office. The same remedy for politics under the old system may be applied under the new.

Consolidation has been the great fear of some of the people who oppose the new law. No one will deny that the Education Department probably intended to make consolidation more easy where desirable. Likewise no one will deny that consolidation in many cases is a very desirable course to pursue. But under the new law no districts may be consolidated without the assenting vote of the district concerned, while under the old law the district superintendent had full power to dissolve a district and unite it with another. This then is a change for the better, and renders consolidation less liable instead of more so.

Finally, may I ask if it is your opinion that the law has had a fair chance to demonstrate whether it is for the best or not? It has been in force only a few months and we have certainly not had the time to tell whether it is for good or for evil. We must remember that it is the product of the thought of men who have grown gray in the service of the schools of the State and who we know have the best interests of the schools at heart. We all of us know Dr Thomas E. Finegan, a product of our neighboring county of Schoharie, and we know that he understands the conditions of rural schools from beginning to end. He is one of the men who were responsible for having this law passed and put in practice. Are we going to discredit him and the able men who are his helpers without giving them every opportunity to show us whether or not he is working for our benefit. Would that be fair? And are we who have no means of knowing all the ins and outs of education in this State going to say that we know better than those who have, what should be done. I leave the answer to these questions to any thinking person. I say give the new law a fair trial. Give our leaders a chance to show us that they are worthy of our confidence. And then, after we have done this, if we are still of the opinion that the new law should be repealed, we can take the necessary steps and go back to the old system. The law can be repealed just as well two years from now as now and will it not be wiser to wait. At any rate let us be careful lest we put our Empire State, the State that now marches at the head, years behind the other great states of Vermont, New Jersey, Ohio, and many others who have the township law, in educational progress. We are not living for the present, we are living for our children and for their children after them. Let us give them every opportunity to be so trained and so educated that they will live to be a credit to the new and greater country life in the new and greater age that is dawning upon us.

A RURAL TEACHER

—*Delaware Republican*, January 26, 1918

Finds Advantages in New Town School Law

The Knickerbocker Press, on January 21 last, contained an article on the town school law, criticizing my article approving of this school system, published in the same paper on January 14. This critic, writing from Voorheesville but stating that Guilderland was her town, objected to my approval of the present system on the ground that I was a lawyer and a city man and, therefore, unfamiliar with country conditions and the wishes of farmers relative to the education of their children.

My observation has been that the people attacking this system have indulged in unnecessary personalities in order to distract attention from the real reason for their opposition to the law, which consists almost entirely in their objection to contributing their fair share of the amount which is necessary for the maintainance of suitable schools for country children. While my own occupation and place of residence have nothing to do with the merits of this question, yet for almost eight years I have lived continuously on a farm of 150 acres, and I send my own children to one of these rural schools. I have the same objection that she entertains to paying unnecessary taxes, but as a parent of school children I wish the best system that is practical adopted for our country schools and I am willing to contribute whatever my share may be towards the improvement of the schools throughout the town. I have no financial interest of any nature in the maintenance of the present law.

I assume that none of the people would be willing to accept either this critic or myself as competent to plan a system for the proper management of rural schools. A portion of the money raised by the State through general taxation is used to employ the best experts that can be found to manage our schools through the State Department of Education. The New York State Department of Education is regarded as the equal of any similar organization in the United States. It is their duty, which they have properly discharged, to thoroughly investigate the condition of our rural schools and to endeavor to improve them wherever possible. This Department is familiar with the work done by similar organizations in other states in the Union. They know that the country school system which we have just adopted has been in operation for several years in most of the states on each side of us, that it displaced in these states the same system that we have just discarded, and that in each of these states it has fully demonstrated its great superiority over the old school system.

We are fortunate in having at the head of the Department, charged with responsibility for the care and management of our rural schools, a man who is recognized by educators as one of the best informed, most practical and progressive educators engaged in this particular field. Dr Finegan not only has demonstrated his worth to the people of the State of New York but has received the unqualified approval and support of the National Society of School Superintendents who have selected him as their president, and thereby demonstrated their complete confidence in his ability, his knowledge, his experience in educational matters and his management of our rural schools. It was only after a most careful investigation by Dr Finegan that the State Department determined to abolish the old system of managing our schools, and to introduce in its place the system which the states on all sides of us were employing, and the system which is similar in many respects to that

found in most of our cities. It would be the height of folly for people, who at best can be classified only as amateur educators, to argue that their ideas should be substituted and adopted by the State in place of the mature judgment of the greatest experts in this country.

The two main objections urged by opponents of this system are that it deprives small communities of local control and that it uses money raised in one locality for expenditure in another. Under the old system the trustees prepared budgets, and these were submitted to a school meeting of the taxpayers. Under the present system, while the budget is prepared by the board of education and published for the benefit of the entire town, yet no attack can be made successfully upon this budget if the proposed appropriations are for purposes recognized by the law and kept within the limitations prescribed by the law. Under the old system the taxpayers had the power, and this power usually was employed to cut down the budget so as frequently to prevent necessary improvements from being made, and competent teachers from being employed. The experience of sixty or seventy-five years has demonstrated that this system for these reasons has been a failure. The new system is based upon the same principles upon which all other town money is raised and disbursed. The principle of selecting competent men to take charge of such matters and trusting to their good judgment to refrain from extravagance and to spend the money not only legally but wisely, is followed invariably in the town government, in the city government, in the county government, in the state government and in the national government. The old system was an anomaly. It grew out of the situation where the private schools of several generations ago, which had been supported by the people in the vicinity, were converted into public schools for the free education of children and all the people in that little locality instead of merely the parents of the children at school, were forced to contribute for its support as a matter of public policy. But this system never was a success, and we have outgrown its necessity. It has given way to a modern system and we cannot go back to it.

In the disbursement of money raised for general town purposes we may find, for instance, that a large sum is used for the construction or maintenance of a bridge that is used by but a portion of the town, yet the people in another portion of the town who will never have occasion to use this bridge are forced to contribute towards paying for it; but sooner or later the latter in turn will require some public improvement, and then the section of the town which has enjoyed the benefits of the bridge will be taxed to pay for the public improvement in the other section. All are taxed for the general public good of the whole town, and so it is, and should be, with the schools. It is far more important for a man living in the southwest corner of a town to have the children in the northeast corner properly educated than it is to have a bridge or some other local improvement constructed in that locality, for he is sure to benefit sooner or later by the improvement in these children which must eventually benefit the entire town.

The new system affords possibilities which could not even be contemplated under the old system. Let me illustrate this by what has been done in our own town, and lest some reader may say at the startoff that such improvements must have been extremely expensive, perhaps unwarrantably so, I should mention that whereas the critic from Voorheesville stated that in her

town of Guilderland there are thirteen schools for which the town was obliged to raise \$25,994, yet, in the town of Bethlehem, there are fifteen schools for which our town raised less than \$25,000, and our tax rate was but seventy-two cents on every \$100 of assessed valuation. The first improvement made by our board which would not have been practical under the old system was to employ a trained nurse, to act in the double capacity of supervisor of physical training and school nurse for all the schools in the town. Whatever criticism may be made of the office of supervisor of physical training, every well informed person must concede that a competent school nurse will protect the health of school children, perfect the sanitary conditions of our schools and improve the personal appearance of many of the children. Every child in our schools is examined carefully by this nurse. Those having difficulty with their eyes or with their hearing or breathing, who have defective teeth or other physical weaknesses are reported to their parents, who are informed of their condition, advised to consult a physician or surgeon and frequently induced to take the necessary measures to safeguard the well being of their children. Our school nurse was largely responsible for the speedy control of an epidemic of typhoid fever in one of our large villages which was exciting the consternation of our people, and might have led to the gravest consequences. Our experience so far has imbued us with great confidence in this plan of having a competent trained nurse to safeguard the health of our school children.

We next organized a rather unusual type of school, offering an academic course for children of the first and second year in high school, and what may be termed an industrial course to cover a period of four years to be taken by children from the seventh grade upward. The principal of the school is a graduate of the agricultural department of Cornell University. He is giving a thorough course in agriculture at this school, extending over a period of four years and designed primarily for the benefit of farmers' sons, which includes also a very practical course in carpentry, forge work and machinery. We have employed also for the benefit of the girls a graduate of the State College for Teachers who gives a thorough course in home economics, including cooking, sewing, household management, home nursing, etc. This school is open to all the children of the town free of charge. Moreover, we encourage children from distant parts of the town to come to the school by paying all, or the greater part of, the cost of their transportation. Some of these children come by trains, some by motor busses and some by bicycles in good weather and horses in bad weather. We have taken out the seventh and eighth grades from two of the district schools in close proximity to this central school and give the children of these schools an option of coming either to the central school, in which event we pay their transportation, or of going into the city of Albany, in which event we pay their tuition, which amounts practically to the same as their transportation. Courses are so arranged that a child in the seventh grade spends his forenoon in the regular rural school, located in the same village in which is situated the new school, where he gets his usual elementary work, while he spends the afternoon in the new school at his industrial work. Children in the eighth grade spend their mornings at the new school, taking the industrial course and their afternoons in the old school getting their regular elementary work. This new school is located in an old dwelling house, and one of the novel features

is an arrangement by which the teacher of home economics has three girls living in the school with her for the first four days of the week, so as to be under her constant care and supervision, and in this way learn home management to far better advantage than they can merely in classroom work. When these girls have finished a period of two or three weeks living at the school their places are taken by three other girls. Of course, during the entire period all girls are having their regular cooking and sewing lessons in the school kitchen or sewing room. While no charge is made for the girls' lodging they all contribute towards the expense of maintaining their table at the school, and this amounts, as the mothers of some of the girls have stated, to about the same sum that it would cost for their meals at home. Such a school is made possible because the State pays half the salary of the principal, one-third the salaries of the other teachers and makes a generous allowance for equipment.

We have adopted in our town the principle of promotion in order to encourage and reward our teachers. If a vacancy occurs in a position that is more desirable than that held by another competent teacher in our town, we believe in promoting such a teacher to this vacancy rather than going outside of the town. This principle, of course, could not be applied under the old system. It has worked extremely well in operation. In one of our village schools the principal got into a row with some of the people there and before an investigation could be made by the board he broke his contract and deserted the school. It became necessary to fill his position immediately. We were able to transfer to this place a teacher who had been doing excellent work in another school in our town who thereby was rewarded by being given larger pay and a splendid opportunity to demonstrate her ability and authority in a prominent position. She already has made a great success in her new location and should win a reputation that will lead to further advancement, if not in our town perhaps in other towns or in cities, where they could afford to pay more for a first-class teacher than our town may be justified in paying. The place she left vacant has already been filled by a competent teacher, and the people of the village from which she was taken realize that they in turn, when a vacancy occurs in their school which is superior in many respects to most of the schools in our town, will be able to call upon the rest of the town to surrender to them the most competent teacher occupying a position of inferiority to that becoming vacant. We believe this system of promotion will improve the schools throughout the town, and even make our system attractive to teachers outside of the town, who otherwise might not care to take a position in our town that in itself might not be particularly advantageous, but as a stepping stone to something better where the merit system is recognized might be extremely desirable.

We have also found it advisable and necessary to employ a regular substitute in our town, which could not have been done under the old system. We have four classrooms in one of our village schools, and three classrooms in another village school. The principal of each of these schools is one of the regular teachers whose work confines him to his own classroom, and prevents him from properly supervising the other classrooms. Notwithstanding this he has been held responsible for the condition of the entire school. The employment of this substitute enables us to send her for a portion of her time to each of these schools, thus permitting

the principal to surrender his class to the substitute and supervise the rest of his school. The substitute also takes the place of other teachers at the school as well as the places of teachers at our one room schools, thus enabling the regular teacher to spend a day or two visiting and inspecting other schools, either in our own town, or in the adjoining cities. The visiting teacher is enabled in this way to observe different methods from those employed in her own school and thereby improve her own work. This system so far has worked well and is meeting with enthusiastic response from the teachers.

Contact With Teachers

We have made it a point under this new system to have all the teachers of the town meet the board once every four weeks, at which time they file their reports of the school work, and obtain their checks for four weeks' salary. This permits the board to meet frequently all the teachers and to discuss with them various problems involving the different schools, and also enables the teachers to become acquainted with each other, and to talk over with each other the various questions of school management in which they are interested. We have also arranged to have an expert on rural schools attend these meetings and deliver a course of lectures on modern methods of teaching and managing rural schools. We hope also that we can arrange to have the younger teachers in our town who have not had the advantage of a course at a normal training school, spend a portion of their summer in attendance at one of the summer courses at a school devoted to the training of rural teachers. We expect as a result of these measures to increase the teacher's interest in her profession, to stimulate her ambition and to improve her methods of teaching; and we intend to so organize the force as to promote those teachers who demonstrate their ability and their devotion to their work.

The result will be that we should have very much better teachers and greatly improved schools, with corresponding advantages in the education of our children. All of these things are done in many of our cities where the same system of school organization is in operation that is provided under the present town school law. The results have been satisfactory in the cities and we anticipate the same improvements in our country schools.

I should add, inasmuch as some of the frenzied opponents of the new system have stigmatized it as an example of "Prussianism" by which the schools of the State will be managed by the State Education Department instead of by local representatives, that all of these changes originated with our own board, that none of them was ordered or even suggested by the state board, although each of them after adoption tentatively by our board was submitted to the State Department and approved by it before being put into operation.

Elsmere, January 25

CHARLES J. HERRICK

—*Knickerbocker Press, January 28, 1918*

Letters from the People

To the Editor of The Journal:

I have read with much interest the letters appearing in the *Journal* in regard to the township school law and am rather glad that as "Mother"

I was able to draw out something besides generalities. From the first I have been thoughtful of the law mentioned and have discussed it with both educators and parents as well as with the man in charge of the exhibit of the subject at the State Fair at Syracuse. Always the farmers in thinly settled districts opposed it thus leading me to ask "why."

Yes, I am a mother and have always lived in town with the exception of the time when I taught in a district school which was for the length of three terms, and in case there should be criticism I would say that I was not "fired."

I know what it is to wade through deep snow to a cold schoolhouse, often to build my own fire, often to sweep the floors, to dust and to clean the windows. I know what it means to have between 40 and 50 pupils with 15 classes a day, many in the same class having textbooks that belonged to their parents and they of such variety that assigning the same lesson to all was something of an undertaking. As one of the terms was spent in a small school I also know what it means to try to make enough work for two or three pupils and myself to keep us from stagnation or indifference. It is this very fact that many school districts were drawing public money for so few pupils that made the old way seem inefficient. Then there is the incentive to study that comes with rivalry, the preparation for citizenship and good fellowship, that poise that comes with constant contact with others of our kind that one gets only in the larger school.

I take it for granted that those who are opposing the new law have either read or heard read article 11-a to which they refer. Of course we must take into consideration that few proposed laws are ideal even to the minds of the farmers, who must not feed the people stronger food than they are able to assimilate but must only propose such reforms as it seems the people can intelligently accept and, it seems, we were not ready for this new school law.

It is a good deal like the present food conservation. The housekeeper may know that the menu is well balanced, the food wholesome and nutritious, but the greatest problem comes in getting the family to eat the approved food. They have become accustomed to certain foods cooked in certain ways and they object to the change even though they may benefit by it and the people as a whole be better fed. Our representatives in The University of the State of New York as well as those in the food conservation committee see the work as a whole while we are apt to think of the law as we do of the weather signal—only created for our own local needs.

At the exhibit at Syracuse the model schoolhouse and grounds, the covered wagon for conveying the children to and from the schoolhouse seemed a long step forward, especially the wagons where soapstones, flatirons or footwarmers might be used to keep the little folks warm. I could not help but think of the crowded cars of our large cities where children must ride for miles to school in close contact with all kinds of disease and filth and the air putrid with bad breaths and unwashed clothes.

The taxes seem to be the biggest objection and I do not doubt that they are a burden but if you can have more grades, better apparatus, more experienced teachers by pooling your interests, as has been proven in some localities, you need not send your children to the city school at so young an age,

the rudiments of agriculture and household economy can be taught, they will be able to render some assistance to the busy parents and will be surrounded by the wholesome atmosphere of the country. "Farmer" wishes each district to take care of itself. Has he visited many of the districts of his State? This law would not have been needed if each district had cared for its children.

To "Another Mother," bless her, I would say that our children have sometimes had to sit in wraps in the winter time and this very morning one of the rooms was dismissed because the room was too dangerously cold to keep the children even with wraps. I can not get the thermometer above 53 in one of our own living rooms though there is a furnace with just as good a fire as we can build in the cellar. There are two reasons for this, namely: the war with all its attendant privations such as lack of coal to supply our many transports, etc., the unprecedented poor quality of the coal that we do receive, and the effort to save; and the second reason that never in my whole forty-five years have I ever experienced such prolonged cold weather in this locality where the close proximity of large bodies of water renders the atmosphere damp and the cold more penetrating.

"Another Mother" is looking for immediate results. We can not adjust ourselves to new conditions or achieve our goal without steady and prolonged effort. Why is the power in the hands of one trustee when you are entitled to three or five? There is often safety in numbers united for a common cause and you may under stress appeal to the State Commissioner.

The Brookton farmer complains that the law takes the burden of taxation out of the hands of many and places it in the hands of a few while it seems to me that this is just what he advocates in going back to the old system. There never was a greater chance for the people to shift the responsibility than in the old conditions. I should like to know personally "A Taxpayer." A letter so devoid of bitterness must come from one whose heart and mind are big and broad. Yes, I do know of the men worth while who have begun their education in the district schools and that is one reason for making it possible to have larger, better equipped schools and girls may be kept among the wholesome surroundings of country life as long as possible which (not the excellency of the old schools) was the foundation stone in the character of those men and women who made good.

I would like to ask "A Farmer" if the \$104.20 school tax was a yearly tax or if it did not include a special tax for building or improvements. Special taxes are liable to come to all as Ithaca must know after having two of her school buildings burn in one year. It is becoming known, but slowly I will admit, that consolidation of even city schools as in the Gary system, is less expensive and tends to democracy. It costs from \$40 to \$50 to educate one pupil in our city high schools. Do not talk too much about the tuition, it might be raised to meet the expense which is equally borne by taxpayers who have no children. Many of "A Taxpayer's" problems are purely local and would indicate a disposition to shun responsibility and a lack of desire to be up to date and growing. The schools are pushing our young people rather hard but after long years of effort they are so arranged that a pupil of unusual ability may go as fast as he desires and the pupil of slower mind may take a longer period, so if he rushes too fast for his

store of nervous force he must necessarily be to blame. Twenty years ago there were more farmers' wives in the asylums for the insane than women of any other walk of life. It surely could not have been the rush of school life that put them there. The future farmer must learn to conserve energy, to take advantage of the best of the new inventions for lessening labor, to know the land and how to preserve its fertility, and to know his family of humans as well as his live stock and how to conserve their energies, and there is no better place to teach this than in the country schools where the problems of one are often the problems of all.

No, I do not hold an office or draw \$500 a year salary because the position I occupy is rewarded by an allowance which in my case is generous. Why not form a parent-teacher association in your township and get together on your grievances? Have you shut the teachers out of your grange?

Finally we are in war. Nothing is normal and what might work to our advantage in peace times will not now.

A MOTHER

—*Ithaca Journal*, January 29, 1913

Condemned Without Trial

Johnsburg, N. Y., Jan. 26, 1917

Editor News: From time to time I have read comments on the new township act, most of them unfavorable. It seems to be hailed as a demon, demoralizing children, spending money unnecessarily, and swallowing up districts.

The act was planned with the view of combining districts eventually. This feature is feared mostly because people accept it in its exaggerated form. I do not believe the combining of districts will be widespread, but will touch a few outlying districts where the attendance is very small. At best, the wages in such districts have to be fairly good before a teacher will consider the position. When the entire expense of the school is summed up, reports will prove that the cost is much more per child in that one-room district than it is in a graded school of a village. Why not, then, combine with your neighbor and share your expenses together for economy and for the benefit of your children? Today the world is commercialized and dollars are the criterion. While possibly now the taxes seem high I have reason to believe that later the districts will share more proportionately.

One mother argued that her children would have to walk to the assigned place and then wait an hour, more or less. The time, the place and conveyance could easily be adjusted to the need. She also said that she had guarded her children's morals carefully, and now they would be mixed in with children about whom she knew nothing, and possibly spoiled. The mixing is fine and the good will still be good. Mother's influence goes farthest.

Should you speak regarding system, people say, "Oh, yes, I believe in system." What is the township act but a system—a system for the rural school? In one paper it was stated that under the old management the trustee resided in the district, could easily be approached by teacher and pupils, and had the interests of the school at heart. He may have had the interests at heart, but convenience viewed the needs from one side and the

people of the district from another side, and the trustee, in his efforts to keep on the "right side" of the people, was handicapped. Does it not seem that through a board of trustees he has more power to supply the actual needs of the district? Because he is a member of such a board, does that make him less interested in the welfare of the district? He has need to feel that he is a part of the whole, that upon him comes a greater responsibility, therefore from him must go greater and more efficient service. Since the days of '61 our motto has been "In union there is strength." Still let it be.

The scientist, the inventor, the chemist, each in his own way, tests out; no one questions his right. This township act is a system in embryo; let it be "tested out."

A RURAL SCHOOL TEACHER

—*Warrensburg News, January 31, 1918*

The Township Systems

Editor Evening Times:

SIR: It is true that the township system originated in Germany, was transplanted to Britain by the Germans and later brought to America by the descendants of those Germans who once conquered the Britons. But what matter where the system originated! Before discarding the township because of its German origin let us investigate what effect it has had on the progress of mankind. The first thing that attracts our attention and challenges our admiration is that the people living under some form of the township systems have always been able to protect themselves from a foreign foe. We have only to cite Germany, England and the Eastern United States. These countries have never yet come under the heel of a foreign oppressor outside of the Teutonic race. Local self-government taught them that "in union there is strength." Taking pride in building up, strengthening and ornamenting their communities made strong nations. The various townships became links in the mighty chain of freemen. A chain is only as strong as its weakest link. Hence every township necessarily became interested in the growth and character of every other township; and just as every person in the township was interested in the development of his own town, so every town was interested in the development of every other town that all together might develop into a strong nation, capable of protecting and aiding any or all of the towns that entered into the nation's composition.

Uncle Peter represents a self-centered class whose horizon is bounded by their own selfish desires. They do not see, or do not care to know, that in helping to make a progressive township they not only are safeguarding their own property and family, but are also opening new avenues of prosperity to themselves and neighbors. And if all the towns of our State are filled with intelligent and progressive citizens then necessarily the body politic will be such as to establish and maintain an intelligent and progressive commonwealth.

Uncle Peter would have a property qualification for voting. Such a system would be wholly undemocratic and entirely out of harmony with the

principles for which we are supposed to be waging the present war. If only taxpayers could vote no public improvements would be made except such as would bring immediate and direct benefit to the voter.

Our venerable friend asks why should a few taxpayers bear all the burden of the public highways? For the simple reason that the roads are a public utility and as such should be supported by public taxation. The townships that have the best roads are the most progressive, because they have more ready and frequent access to the greater centres, and because they are more frequently and easily reached by outside influences. The town without improved highways is non-progressive and lagging in public spirit and philanthropy. Probably no county in the State with the same assessed valuation has a better system of public highways, or a better county superintendent of public highways than our own Herkimer county, and the old man's yell that our public roads were better under the pathmaster district system is the dying squeal of an obsolete custom. Rome for years held her conquered territory because she could quickly send her troops to the farthest bounds of her empire over improved roads that radiated from her capital in all directions like spokes from the hub of a wheel. The successes of the German armies in the present war are due in a large measure to her magnificent highways, over which her huge auto trucks quickly transport her troops and munitions of war. What is true of a township is true of a nation. A nation's road system is a true index of the nation's rank in civilization. Any township without improved highways is a weak link in the chain, and any citizen who talks like Uncle Pete against township road building is a traitor to his country, because, if these United States are to take first rank in the commercial world they must, and that right quickly, build up and maintain the most comprehensive and convenient road system to be found anywhere. Give us transportation facilities, our varied climatic conditions, our variety of soil, our great mineral wealth and our boundless water power can feed and clothe the world; and then only can we exercise the inherent instincts of our Anglo-Saxon forefathers to conquer the world. But in this commercial warfare we shall rob a people to make them richer, and enslave them to make them freer than ever they were before.

When the old rate bill system of schools was abolished and the district system was adopted by the Legislature Uncle Peter and his friends put up such a fight that the district system had to be voted on a second time by the people before it became firmly fixed. So the present complaint against the township system of schools is only the customary expression against change. The same people made the same complaints when the change was made from the old pathmaster system of working roads to the present township system of working roads. Uncle Pete, with much inward groaning, asks why those who have no children should be taxed to educate other people's children? The answer is obvious. The children are the wards of the State, and the State will be strong only as the people are well trained. Self-preservation is the first law of the State, and the State is preserved by her public schools, and the kind of public schools she maintains determines the destiny of the State. And again the first right to all property is inherent in the State; therefore the State has a right to exact an equitable share of all property for the support of that vital public necessity, the public school. Say, Uncle Pete, how long would your life and your property be

safe had there been no schools in your neighborhood during the last 50 years? You say you have received no personal benefit for the thousands of dollars of school taxes which you have been forced to pay. Has it been worth anything to you to live among moral and intelligent people where you could accumulate property? Is it worth anything to lie down at night, feeling yourself under the protection of law, justice and fraternity? Or perhaps you would prefer to live in Mexico or Russia. I said above that the State has a right to exact an equitable portion of property for public purposes, and the township school system is the only system of public schools yet devised that places an equal burden of taxes on all residents of the township. Under the district school system a man living in the poorer section of the township was forced to pay often four or five times as much tax as another man living in a richer part of the same township to support the public schools of the township. Since the public schools are the vital factor in making good townships, and since good townships make good states, then the one man was paying for more than his share toward the development of the State. This is obviously unfair and undemocratic—a violation of the very principles for which our forefathers fought in the Revolution, and a violation of that democracy for which we are fighting today. The question is often asked: "Does the township system add to the cost of the schools?" The only additional expense is the small salaries of the clerk and treasurer, and these may be largely offset by purchasing fuel and supplies at wholesale. The present town boards did not hire this year's teachers and are in no wise to blame for the necessary increase in wages. Nor is the township system to blame for the present high prices of supplies, nor for the scarcity of fuel. Most people living near schoolhouses with large wood-lots refuse either to loan or sell wood to schools to help tide over a storm until the board of education can supply the needed amount. If private individuals have difficulty to supply one family with fuel what must be the difficulty of a board in supplying from 6 to 12 schools in widely separated parts of the townships, in some districts of which there is not enough public spirit to keep open the roads and where there is pronounced hostility to the board of education and to the township system. Next summer the boards of education can purchase the year's supply of fuel at wholesale and store it at the schoolhouses for winter use. This can be drawn when the roads are in the best condition. Under the township system, a fair and equitable scale of wages can be paid the teachers, thereby keeping the best and getting rid of the inefficient. Then, too, the boards of education can gradually bring about a standard for repairs to school buildings, making a uniformity throughout the township. It is only by standardizing our roads, our bridges, our schools, in short all public utilities, that our township can have that healthy growth that makes for a strong state and an aggressive nation.

Thus, Mr Editor, I have presented both sides of the township systems. The reader is at liberty to take whichever side he prefers. But this much is certain, the farmer is the man most vitally interested in the rural schools. If he is not satisfied with the present law he should draw up and submit a bill that will satisfy him, but if he is the patriot he pretends to be he will see that there is incorporated in his bill a rate of taxation that falls equally on the "just and the unjust" throughout the entire township.

On Saturday next, February 2d, there is to be a large gathering of farmers in the village of Herkimer. Every farmer interested in the rural schools should make every effort to be present and help draft a bill that will put Herkimer county on the map as a progressive school county. But I rather mistrust when the farmer, or any other man, frames a school bill big enough for the Empire State that may please everybody, it will be when Old Gabriel blows his trumpet. For the rich districts will be no more willing to bear their just share of the burdens of township taxation under a new law than they are at present.

This war is placing upon the farmer the greatest burden that he has ever been called upon to bear in the history of our Nation. The flower of young manhood is being stripped from the farms, leaving them too often desolate or forsaken. And these young men, the pride of the country side, the props of old age and the mainstay among the Nation's defenders, can not be replaced. More than a million red-nosed sots are loafing about the streets and saloons or are in poorhouses, asylums, jails or prisons, for whom the farmer is called upon to raise food. These parasites on the farmer were made what they are by the fiendish partnership between Uncle Sam and the brewer and distiller. Had this great government trained this million or more of men into ways of usefulness and sobriety instead of drunkenness and debauchery, they could have been skilled men on the farm or in the machine shops making farm tools and farm machinery so greatly needed at the present time. The government that has directly aided and protected the saloonkeeper and dive proprietor in debauching the farmers' sons, now calls frantically to the farmer to raise more food, and save more wheat, while the same government has permitted enough food to go into making the Devil's brew to feed all the allies in Europe. The government is urging the farmer to cut more wood, while right now, after every pay day in the anthracite coal mines 20 per cent of the miners are incapacitated for work through strong drink, permitted by the government, thus cutting short coal production by over 3,000,000 tons per year. Not only that, but the government has indirectly come into competition in the labor market with the farmer, thus taking from the farms the skilled hired man. With his son at the front and his best hired man in the munition plant, the farmer is at his wits' end. In their sore dilemma there is great danger that the farmer may take his children from the public schools and set them at work on the farms. Such an act would be a catastrophe to the entire nation. The rural school in the past has furnished the red blood of the statesmen—the leaders in state and national affairs. More than a million of the farmers' sons who were destined to become leaders have suddenly been called from civil life to become heroes of men. Most of them will never return, or will return physically unfit to carry the burdens of the strong. Who will take their places? From whence shall come the red blood of the future—the statesmen who will bind up the wounds of war, build our great transcontinental highways, help to establish justice and tranquillity once more among the nations, and make our Nation a democracy in fact as well as in name? Obviously in the future as in the past they must come from the rural school, and if the rural school fails in this crisis in our Nation's history this country will be filled with the discord of rival factions, as in Russia.

Then let the farmer, who today is the real hero of the nation, look beyond the trials and temptations of his present needs, and while praying for his son and his neighbor's son at the front, may he at home defend his rural school, seeing more clearly day by day the vision of that great army of young people who shall leave the old school house on the corner to become the leaders of the nation.

S. C. KIMM

Herkimer, N. Y., Jan. 30, '18

—Little Falls Evening Times, February 1, 1918

Further Discussion of New School Law

DEAR MR EDITOR:

I believe you are a grange booster; what do you think of this?

Report of standing committee on common schools, of the State Grange. It was adopted without a dissenting vote at the meeting held in Oneonta, Feb. 9, 1917, a year ago.

Your committee has made a careful study of the report of the standing committee on education and common schools of the State Granges, and has made full use of the excellent work done by that committee during the past year. It has held lengthy hearings, at which all interested were permitted to be heard; 30 persons appeared and spoke, either as individuals or as representatives of their granges. It has examined with care all the resolutions submitted to this grange on the subject of rural schools, by pomona and subordinate granges of the State, and has given due consideration to the same, and offers this report as a substitute for such resolutions.

As a result this committee is unanimous in its belief that the welfare of the rural schools of this State demands a change in the methods of administration, to the end that the burden of the same may be more equitably distributed and the authority for the administration of the schools may be lodged in the hands of the people who support and patronize them.

It found, it is true, a considerable diversity of opinion on many matters, and that it was impossible for any individual or set of individuals to secure all those things which they would desire to see incorporated in new school legislation. In fact, every member of this committee has found it necessary to surrender some of his personal views in order that a working compromise might be reached. But this has been cheerfully done because we realize that some legislation is desirable and necessary; (Mr Editor, what was the resolution of the supervisors of Delaware county?) That the State Grange should have a voice in such legislation, and that to further delay action would not only be neglecting an obvious duty, but would undoubtedly lessen the future influence of the grange in this and other matters.

Therefore we recommend that legislation be passed making the town the unit of school organization and taxation.

Mr Editor: The above and a whole lot more along the same line which simply catalogues and specifics is found in "Elementary Education," vol. 2, Report of Education Department for 1917.

It appears, Mr Editor, from an investigation of this report that the Educational Department and Legislature were, in enacting the present law, carry-

ing out the counsel of the granges of the State, and who is so foolish in these rural districts to think that the grange members are going to injure their own interests?

The present law was drafted after careful investigation of laws in other states (every state that touches New York State has the town unit in taxation and administration of rural schools) and after correspondence with administrators of these laws.

Mr Editor, we would like to ask each supervisor who voted for those resolutions that wanted the good old way, if he ever saw or read the new law? We do not believe any of that bunch belong to the grange nor that they ever read the law. Is it not about time for the grange to turn its attention to the supervisors about election time?

What did they call it—"oppression?"

Mr Editor: Clark Nesbitt is a member of the grange. I do not believe he stands for repeal and I am confident that he did not have the support of many of those who write "Supervisor" after their names.

This State has gone too far ahead ever to go very far back.

"AU REVOIR"

Delaware Republican, February 2, 1918

The Town School Law as Viewed by a Teacher

To the Editor of the Knickerbocker Press:

SIR: Much comment has been made on the present town school law and much ridicule has been manifested.

From a teacher's standpoint of view, I think the value of the present system can hardly be overestimated. It is going to promote a wonderful system of improvement in our rural schools in a not far distant date. The time has hardly elapsed since the town board has been in power to form an opinion of its value. Too many are now ready to condemn this system even though our rural schools are to be benefited. Here, let me explain how they are to be benefited.

In the first place, after the town board has been in power for a year, the promotion of good teachers to better positions in the town is an incentive for teachers to follow that profession. It is going to create more interest for their work and we will have far better teachers than ever before. So many of our teachers after graduation follow the profession long enough to earn a "trousseau," and the rural schools advance the cost. Still we can not say that the fault lies wholly with the teachers, when we consider that most rural schools offer no advancement to teachers under the old system. Can we therefore wonder at their leaving the profession before they had learned to be a successful teacher? It does not require merely an education to be a successful teacher. That is only a foundation on which we must work. It requires experience—the key to success.

Another instance of the value of the town board is the demand for good teachers. The work of each teacher is investigated and if satisfactory work is not done, they are to be dismissed. This will require that all teachers

do good work and there will be no infringement of "poor" teachers upon any of our rural districts.

Again, much fairness and justice will be given teachers. In the past no regard for these traits was shown. I quote you an instance to show that weak point of the old system. In a certain locality a good conscientious teacher had been engaged by a trustee of that district, and had taught two successive years. She had proved herself an efficient teacher and had endeared herself to the community at large. The following year another trustee was elected. He engaged another teacher, one just graduated, with no knowledge of rural conditions. She secured the position because she was an intimate friend of the trustee's family. The former teacher had proved successful, still she was dismissed for an inexperienced and unsuccessful teacher because one trustee had sole authority in choosing a teacher. Was this not an injustice to the successful teacher? Was there any regard for fairness?

Then, too, some of our former trustees used no judgment whatever in choosing teachers. They considered financial economy far more important than efficient economy. A certain trustee once remarked to me, that anyone could teach the rural schools in the present day. It does not require much of an education. Consequently, after learning the prospective salary of each applicant, the "cheapest" teacher was accepted. Such a trustee had no interest for the welfare of his school. It was merely a compliance with the law, not an education of merit, that he sought.

Too many trustees, in the past, have been only too willing to reward teachers with inadequate wages. It was considered economy to secure a teacher for ten dollars a week even though education (as far as the teacher was concerned) was at a standstill, while a salary of fifteen dollars a week to a good experienced teacher was robbery. Too much stress and thought have been placed on money, while education has been placed in the background.

Another disadvantage of the old system was that one man had the authority to select the teacher. In many communities it has been almost impossible to elect trustees who would serve and as a consequence they served unwillingly. School interests were overlooked. Good teachers were not demanded. The children of those districts were defrauded of an education that rightfully belonged to them. Therefore, is it not better to have several trustees or a board of trustees to look after school interests and secure competent teachers, than a disinterested trustee?

Mrs Merritt, in her reply to Mr Herrick, under date of January 21, undoubtedly has a wrong conception of the value of the present school system. This new law has not as yet been in effect a year. In fact not more than one-half of the school year has elapsed, and many matters have been improved already. Yet we can hardly expect any very great change until, at least, one year has elapsed. Then, we shall see the improvements of rural education, for we must remember that October's apples can not ripen e'er May's blossoms have withered.

I will admit, in my opinion, that there are some clauses in the town school law that need amending. Especially is this true regarding the taxation question and several minor clauses. But the selection of the teachers for each township should be solely in the hands of the town board.

I see no reason why one clerk can not perform the services of a large township. As regards his salary, if the sum is not adequate for his duties as clerk, how about the salary a trustee receives? I think you will agree that there is not much profit in a trustee serving for pleasure.

I know of two townships where the clerks have performed their services well. I have heard no complaints where schools have been deprived of necessary supplies where the needs were made known in these townships. In fact, in most cases all such communications have received prompt attention, and it was not necessary to wait for a meeting of the board before it was granted.

Mrs Merritt has also said that trustees gave teachers last year \$38 for janitor work. I quote you an exception to this, for a certain janitor, a schoolboy, received \$27 last year, and only in the past three years many janitors received but fifty cents a week. I, myself, as a teacher have taught for \$9.50 per week with the niggardly sum of fifty cents a week added for janitor work. This year, I understand that \$40 is allowed in each district for janitor work, and where the need of supplies have been made known to the board, they have tried to furnish them. Again, last year, after school meeting in May, a certain trustee engaged a teacher for ten dollars a week. This sum, at the present time, will hardly cover the expenses of a teacher. This is not much of an encouragement for any teacher to offer her services as a gift to a rural district. Can we therefore wonder at so many teachers leaving the profession when they can secure good positions and a much higher compensation in other branches of work? Such a trustee does not consider the cost of securing an education for the purpose of teaching.

Mrs Merritt speaks of very inferior teachers in the past. Here, let me ask whose fault it has been. From experience I am well aware of the cost of a Normal education, being a graduate myself. And, it is hardly fair for any district to demand a good teacher unless they are willing to meet the demands of a salary sufficient to fully compensate for a thorough education. There are now so many different branches of industry open to young women that require so little education, and many do not prepare for teaching. For this reason better conditions should exist so that we may have better educated teachers. This has been proved in a certain rural district. For several years, a large rural school had been in charge of some very inferior teachers. They received between \$10 and \$12 a week salary. Finally the school became in a deplorable condition. After a time, the district became aware of the downfall of education in the school, and at the next school meeting, voted to engage only normal graduates as teachers with a weekly compensation of at least \$15 per week. It is needless to say that since that time they have secured efficient teachers and as far as I can learn, have had a good school.

In conclusion, I wish to say that while some clauses need amending in the present school law, I deem it necessary that the choice of teachers be left entirely with the town board. For then, and then only, can we have a good system of education throughout all rural communities.

A TEACHER

—Albany Knickerbocker Press, February 4, 1918

Professor Works on the Township School Law

Professor Works, of Cornell University, replies to an editorial which appeared in a recent issue of the *News* in which we condemned the new township school law and said that it should be repealed. Assemblyman Fenner of this county is one of a number of legislators who have introduced bills to repeal it.

Professor Works has given an illuminating exposition of some of the important features of the law. We agree that many of its features have been misunderstood. In the matter of consolidation of districts, the new law is better than the one which it superseded. A consolidation can only be consummated now in pursuance of favorable action by the voters of the districts concerned. It was wise to take the power of consolidation from the State Department of Education and place it entirely in the hands of the people.

It is a good provision of the new law that no board may include in a tax budget an amount in excess of one-half of one per cent of the total assessed valuation of the town for the improvement of the school property of the town without a favorable vote by the people.

We concede that the township system has restored power in the matter of consolidation to the hands of the taxpayers, and in the levying of taxes they have lost no power as compared with the district system, except that this power is not lodged, as it should be, with each individual school district.

We are glad that Professor Works is in accord with us in believing that our present system of electing district superintendents is unsatisfactory. We regret that he does not suggest a better system.

We are also willing to concede that the State Department of Education was in no way influenced by any political partisanship in framing and recommending the Machold township law. Nor do we believe that the Department was influenced by any political partisanship in devising and recommending the passage of the law which created the office of school superintendent, abolishing school commissioners and providing for the election of these school superintendents by what we call a body of SUPERMEN, called school directors.

While conceding all this to the State Department of Education, and while acknowledging the several good points in the new township law to which Professor Works calls attention in so lucid a manner, we still feel inclined to stand by every word which we wrote in condemnation of the Machold law.

Professor Works suggests that there is nothing in the new legislation which justifies us in characterizing it as "trampling down the principles of home rule in educational matters." We will see about this. The professor is entirely wrong in thinking that we had in view the method of school consolidation for which the law provides, when we condemned it in forcible language. Not at all, we were well aware, as Professor Works points out, that in this respect the new law is an improvement over the old one.

The vicious principle of the new law which is fundamental and undemocratic, and which does trample down the principle of home rule, is the abolition of local district government for the district schools. We do not think it would be wise for a county board of education, composed of five members, serving without compensation, to undertake to run all the schools

in the county. Similarly we think it unwise, unjust, undemocratic, vicious and dangerous for a town board of education, composed of five members, serving without pay, to be entrusted to run all the schools of a township.

Take the town of Caroline for instance. It has 16 school districts. Each one of these districts (the one at Speedsville for instance), formerly conducted its own affairs, held its school meeting, elected its trustee or trustees, passed on its school budget and on the question of any extraordinary expenses for school improvements. The men and women who attended this school district knew local conditions, it was their own children who attended the school, and, we believe, they were more competent to select a trustee than any other possible group of citizens and far more competent than a town school meeting. The trustee elected also knew local conditions, knew the sentiment of his constituents and he was the right man to hire a teacher and to carry on the business of the school district as the representative of the people of the district. This was a democratic system, this recognized a sound principle of home rule in educational matters.

Now the school at Speedsville is governed by five men who have 15 other schools to look after, who serve without compensation, and a majority of these men live 10 miles away from the school they are governing. The law provides that not more than three of the school board shall be from any one district. Even were the members of the town school board scattered as widely as possible, 11 districts in Caroline would be unrepresented on the board. The law makes no provision for the expenses of the board of education in visiting the different school districts, and the town boards of education, as a matter of fact, do not visit the different districts. They ought to do so, they ought carefully to inspect every schoolhouse, note its sanitary conditions and its state of repair; otherwise how can they intelligently decide what it needs? And how can they decide whether last year's teacher is the right man or woman for the position and deserves reengagement? Even if they visited every school in the township occasionally, and often talked with the patrons of the school, how little they would know as to the real needs of the district compared with those who reside in the district and whose children attend the school.

We did not elaborate these points in our editorial but we pointed out that the indignant protest against the township school law was due to a feeling on the part of the people in the rural districts that they are competent to conduct their own schools, that they are determined that they will conduct them and not surrender important educational matters entirely to non-residents. We pointed out that in these days when the rural districts have telephones, free rural mail delivery, the parcel post, granges, daily newspapers and magazines, they also have a citizenship sufficiently intelligent, sufficiently well educated and sufficiently enterprising to conduct their own district schools. And we also said that there was every indication that they intended to assert their RIGHT to conduct them.

Professor Works defends the system under which every property holder in a township is compelled to pay, pro rata with his assessment, an equal sum for school expenses. We did not attack this feature of the law, except by inference, when we pointed out that some citizens found their taxes doubled, trebled, and quadrupled, in connection with a law that took away from them the management of their school and conferred this management

usually on nonresidents, but we do question the fairness of a law which makes a farmer pay as much for the erection and maintenance of an expensive high school, when he may live 20 or 30 miles away from that school as the property owner who may live only a stone's throw away from the school. We certainly can not wonder that farmers balk at paying for the erection and maintenance of schools which are so far away that their children can not attend them while residing at home.

Professor Works is entirely in error in thinking that any political partisanship has prompted us to criticize the new school law. If he believes that the protest against this law emanates from Democratic partisans, he is utterly mistaken. There are twice as many Republicans as Democrats who object to the law, but this is simply because there are about twice as many Republicans as Democrats residing in the rural districts of the State. We certainly do not believe political partisanship often guides the policies of the State Department of Education.

Professor Works thinks that our school supervisors (formerly school commissioners) should not be elected by popular vote, and he says the first question he wants to ask regarding those responsible for the instruction of his children is in regard to their intellectual and professional fitness, and the last is in regard to the political party to which they belong. This is a commendable position to take, but when school commissioners were elected by popular vote, they were not chosen on account of their political views as was often proved when Republican districts elected Democratic school commissioners. The average voter is sensible enough to ignore party affiliation in educational matters. There is little of party politics in connection with our public schools, although we nominate and elect our boards of education on party tickets and in accordance with the party system of democratic government. We criticize the law which abolished school commissioners and provided for school superintendents elected, not by a direct vote of the people, but by school directors, because this law, ostensibly enacted to keep this particular office out of politics has proved to be an absurd failure. Can anyone wonder that we question the nonpartisanship of a method which makes the incumbents of a certain office all members of one and the same political party?

If Doctor Finegan were consulted by some young man desirous of obtaining office as a school superintendent, and if this young man were to ask Doctor Finegan about the qualifications for the office, the doctor would be compelled, if frank, to ask him, "What political party do you belong to?" And if the young man were to reply, "I am a Democrat," Doctor Finegan would have to tell him, "Well, if you want to be a school superintendent, you will have to become a Republican."

We can not think favorably of the nonpartisanship of the method of choosing school superintendents by school directors when it results in placing in these offices only men who belong to one and the same political party.—*Ithaca Daily News.*

Elsewhere in this issue, the *Recorder* begins the publication of a series of articles, in the form of questions and answers, with regard to the township school law, explained it thoroughly, from a standpoint favorable to the law, correcting misapprehensions of it, showing its workings and pointing out its advantages. These articles have been prepared by a well-known educator,

after a close and careful study of the law and should be of much help, we think, to the intelligent voter in forming a definite opinion as to a measure which has caused a great deal of discussion and against which a strong feeling has been created, based, for the most part, however, on a lack of knowledge or a misunderstanding of its provisions.—*Amsterdam Evening Recorder, February 4, 1918.*

Rural Parents Object to New School Laws

Parents of children attending the rural schools are of the opinion that the strenuous game of "hunting the thimble," engaged in once a month as per instructions of a "physical training teacher" is not necessary. They fail to see its value as physical training and exercise of the muscles for children who have to trudge from one to several miles to and from school, cut wood, help with the milking, and do several other kinds of chores; a little skating, swimming, baseball and other robust games, in season. For that reason they ask the repeal of the educational law insofar as it requires the students to have "physical training" once each month whenever the physical training teacher comes to show them "how to play."

The parents also do not believe that the physical examinations as conducted by the regularly appointed physicians amount to anything "except 50 cents for each examination for the doctor," and they want this part of the educational law also amended or repealed.

The third objection on the part of the parents especially those who are taxpayers, is to that part of the township educational law which makes each town support a board of education which has supplanted the independent school districts and their trustees. Bills to amend all these features in the educational law are before the Legislature. The hearing which was scheduled to be held next Tuesday on the board of education feature has been postponed until Feb. 27, at which time the three above-named objections to the law, and for which bills to amend and repeal are in committee, will be heard at the Capitol. It is expected that a delegation of taxpayers from the rural districts in Broome county will attend.

The board of supervisors has gone on record as favoring the repeal or modification of the law with respect to the town boards of education, and formal requests to the county's legislative representatives to work for the amendment or repeal have been presented to Senator Hill and Assemblymen Jenks and Whitcomb.

Speaking of the three obnoxious features, which are sought to be repealed or modified, a resident of the town of Chenango, who asked that his identity be camouflaged, said to a reporter for the *Binghamton Press*:

"The education of the children in the rural schools should be as important as the education of children in city and large village schools, and the parent of the child attending the small district school is anxious to see that the little one gets the best there is. Undoubtedly the framers of our educational laws have been working for the best interests of the district school children, but it seems they have gone on the theory or worked on the idea that a district school can or should be conducted just like the city or village schools.

"For that reason the law was amended and our independent districts were abolished and each school in a town is made part of a town system. It

means that we must support a board of education which hires a clerk. The system has saddled a cost on the taxpayers that is not warranted by the results because the schools and the scholars are no better off than they were under the old system; but at the same time someone has got a job that is useless as far as the town is concerned.

"When it comes to 'physical training' that is another big humbug, perhaps the biggest. Country school children do not need physical training in addition to the physical exercise they are getting every day. We figure it out that a little fellow and his sister who have to trudge through the snow in weather like this gets plenty of good, healthy exercise. Every drop of blood and every muscle is exercised, and there is nothing sluggish in the system of the scholar. Most country children have plenty of exercise at home to keep them from getting soft, and none of them has any trouble with appetites or sleep. If they have, it is not for the want of exercise.

"For that reason we can't see anything sensible or necessary in having a physical training teacher visit each school once a month and show the children how to play games, how to hide the thimble and other nonsense. It is all right for the teacher, of course.

"She is working and getting paid for it, but we object to being forced to buy and pay for a service which is not needed and which can not do any good. The regular teachers do not like it as it interferes with their work, and the scholars poke fun at the idea.

"When it comes to medical examinations, that's something different. I believe the medical examinations, when conducted properly, are good, and we should have them. But as it is conducted now there is no examination. It really amounts to nothing more than a visit to each school and an observation of each pupil by the doctor. It is 'easy money' for the doctor, who gets 50 cents each per child for the 'examination,' which I could make just as well.

"Parents are anxious to know if anything ails their children and, while a condition might not show itself to the parent, a careful doctor, making an honest medical examination, could find the trouble and cause a report to be sent to the parents. The doctors visit the schools, but the parents never hear any reports about their children. Let us have this part of the law amended to compel the doctors to make honest and thorough medical examinations, and we will be satisfied."—*Binghamton Press*, February 8, 1918

Machold Township School Law Is Well Defended

Prof. George A. Works, of the Cornell department of rural education, has addressed to the editor of the *News* the following answer to a discussion of the township school question which recently appeared in its editorial columns:

The editorial in the *News* of January 26, entitled "Prussianizing Our Country Schools," is so unfair to the Machold township law that it should not be permitted to go unchallenged. You imply that this piece of legislation has been a factor "in trampling down the principles of home rule in educational matters." I can not believe that any fair-minded person who was familiar with the district system and who has given the new law even a cursory reading has been able to find an adequate basis for such a statement. The vagueness that characterizes the editorial as a whole is not lacking in this instance. If you had anything specific in mind when that statement

was written it was probably school consolidation and the method of taxation. This is at least a fair assumption since these are the two things which are commonly given as indicating the passing of "home rule."

In considering the question of consolidation it should be borne in mind that the Machold law is not a consolidation act but legislation by which the unit of taxation, organization and administration of the country schools is changed from the district to the township. Under the district system the voters of two or more districts might vote to consolidate. This happened occasionally but more frequently the consolidations were "forced." This was possible because under the old law a district superintendent had the power to issue an order consolidating two or more districts. It is true that the voters had a right to appeal their case to the State Department of Education but usually the action of the district superintendent was sustained.

Compare this procedure with the provision for consolidation under the present law. If a district superintendent believes a consolidation of districts to be desirable he presents the matter to the town board of education. If they are opposed to such action it can proceed no further. If they are favorable to the consolidation the question is submitted to the voters of the districts involved in the consolidation. In order that the consolidation may be effective, a majority of the voters in each district concerned must vote for the consolidation. As a result the power of consolidation is taken from the State Department of Education and placed entirely in the hands of the people. Certainly this is not "trampling down home rule."

An analysis of the taxation phase does not show any greater failure to recognize democracy in the management of school affairs than exists in other matters of local taxation. For the past fifty years the trustee of the country school district has had the right to include in the budget for his school district the amount necessary to pay the salary of the teacher and the maintenance expense of the school. The trustee had absolute power in fixing the salary of the teacher and it was only in the matter of unusual expenditures that the voters were given a voice. In union free districts since 1853 boards of education have prepared their budgets and submitted them to the voters of their respective districts. The law under which this was done expressly provides that the voters could not reduce the amount included in a budget for the salaries of teachers or for contingent expenses. This same plan is followed under the provisions of the township system. The town board of education prepares its budget, and it is required to publish the same so that every taxpayer of the town may know the amount included in the budget and the purposes for which the money is to be collected. The board may include in this budget such sums as may be necessary to pay the salaries of the teachers, to provide fuel and other supplies. Provision is made, however, so that no board may include an amount in excess of one-half of one per cent of the total assessed valuation of the town for the improvement of the school property of the town without a favorable vote by the people. In no case may the board include more than \$5000 for betterment of school property without action by the voters. Is this method more undemocratic when it is applied to the handling of school affairs than when used by the town board in providing for the operating expenses of a town?

From this brief analysis it is evident that the township system has restored power, in the matter of consolidation, to the hands of the taxpayers, and in the levying of taxes they have lost no power as compared with the district system. Furthermore, the method of determining expenditures for school purposes is essentially the same as that used in raising taxes for other local expenditures.

This measure makes a further provision that is essentially democratic, viz., the equalization of the school tax throughout the town. Every property holder in the town is called upon to support the schools of the town in proportion to his wealth. Under the district system there were hundreds of districts in which no local taxes were raised for school purposes because they "contracted" with adjacent districts. The state quota was ample to cover this expense. It was also an easy matter to find hundreds of towns in which

the taxpayers in some districts were paying a tax rate several times greater than that paid in other districts in the same town. It is true that a difference in tax rate between different towns will still be found, but the rate in all districts that come under the township law, in a given town, is uniform. Naturally this has resulted, as your editorial states, in the taxes of some individuals being doubled, trebled or even quadrupled. But this condition will be found only in those districts where the taxpayers have for years been escaping their fair share of the school tax because of a high assessed valuation for the district. This high value frequently was due to the passage of railroads through the district.

I have no desire to be understood as claiming that this law is a perfect piece of legislation, but I do maintain that it is an improvement over the district system and that it is deserving of fairer consideration than your editorial page has shown it.

I am in accord with you in believing that our present system of electing district superintendents is unsatisfactory. However, your advocacy of a return to their election by a direct vote of the people is contrary to the views generally held by careful students of school administration. Those who are responsible for the supervision of and the teaching in our schools should be selected on the basis of merit and without regard to partisan politics. These offices should be regarded as professional positions and persons should be selected for them only on the basis of professional attainments. When such choices are made by a nonpartisan board that has opportunity to thoroughly acquaint itself with the preparation and fitness of available candidates, better selections are likely to be made than will be made by a popular vote by people who have no opportunity to become intimately acquainted with the professional fitness of available candidates. Why should the supervisors of our rural schools be chosen by popular vote any more than should the superintendent of the Ithaca public schools? If school supervisors are to be elected by popular vote, why not select classroom teachers in the same manner? Your comparison of the choice of persons for these professional positions with that of political offices is absurd. The first question I want to ask regarding those who are to be responsible for the instruction of my children, either as teachers or supervisors, is regarding their normal, intellectual, and professional fitness, and the last is regarding the political party to which they belong.—*Ithaca Daily News, February 8, 1918*

The Township School Law

To the Editor of the Journal:

I am a resident of an agricultural township in western New York, paying taxes upon village property and upon a farm in one of the outlying school districts. Almost touching the grindstone embedded in the center of our townships are the grounds of the high school, an institution in which the inhabitants take pride. For some time after the passage of the township school law, the people of the township were in the throes of a heated discussion, which, however, has been succeeded by comparative calm.

That the township school law provoked much opposition is not surprising, since there never was a change made in a system of long standing that did not call forth vehement resistance; moreover, there never was a law that did not work hardships in individual cases. So opposition to the law does not necessarily prove that it is a thing of evil.

Some were opposed to the passing away of their district schoolhouse because of old associates; but sentiment can not bar the way of progress. Others objected because, as they said, it would depreciate the value of their farms; it has not been proven that such is the case. Still others feared that

their children would suffer injury, if they attended the village school; but their children have been carried to and from the village school by responsible persons, one of the faculty has remained in the school building during the noon hour, and thus far not only is no harm apparent, but their children have been stimulated by being in larger classes and in the atmosphere of a more advanced school.

Governor Whitman, in his message, speaks of the long distance some children are obliged to go; this is not true in our township. No district whose schoolhouse is more than two miles from the center of the township has united with the high school district. The districts on the border are the same as heretofore, with one exception, in which two such districts have been consolidated.

Undoubtedly the opposition is due chiefly to the increased taxation in the outlying districts. At first the taxes would be higher because of needed changes in the school buildings. In the instance just mentioned, that of the consolidation, one building was moved to another site, while the other was torn down and the material used. Money was also expended in making changes in the high school building. But there are now four less teachers employed in the outlying districts than heretofore and, exclusive of the teacher of physical training, only one more is employed in the village school. The salary of the teacher of physical training is paid by three towns. Since the cost of transportation and the salary of the clerk is less than half the amount that would have been paid the extra teachers under the old law, it looks as though, after matters have become adjusted, the school taxes of the township would be less under the new law than under the old one. The amount of fuel burned is considerably less with several schools discontinued.

Not long since two farmers were discussing the new school law, when one of them said, "I haven't any kick coming; I sent all my children to the high school, nearly all of them graduated and I didn't pay a cent of tuition." "I sent children to the high school," said the other, "and I never paid any tuition but once, so I can't find any fault."

Not all the farmers of our township are like these two, for when another was about to retire from farming, after his children had enjoyed the privileges of the high school, he decided that he would buy him a home in one of the outlying districts because the school taxes in the village were so high.

Is it just for one district of a township to sustain, with the help of the State, a high school for the benefit of all the districts of the township? In our school the great majority of high school students come from the farms. There are those who say, "Let those that go, pay tuition." Is this the spirit of true democracy? Would the children of the poor man, who is frequently rich in children, have an equal opportunity with the children of the well-to-do? If this plan were carried into effect, the school would be weakened, and many, I fear, would be deprived of a high school education.

Why not give the new law a fair trial?

Township School Law too Costly

Kingston, R. D. 2, Feb. 11, 1918

Editor Kingston Freeman

DEAR SIR: Mr Andrews has personally, in a recent issue, assailed me in my action on the town schoolship law. Please permit me to reply to this unjust criticism.

In the first place, did I so grossly misrepresent the facts in my statement as to the tax rate? I did not go into the fraction of a mill as I did not have the official figures as Mr Andrews did. The fact is it was a fraction over six mills last year and a fraction less than eight this.

Mr Andrews is right; it is not the negligible increase in the tax rate in the whole town, neither is it the increase of two and eight tenths in my district. It was at the request of taxpayers from every district, not excepting those districts in which the rate was lowered, that impelled my opposition to the law. It is not the fact of the small increase. It is the fact of any increase at all without any benefit that we are fighting. Mr Andrews failed to tell us that the districts with the low valuation, consequently high tax rate, get the largest per cent of public money. Although my district has the lowest rate we get less public money than any district in the town.

He says that the increase in the tax is due to increase of teachers' wages, fifteen per cent in cost of labor and material. To use his own words he should be more than half right, to be convincing, why don't he mention all the items?

I find an order on my district for 1917 as follows: Miss Alice Chaffee, physical director, one and one-half hours' instruction, twenty-two dollars and thirty-three cents. Although this has nothing to do with this law, it goes to show what we might expect if we sit still and say nothing.

Forty years ago when I was a boy going to school this would have paid a teacher for a whole month. We got our physical training at home, nights and mornings, free gratis, carrying wood, shoveling snow, etc. By the way, we have to get back to some of the principles of those days or we will have more meatless and wheatless days than we are now having.

In regards to the members of the board of education, I do not think it is for lack of manhood or womanhood that they think they should not be asked to work for nothing. I enclose you copy of a letter I received from a town official from Mr Andrews's own town, showing how much they think of the law.

January 20, 1913

Mr L. L. Sagendorf

DEAR SIR: I write because I am much pleased at the manner in which you defend the board of supervisors in their action regarding the repeal of the school law and in the little but good things you say to Mr Andrews. True it is that it is mighty fortunate for him that the taxpayers do not vote direct for district superintendent.

There is not a single taxpayer in Mr Andrews's own town that would not vote for the repeal of that law and but very few in his own town that would vote for him even.

My tax is about three times as much as before and as you say, no improve-

ment in the schools. Go on, the people are behind you and will stay by you. It is an abominable law. Mr Andrews can see this letter with the writer's consent.

I am now through with this controversy, and I would advise Mr Andrews to do as the bear, in which he said the board of supervisors took more interest than they did in the school children, is supposed to do after the bright sunshiny day of February 2.

L. L. SAGENDORF

Helps Educate Country Youth

F. D. Boynton, chairman of the executive committee for the State Council of School Superintendents and the State Teachers Association of the legislative committee has sent out the following notice to educational superintendents:

My Dear Superintendent:

Are you watching EDUCATIONAL legislation now going on at Albany? Are you in touch with your senator and assemblyman? Are they not entitled to your PROFESSIONAL judgment as to the NEED and EFFECT of the legislation proposed?

Mr Martin has introduced into the Assembly a bill no. 26 for the repeal of the township bill. I have taken some pains to look into the cause for the opposition to this measure and thus far have found nothing essential which is not financial. Now why should not a country boy be educated at the expense of the property of the city? No section or division of a city supports by taxation its own little school, education in a city is a city proposition; why should not the same hold true in a town? Isn't a country lad just as much the "ward of the state" as is the city boy?

For years we have been told that we should not "educate boys away from the country." The township bill is the first organized and adequate measure which undertakes to bring to the country boy the education he needs and is entitled to receive into an environment which he thoroughly understands. The opposition to this bill is the opposition of property which denies and defies the rights of the child as long as it can. Of course, the child is helpless and can't plead his own cause.

The taking over of the railroads by the federal government and the Garfield closing order have established the fact very definitely that property will not be exempt but will be as freely conscripted in the cause of liberty as persons of military age. Of course "it has never been so" in the matter of the district school which is "the same yesterday, today and forever," unless the principles established in this bill are maintained. Very likely amendments may be needed, but the bill has not had a chance to be tried out. It works in other states, why should it not here? It proposes no new and untried problems. We are only benefiting by the well tried experiments of other states.—*Elmira Gazette, February 14, 1918*

School Law and Corporations

To the Editor of the Observer:

Please allow me the use of your columns to explain to the farmers the workings of corporation taxation for school purposes under both the old district system, and under the present township system.

Under the district system the railroads and other great corporations were taxed for school purposes only in the particular school districts through

which the railroads and corporation lines passed. To illustrate: The great Central Railroad extends, in this State, from Buffalo to New York city. Under the former district school system this corporation helped support the schools only on each side of its tracks for a distance of about a mile. It did not contribute by direct taxation a single penny toward the support of the schools of the towns through which it passes except as I said before those districts in which its tracks lie. What is true of the Central Railroad is also true of all corporations doing business in this State.

Under the township school system the Central Railroad, as well as all other railroads and corporations, are obliged to contribute to the support of the schools of the entire township through which the railroads pass, and the towns in which the corporations do business. Thus the school districts situated in the back and more inaccessible parts of the town through which the railroads pass now receive under the present township law several hundred thousand dollars school taxes from the railroads and other corporations, where, under the district school system they never received a cent from the railroads and other corporations doing business in their township.

The district school system of taxing railroads and corporations is a method of robbing the back school districts for the benefit of the railroads, and also for the benefit of the rich districts through which the railroads and corporations' lines pass. The back rural school districts of the townships through which the railroads pass give the railroads much more business than do the few rural school districts which touch the railroads and which have before this year received all the school taxes paid by the railroads and corporations. This is self-evident, for there are from four to eight times as many back rural schools in the townships through which the railroads pass as there are rural schools touching these same railroads. Hence, these same back rural school districts all these years have contributed many times more business to the railroads than have the more fortunate and wealthy school districts lying along the railroad tracks. Not only do the back rural districts furnish the railroads many more times the milk and other freight, but they purchase many times more feed and other return freight than do the school districts along the railroad lines. Then, too, the farmer living back on the hills must draw their freight up and down long and steep hills, through deep mud in summer and huge snow banks in winter, thus costing the back rural school districts far more to furnish business to the railroads than it costs the rural school districts lying along the line of the railroad. We can the more cleverly see the unfairness, yea the robbery practised against the back rural districts when we understand that nearly all the best improved highways extend along corporation lines and through the richer rural school districts. We plead with you, Mr Lawmaker, and ask you is it fair to deprive the back rural schools of railroad and corporation taxes, and permit only a few rich rural school districts to tax the railroads, when the back rural school districts at great cost and effort are contributing several times more business to the railroads than are the few rich districts along the line of railways?

In this age of selfishness and injustice it is to be expected that the rich railroad school districts will make every effort to prevent the back rural school districts of their town from receiving any railroad taxes and thus

keep all the help of the railroads for the rich railroad districts. Likewise it is to be expected that the railway and other great corporations will do all in their power to induce the law-making body of New York State to repeal the present township school law and thus save for the pockets of the stockholders hundreds of thousands of dollars per year school taxes that rightly belong to the back rural school districts from which the railroads and the cities draw so much business.

Finally if the Governor and the Legislature think as much of the farmer as they say they do, let them give us a just and equitable law of taxation by which the majority of the farmers of this State, living in back rural school districts, who at great expense and labor are contributing far the most business to the railroads, shall receive their pro rata share of corporation taxes along with the rich rural school districts along the line of railroads.

Mr Governor, is it your aim as your message indicates to free the rich corporations of hundreds of thousands of dollars of school taxes that are now being paid to the back rural school districts that never before received a cent of railroad school taxes? Does the Republican party in New York State propose to give us a school law that will give corporation taxes only to a few rich school districts through which the corporation lines run, and thus deprive the great majority of hard-working farmers in the back rural districts of every penny of corporation railway school taxes? That party that so legislates ought to be snowed under beyond all resurrection.

The Government has taken the sons and the best hired men away from the farmer, and can give him no substitute. There he is back on the hills alone with his wife and little children trying to run the old farm to support his family and raise a little extra to feed his sons and his neighbor's sons in training camps and "somewhere in France" while a great Governor of a mighty State is bending the energies of a great mind to deprive this back district farmer of school taxes justly due him from great railroad lines that grow rich carrying the farmer's produce to the great commercial marts.

The Old Red Schoolhouse

Editors of the Star:

There is one feature of this much cursed township school law which we don't hear its opponents say much about. Everywhere we hear them claiming that it is an effort of the village to load the burden of expensive buildings and teachers on the farmers.

Well now most of the farmers when they have children who are getting beyond the grades have appeared in the past to be darned glad that there was a village school near — with its "expensive" buildings, teachers, etc., — that is with modern equipment to give to the young man or woman the right fundaments for a modern education. We have noticed that in every desirable farm offered for sale it has been stated how far it was from a "good high school." Farmers with families, we have noticed, have looked at that as one of the first considerations. Why is it that a farm located

within a mile or so of a good high school is worth 25 per cent more than exactly as good a farm, with all other conditions equal, five or six miles from such a school?

What about that? Well, the villages have been maintaining modern schools and educating the farmers' children for a small fee—less than cost. Very naturally the farmer likes that arrangement, with his own school taxes next to nothing. Now that it is proposed that he shall bear his equal portion of expense he kicks and kicks hard. The "old red schoolhouse" is good enough—for the neighbor's children. The fact that he is asked to bear his share of expense is practically the only kick he has against this law.

Does the farmer want the neighboring village to abandon its "expensive" school? Or does he want the village to educate his children at village expense? If this township law is repealed, how would it be for the village schools to put their tuition fees up where they ought to be? Of course that might prevent many a young man or young woman without means from getting the start toward high position—but then it would save taxes for those who have no children of school age.

A CITIZEN

Favors Township School Law

Editor Buffalo Express: The *Express* and its readers are requested to give their views on the Machold township school law. The question is, should the said law be repealed or not? There can be no question of the fact that the provisions of the said law place the rural school on a higher educational plane, "a consummation devoutly to be wished."

I think Governor Whitman is playing politics to the rural vote by favoring its repeal. The probability is that some of our religious organizations are also behind the repeal.

Says Dr John H. Finley, Commissioner of Education, "The township law is the most important legislation touching the common schools of this State enacted since the establishment of the free schools, and it is of record that the latter called forth even greater criticism than this measure and was repealed after its first enactment, only to be reenacted in substantially the same form. The repeal of this measure would, we believe, be a disaster."

ROBERT GALLOWAY

Buffalo, Feb. 18th

—*Buffalo Express*, February 20, 1918

Township School Law

Editor the Record: It would be pleasing to me if you would allow me space in the pulse of the people column to express my approval of the bill of Assemblyman Martin now pending in the Legislature to repeal the obnoxious township school law. After perusing the law in question it would appear to me to be one of the worst measures and also one of the most unjust and unfair ones that ever was placed on the statute books of our State. Instead of being known as a township school it should be entitled

an act to establish kaiser rule over the rural district, the kaiser being personified by the State Education Department. I can not for one moment imagine how any resident of the rural districts with one drop of good red American blood in their veins can favor the present law, although I am sorry to say there are a few, a very few, so few that they must feel lonely, very lonely indeed, as I would venture to say that they do not include over two and one-half per cent of the rural population.

The present law violates all the principles of home rule for the reason that it forces an obnoxious law upon the rural population without their consent and without consultation with them in any manner and the State Education Department seeks to retain it despite the strong opposition to and dissatisfaction with it by the greater portion of the people interested.

There has been no demand from the rural districts for any such law. If the rural population desired any change from the old system they would long ago have made their wants known and have pointed out the desired changes they wished made.

I do not wish to be classed as a kicker but I believe it is the duty of every citizen to kick when any state department seeks to deprive him of rights which he has enjoyed for years, and also when added burdens are placed upon him without his consent and at the same time giving him no benefits of any kind in return.

In these days when we are engaged in the most holy war in the history of mankind, in the fight for pure democracy and to make the world safe to live in, when it is the duty of every citizen to aid our government in every way possible, even to giving his life that the right may succeed in this struggle against savagery and barbarism as exemplified by the German government and people, it would seem like sacrilege to retain such earmarks of lauserism as the township school law upon the statute books of our State.

RURALITE

Mechanicville, March 5, 1918

—Troy Record, March 11, 1918

Repeal School Law

The so-called district school law which was passed at the previous session of the Legislature on the recommendation of the State Education Department, has proved to be an unjust, inequitable and abortive measure, and there has been a widespread demand for its repeal, especially among the farmers of the State. While the basic principle of the law may be sound, yet its application to present conditions in this State is unsound, unjust and unsatisfactory. The fact is that the law is sound in theory because the theory of the law can be easily worked in one's head with no realities to interfere with its operation but when it is applied to people, to conditions and to districts as they exist, its operation is entirely different, than it is in the head of the theorist, and therefore in its operation it works injustice and hardship to one district, while it relieves another district of its just burden of taxation.

This may be owing to the fact that the boundaries of the towns in this State and the boundaries of the school districts do not harmonize and never

have harmonized and never have been adjusted on the basis that the town boundaries and school districts were adjusted in the New England states where this law or a similar law has worked out satisfactorily. In the New England states the old town meeting system was the original system of government. The towns were organized on the social center idea and the boundaries of the towns were largely uniform and the school districts were laid out in harmony with the town boundaries. In the State of New York the situation is entirely different. In this State there were large landed estates throughout the territory and irregular boundaries everywhere and the State was cut up into townships and the ideal of the New England social center was obliterated and the township boundaries were adjusted not to the social center idea but to the irregular outlines and boundaries of the various estates in which they were included. This has had the effect to make our township lines and school district lines irregular, some long, some short, some wide, some narrow and some both long and narrow.

A school law framed in the head of a theorist to apply to universal, uniform conditions can never be made to apply to these irregular and absurdly laid out boundaries of town and school districts. This is in a large measure the reason why the present district school law can not be made to operate in this State fairly, justly and equitably because it distributes the burden of taxation in accordance with districts and the districts are not uniform and the result is that the taxes are increased in one district and decreased in another, thereby imposing an added burden upon the very districts that are the least able to pay that burden. This is the primary reason for the revolt against the so-called school district law and the only thing to do is to repeal it because however good it may be in theory, it is abortive in practice.

Governor Whitman is right in recommending its repeal, the Assembly is right in voting for its repeal and the Senate should also place itself on the right side by following their example and vote to repeal the law.—*Lyons Republican*, March 29, 1918

Woman's Appeal Almost Wins Supervisors' O.K. for School Law

Riverhead, L. I., February 27—A woman, Mrs George W. Bacon, a wealthy summer resident of Smithtown, almost converted the entire board of supervisors to a belief that the township unit school law is all right as it is and that the bill to repeal it should be killed forthwith. In fact, it looked at one moment as if she was going to take all of the "county fathers" to Albany with her today and have them put in an emphatic no against repealing the law, which several of them have previously vociferously declared to be most horribly unjust.

"This is the first time I have availed myself of the privilege recently conferred on women," she said as an introductory. "I appear before you as a citizen deeply interested in the schools. To repeal the law that now provides a township unit will be a step backward. This system, after it gets fairly started—it has not yet had a fair trial—will help keep the country from being deserted. We love to think of the freedom of country life over city life. With better schools in the country our children will

remain in the country for their education, and the schools will help train the children to be better country folk and more interested in the country, agriculture and everything that helps to make them better citizens. We are not now in the front ranks of rural education, but we could be. Other states have tried the county unit or township unit and have found it works admirably."

Mrs Bacon presented facts and logic that seemed to be convincing the board that it had been committing a crime in even thinking ill about the school law. She called the law a family affair and delicately alluded to the fact that Smithtown, being compact and having various civic societies, was really a family town—"and we would like to allude to our supervisor (E. H. L. Smith) as the daddy of Smithtown if he were old enough." Mr Smith arose and made his most dignified bow.

All was going splendidly until an irate trustee in the back seat—just an ordinary citizen—jumped up.

"Has anybody on this side of the rail a right to say anything?" he demanded.

"Certainly," replied Chairman Tiffany.

"Well, I just wanted to say that this law is the worst piece of legislation ever written on the statute books. I know what I am talking about, for I have been a school trustee for nine years."

He had spilled the beans; the charm was broken, and the board will not appear en masse and demand that the law remain as it is. But some of the members looked as if they would just like to bite that taxpayer in the back of the neck.—*Brooklyn Eagle, February 27, 1918*

THE OPPOSITION OF THE "RURAL NEW YORKER"

Probably the periodical which was most persistent in its opposition to the new town school organization was the *Rural New Yorker*. We are presenting the complete history of the opposition of this particular magazine. All editorial comments and all letters from subscribers are here reproduced as taken from the pages of this magazine from the issues of 1915 to 1919 inclusive. We are also reproducing several letters in regard to this same situation that might add some interest to this phase of the controversy.

Extract from Letters of Charles S. Farr, Lodi, N. Y., to Senator Elon R. Brown, January 6, 1918

I am inclosing you a letter which will speak for itself and show you plainly where all this opposition to the new school law gets momentum from.

This letter was sent to me thinking I was opposed to the law as it now stands. These letters have been sent all over the State thinking to curry favor among the farmers and get all opposed to the law to write letters etc. This method is of course old, and as has been said, a petition can be secured to hang the President or Governor.

In my opinion if this law must be amended it should have a member in every school district and the unit of taxation should be the town.

Could the law be finally amended so that a direct, of only say five dollars per thousand be assessed direct for schools and the balance assessed on the state at large as so much for schools the same as so much for canals we would hear no more of this cry of high taxes.

I believe this law which whatever changes are made that the idea of a high school in every town supported by the whole town is the only solution of this question that is equitable.

Letters referred to by Mr Farr

You are opposed to the present school law and wish to have it amended or repealed. Since your letter was received we have heard from most of the upstate members of the Legislature, and it seems evident that the law can be changed if the country people can bring strong pressure to bear. It will be necessary to *organize* thoroughly in every district and county.

Can you not start such organization in your county? If at present organized, will you send us names of the officers and the number of votes (men and women) on whom we can rely? Quick work is required if we are to make a strong fight.

Very truly yours

H. W. COLLINGWOOD
Editor
Per F. L.

—*Rural New Yorker*, December 31, 1917

I see by the *Rural New Yorker* that an effort is being made to flood the Assembly with letters and also there seems to be a stereotyped letter being prepared for you also, in regard to the repeal of the new school law.

Now as I understand the aim and object of this law is to establish a high school in every township in the Great empire state and where there is none to ultimate see that one is built as was said by the late Commissioner Draper he hoped to live to see a high school within easy distance of every child in the Empire state

Now that this is being accomplished and where there is already a high school building suitable they are much better off than had they to build one these times and it seems to me if this were understood it would put to shame many of those who are howling about the unjust law etc., etc.

The only objection when boiled down seems to be that in some districts the taxes are this year advanced somewhat

A member of the legislature was called to visit a grange in an adjoining county near here and asked why he had voted for such an iniquitous bill when he promptly produced resolutions from several different granges asking him to support the bill, also numerous individual letters urging him to vote for it.

The *Rural* seems to be very short sighted in taking this matter up and advising stereotyped letters which as a rule do not good. I have written them this morning asking that they understand fully the object of the bill before

going farther in the matter. I am personally paying taxes on four farms in outside districts and cant well be said to be piqued over the tax.

I hope the law will stand.

Yours

CHARLES S. FARR

Lodi, N. Y.

December 16, 1917

Extract from Letter of Vesta McKee, Newfane, N. Y., to the Rural New Yorker, January 28, 1918

I have been following with much interest and no little amusement the articles appearing from time to time in your paper relative to the rural school laws. So many of them show plainly that the writer was entirely unfamiliar with conditions in his own school or with the newly enacted school laws. As I heard one man express it, the only evidence they want to prove that the township school system is a failure is the receipt for this year's school tax.

The article by Mr Hall which appeared in your issue of January 26 is the first I have seen that shows a careful consideration of the subject. I feel that in putting this article on the front page your paper has in some measure repaired the damage done by previous articles where the keynote was, knock everything and everybody connected with the school system. He writes as a man of experience in rural school affairs, and if the reading public will study his article carefully and do a little investigating in their own towns I know a better understanding of school conditions could be reached.

I am one of those articles classified by your contributors as Impositions, Abominations, Nuisances etc.,—a Physical Director. And let me urge right here that you keep in mind the fact that the township school law and the physical training law are entirely independent of each other.

I am inclined to agree with those who apply such names to those of my profession, for we are a nuisance to those who believe that the schools were good enough before. We are in a position to find out too much that many do not want to know regarding conditions in rural schools.

I have always lived on a farm, attended a district school, and a rural high school, have taught nearly half of my life in rural schools, leaving my schoolroom a year ago to take up the work of physical director for the seventeen schools of this town. I worked the last five months that the schools were under the old trustee system, and now five months under the township system, and have learned a few things in that time. I was much opposed to the township system when it was first proposed. I had always got along with trustees and found they did not make me any trouble. Some were men of education, public spirited, anxious to do all possible for the good of the school and community. Some had little or no education, and directed me to purchase supplies and see to repairs, and send in the bills. One who felt the responsibility of his office whenever his habits got the best of him would then come to the school and give us an interesting time while he tried to find a way to spend more money on us. One who had never heard of me before hired me over the

telephone because I was the first one to apply for the position; and I saw him once during the school year—at a dance. No, trustees have never disturbed me so I suppose I should be satisfied with the trustee system. But I am not.

As Mr Hall says, the chief criticism of the township system is "increased taxes." If you will examine the books of your school board I think you will find that every cent has been wisely spent. You must remember that everything necessary for school equipment has increased or doubled in price; it is next to impossible to get a man to work on the school premises. Those who in former years mowed the school yard for the hay, this year wanted five dollars for the job, and everything in proportion. Consequently much was left undone.

In many districts the school has been run as cheaply as possible for so many years that the school building and equipment as it stands is practically worthless. Yet now they are complaining because they are not put in first class condition by the town board all at once. If this were done there surely would be taxes. The ones most in need are being attended to this year, and the conditions in some districts were frightful.

When I took up this work a year ago a few school rooms had thermometers. Now all have them and an effort is being made to instruct teachers and pupils in regulating stoves and furnaces so as to secure an even temperature. The pupils are keeping temperature records for each hour of the school day so I have proof of the following statements. Three schools in particular I know of where last winter's records show the temperature was from 40 to 60 throughout the day have been made comfortable with new stoves and jackets. This could have been done years ago by the trustee, but they were keeping down expenses. In some cases he was limited on the amount he could spend and told that the old stove was good enough. Rather than get in bad with his neighbors, he let pupils and teacher suffer. There was much sickness and the parents paid the doctor (I suppose). And this year the stoves cost twice the former price. In some schools the average temperature ran from 80 to 90; an equally serious condition.

In the matter of toilets a frightful condition was found to exist. If a man kept his cow stable in the condition that I found some of the buildings to be in the Board of Health would not grant him a milk dealer's permit. Yet we expect to make good moral American citizens out of our boys and girls. In every one of these instances, after a talk with the school they were willing and anxious to clean up. And they did it. Some of the teachers said they had no idea such conditions existed, as they had never inspected the toilets and did not know they were expected to. The trustees had not or else they were guilty of the greater crime, indifference to the moral and physical welfare of the community.

The largest school in this town includes the grades and two years of high school. In the eighth grade there are seven pupils from outside districts to one resident of that district. Most of these would be out of school entirely or the big bully in a little one room school, the only one in his grade where there is no competition and no incentive to work. In the larger school he is with boys of his own age, learns to respect the rights of others and not be a slacker.

The question of bonded indebtedness is the most serious to dispose of, but I am sure that a way can be found to meet this in a satisfactory manner. We hear it said, "Why should I help pay for a school building in a part of the town where I can get no benefit from it?" Sure enough. Ask yourself the same question about the jail, county house, capitol, state college, normal schools, etc.

I wonder how many of those who wish the repeal of the township school law have spent, during the past year, one hour in their district school when the regular school program was being carried out. Are you acquainted with the lighting, heating, seating and ventilating conditions? If not how can you consider yourself qualified to instruct your legislators how to vote on this question?

Have you made the acquaintance of your teacher and physical director? Do you think as one contributor, that the duty of a physical director consists solely in "Practicing the children in a few motion exercises?" You consider the country children healthier than city children. Do you know what the medical inspection cards of your school show?

By the order of our school board I accompanied the medical inspector and attended to the clerical work, receiving from him priceless aid on how to handle individual cases where abnormal conditions were found. Much to my surprise, the number of those in the one room schools who passed a perfect examination was from four to twelve per cent while in the village school it was from twenty-two to thirty three per cent in the various rooms. In the follow up work I find that in some districts the parents have heeded the advice of the medical inspector, had the defects corrected and the children greatly benefited thereby. In other communities practically nothing has been done. The medical inspection is worth just what you want it to be worth. If you allow a doctor to examine thirty-five pupils in thirty minutes you get just what you deserve, nothing.

Another thing the township system can arrange is in the matter of text books. Our floating population can not change books at every shift. I have had notes from parents saying, "We do not expect to stay here all the year so if you want the children to have books you must get them yourself." In one of my schools I found a second grade of eight where five different kinds of readers were in use. Such a waste of time; but the teacher prevented disorder by keeping the room so hot that the children were dozy and the school went smoothly. If the town owned the textbooks they could be purchased from the publishers at about two thirds the dealers' price, have them mended and fumigated during vacation, at a cost, I am informed by a city superintendent, of less than thirty cents a year per pupil. A mother told a short time ago that when they moved from one district to another the book bill for their five children was twenty-seven dollars. Any difference?

Did you ever think that teachers have little chance to learn how others are doing? She seldom has the chance to enter another school so becomes narrow in spite of herself. Frequently I am asked by a teacher to find out how others are handling some school problem and tell her. Are you standing by your teacher?

Mr Hall advises training in the normal schools for teachers of rural

schools. Do you think such a course would be popular? The person who would be satisfied to be a rural teacher for all time has not pep enough in her to make a teacher. Don't spend anything on her; she is a poor investment. I am informed that in some of our normal schools, since the beginning of the school year the classes have fallen off twenty-five per cent. Business is claiming the teacher and will continue to do so. Consolidation to some extent may become necessary on that account, but I think in few cases will the schools be abandoned.

Amend the law for the better, by all means; but investigate for yourself and know that what you have been told is true before you condemn a system that has worked out admirably in so many states. Be fair, know your subject first hand, then advise your representatives.

VESTA MCKEE

Newfane

N. Y.

Letter from Richard Hall, Dunkirk, N. Y., to H. W. Collingwood, Editor, Rural New Yorker, New York City, January 7, 1918

Fredonia, N. Y., January 7, 1918

I have read with considerable interest the various letters published in your columns recently in condemnation and criticism of the Rural School Bill that went into effect August 1, 1917. From these letters it is evident to me that the chief criticism is, "Increased taxes," and I am of the opinion that most of the criticism so far is quite unfair to the boards of education throughout the State.

I have no desire or purpose in upholding the law, for in truth no citizen could have done more than the writer to prevent the enactment of the township bill as adopted. However, now I want to see "fair play" and I believe there are very few thoughtful people willing to concede the former system of control was perfect.

I am quite familiar with conditions in Chautauqua County and taken as a whole our schools averaged fully as good as any County in the State and I am forced to admit there were abominable conditions to be found in certain sections, even including my own town, that were a disgrace to any community.

The argument against the bill of "Increased taxes" is a very flimsy one to carry before the legislature, in view of the fact that the law has been in operation but five months and no board should be condemned without more careful investigation.

There are several reasons for the increased taxes, viz. 1st. In many districts under the former law corporation and franchise assessments, together with the public money received, paid virtually one-half of the cost of maintaining a school in that district, thus keeping their tax rate far below the actual cost of operation.

Under the township system the franchise assessments are distributed evenly throughout the town and I am not ready to admit that this is an unfair provision.

2nd. Under the township system now in operation all villages of less than 1500 population are included and therefore the cost of maintenance of village schools is placed upon the town, thus in some instances lowering the tax-rate in the villages with its resultant increase of taxes in the rural districts. Many reasons have been advanced to me upholding this section of the law, claiming chiefly that our boys and girls have equal privileges in the village schools and therefore the rural property should be equally taxed with the village property in their maintenance. This I deny and believe all village schools should be operated under a separate system of taxation.

3rd. Many of the schools were in such a run-down condition that extensive repairs were imperative and in some instances an attempt was made to comply with the State Department requirements relative to sanitation. The only criticism I wish to make on this section is: That the State Department issued an edict from time to time for certain requirements in ventilation, heating, and sanitation, that are altogether unreasonable, impractical and unnecessary in Rural districts.

4th. The new system has provided for the retirement of bonded indebtedness and provision had to be made to meet interest and certificates due.

5th. The biggest imposition placed upon the rural districts in my opinion is that of the "Physical Director." The Department has sent out statistics to support the claim that our rural population is physically inferior to the city population and hence it is imperative that we have a physical director to mold us into stalwart men and women and incidentally it makes a few more salaried offices. All of which I claim is unjust, untrue and without direct benefit to anyone aside from the "Physical Director."

6th. The expense of organization had to be considered, salaries provided for the clerk, treasurer and janitors; also in some cases extra teachers engaged and higher salaries paid. All of which has contributed to a higher tax-rate.

If the township bill now in force is not repealed or amended, a high tax rate will be necessary for many years to come without any visible efficiency from its operation. In the first place it provides for the appraisal and purchase by the town of all school property even including the village schools and payments for the same shall be met in five annual installments.

There is now in many villages a bonded indebtedness of from thirty to fifty thousand dollars, in addition to the equity owned by the villages and again I reiterate that all village schools should be separated entirely in their support from the rural schools. At the same time I don't believe in giving the Educational Department the right of confiscation of school property without just recompense to the legitimate owners, neither is it fair to property owners in a district with a good school to be forced to pay another assessment towards the erection of schools in other parts of the town. In this the new law has been fair and impartial and after excluding the village schools from its operation no rural tax-payer could have any just cause for complaint. In asking the legislature for the repeal or amendment of the bill we should be prepared to offer something we know to be better than the old and an improvement on the new plan and it is too large a matter for any individual to attempt alone. The only fair way to do, is for those who are truly interested in the better housing and education of our children

to unselfishly and impartially state through your columns and to our legislators brief plans from which a bill may be produced to meet fairly all conditions to be found in every rural community throughout the State.

I truly believe our State Department of Education is composed of fair and broad minded men and I also believe that practically all of our rural citizens stand ready and willing to pay out their last cent if necessary, to give their children a better education than they themselves have had and are far above being classed as "pikers."

The following suggestions of an outline for a bill may serve to open up discussion that may eventually lead us somewhere near a solution:

I. Continue the township as a unit for taxation.

II. Exclude all villages over 500 population.

III. Permit the electors in each district to select as formerly two directors to serve a two-year term arranged so that one would be chosen annually, such election to be held in their own school building.

IV. Require the electors of all districts in the town outside the larger villages to assemble for the purpose of selecting an executive head of three members, from among themselves or other qualified electors of the town, such selection to be made by a two-thirds vote.

V. The executive body should consist of a manager, clerk and treasurer, the manager and clerk to be paid a moderate salary in no case to exceed \$200 per year each and the treasurer permitted to collect the usual per cent on taxes for his recompense.

VI. All of the minor repairs and upkeep of the buildings might safely be left with the executive body and the more important matters such as extensive repairs, new buildings, text books, teachers, etc., be considered by the full town board and when a difference of opinion existed require a two-thirds vote for decision.

VII. Prevent the consolidation of schools without the consent of two-thirds of the property owners involved.

VIII. Appraise all rural school property as now planned and provide for the purchase of same by the town, excluding from such appraisal all village schools.

IX. Make the township its own boundary for taxation rather than the present system of joint district boundaries.

X. Provide tuition in full by the State to all village schools in payment of all rural children admitted.

XI. Provide for the acceptance of pupils in the grades of the nearest rural schools regardless of township boundary, tuition to be equalized between towns as per average cost of maintenance.

XII. Eliminate entirely the special physical director, military training director, school nurse and compulsory medical examination of the pupils by the educational department of the town, as the results obtained by the present system are a farce and absolutely worthless in rural communities.

XIII. Require and provide special courses of instruction in the training department of our Normal and High Schools for the general training of teachers for rural schools.

XIV. Provide thru the State Architects Department plans of buildings including heating, ventilation and sanitation that are practical and serv-

iceable in rural communities and not excessive in cost of construction and operation.

XV. Require parents of all pupils admitted to schools to present a health certificate from a competent physician on the opening of school each year, same to be filed with the clerk thus giving a record of the child's health from its entrance. If the parents are not able to furnish this certificate the poor department of the town are the proper officials to appeal to for relief.

XVI. Provide a fund by State aid to enable pupils in limited circumstances to complete a basic education, fitting him for more extensive agricultural development in the rural communities.

The writer has served as a school trustee four years and is now the chairman of the board of education for the Town of Sheridan, Chautauqua County. Before the passage of the bill I devoted much time in debating the merits of the township plan with various state officials and did everything possible to prevent its enactment. There are, however, some good points in it and I believe in amendments rather than an outright repeal.

[Signed] RICHARD HALL
Dunkirk, N. Y. R. 12

Editorials

We find great interest in New York rural neighborhoods over the efforts to close up the district schools and consolidate them with others. Opinion is divided. Some country neighborhoods are so situated that the people prefer to give up the school and send their children to larger central schools. In the great majority of cases there is bitter opposition to closing the local school. Most farmers feel, and rightly so, that it is unfair and un-American to take the final decision out of their hands, and let one man or one small set of men decide an important local matter. We have had many of these school cases put up to us, and have found some remarkable conditions. Many times the entire trouble may be traced to one of these unhappy feuds or personal fights which do so much to break up neighborhoods. Where there is such trouble the school authorities seem to think it better to give up the school. There have been several cases where we think injustice has been done to the people of a district by closing their school. The state school officials say that they are working for the best interest of all to make a uniform system of education, but it is doubtful if they know the real needs of the country people as well as resident farmers, and the law should not permit them to act in an arbitrary way — without an appeal. In these times, however, country people must realize that if they are to retain their district school they must get together and make the school efficient. We do not say "up-to-date," for that usually means some educational fad which is being tried out on the children. We mean efficient—a school which gives the children of the neighborhood what they need to make them useful men and women. If the people of the district will not work to provide that kind of a school it will probably be better to unite with others who will do so. The country children should have a fair chance at education, and we think the home district should have first chance to provide what they need.— *June 16, 1916.*

By the time this reaches our readers we shall all know how the election

resulted. In years past after such an election, the people have given up "politics" for a time. Part of them cheered over the "victory," the rest did more or less sulking over the defeat, but most of them returned to the job of earning their living and let the politicians alone. Now there never was a man in the public office yet who did not need more or less watching and personal attention. The office-holder may be the finest character on earth, but the office-holding should not be a one-man job. You put a man in the Legislature, into the Governor's chair in order that he may serve you — not to serve himself or the great and powerful interests. That man will not serve fully unless he knows that you are awake and watching him. Let us not, as in former years, go back to work after election and let these men do as they please. Let us keep right after them, and make them know that we are alive, and that we want certain things done. Legislation for farmers covers many local needs, and a few of the great public importance. In former years there have been too former demands. They could not all be put through. The R. N. Y. suggests that we arrange a program of farm legislation for New York State and organize to put it through. We open our columns for the discussion and offer our influence and power for the battle.— *November 11, 1916.*

The patriotic services which you are rendering in giving publicity to the township school law matter are already bearing fruit. I have just received a letter from Mr Wm. Maxam, Oswego County, N. Y., in which he states that a very live meeting has just been held in Oswego Co., 90 being present, and a committee of three being appointed of which Mr Maxam is chairman. This committee will cooperate with the committees from other counties as per our suggested plan. I believe that the quickest way to get action in the various counties is to have the various farm bureaus call a meeting and take action as soon as possible. That is the suggestion of my own county agent. I believe the farm bureau has more life and a larger membership than the Grange. We are going to have a big farm bureau meeting in Montgomery County on Dec. 14.

D. B. D.

This school law discussion comes just at the right time to prove the value of the non-partisan farmers' league. Surely it doesn't make any difference whether a man thinks he is a "crat," a "can" or some kind of an "ist" when it comes to a proposition like this school law. Any man can see that no progress could be made so long as these various parties fight each other and thus split up what might be a solid club into kindling wood. Get together over this school law and use the same organization to help to put 50 farmers in the New York Legislature.

When the full returns are in you will be astonished to see how many members of the Assembly barely scraped through. In some cases a former majority of 1,500 or more was cut down to 150 or less. No use talking the waters are moving and the time is ripe for that non-partisan league. Come on in and join. We are already hearing from members of the Legislature and they are all "attentive." Our old friend Senator E. R. Brown has written a note which will make a fine text for next week.— *December 8, 1917.*

The fate of this New York School Law will be settled in the State Senate. We already have enough promises from Assemblymen to make us feel that

the Assembly will repeal or amend the law. Last year the bill had only two majority in the Assembly, while only seven Senators voted against it. Thus the fight comes in the Senate, and will naturally center upon Senator Elon R. Brown of Watertown. He voted for the bill, and will never permit it to be changed until the people convince him that he has got to do so in order to save his own neck, and the neck of his party. And Senator Brown will not be convinced by reason or solid argument. He can easily dodge that, but he cannot dodge 100,000 drops of ink pricked into him by fearless pens, and tintured with the genuine feeling of earnest men and women. We never ask our readers to use postage stamps needlessly. In this case we give you fair warning that the only chance to repeal or change this bill lies in controlling the State Senate. Your only chance of doing that lies in convincing Senator Brown that you will put this school question above party consideration when you next get a ballot in your hand. We all have here the finest chance to show the power and punch of our Non-partisan League. One of our readers in Chautauqua County says:

"Spray Brown and his 200 B.C. ideas with ink!" We will, and we invite all of you to come right in on the job. Every man and woman in New York who is interested in this school question should write Senator Brown. Be respectful, brief, firm and accurate, and *show him!*—December 22, 1917

There has been nothing in years to stir up the rural districts of New York like this much debated school law. We have had nearly 500 letters about it. At least 95 per cent of these letters denounce the law and demand its repeal or change. Three per cent claim that the theory of the law is sound and that it ought to succeed, while about two per cent praise the law from its operations. We have never yet known our readers to go wrong in expressing public opinion when their interest was aroused, and we conclude that this school law is opposed honestly and seriously by a very large majority of our country people. That being so we feel that the law should be repealed or greatly changed. It seems to us like something good in theory, but not well adapted to conditions as they exist in the country, and surely this is not the time to force extra expenses and worries upon the country people. As we stated last week the fight of this bill will come in the State Senate, which passed the measure by a great majority. The Assembly will, we believe, do what the people desire. The Senate will do pretty much as Senator Brown directs. It is humiliating to be forced to make such a confession, but under our political machinery it is a fact. In a way it is a good thing if we will take advantage of it for Senator Brown looms up as a target or bulls-eye as a mark for your ink or pencil. If you ever expect to have this law changed go right after Senator Elon R. Brown of Watertown, N. Y. Keep your temper, do not argue with him, but *make him understand that you mean business!*—December 29, 1917

What seem to us vital defects in the New York school law are pointed out this week in the first page article. The section of the law referring to bonds is printed on page 6. The friends of the bill are asked to name unbonded districts in which the taxes are lower. We repeat the invitation here. The R. N.-Y. is ready to give all sides of the question a hearing, but when, as in this case, 95 per cent of our correspondence is in opposition, and practically all the support of the bill comes from interested parties, it

looks like one of these questions where the country is lined up solidly together. The friends of the bill undertake to say it is a Grange measure, fathered, originated and urged by the State Grange. We are authorized to deny that statement. The bill was forced upon the Grange and finally passed by practising a form of deception. The Grange stands for the principle of keeping the school district intact, and every farmer in the State should do the same. We do not minimize the size of the job involved in repealing or changing this law. As stated on page 3, it would be about as easy to move the Capitol—yet it can be done. There must be an organization of men and women in every school district of the State. Various officials and politicians are wandering about the State advising farmers not to join any new movement or any organization in a fight for their rights. Pay no attention to them. Go right ahead and organize against this law, or you will find it only the beginning of a long string of burdens.—*January 5, 1918*

The campaign for repeal of the school law is growing like a snowball. The supervisors of Saratoga, Onondaga, Broome, Wyoming, Delaware, Chenango and other counties have voted against the law and directed their representatives at Albany to work for such repeal. Word comes to us that Gov. Whitman and the "leaders" recognize the storm that is coming, and are now ready to amend the law, on the ground that it contains some good features which should be retained. We would have nothing to do with their amendments. If country people do not know the tricks of these "amenders" already they never can learn. These politicians would fix the law so it would be worse than ever. We should all stand for absolute repeal. Then let our country people get together and work out a new law which will be fair to the rural districts. Parts of the present law may be re-enacted if desired, but let us get rid of this law as it stands first of all. On page 81 is a call for the formation of a Patrons' League to concentrate and organize sentiment in this school question. Every man and woman who lives in a New York rural district should join at once, for we have here the basis for a great organization. Out of nearly 1000 communications on this school law about 15 people have favored the law without qualification and say we do not give them a fair showing. Next week we shall print what seems to us the fairest statement of the case that can be presented.—*January 19, 1918*

The School Law! Organize! Organize!

To get effective action on the repeal of the township school law, it will be necessary to have some centralized organization to speak authoritatively for the farmers of the State on this particular subject. There need not be much formality about it provided we have uniformity enough to centralize influence. We suggest that a Patrons' League be formed in each school district of the State.

We advise co-operation with the local organizations of the Grange, Dairymen's League, or other societies, but it will strengthen the work of all districts to hold a meeting and elect a county delegate. It will not matter whether the Patrons' League has many or few members in a district, nor where the meeting is held. Be sure that the women become members. If

you can do no more, get a neighbor or two and your wives and form a district league.

The blank printed below may be used as heading for a list, and report of the officers and delegates elected should be sent us promptly.

PATRONS' LEAGUE

To Repeal

THE TOWNSHIP SCHOOL LAW

We, the undersigned patrons of School District No., in the town of, county of, State of New York, hereby bind ourselves in an organization to be known as the Patrons' League, the purpose of which shall be to use our united influence to repeal the Township School Law, known as Chapter 328 of the Laws of 1917.

We promise to attend local meetings as often as possible; to formally organize the Patrons' League; to help elect delegates to a county league to be organized for the same purpose; and to make a voluntary contribution to help pay expense of postage and travel.

Names of Members

— February 2, 1918

The Patrons' League! Organize!

Patrons' Leagues for handling the school-law question effectively are being organized all over New York State. In many school districts all voters, both men and women, have joined the League, and signed petitions for the repeal of the law. The circular given below is a sample of the way they are doing it. This original printed circular is 11 x 15 inches in size:

SPECIAL MEETING

OF THE

PATRONS' LEAGUE

TO REPEAL TOWNSHIP SCHOOL LAW

SATURDAY FEB. 2

AT 1 O'CLOCK P. M.

IN THE VILLAGE HALL, DEPOSIT, N. Y.

This will be a joint meeting of any or all of the towns of Delaware and Broome counties.

Let each school district interested send delegates to represent them at this meeting. All come that can and bring your wives. We want them enrolled as Patrons of the League.

BY ORDER OF

SCHOOL DIRECTORS

THE COURIER-JOURNAL PRESS

Usually some enterprising man or woman in the neighborhood starts out with the petition and talks the matter up. Others are sure to come on and the plan is spread by personal appeal, over the 'phone, by letter or through the local papers. Some one must start—the rest is easy. The county meetings are brought together by notices in the local papers, personal letters and the machinery of the Grange, Dairymen's League or the Farm Bureau. Form all the Patrons' Leagues possible and hold them together for effective work:

PATRONS' LEAGUE

To Repeal

THE TOWNSHIP SCHOOL LAW

We, the undersigned patrons of School District No. in the town of, County of, State of New York, hereby bind ourselves in an organization to be known as the Patrons' League, the purpose of which shall be to use our united influence to repeal the Township School Law, known as Chapter 328 of the Laws of 1917.

We promise to attend local meetings as often as possible; to formally organize the Patrons' League; to help elect delegates to a county league to be organized for the same purpose; and to make a voluntary contribution to help pay expense of postage and travel.

A Patrons' League; The School Law

The opposition to the new township school law in New York State in country districts is emphatic and almost general. The farmer advocates of the law are in a small minority. The complaints involve not only the expense, but individual family and neighborhood considerations. The protests against the law are so pronounced as to threaten a social if not a political revolution. No compromise is possible. The law must be repealed. Farmers will never be satisfied with even a revision of it. They want it out of the way entirely.

Local Granges and local branches of the Dairyman's League have already held meetings, and made demands for the repeal of the law, but it is unfortunate that all these efforts have not focussed in one definite uniform plan or organization to express the protest of the people against the law and the conditions that it has created.

Many requests have come to us for forms of organization. The form is not really important; but there would be strength in simple uniformity. For the purpose of this uniformity and to supply the needs of those who have adopted no form we submit the membership pledge printed below. After a number have signed, a meeting should be called, and officers elected. A delegate should also be elected to a county convention to be organized later by all the delegates of the county. It would also be well to provide an expense fund through a moderate membership fee to cover the cost of postage and travel. The county conventions can then send delegates to Albany and in various ways make it clear to the members of the Legislature that this school law must be repealed. To emphasize this uniformity of action, we suggest and

urge that a meeting be held in every rural school district of the State on the first Saturday of February, namely February 2; and that the delegates meet in county convention on the following Saturday, February 9. At the county convention a State committee can be formed to speak and act for the school patrons of the State at Albany. The form of membership may be clipped and used or blanks will be sent on application, though the precise form is not important.

When the Patrons' Leagues are formed in school districts, the names and addresses of the officers and of the county delegates should be mailed to League Bureau, Rural New Yorker, to crystallize the effort in publicity. Legislatures are influenced by numbers and we should have a record of the number of leagues and the membership of each. Wherever local Granges, Dairymen's League or other local organizations exist the work can be pursued effectively through the existing organizations.

The Legislature is now in session and the work should be taken up at once and vigorously. Are you interested enough to start a Patrons' League in your school district?

PATRONS' LEAGUE

TO REPEAL

THE TOWNSHIP SCHOOL LAW

We, the undersigned patrons of School District No., in the town of county of, State of New York hereby bind ourselves in an organization to be known as the Patrons' League, the purpose of which shall be to use our united influence to repeal the Township School Law, known as Chapter 328 of the Laws of 1917.

We promise to attend local meetings as often as possible; to formally organize the Patrons' League; to help elect delegates to a county league to be organized for the same purpose; and to make a voluntary contribution to help pay expense of postage and travel.

The New York Assembly voted 107 to 36 to repeal the Machold school law. Mr Machold himself—who introduced the bill last year—voted for its repeal, convinced that it did not work out as was expected. We think the Senate will go the same way, though the vote may be close there. Early in the campaign a strong supporter of repeal said it looked like a hopeless task. "You might as well try to move the Capitol as to make the Legislature reverse itself!" That would have been true if country people had gone at it in the usual way of asking politicians to do it for them. A politician can no more "move the Capitol" than he can lift himself by his boot straps. An organized democracy can—and will—take the politicians by the neck and

lift them out of the job. The fight for repeal is the greatest object lesson in public service we have ever had.— *March 23, 1918*

The School-Consolidation Bill

Last Fall I believe a bill was presented to the Legislature to combine the rural schools in New York State. For some reason it failed to pass. Could you give me the following information? Who was the author of this bill? What did it consist of exactly? What was the opposition? Why was the bill withdrawn? Was it compulsory for all districts or optional? In event of a district building a new two-room school-house this year, would the town have to assume the debt next year, provided the bill passes next Year?

Mrs D. R. W.

A member of the Legislature, who took some little interest in the bill to which you refer, tells that it was introduced at the instance of the State Department of Education, that department being in favor of its provisions. The bill provided that the town, rather than the school district, should be the unit of administration of school affairs, control vested in town board of education which should be elected as are other town officers, and each should administer the affairs of the township schools in such manner as it believed would serve the interests of the town as a whole. This board would be, in measure, sub-ordinate to the State Department of Education and its representative the District Supervisor. Such a board might discontinue certain schools if it seemed advantageous to do so, making other provisions for the pupils in those districts, or it might combine districts in whatever way seemed best adapted to serving the interest of all school patrons in the most efficient and economical manner.

The bill was compulsory, bringing all township school districts within its provisions. It was never reported from committee, the State Department feeling that it was advisable not to bring it to vote until there was a better general understanding of its principles and until the bill itself had been perfected through discussion and criticism. Under the provisions of this bill, the town would take over all school district property and with them, of course all debts and liabilities. The money then raised by school tax and received from the State would be applied to the support of such schools as were maintained, being divided according to the needs of the school.

The opposition to the bill comes largely from those who fear that the interests of the pupils in sparsely settled districts would not be as well provided for as now, as transportation to the more central schools would doubtless have to be provided for such pupils, and from those who object to having the township assume indebtedness, bonded or otherwise, under which some districts, particularly the union school districts, now labor. The Department of Education, takes the position that the methods of administering public schools in the State have become antiquated having been devised at a time when conditions in rural districts were different from those that obtain now; and that the changes which they advocate will increase the efficiency of the vast sum spent annually for educational purposes.

M. B. D.

— *June 12, 1915*

The New York School District System

I was very glad to see the matter of township school boards mentioned by Mrs D.R.W. on page 799. In this section of the country the bill aroused violent opposition as soon as the people understood the meaning. Over 98 per cent of the voters in our school district signed petition requesting our Assemblymen help to defeat the bill. As a result of the activities of the political machine, over 90 per cent of our town officers are concentrated in or very near the two largest villages in the township. In fact it is a common saying here that if you want a town office you must move to the largest village and stand in the ring. As the township school board now reads there is nothing to hinder the political machine from nominating and electing the entire membership of the school board from the two villages. This would leave the inhabitants of nine-tenths of the area of the township absolutely without voice in the conduct of their school affairs. This condition would be duplicated, perhaps not to the same extent, in the majority of rural townships throughout the State. Make the proposed school board consist of as many members as there are now districts in the town and specify that one member shall be resident of each school district or former district, and one of the greatest faults of the system will have been remedied. Then, if the farmers in the far corners of the township want their children taught at home or taken eight or ten miles night and morning to some central school they will have at least something to say about it, or where they want the new \$5000 school building which the school board is privileged to build each year without the consent of the taxpayers. As it now stands, the trustee cannot spend \$50 or even \$5 for repairs or new school buildings without special authorization from the taxpayers at school meeting. The politicians seek to take the control of the public money out of the hands of the farmers because they are not progressive enough to conduct the affairs of the school districts, yet what department of the state government shows more results and less graft for the dollars expended than the district school system? Where can you find a more intelligent or progressive class of people anywhere than the farmers of this State.

As it is now it is difficult to get a man to serve as district trustee and attend the affairs of one district without compensation. How many towns can furnish nine men intelligent enough to serve on a school board, who would be willing to give their time attending board meetings once or twice a month the year around and conduct the school affairs of the town absolutely without compensation unless there was a little comeback somewhere?

The benefits of the plan have often been likened to those resulting from the state supervision of highways. True, we have better roads than under the pathmaster system, but under the present régime this township raises annually \$110 per mile road tax. Under the pathmaster system we did not pay a dollar. We ought to have better roads; we pay for them. There may be improvement in the present manner of doing things, but it is expensive improvement, and as a usual thing the people pay for all they get and then some.— *August 7, 1915*

Chautauqua Co.

C. C. C.

Long Island District School

In this district it has been for many years the custom to hold a reunion of teachers and scholars who have attended this schoolhouse. The reunion takes the form of a picnic which each August is held on the school grounds, and is a most enjoyable affair, many coming from a distance to meet their old friends.—*February 12, 1916*

M. S. B.

Rural Schools in New York

Part I

Proposed legislation. Our rural school system in New York State is not in good condition. No one will more readily admit this than the farmers who are directly affected by it. Changes in the system, however, should not be made rashly. By that I mean that the farmers themselves ought to have a clear understanding of the proposed changes, and the probable results therefrom. A bill was introduced in the Legislature last Winter, and will probably be renewed this Winter, that is of far-reaching effect if passed. From my own acquaintance with the situation I would say that very few of the farmers affected by its provisions have any definite knowledge of its probable workings, or what is provided by it. It now appears that the State Grange has endorsed it and given it approval so far as the legislative committee of the Grange is concerned. That the Master and secretary of the Grange endorse the bill, leads one to conclude that some sections of the State are differently conditioned from others. It is certain that there are sections where farmers will find its provisions a hardship, and probably detrimental. It would seem that there ought to be a provision to allow the volunteer action of certain localities to say the least.

Provisions involved. That the proposed amendment to the education law, the Tallet bill of last Winter, has much to commend it is not disputed, so far as I am aware. It proposes a uniform tax for the support of the schools. So far as the rural sections are concerned this ought to pass. It would seem better even if the unit of taxation might be larger than is proposed, and marked out by topographical conditions looking to the establishment of consolidated rural schools under conditions of easy transportation, rather than political divisions, as the township, at least in some cases. There may be mentioned some reasons for this enlarged unit of taxation whether township or otherwise. In my township, for example, there is a diversity of ratios of taxation in the various rural school districts from about \$3.30 per one thousand taxation up to \$12.47. These two districts have, by the way, the same amount to collect by tax within \$1.09, as a total. The reason for the difference in ratio is the fact that one has over \$90,000, assessed valuation, while the other has only \$24,300. The remainder of the rural districts range from \$5 to nearly \$10. Other townships have similar conditions. Evidently there should be some more equitable way of taxation for school purposes. I am not able to say that one school has a better teacher than another, except as occasional personality has an influence. Ratio of taxation does not affect the educational value one way or the other. The proposed legislation has this in mind and proposes the remedy. If when uniting the districts for taxation the union might be in such a way that districts could be most readily com-

bined, should that be desired, the scheme would have additional value. This refers to the hilly sections of the State, and these hilly sections need more care than others, because agriculture is less profitable, and the population is less dense. The end sought in this is to be commended, while the suggestion mentioned might well be considered.

School consolidation. The point of objection in the Tallett bill is in another part. It provides for the union of the rural schools with the village school unless the union free school district has a population of 5000, or over, and employs a superintendent of schools. The number of villages in the State that are exempt by this provision cannot be very large. Where the exemption does hold the rural schools are by themselves without control of the village schools. It seems possible that such rural schools may get along very well if left to their own control. Why not extend this exemption to all other towns having union schools unless the separate school districts vote to join the village district? Will they not be as well off as those rural districts that are in towns where the village district has 5000 population? If every local school district votes to join the village district they ought to have the privilege of joining unless the union school district wishes to keep them out. If they do not desire to join the village school it is unwise to compel them to do so. There are several reasons for this. Iowa has some such law.—*April 8, 1916*

H. H. L.

Part 2

Taxation. The writer has been severely criticised for bringing into this discussion the question of taxation. Where schools are affected taxation ought to be considered, say the wise ones. I am not ready to fully admit this contention, nor do I think the average taxpayer in the country so considers the matter. We agree that we ought to be generous towards the school, but if we are to expend more we ought to be reasonably sure that we will get something for the increase. In my own town, again, our union school taxes its inhabitants practically 50% more than the average rural districts, and it is pretty evident that other towns are not far off. The village ratio would be reduced by the combine. While the assessment is so nearly even, the population of the village is fully 50% more than in the rural districts, and the school population is several times more. It is not clear that we ought to help support the village school. The fact that personal property in town largely escapes, and that business investments and property in town are assessed much lower than farm property does not help the case for the village.

Village and rural districts. It is intimated that the reason for uniting the rural districts with village, is ultimately to bring all the rural scholars into town for their education. Some really believe this wise, others are just as certain that it would be unwise. It is said that the rural districts ought to have as good educational advantages as the city. I would say they ought to have better schools for them than the city schools are. What is good education for one is good for all, say some. Many will not agree that the education that looks down upon agriculture is the best for rural pupils. Then what about the improvement of the farming communities? Have not we gone to town for instruction as to the way to vote long enough, and how to talk and what to think? Should we always go to town for our education

and our religion? Are not you going to give us any of that pure brand of country community improvement? Are we to go to town for social advantages and for rural community uplift? What is uplift anyway? It is something that the town holds as a monopoly? Better let us have consolidated rural schools unless we want to go to town. Give us a chance to say something about it locally.

School elections. There is just one other point that seems to need attention, and that is the proposed election of the school board. It is practically directed that the election in the middle of June (a busy season for the farmers) shall be held in the village schoolhouse. In a town like ours where there are 50% more people in town than in the country have you any doubt as to the place of residence of the trustees that will be elected? A few men in the village with one or two outside whom the village folks want will have the deal. The country will be wiped out so far as having anything to say about the schools is concerned. Perhaps it ought to be, but I can't see it so. There are rural communities where the rural people will be glad to have this done, and there are others where the country will have the advantage of numbers over the village, but those are small villages, and there it is likely that a consolidation of the whole will be wise. All that I ask is that all districts be allowed to say what they want to do about it.

Rural school exhibits. While we want the union of rural districts for purposes of taxation, and are pretty sure to want the union of districts for school purposes after the taxation scheme has been worked out, there are things to encourage us in the present method of school affairs. The picture on page 583 of the rural school exhibits of a single town tells a story. Vegetables, bird houses, needlework, cooking, drawing etc., are all the work of young children, in a town where the total number is considerably under a hundred pupils in the schools represented. The quality of the work was really astonishing in many instances. Schools are doing creditable work. Give us equitable taxation a free chance to unite the districts if we want to, and leave us to decide for the present whether we join the village district.

—April 15, 1916 H. H. Lyon

The District School Question

Don't you think it is astonishing statement that "Our rural school system in New York State is not in good condition," as H. H. L. says on page 583? I deny this most emphatically. Our schools are doing better work now than ever before. This is not much of a compliment to Dr Finley and the Department of Education. Thirty years ago, when the writer first attended school, the district school was far different institution from that of the present day. The smokegrimed walls of the schoolroom had never known paper or whitewash. Window shades were conspicuous by their absence. The seats were most uncomfortable, and of a pattern likely to make the scholars round-shouldered. The only book supplied by the district was a Bible. No dictionary was provided until several years later. We did not have a library. The teacher was paid \$5 a week, to-day the same school room is a far different place. There are patent seats, framed engravings of historical scenes hang on the neatly-papered walls. There is a good

library, atlas, maps, dictionary and other books of reference. The teachers draw twice the pay they did then. Children nine years old can write business letters for their fathers, can read aloud so it is not a torment to listen to them and in all ways make far better progress than was possible three decades since.

I appeal to all good Grangers (as well as all others interested in the progress of agriculture in New York State) and those interested in the welfare of the children to oppose the Tallett bill root and branch. If it is thought best to equalize the taxation in all districts in the township or county a bill could be drawn to do that. Personally I am opposed to this, as conditions on the farms are very favorable at present, if we are only let alone. Let us keep the district schools as they are, controlled by the farmers and supervised by unpaid trustees who live in the district and understand local conditions. We have heard much of teaching agriculture in the schools. How would this be possible if all districts (country) that adjoin (village) union free school districts should be permanently annexed to them as some have proposed? Let us keep all schools in the control of the farmers.

A nearby district reopened school last Fall, after running a school wagon to a nearby village, for several years. The man who carried the children on a contract claimed he could not dress his little girl warm enough to keep her comfortable in severe weather. Though dressed in the warmest garments money could buy in the local stores she would be crying with the cold before the village was reached after a drive of only three miles. Do you thing such exposure is wise for children in these grip and pneumonia days? If an only child cannot be kept comfortable how would a large family or a day laborers' children fare?

Too many farmers have moved to town to educate the children. All sorts of reasons are urged to bring this about. If a district contracts every case of sickness among the children it is laid to the kid wagon. The women and children claim that a family can live and work in the town, sell the hay and save more money than they can if they stay on the farm and keep a dairy. This practice has exhausted many farms and almost depopulated several neighborhoods already. Any centralizing of schools will greatly aggravate this evil.

The average dairy farmer is unable to attend the farmers' institute at the county seat, but any kind of an entertainment at the school house always draws a large attendance. Each city has its night schools, but nothing has been done for the isolated farmer. Ex-President Roosevelt claims the school house is the best place to instruct the farmers, and experimental plots in each district would soon show the best way to handle the soil of that locality.

No Western farmer has bought a farm in this county (and a great many of them have located here in the last 10 years) that was more than mile from a live school. A neighbor who dealt in real estate in the Middle West for 20 years, tells me that there is no sale for farms located more than a mile from a good school, the centralized school being a failure. Former residents of this place now living in Southern Michigan, report the same failure. Is it necessary to repeat it here and spoil the sale of our farms? It is very difficult to keep hired boys and girls from the villages contented on the farm, even in Summer. Will it make this problem any easier by

taking away the school house, our only place of assemblage? There is nothing said about making the most of it as it is.

S. S.

Tioga County, N. Y.

The letter by S. S. on the rural school question which I have just read appeals to me. So far as I can see it holds practically the same position that I have taken. S. S. admits in effect that the union to the extent of taxation may be a good thing. That is my position, except that I do not think this should include the village district, if the village is of much size, unless the various districts approve it. He wants rural people to manage rural schools, and this is my belief also, although I have to admit that sometimes there is too little interest taken in that management. He objects to the exposure of the ride to town from the district and says that if there is any sickness in school it is laid to the "kid wagon." That may be, but I had not learned it before. It is quite possible. That Western farmers do not like to buy farms where the school is too distant is quite often true, and it is also true that the centralized school is not so popular in the West as some seem to think it is. S. S. urges that something be done to make the most of the present rural school. In this he accepts my statement, which he criticizes in another place, "that our rural school system is not in good condition." He wants it improved just as much as I do, and he wants it kept intact as a rural system, the same as I do. This will be found to be the real sentiment in most rural localities, I think, although there are those who believe to send children to the village school is far preferable, these are not in a majority, I am certain. Unite the rural districts for taxation, but do not compel the union with the village school, only give the permission if wanted. That will leave it in the best shape for the present.

The Rural School Question

I have read with a great deal of pleasure and interest, your editorial on page 1424, on the result of the late election, and your suggestions as to what should be done next. I am glad to see your paper offer its columns and its power and influence for the benefit of the farmers of this State, which is characteristic of it.

There is one question which will come before the Legislature this Winter, that is of vital importance, not only to the farmers of the State but to all who have the education of the children in this State in mind. There will be a bill presented this Winter called the "Township System of Schools." This question has been before the Legislature previously but was not passed because of the opposition that it met from the farmers. For the past two years, the Department of Education have been quietly working among the rural districts to convince them that the township system would be a good thing for them. It has been discussed in the Grange, all over the State, and the majority of them have decided that it is not "for the best good of the most people."

A township system for schools may be a good thing, but it should be a vastly different law from the "Tallett bill," which was introduced in

March, 1915, referred to above. The Department of Education, or rather the present Commissioner of Education has one idea which, if carried out, would work a hardship for many farmers, viz. the elimination of the rural schools. It is his desire to consolidate all rural schools with village and city schools, regardless of the wishes of the people. He became frightened at the protest that went up all over the State, and wrote and had introduced the Tallett bill, which if passed, would make it still easier to do away with the rural schools.

The State Grange made a fight last Winter to have the education law changed, but started it too late in the season to be useful; I hope that they will take it up again and in time to have the changes made this Winter. With the above idea in view I would like to join that "organization" that you mention and help the farmers to get some laws passed that will be for their benefit. I know what you did for the farmers in the "milk strike," and your past record, and hope that you will help us in this great question of rural schools.

J. G. HALL

—December 23, 1916

The Township System of Schools Proposed for New York

Part I

Changed conditions. Our present district school system originated in a law enacted in 1795, when the population of New York State was counted in the thousands, when the population of the rural districts was greater than that of the villages and cities, when the roads were poor in all parts of the State, and mere paths through the forest in many parts, when means of communication and travel were primitive and difficult, when in brief, the interests of a rural community were confined within a small area. Today all these conditions are reversed. The population of the State is practically ten millions, the population of the villages and the cities is greater than that of the country districts; the steamboat, the railroad, the automobile have made communication and travel easy, the weekly paper of the country people changed to the semi-weekly, the semi-weekly to the daily as rural delivery was introduced and no longer are the thoughts, the pleasures and the interests of country confined to their immediate localities.

School improvement. During this time the one-room ungraded country school did not stand entirely still. The log buildings gave way to frame buildings, the buildings were painted, modern desks were put in, warmer and better floors replaced the old floors, a dictionary, a globe, wall maps and library books were added, the teachers became better qualified. All these changes were for the better but there was another change. After a time the number of pupils attending the rural schools became less each year. Where once the attendance was from 20 to 50 boys and girls it dropped in the majority of districts to an average daily attendance of 10 or less. It would be foolish to argue that the country school of today is not better than the country school of the past, but it is not as good as the graded school with more teachers, more pupils, better buildings and more sanitary surroundings. We boast that education is free to the boys and girls of our

State, and it is free, but we cannot say that it is both free and equal in the sense that the children attending the country schools get as much for every dollar spent as do the children attending the graded schools of the villages. This is not wholly the fault of the teachers in the rural schools, but is largely the fault of our rural system. We might say that it is due to our trying to make a system designed for 100 years ago fit present conditions.

Unequal tax rates. We who believe in the township system feel that the rural school does not measure up to the standards of today, but the weakest spot in our present system is the manner in which its business is carried on. Its administration is cumbersome and wasteful. The present method of raising money for school purposes is unfair and unjust. In a certain rural district in the town in which I live the school tax rate last year was \$1 on each \$100 of assessed valuation. In another district less than one mile away the rate was 21 cents. I am told that 40 years ago the rates in the two districts were practically the same. With the building of railroads and State highways, with the introduction of the telegraph and the telephone, with the growth of Summer resort business, the value of the land in the district with the rate of 21 cents increased nearly six times as fast as the value of the land in the district with the rate of \$1, the people in the district having the high rate are just as progressive, they work just as hard, they are just as good farmers as those living in the district with the low rate, but circumstances over which they had no control make them pay nearly five times as much for the support of their school as their neighbors in the other district. Under the township system we shall have a uniform tax rate in each town. This tax will be collected by the town collector. This will do away with the loss arising from many cases of unpaid school taxes that remain unsettled each year. If it is logical to have a uniform highway tax in each town it is just as logical to have a uniform school tax in each town. The benefits derived from a school are not confined within the boundaries of the district maintaining the school but are diffused over a wide area. The schools are performing a public service, and the cost of maintaining them should be distributed over a reasonably large territory.

Cost of township system. Will schools cost more under the township system? They should cost less. It seems reasonable to believe that in a town having 15 rural schools, that a single board of education will be able to purchase the supplies for all the schools cheaper, in one lot, than when purchased by 15 separate trustees buying them in 15 small lots. A single board should be able to make repairs and improvements cheaper and they certainly will be more uniform when looked after by a single board than when controlled by 15 separate trustees with 15 different ideas of what should and should not be done in the 15 different districts. A single board should be able to hire better qualified teachers than the 15 trustees, who usually have little time to spend looking up the qualification of teachers.

Possibilities of favoritism. Is there not a danger of the single board favoring certain schools and neglecting others? No, there is no more danger of this with a town board of education than there is of unjust treatment for certain localities at the hands of the town board of assessors. If such a situation comes up the people have the cure in their own hands. It is doubtful if a majority of those serving on a town board of education would be so unfair as to favor certain districts at the expense of the others.

Local interest. Will not the people lose interest in their local school under the township system? The chances are that they will take an increased interest. The system provides the utmost publicity in the administration of our school affairs. The publishing of the school budget in the town papers and the posting of copies in the public places within the town will direct the attention of the people to their schools as never before. Under the present system the percentage of voters who attend the annual meeting in the rural districts is very small. In all probability the number of votes cast at an annual meeting under the township system will be greater than the total vote now cast at the meetings in the separate districts.

Local control. Does not the township system do away with the principle of local control? No, it only makes the unit of control the town instead of each school district. Those who are candidates for the school board must be nominated by petitions. This will direct the attention of the voters to the character and qualifications of the men and women who are to control the affairs of the schools and the best in the town will be chosen. No longer will the office of trustee be thrust upon some unwilling person, no longer will it be given to some man who is not present at the annual meeting to protest against accepting it, no longer will it be given to some man who has just moved into the district and his being made trustee considered a good joke on him. The office will acquire dignity that it does not now possess.

Uniform text-books. Does the township system mean uniform text-books? Yes, for each town at least. At the present time the text-books in a majority of the rural schools is so varied in the same subjects that it is impossible for the teachers to secure the best results. Uniform text-books will not only be cheaper but will increase the efficiency of the rural schools 50%.

THOS. B. STOEL

—February 10, 1917

The Township System of Schools Proposed for New York

Part 2

Consolidation. Does the township system mean the consolidation of the rural schools? There are many people honestly opposed to consolidation. There are many oppose the township system who use this fear of consolidation to clinch all their arguments against the measure. It is said that it will be impossible to transport the children to consolidated schools. Before rural delivery was introduced there were many who scouted the idea of the farmers ever having their mail delivered at their gates, but it is being delivered. There will be days when it will be impossible for the children to reach a consolidated school even with transportation provided. There are days when they cannot reach the local school. As a matter of fact where consolidation has gone into effect the attendance at the consolidated school has been better than the combined attendance at the former local schools. We forget that consolidation of schools has been going for nearly half a century. There are not as many rural schools in this State today as there were 25 years ago and it is safe to predict that there will be fewer 25

years from now than there are at the present time. Many of the rural schools have so few pupils that the teachers can not arouse the enthusiasm and interest that comes from competition. In a very few of the rural schools the number of pupils is so great, there are so many classes, that the teachers can not do justice to all. The only reasonable solution seems to be consolidation. If a district with 30 pupils, a district with 10 pupils and a district with five pupils were combined and one building used instead of three, two teachers employed instead of three, the public money formerly going to the three districts used in this one district, there is no reason why the combined schools should not cost less than the three separate schools; there is no reason why the forty-five pupils in the one school should not receive better instruction from the two teachers than when they attended the three separate schools. Consolidation is a tendency of the times. Manufacturers combine to secure greater efficiency. The successful farmer buys more farms and consolidates them under a single management of his own. However, the township system does not mean consolidation. Under the township system when public sentiment says that a district should be discontinued it will cease to exist because of this sentiment and the same statement is true today under our present system, when a community feels that it is not good policy to retain the rural school it is given up. No, the township system is not another way of saying consolidation.

The western system. Those who write and speak against the township system for this State often refer to the systems of some of our Western States. There is one very important difference between the township systems of these Western States and the proposed system for New York State. The basis of the Western systems is a consolidated school while in the bills introduced in the Legislature of our State, the question of consolidation is left to the people to decide and the existing school districts are not disturbed.

Proposed legislation. Perhaps a brief summary of the last township bill introduced in our Assembly last Winter may be of interest. This bill was not pressed for passage as it was considered best to give the people time to study the measure and be able to express their opinion as to the form it should finally take. This bill provided for a town board of education to consist of seven members, elected by the qualified voters at the annual school meeting held on the first Tuesday in May. The term of office of the members of this board shall be three years and they shall have control over all the schools in the town except those located in union free school districts having a population of 1500 or more. If a majority of the voters living within a union free school district having a population of 1500 or more, favor having their school come in under the town board of education, the town board shall then submit the matter to the voters of the town living outside of the union free school district, and if a majority favor the proposition, then all the schools of the town shall be under a single town board of education. If, in any town there are two or more union free school districts, each having a population of 1500 the district superintendent of the district in which the town is located shall issue an order dividing the town into as many units as there are such union free school districts, and designate those rural schools which shall be associated with the union free school in each unit. In a town in which such units exist there shall be separate boards of education for each unit elected in the same manner and

having the same powers and duties as the board of education for the entire town. Provision is made whereby the school boards of these separate units may submit to the voters of their respective units this proposition, "Shall all the schools of the town be placed under the jurisdiction of one town board of education?"

THOS. B. STOEL

—February 17, 1917

The Township System of Schools Proposed for New York

Part 3

If majority of the voters in each unit favor this proposition, then a single town board shall be chosen to administer the affairs of all the schools in the town. The town board of education shall organize, elect one of its members president, and appoint a clerk and a town school treasurer who are not members of the board. This town board shall hire the teachers, purchase supplies, make repairs, hire janitors, provide when necessary for the transportation of children living at considerable distances from the school buildings; establish and maintain elementary, high, industrial, vocational, agricultural and night schools, if such be deemed necessary; establish and maintain school libraries; authorize a uniform and general course of study; arrange for the schooling of any children living within the schools of an adjoining town providing the schools of the adjoining town as more convenient for such pupils; may acquire new schoolhouse sites; enlarge or improve old sites. This is a long list of the things that a town board of education may do under the township system, but it contains no powers not possessed by present rural trustees and boards of education of union free school districts.

The school budget. The town board of education shall prepare a school budget before the first day of July each year. This budget shall state the probable amount of public money that will be received by the town from the State, and the estimated amounts that will be received from other sources. The budget shall also contain an itemized list of probable expenditures. The budget shall be published in two town papers or if there is only one paper published in the town in this one paper or in a paper published outside of the town but having a general circulation within the town. The budget shall appear each week for four weeks prior to August first and a copy of the budget shall be posted in at least five public places within the town at least 20 days prior to the first of August. A certified copy of the budget shall be filed with the town clerk and a copy given to the supervisor of the town. The supervisor shall present the budget to the board of supervisors at their annual meeting and they shall provide for the collection of the school tax by the town collector at the same time and in the same manner as the other town taxes shall be collected. The town board of education shall not expend a sum in excess of \$5,000 in any one year for repairs, remodelling or building new school buildings without submitting the matter to the voters at the annual or special meeting called for such a purpose.

Annual school meeting. The annual school meeting shall be held in the most accessible schoolhouse in the town or the board of education may divide the town into election districts if such an arrangement is more convenient for the voters of the town. The meetings shall be held in school houses and the

polls shall be open from nine in the morning until seven in the afternoon. Notices of the annual meeting shall be published in the town paper, if there is one, each week for four weeks prior to the date of the meeting or a copy shall be posted on the door of each school house in the town and in at least 10 other public places 20 days before the annual meeting. Candidates for the school board shall be nominated by petition, 25 signers being needed. The petitions shall be filed with the clerk of the board of education at least 15 days before the annual meeting. The ballots shall be printed and uniform. The names of the candidates shall appear in alphabetical order and there shall be blank places, so that the voters may vote for persons other than those whose names appear on the ballot. At each election district there shall be three inspectors of election whose duties are similar to the duties of inspectors at a general election. The arrangements for the first election under the new law shall be made by the district superintendent of schools and the succeeding elections shall be arranged for by the clerk of the board. These are the main features of the township system proposed for this State. The law provides for the issuing of school bonds when approved by the voters; for an inventory of school property; and for the preparation of a list of those qualified to vote on a school meeting.

THOS. B. STEEL.

— *February 24, 1917*

A Mothers' Club on Rural Schools

The township system. The members of the Mothers' Club of Ardenia, N. Y., are doing all they can to fight the bill called "Township System for Schools," which will come before the Legislature in February. The consolidation of the rural schools is not for the good of the children and community, is the consensus of opinion expressed at the club meetings. It is not for the best good of the country children. It would make the center of interest in the city or village instead of in each rural school, which should be the pride of every district.

Transportation of children. It would mean that children must be transported in conveyances to some village school, a thing that every right-minded parent knows would be even dangerous to the welfare of the child. These conveyances could not go to every home, and necessarily must start from some central place, and that would necessitate many children walking as far as or farther than they do now to reach the rural school. Then they would be obliged to get in and ride with the same clothing on that they had when walking and often they hurry to be there on time. A little common sense would tell you the results. The children who now walk to school through the snow are not the ones who complain most of the cold when they reach the school. It is those who ride who suffer, and often cry with cold hands and feet. What would it be when the little ones came to ride five or six miles on a cold day? It would be very hard on the poor, as they would be obliged to buy extra clothing, which the children would not need if they walked to school. It is not such a hardship for teachers and children to walk to school in winter as some people who coddle themselves up in heated houses think it is.

The movement from the farm. Such a system would tend to draw the boy away from the farm to the city. If the boy is kept on the farm he should have a good rural school at home. Yes, a good rural school, why not? Let the State give more aid to the rural schools. The cost of conveying children to other schools, if given each school would be quite a help. Even better than State aid, let people wake up and take more interest in their home schools. It is up to the country people to see that there are good teachers in the rural schools. Let the country schools have teachers who love country life and country children. They should be country men and women who have been brought up in the country, and who have attended the rural schools, and know the needs of such schools. They should not be teachers who are afraid of a storm, and who think country life dreary and long to get away. The attendance at school depends on the teacher and not the "truant officer." If a teacher truly loves such teaching she will be willing to teach for a salary less than that offered by the city school.

Making the school. The "little red schoolhouse" is just what the teacher and the people make it. It can be an ideal place without much expense. It can be better than any village school where children herded together in a large school which has the children from the whole town. The country school can be made homelike, attractive, sanitary and altogether a most desirable place for the country children. They can have hot lunch and a well-equipped playground. Yes, they can build their own apparatus and be all the better for it. The boys and girls will get more enjoyment out of it, and will take care of the apparatus. They will take pride and interest in the school because they have helped make it what it is. Let the boys and girls help to make the rural schools better. Any teacher can interest them if she is interested. This can be done in any rural school if people will only think so, before they find themselves wishing we had the rural school back with us when it is too late.

The high school. It is very doubtful if the building of a high school in every town will really educate any more young people than are being now educated. The high school is what every town might do well to have, but leave the younger children in the rural school. Let them be in a room where there are all grades, and when they reach the high school they will stand as well as or better than those children who passed out of one grade into the next and did not have the opportunity to hear the other grades recite as they now do in the rural school. Those children who are determined to leave school as soon as the law will allow it, will still do so, but the boy or girl who really wants an education will get it under the present system and will make all the better man or woman for having had to work for it. Where have many of the best men and women of our country received their education? It was in the rural schools and when they were not half as good as they are now.

Advantage to the city. The village and city people say "Yes, let the bill pass, it would be a grand thing." It would be for them, of course. People would move to city or village, many of them, rather than have their children taken in conveyances for miles during the Winter weather. That would help the city and village people, but what about the farmer? Where is he? It looks like a very selfish interest upon the part of the townspeople. The

largest village in each town will want the school, regardless as to whether it is in the center of the town or not. A correspondent from a village in this town shows that spirit in his writing for a local paper. That village is in one corner of the town. Let parents compare the children of the village or city, who spend their spare time on the street, with the country boy or girl who has legitimate work at home for spare time, and say which they prefer to have their children pattern after.

Let the farmers speak. It is time that the farmers had a little more to say. They have been ruled by the city about long enough. It is time some laws were passed for the benefit of the country people. It is quite necessary that we have farmers and they should have a show. It is to be hoped they will wake up in this school question as they did over the milk strike. Next the farmer will be told he must come into some village or city for his meals, where they can be prepared by experts. Will people interested in the education of children in other rural districts join us in the fight to help keep the rural schools under control of the districts and to make the rural schools better?

Ulster County

FLORA MALCOLM
—February 17, 1917

Consolidated Schools

(The discussion of the proposed new school law for New York State has attracted attention everywhere. We try to give both sides a fair hearing, as this is not a question to be settled by any onesided argument. In addition to the letters from New York readers we have heard from readers in other States where the schools have been consolidated. This week we give one such letter so that the other side may be given from experience.)

Vermont Satisfied With Consolidation

It appears that the good people of New York are agitating the question of a town system of schools, and incidentally the consolidation of rural schools. Perhaps the experience of Vermont may be useful. The conditions in the two States are identical. We Vermonters have forgotten our old grudge against New York, and are as ready now to do you a good turn as our ancestors were ready to apply the "Beach Seal" to all interlopers in their day.

About 20 years ago we adopted the town system. Each town was made a school district and all its affairs were managed by a board of three trustees—one to be elected each year, to hold office three years. The schools were to be supported by a town tax, thus doing away with the glaring inequality of taxation under the old system. The trustees were given power to establish a town central school, and provide for the transportation of pupils as they saw fit; to make the central school a graded school with all departments from primary to high, and to maintain such other schools as might be advisable.

The law did not compel towns to establish a central school, but left it entirely optional with each town to do as it thought best. By electing a board of trustees known to favor consolidation we could have it, or vice

versa. The town in which I live was one of the first to vote for consolidation. Certainly we had to fight for it, and we only won by a slight majority. The women pretty generally favored it, and for the first time came out and exercised their right to vote on school questions. By their help we won. Ah, yes, there was a hot time in the old town that day! We heard all the arguments, all that your correspondent on page 236 adduces and many more.

What is the result? Simply another demonstration that hindsight is better than foresight. After 15 years of trial everyone is satisfied. You could not get a single vote in town to go back to the old system. All the lions in the way that looked so fierce have vanished. We have a school that in efficiency equals our highest expectations. We have a school building built under the direction of the State Board of Health, with steam heat, modern ventilation, proper lighting and careful sanitation. Pupils from five or six outlying districts are brought in in covered vehicles, and the "kids" enjoy the ride. None is brought more than about four miles. Beyond that distance separate schools are maintained. This plan has been gradually and generally adopted all over the State by towns with a population sufficient to make it practicable. Wherever you can find from 75 to 100 pupils within the radius of four miles there you will usually find a consolidated school, not forced by any outside enactment, but the voluntary result of the observation and good sense of the people. If you were to ride through the State you would find in almost every hamlet a nice graded school building, and meet sleigh loads or wagon loads of laughing children going to school or going home.

Thus is Vermont endeavoring to discharge its duty to the coming generation. Upon these New England hills our fathers lit a beacon that has been shining through the years—shining beyond the mountains and beyond the plains, and is even now lighting up the dark coasts of the Orient. It is for us, with pious regard for the past and with ambitious hope for the future—it is for us we fully understand, to keep that beacon trimmed and burning for oncoming centuries.

Not in a spirit of boasting or intent of meddlesome intrusion is this written, but only "with hands of exceeding good will."

Vermont

E. G. HUNT

— March 10, 1917

New York School Law

Is it possible that while the public was giving its attention to crop production as a patriotic duty, that some one rushed through the Legislature that revolutionary education bill? It was not suspected by country folks at all this time. Was it the Education Department that did the trick and did it slick? There is universal disgust among our farm folks over the situation, but the deed is done, and some think that surely democracy is disappearing. Many feel that democracy is on the incline even now while we are engaged in war for democracy throughout the world. Farmers will no longer have a voice in school affairs except in a few local instances. They have had little voice in any other matters for a long time. They did have something to say about milk prices last Fall it is true, but it cost them something. It is difficult to see how they can escape obeying the village board in school affairs from now on. It seems that there is to be a board of five members in the township, and that only three

of these can be from any one district. Only three! Why not all from the village if the village is to have a majority? If this report is correct then it is certain that it is the deliberate intention of the writers of the bill that the village shall take the whole matter of education affairs out of the hands of the country folks. There are some good features in the bill, but there should not be more than two members of the board from one district. If the authorities were afraid that farmers might have too much to say about the village school, they should have protected that school by not including it with the country districts. That ought to have been done anyway, unless the village is under 800 or better still under 500 inhabitants. It is all wrong to take the control of rural schools out of the hands of the rural people. Some of us have been hoping that the rural school would yet be able to make a nucleus for better community life in the country. It seems that the now defunct country church will have to be resurrected for that purpose, or it can never be done.

H. H. L.

— June 30, 1917

Township Schools

Can you explain the new township school law? The farmers here are suspicious of it, believing it to be a scheme to make the country districts pay off the bonded indebtedness of the schools in the villages. Who is responsible for the law and whom will it benefit? In this district we have a good schoolhouse, well equipped, hire good teachers, pay them well and the children learn well. How will we be benefited?

S. C. S.

The plan of the township law is for a town to take over all school property and to own such property. This property may not be taken without due compensation. While the town will, therefore, assume the outstanding bonded indebtedness it will also pay to each district the appraised value of its school property. A value will be fixed upon the property in the district in which S. C. S. lives. This value will be determined by a commission consisting of the supervisor, chairman of the town board of education, and the district superintendent of schools. A tax to pay for this property will be raised by the town and the amount of the value will be apportioned among the taxpayers. S. C. S. will receive his proportionate share of the value of this property. If there is a high school in the town his children will be entitled to attend that school without the payment of tuition.

— October 20, 1917

Protest Against the School Law

The Montgomery County, N. Y., taxpayers' school meeting took place as scheduled, was attended by about 100 farmers, and lasted two and a half hours. Never have I attended any sort of a meeting of farmers where I witnessed such determination and enthusiasm. Everyone, with the exception of one district school superintendent agreed that the Township School Law was the most unpatriotic law ever put over. A city merchant related that he had three brothers, Grand Army men, living on different farms in the

vicinity, and not one of them would be there today were it not for their pensions. Such experiences as a raise in tax from \$35 to \$135 are quite common. You will notice that the above illustration lacks but \$5 of being four times a normal tax. One man reported the tax on his 140 acres to be \$140.

After two hours of discussion a committee of three was appointed by the chairman (he being so directed by a motion unanimously carried) to constitute a county and to act in co-operation with other county committees. One of our first duties will be to influence similar action in other counties. In this connection your services would be invaluable. We have decided not to send a petition to Albany, because those things are ignored, but believe that a committee from each county to visit Albany and to act in unison would be effective. We had our Assemblyman present. He states that the legislative leaders all advised him to vote for it, and that he did not hear a single objection from his home district. I believe that to be true. Farmers have been so busy, and have not taken the prompt interest in legislative matters that they should. Our county committee is constituted as follows: W. Barlow Dunlap, chairman; Frank Hotaling, D. B. Devendorf, all of Amsterdam, N. Y. The committee will have its first meeting in a few days and I hope our activities may take definite form. The Grange reports that this law is not a Grange measure. Our meeting was also unanimous in opposition to the employment of physical culture teachers in the country. We believe the Board of Regents has too great an arbitrary power. The board uses its threat of removal of public money as a weapon to force unbeneficial and impracticable adjuncts to our school system.

D. B. DEVENDORF

R. N. Y.—On this as on all other matters affecting farmers we stand ready to give all sides a fair hearing. If those who advocate the new law want to defend it they may have their chance. What we want above all things is an intelligent discussion by the country people who, too frequently, take things for granted and find themselves tied up to things which do not suit their conditions.

The New York School Law

Taxation without Representation

Like most of the other rural sections, we are peeved over the new school law. It seems to us to be just about such a situation as faced the early colonists and instigated a famous tea party — taxation with out representation.

There is a small incorporated village in the extreme southwest corner of the town (in fact only one corner of the village in this town, and half in another county), whose inhabitants saw fit to build a new schoolhouse and issue bonds for \$20,000. As it happens, the schoolhouse stands in the corner of the village that is in this town. Therefore, we are paying the \$20,000. Incidentally, three other school districts saw fit to combine and build a union schoolhouse. We are paying their bond also.

In our own district we have been contracting with the Hamilton High School, and paid \$100 for a wagon to transport the children to the school. Last year we got in debt about \$85 through the party who contracted to

draw the children skipping out and leaving in the Spring, when we were obliged to pay an exorbitant price to get them transported for the remainder of the year. Of course, the town paid this debt, you say. Not so you would notice it. They simply "took over," seized or appropriated "our \$100 wagon" to pay the \$85 debt.

Perhaps some may say that the law is fair enough, because anyone in the town may send his children to this \$20,000 schoolhouse if he wishes. But this is not so. There is a section of the town nearly 10 miles from this school. It is away back on the hills, where the roads are poor, and drift badly in Winter. The inhabitants are the most part poor and their only chance of educating their children is the little schoolhouse on the corner. The \$20,000 school is as inaccessible to them as if it were in New York City. Some were born there, and have never had a chance to get away, and others have bought farms there because they could not afford to pay for the luxuries of their more fortunate brothers—including \$20,000 schoolhouses. Now these people are being forced to pay their share of this expense, and without their consent or any expectation that they will ever receive one cent in benefit in return.

J. GRANT MORSE

Madison Co., N. Y.

An Insult to Rural Communities

District No. 8, town of Rome, Oneida Co., is decidedly opposed to the new school system, and wants the law repealed. No flag has been displayed for about six weeks on account of broken rope on the flagpole. Schoolhouse, or toilets have not been cleaned, and boys toilet is not fit to go into. There is a driven well in the schoolhouse, but no water available on account of needed repairs to pump. But our taxes are nearly twice what they were last year, and we have a physical training teacher, also a visiting school nurse, to see that the pupils have proper exercise and are properly cared for. This is not done to censure our town board, as they are widely scattered over the town, and are very busy men. (I believe, they all own and work farms.) I doubt very much if they are any better pleased with the new system than the people they are trying to serve are. In Verona the adjoining town, taxes are three times what they were last year, with no better results. The general agreement is that the new law is an insult to rural communities, as it deprives them of governing their local affairs. It must be admitted that some districts have not done what they should for their schools. But how does this new law help them, and what does a district superintendent of schools draw his salary for?

H. G. PHILLIPS

—December 15, 1917

Oneida Co.

The School Question on Long Island

Economical management. The situation in our unit, Brookhaven No. 2 is unique. Originally, it was planned to unite six school districts with a union free school. A census, however, of the latter village gave a trifle over 1500 population, and it immediately withdrew. So, as matters now

stand, we six districts comprise the unit. The members of the Board of Education, being for the most part former trustees, agreed among themselves to look after their respective districts, thus greatly reducing the work of the clerks. Consequently, instead of the \$1000 or \$1500 paid clerks in neighboring units we gave ours a salary which nets him about \$300. By practicing several minor economies in addition we were able to hold this year's tax rate for the unit to 38 cents on a \$100 assessment. Last year the lowest rate for any of these districts was 12 cents; the highest 36 cents, which means an increase of 210 and $5\frac{1}{2}$ per cent respectively for this new system. In a neighboring unit with good salaries and a union free school one man paid \$28 school tax rent last year and \$142 this year.

Increased cost. Roughly then, this gives an idea of the extra cost of the cumbersome educational machinery somebody in Albany is inflicting upon us. The farmers here are up in arms. At the last Grange meeting it was unanimously voted that the Grange was unalterably opposed to the present Township Board of Education Law, and the delegate to the Pomona received instructions to do all in his power to have the law repealed, or at least Suffolk County excepted, as is Nassau. The matter is also being taken up with our Assemblyman and State Senator, and if necessary a delegation of wealthy farmers will be sent to Albany this Winter.

No advantage shown. What makes the citizen whooping for somebody's scalp is the fact that the educational advantage for the children in our unit are identical with what they were a year ago. If it could be shown that we were getting even 50 cents on the dollar in improved educational opportunities some of us would shut up. We believe in education. Why, when Albany was nothing but a trading post for the Indians we had our academies. Now, if we had been hooked to a union free school, as it was originally intended, it is very doubtful if any of our students would have attended it. True, it was the best one that could be scared up under this law. But it was located miles to the west of any of our districts, and between it and us lay a real good high school. Fifty-odd years ago, when our academy closed, the larger boys and girls began studying there; and there are still attending.

Physical training. We seem to be going from bad to worse in our educational system. At a previous session of the Legislature somebody caused to be enacted a physical training law good in itself, but most abominable in operation. Instead of letting us wait a year or so until our local school-marms could qualify to teach the exercises, we were forced to hire a buxom dame from the city. Mathematically it figured out that we are paying \$5 per hour to get our youngsters' feet educated and 50 cents per hour to have their heads attended to and wits sharpened.

A department view. Some of the educational officials at Albany, who from time to time have written us conciliatory epistles, hoping thereby to get us around to the Department's point of view, have claimed that this township board of education law was a Grange measure; that its real purpose is to lower the excessively high tax rate in rural districts having a very low assessed valuation. Undoubtedly there are such districts up State and there is apparently a very simple solution. Give the Commissioner of Education greater discretionary power than he has at present, in apportioning the school monies of the State, by making a few alterations in article 18, section 149, of the Education Law. Then let the rural school district make

out its annual budget and tax rate as usual, save that no allowance be made for State monies. A very little mathematics and even less on the part of the Commissioner would show him what districts needed the money, and the amount they should receive. Our district gets a little over \$100 per year "free money". But we could forego this entirely, give the Commissioner another \$100 to donate to some up-State school and then be far better off financially than we are under this law.

Centralizing education. Other people claim that this solicitude on the part of the Department of Education is merely camouflage; that it is aiming at a more highly centralized educational system. Here too seems a more expedient way. Let the Legislature increase the powers of the district superintendents and decrease those of the district trustees. But such a proceeding is highly questionable, unless the Department of Education shows more gumption than it has recently in administering rural educational affairs.

DANIEL W. HALLOCK

Long Island

—December 22, 1917

The New York School Law

The following are some objections to the new school law: We object to the law because it increases taxes in the country districts and lowers them in the villages, thus compelling us in the country districts to help pay the high-salaried teachers in the village schools. We object to it because it permits a majority of the board of education to be residents of one district, which gives them full control in the town. In one town three members of the board and the clerk and treasurer live in the village and the other 14 districts in the town are represented by the other two members. Another objection is that school districts are obliged to surrender their school property to the town, whether they are willing or not and without having anything to say in regard to the price, and it compels the country districts to help pay for the large and expensive buildings in the village, while the village helps pay for the cheaper buildings in the country. The tax rate in my district last year under the old law was 84 cents on a hundred dollars. In the village it was \$1.50. This year under the new law in my district it was \$1.30 and in the village the same, \$1.30. These are a few objections and there are others.

W. W. BOARDMAN

Jefferson County

The new school law has worked very well in this town: at least that part of the town which is back from the river. Rhinebeck town borders on the Hudson, and many wealthy people live along it, also the N. Y. C. & R. R. runs the whole length of the western edge. Therefore the school districts bordering the river have a great deal of taxable property. The school tax in several of those districts was about \$1 on a thousand. The districts lying back from the river on the eastern side of the town had a tax rate of from \$6 to \$6.50 per thousand dollars taxable property. The new school law which makes the whole town the unit, equalizes the school taxes in the town so that all pay the same, not some people having to pay six times as much per thousand dollars taxable property as others. Of course the people

who have had to pay a rate of about \$3 per thousand, when formerly paid about \$1 per thousand, are kicking and making a big time and fuss about the new school law. Further the districts that have the wealth provided much better for their pupils than the poorer districts. They furnished textbooks, writing books, drawing paper, pencils etc., which the others did not. Now all the pupils in the districts get treated alike, which is a step in the right direction. Again the poorer districts usually had a school term of about 36 weeks; now all have 40 weeks. The schools are better equipped, provided with more sanitary drinking vessels, cups, towels etc.

In this town there is no movement to discontinue any schools and transport children by teams, which so many are crying out about. If there is any part of the school law which needs repeal or changing it is that part which requires all schools to have a physical training teacher. That as far as I have been able to observe or hear, is generally condemned. It certainly seems the height of folly to have a high-priced teacher come around once a week to teach the pupils of the rural schools to hop on one foot, throw bean bags, or a big rubber ball etc., or to practice them in different motion exercises. Boys and girls who get up early do a lot of chores or similar work before and after school and walk a mile or more to get to school, certainly have plenty of exercise. This part of the program has brought the Educational Department into more contempt and disfavor than anything they have put over on us in many a year.

CHAS. R. TRAVER

Dutchess County

We live in District No. 6, lying in the town of Athens with a small portion in the town of Coxsackie, N. Y. Last year our school tax was 32 cents on a hundred under the old system of rural school government, and this under the new law taxes are 73 cents on a hundred, over 100 per cent increase and at the same time the school is receiving no personal interest from any person, who is direct representative of the district, as before. Under the present system with higher taxes, etc., the taxpayers have absolutely no voice in the management and control of their district school. It is left entirely to a disinterested director who is supposed to look after the interest of several schools in the town. It is simply a case of taxation without representation as far as the residents of the rural school districts are concerned. Also the school building of this district has been used for Sunday school and other religious and social functions for the last 20 years or more. In fact it is the religious center of the neighborhood, and now, if the working plans of the present deplorable school law are allowed to mature we stand a chance for our school property to be absorbed by the town, the school consolidated with that in town and the residents of the district compelled to send their children to a town school, where the common school advantages are no better. Examination reports will corroborate this statement. The farmers of this section are very bitter in their denunciation of the present school law, stating that it is the most unjust, unpatriotic and unnecessary law that has ever been passed, affecting their constitution rights and privileges as rural citizens.

Green County

WM. H. MILLER

In response to your request for views on the new township law in this State, I submit mine. I am an active school teacher, have been for 33 years. I also have a small farm, I, therefore, think I am somewhat qualified to speak. My salary is higher under the new law, and my taxes are lower; so I might be expected to like it—but I don't. I am member of the board of education of the town of Taylor, doing my best to make the law successful *but I don't like it*. We cannot do a given amount of work without the expenditure of much more money. It is wrong in principle. It places the control of schools too far from the people; in short, reverting towards the Kaiserist form of government. They tell us we are fighting Germany to destroy autocracy, (though I never admit it, I say we are fighting for our life). Shall we, then, admit that we are incapable of local government? No, and forever no! Shall we say England was right when in 1784, she told us that republican form of government would be a failure? I hope not! To summarize: The schools under the township law will cost much more. They will not be proportionately better. They will be more under control of partisan politics, and last and far worse too far from the people's control.

EMMET B. KIBBE

—December 29, 1917

The New York School Law

A Critical Study of It

[Thus far the discussion of the school law has fallen into three lines. Over 90 per cent of the letters to us oppose the law, and give definite facts and figures to support their claims. A few people argue on the theory of the law and what it *ought* to do, and a few others say the law is a benefit to them. Thus far practically all farmers who write us are opposed. Those who favor are usually teachers or officers. We now give a critical opinion by a lawyer who knows country people and has studied the law.]

An unjust section. I should like to see a detailed explanation as to how section 353 of the law works out. It looks to me as though the unbonded districts will turn in their property and the bonded districts will turn in their equities (over their bonds) and then the whole town will be taxed to pay those bonds. The result will be that the unbonded districts will have to help pay for the superior schoolhouses the bonded districts have built, with no possible benefit, where the bonded district is simply a common school district, and only a little benefit when it is a high school district. Of course, every high school has its elegant elementary department built by the proceeds of bonds, which the unbonded districts will help pay for, but not enjoy. I can only see it as a plan to unload the bonds upon the thrifty districts that have been content with more humble equipment. That section 353 ought to condemn the whole scheme and bring about a repeal of the whole system. I dislike to think that men in the bonded districts would support this so-called township system of schools for that reason, but there has been a persistence about establishing this system and a strength to the support given that seemed to be inspired by something other than improvement of rural schools.

Added expense. Apart from the bond feature the system involves new salaries and expenses that are inevitable, and which the district system did not require. I do not say that the men who get these salaries do not earn

them, and that the expenses are not necessary under the town system. They undoubtedly do and are. Taxes would be higher under this township system if there were no bonded districts. When the department says same taxes are lower than before, it of course refers to some bonded district that has been relieved of its bonds. I should like to hear of some unbonded district whose taxes are lower. Ask the State Department to name one! But taxes are not the all-important thing. I have never seen anything in the township system that promised any improvement of any district school I ever knew, and I have known quite a number in two counties.

Grange recommendations. I suppose the Legislature may have thought that the State Grange endorsed this bill. It did not. If you will read the report of the standing committee of the State Grange on page 68 of the 1917 proceedings, and of the session committee on page 114 on education, you will see that the law disregards four out of the seven (page 114) recommendations which the session committee and the State Grange declared to be fundamental, *i. e.*, the second, fourth, sixth and seventh, and three out of the six recommendations of the standing committee, *i. e.*, the first, fourth and sixth. To be sure, the Grange committed large discretion to a committee, but not as to the fundamental principles enunciated, page 116. Had the State Grange known that those recommendations were to be disregarded, even that report would never have been adopted. I venture to say that had a single one of the recommendations been omitted, or had the proposed action as to bonds been included (and many other details of the law), the State Grange would never have given approval to the township system. That illustrious camouflage artist, Senator Elon R. Brown, appeared before the State Grange and represented that the Legislature was just waiting for the Grange to speak and its recommendations would be enacted into law. It's a long story how the action of the State Grange was obtained. But the law does not follow the essential recommendations of the Grange, and that condemns it.

Objections to centralization. I believe in the district school, *managed by the district*. I received my first education in one, and when my children came to school age I returned to the country and both of my children went through the district school. I do not like the tendency toward centralization. Carried to its utmost hideous length and you have modern Germany, and its logical fruits—the present cataclysm in civilization. It is a decided tendency in all government departments. The district school was the last bulwark of pure democracy, and it was a sorry day when it was destroyed. It should be restored, if it can be, by peaceful methods. A central board might improve conditions *by a tolerable taxation* in a few schools, say one in five. That is a liberal estimate. That one could be brought up to standard without upsetting the other four. The physician is not called to, nor does he expect to prescribe for, the well members of a family. The advocates of the township system reverse the usual common-sense policy.

Killing local interest. In my own district there was an active, public interest in improving the school equipment and beautifying the grounds. It did not get a representative on the board. The former trustee became a janitor of the school, local interest was killed and there is sullen discontent over the excessive tax without benefits and the destruction of local control. I was at the State Grange and have followed this movement closely and

think I see the true inwardness of it. To paraphrase a remark made by the secretary of the State Grange, "It is the people who will make the schools good, not the department at Albany." Those few communities who do not do their duty in providing proper schools could be dealt with by the supervising department, but *put it up to the local people first.*

Hard work ahead. I realize that trying to repeal the whole system is like attempting to move the capitol, but I believe it can be done if you can arouse the people to realize the invasion of their rights and the burdens proposed to be laid upon them. Of course, all sorts of concessions and fantastic schemes will be proposed in order to save the township system. But as a rebuke to those who have put this thing over, and as a return to sane democratic management in the political unit of lowest denominations, *the school district should be restored.*

R. N. Y.—In order to make clear what this writer says about the school law, we have printed, on page 6, section 353 on outstanding bonds. The statements about the Grange are correct, and there seems little doubt that Senator Elon R. Brown was largely responsible for the camouflage which put the endorsement over.

—January 5, 1918

A Town Man Talks

On page 1298 "D. B. D." states the facts about the workings of the new school law in this county also, but in villages having a high school it is but just the expense of maintaining that school be apportioned throughout the town; as heretofore we who are residing in such villages had the pleasure of cheerfully paying (or otherwise, as the mood struck us) the entire expense of such a school, which was open to any outside the district. Our budget always touched the \$2,000 mark, whereas the rural schools adjoining paid not over \$250 or thereabouts. To illustrate, in my daughter's graduating class there were six, and the writer was the only parent represented by the class contributing one cent in taxes toward this school. Eventually many schools will be closed and centralized, no doubt, which is both a good and a bad idea, according to location, etc. But more important, I think, to the country schools, is the repeal and abolishing of this useless, confusing and very expensive physical training program of contortions midway between those of a gymnast and a pugilist. In one-room ungraded country schools there is enough changing of classes to keep things moving without taking four other times daily to distract the pupils' attention from their work. The average country boy or girl who does chores, then walks a mile through snowbanks, needs rest rather than exercise at school. Confine this scheme to cities where it is practical, and cut out such nonsense from the rural schools, and "D. B. D." will see that from \$2000 to \$3000 is saved in his county taxes at once. This physical director work, just the superintendents' salaries, costs the schools from \$5 to \$10 an hour, and the job is generally held down by some politician whose expert knowledge consists chiefly in drawing his salary.

H.

Greene Co., N. Y.

—January 5, 1918

The New York School Law

The Article Referring to Bonds

P. 353. Outstanding Bonds; existing school property. 1 The bonded indebtedness of the school districts in a town which are subject to the provisions of this article, including a union free school district having a population of 1,500 or employing 15 teachers or more, which has adopted a resolution pursuant to the provisions of section 331 of this article, existing and outstanding at the time of the taking effect of this article shall be a charge against the property which is subject to tax for the maintenance of the schools in such town or union free school district.

2 Within one year from the taking effect of this article the value of the school property in the several districts which are made subject to the provisions hereof shall be appraised and determined by a commission consisting of the supervisor of the town, the chairman of the town board of education and the district superintendent of schools.

3 The value of the school property in each district as so appraised shall, after deducting the outstanding bonded indebtedness of such district, be credited to such district and charged against the town. The total amount charged to the town as a result of such appraisal shall be raised by tax upon the taxable property of the town in the same manner as other school expenses are raised. Such tax shall be levied and collected in five equal, annual instalments and the amount required shall be included by the board of education in the annual tax budget of the town.

4 The commission hereinbefore created shall, upon appraising such property and determining the credit to be allowed to each district, apportion the amount so credited to such district among the owners or possessors of taxable property in the district in the ratio of their several assessments on the last corrected assessment-roll of the town. The said commission shall report to the board of education of the town the apportionment so made and the board shall cause to be issued to each of such owners or possessors, a certificate of credit stating the amount so apportioned. Such certificates of credit shall be transferable by the persons to whom they are issued, and shall be payable only out of moneys raised by tax as herein provided for the payment of the charge against the town on account of the school property acquired by such town. They shall be issued in such denominations and shall be due at such times as to provide for their payment out of the moneys raised by tax for the payment of such charge.

5 The commissioner of education shall prescribe rules governing the commission in the appraisal of school property as herein provided and regulating the distribution and apportionment of the credits and charges herein referred to and the form and denomination of such certificate. An appeal will lie from such appraisal or from any act of such commission or board of education in respect to the apportionment of credits, the distribution of charges and the levy and collection of a tax on account of such school property to the commissioner of education, in the same manner and under the same conditions as in the case of other appeals to the commissioner of education. A like appeal will lie from the apportionment of the bonded indebtedness of any town.

The Present School Question

As a member of the board of education of the town of Montezuma, I can personally say that the new school law is not taking well with the farmer, or, as a rule, with the taxpayer of the incorporated villages in this locality. It has caused an advance in taxes in general between 25 and 75 per cent, without any improvement in educational advantages. One farmer in particular whose school tax for 1916 was \$27.86 has just paid for the year 1917 a school tax of \$104.20. His oldest child, attending high school in an adjoining town, pays \$10 tuition over and above the \$20 allowed by the State. The next neighboring high school demands \$20, and the city of Auburn \$30 in addition to the State's \$20, and the boards of education say that next year it must be necessarily increased. If so, only the well-to-do farmer will be able to give his children a high school education.

Boards of education of villages which maintain high schools inform towns which do not maintain high schools that if the matter of increased tuition was referred to Albany a higher tuition rate would be allowed the high schools or towns would be compelled to build high schools. If this was a fact, and to my personal belief upon reading the school law, the latter is the main idea of the State Educational Board. This would work an unjust tax burden upon towns in which the population and location would not warrant a high school, and a large percentage of the towns throughout the State are in this class.

The taxpayers of villages were led to believe that taxes would be lowered by taking in the entire town. But, with four villages here, this is shown so far, 1917, to be an error, as they average the same, to \$2 per 1,000 higher.

As almost all of the high schools of this county are in debt, this law compels the school districts to help liquidate this debt without any voice or vote on the advisability of incurring this debt.

Schools have been closed, necessitating a hardship upon one-half of the students, according to age, by being compelled to walk miles further to school, no way provided for their transportation at present, or thought of by boards of education, because of the expense necessary to carry this out, thereby becoming an additional tax on the town, which the taxpayers object to, and every case to my knowledge the board of education is composed of residents of the village, or have a controlling vote on the board.

While the law says members of the town board of education shall receive no salary, it leaves to the town board the right to fix the salary of the clerk and treasurer, which varies all the way from 30 cents an hour to \$500 a year. One town near here is reported as paying that amount.

There is hardly any end to the arguments against the present school bill, and but few in favor of it. Personally I do not think that this Machold school bill would have become a law if some of our State Grange officials had not been unduly influenced regarding it. I believe I can truthfully say that this law would never have been drafted if the assessed valuation were greater in the incorporated villages throughout the State than in the towns outside of the villages.

Cayuga Co., N. Y.

A. P. FULLER
— January 12, 1918

I wish to commend THE R. N. Y. upon the stand it has taken in a recent editorial in which it refers to the commission which is to investigate the rural schools of New York State. Your advice given as to the personnel of the committee is both safe and sane; the country women should have a representative. They can give valuable information as to what their children need along educational lines, from a professional as well as a practical standpoint.

To cite a specific instance: In Eastern Wayne County, in a community in which I am personally acquainted and interested, there lives a young woman who is a normal school graduate. Before her marriage she was a successful teacher. She now has two boys attending the rural school, and a third will soon enter. This young woman not only finds time to visit the school regularly, but the teachers, who are young and too often inexperienced, find this teacher-mother's advice sound and hints helpful. Other things being equal, can anyone give a valid reason why this woman, in the light of her formal training as a teacher, her practical experience in the school-room, and finally her position as a parent in the community, is not fitted to give advice that is both "safe" and "sane" about the needs of the rural schools in the State?

G. W. F.

This commission to investigate the rural schools is composed of various State officials and is headed by Senator E. R. Brown. These persons are granted the privilege of appointing someone to serve for them if they care to do so. The majority of this commission will frankly admit that they know little or nothing about rural schools except what they read in the school reports. They never will send any children to such schools, and they know little about the feeling of country people. We think we are justified in saying that the majority of the commission feel convinced, before they start, that they must find fault with the present system. Our suggestion is that these members who confess that they know little about the subject step one side and appoint just such women as our correspondent refers to in their places. This would be a courteous and sensible thing to do, and it would result in a more thorough investigation, and one that would satisfy our country people. Thus far we have not heard of any of these commissioners making this reasonable offer.

—January 29, 1918

Autocracy in School Matters

In September 1917, at a special school meeting in District No. 17, town of Denmark, Lewis Co., N. Y., a vote was taken on a resolution read by the superintendent to annul this district and annex it to District No. 1. Twenty-eight voted against the measure and five for it. This superintendent was a stranger who had just moved from another part of the State to District No. 1. When undertaking to close this school permanently, he professedly did not know the district boundaries, the number of school children residing in the district, nor where their homes were located. The argument put forth by him and the members of the board was that under the township law our tax would be less by having fewer schools. The sentiments of the

voters showed plainly that whether the tax would be more or less the school should be kept open, and it was, during last year. When the township law was repealed, the superintendent had autocratic power, and as soon as the snow was gone a surveyor was sent to map District No. 17 joined to District No. 1. The superintendent issued a decree saying by his authority the two districts were one.

District No. 17 has appealed repeatedly to the Department of Education at Albany through an attorney and representatives from the district. These appeals have amounted to nothing except to convince those interested of the utter disregard of the department for the needs and rights of country people. Our Winters are severe, with mercury being frequently from 20 to 25 degrees below zero, and occasionally much lower. The snow is deep and roads badly drifted, making regular attendance at school from some of the farms impossible for young children in Winter, and a matter of much loss of time and hardship to both children and parents at other seasons, from all of them. District No. 1 is a village district, with a heavy bonded indebtedness which is spread over the forcibly acquired territory. Last year, under the township law, our tax was about 300 per cent more than in 1916; this year it is nearly 400 per cent over that of 1916, and we have no school.

City people are loath to believe conditions like the above can be forced upon people in this supposedly free country. The *New York Evening Sun* published recently in its correspondence column a letter calling attention to this abuse which country dwellers are compelled to bear under the present school system, the editor making comment that "with the repeal of the township law this evil was corrected," which it surely was not, as Section 129 of the education law shows. Unless the farms are to be depopulated we must have in this north country nearby schools; and as there is considerable sentiment against autocracy at present, and favoring the return of forcibly annexed territory, would it not be a suitable time for the New York State Legislature to put down the autocracy within her borders, and restore the stolen school districts?

The School Law; A Reply to Mr Hitchings

I do not wish to take too much of the valuable space in The R. N. Y. to condemn the present school law, but would like to reply to Mr Hitchings, one of the Board of Education in Onondaga County. Perhaps Mr Hitchings has depicted the little old red schoolhouse throughout Onondaga County in its actual condition, but personally I am not thoroughly convinced that conditions are any worse there than in adjoining counties. True, there are schoolhouses that need remodelling or perhaps should be abandoned for all times. There was a section in the old law that governed this, and could have been enforced just as well as in the famous Machold law, which allows the present board to expend one-half of one per centum of the assessed valuation of the taxable property of the town, for a new schoolhouse, to choose the site, to spend \$1000 on repairs of any one schoolhouse or on all, and this without any voice or vote from the residents of the district. This dis-

trict may or may not have a representative on the board. The richest as well as the poorest district in the town may find itself in such a position with no voice or vote. Our forefathers called this "taxation without representation."

Mr Hitchings says that "farmer trustees are to blame for the increased taxes, for they saw the chance to put one over, and increased the teacher's salary." If this was true even in one case, then I wish to say that no prophet of old or present-day fortune-teller has anything on this trustee. The facts are that the Governor signed this school bill on May 2, 1917, the same day trustees were elected, and teachers were hired, without any knowledge that the Machold bill had become a law until some time thereafter.

Mr Hichings further says: "To be a member of the element that controls the country church, the corner store or the country school is the height of some of our taxpayers' ambition, and the loss of control of the school, together with the advance in taxes is a bitter pill for them to swallow." My personal belief is if they belonged to this ambitious element they would be represented on the school board, for it is pure politics; they who seek will be more often elected than they who seek not, regardless of ability.

Those who read the school law are not kicking like a Missouri mule at the board, but rather against the law, which the board has no power to amend. I do not think the taxpayers of the town in which Mr Hitchings resides and attends regularly to the board meetings, or in the town in which I irregularly attend board meetings, think that we are deliberately robbing them, but they do see now what was not made plain to them last April; that if this law is not repealed it is only a short time when school taxes will far exceed every other tax levied, and this without any educational advantages in country schools.

Mr Hitchings thinks it is far more patriotic for the taxpayer to stop his kicking and get behind the local board. This is the opinion of residents of villages who have had their taxes reduced, and of the members of the State Board. Patriotism is a grand thing, and should be more general today, but we hear more about it for the farmer than for any other class. He should submit to every law enacted and be patriotic, be submissive to the powers that be, for this is all for Mr Farmer's good. While we are fighting for the rights of mankind, for the rights of pure democracy, we should peacefully submit to be ruled by autocracy in our school education.

One of the makers of this famous school law was so patriotic, so loyal to the country which gave him birth, to the State in which he holds an honorable office, that he places his 12-year-old child in a foreign country to be educated, in which in education, sanitation and morality it is far below the normal level, a country in which the statistics show that more than twenty-nine per cent are illiterate.

The defender of this now famous school law, over which the State Board of Education will in the near future hold a post-mortem by the advice of the people and the consent of the Legislature, asks us to wait and give it a fair trial, to keep this six months' kicking Missouri mule for another six months, and possibly it will cease its kicking and be submissive.

A Resolution on School Matters

At a regular meeting of the Ontario County, N. Y., Civic Organization, held at Canandaigua, January 7, 1919, the following resolutions were adopted:

Whereas, we believe that the number of school district superintendents in the County of Ontario should be limited to two, and that they should be elected by the direct vote of the people, and that neither said superintendents nor the State Department of Education should have the power to consolidate, and that no district should be consolidated without the request and vote of the districts affected thereby, and

Whereas, we believe the law requiring physical training in the rural schools to be unjust, and

Whereas, we believe that the power to regulate the schools should be placed in the hands of the people of the districts where the schools are located and should not be centralized and in the hands of any official of the department.

Now, therefore, be it resolved, That we request our member of Assembly and Senator and the Governor of this State to use all proper and legitimate means to cause such amendments to be made or new laws passed that the number of school district superintendents in Ontario County shall be reduced to two; that they be elected by a direct vote of the people; that all power to consolidate rural schools be taken entirely from the school superintendents and the State Department of Education and eliminated from and be placed in the hands of the people of the districts to be affected; that such amendments be had or law passed that all requirements for physical training in the rural schools be eliminated and that such physical training be not required unless requested and voted by the district requiring the same.

MRS H. D. CONVERSE, *Sec'y*,
The Ontario County Civic Association.

A Plea for the School Law

I note from reading not only The R. N.-Y. but other papers as well, that there is a strong note of protest against the new township school law. I must confess that I cannot qualify as a jurymen who has never thought about or heard the case discussed. It is true that I happen to be the chairman of our local town board, and for the past five months I have had occasion to deal with and to think a good deal about the law. There are reasons why I am somewhat prejudiced in favor of the law. It is perhaps one of my natural mental defects that when I want advice on any subject I turn to those who are supposed to be experts. When I want legal advice I do not ask the local cheese-maker, and if I need medical attention I do not consult the village blacksmith. By the same token, when I seek advice on educational topics, I very naturally turn to the gentlemen who have their offices in the splendid educational building on Capitol Hill in Albany, because they have made it their business to think about these problems for many years, and I am not afraid of expert knowledge. Now I am willing to admit that these men, like all enthusiasts, sometimes lose sight of the dollar and are inclined to put what they believe to be school efficiency ahead of taxes, yet I cannot but think that they are educated, patriotic, high-minded gentlemen who very earnestly

and sincerely and unselfishly desire the best good of the rural schools of the State. I think I am also correct when I state that the law in its main outlines at least had the approval of the New York State Grange, which is supposed to be the clearing house for agricultural legislation.

I believe the opposition is coming mainly from two sources—one being that rather numerous class who are mentally so constructed that they are constitutionally opposed to anything they do not understand, and then there is vociferous opposition to the law on the part of those who have been touched in that most sensitive part of their anatomy—the pocket nerve. I believe that an attitude of open-minded toleration toward that which we do not understand is commendable and I further insist that if this new law really means increased efficiency on the part of our country schools, we cannot afford to lay too much stress on an incidental increase in the tax rate.

Please note that this law sets in motion no large amount of new or expensive machinery. No matter how our rural schools are administered, this cost is bound to increase along with everything else, and we cannot expect anything else. Outside of a clerk that may receive from \$50 to \$300, and a treasurer that may serve without charge (an officer of a local bank may do this free in consideration of the town placing the school funds in his custody) or may receive a small salary, there is absolutely no reason why schools should cost more than under the old system. But teachers' wages have gone up, although less than in almost any other calling—also there has been an increase for janitor service and for fuel, supplies and repairs. It is true that the Department of Education has established a policy looking toward the adoption of sanitary toilets and also for instruction in physical training and the principles of elementary hygiene. I really believe that sanitation, decency and even common morals require some changes in our oftentimes unspeakable school privy. Physical training happens to antedate the township law, but incidentally I may say that if the expense of a suitable instructor can be divided between three or four towns, the cost per district will not be heavy, and I really believe that if we are fortunate enough to secure a sympathetic and tactful teacher who can look after the children's eyes and straighten up their shoulders and give some elementary instruction in personal and family hygiene, it will be worth more than the cost. The fundamental principles of the township law may be summed up in a single sentence, viz.: It makes the township the unit of school organization for purposes of taxation and administration, and it vests the control in the hands of a body of five trustees instead of a trustee for each district. We hear the curious statement that this bill will transfer the control of the schools to Albany, when as a matter of fact these five trustees are absolutely supreme in questions of local administration. They surely need not, and in many cases will not, consolidate a single district or close a single school. These five men will be as easily voted out of office as the town clerk or the village constable, and if they are unresponsive to the popular will, there is the ballot box and universal suffrage. A board of five men from your own town, not chosen from Albany and not self-perpetuating, but chosen by the ballots of their neighbors, can hardly be regarded as introducing "the Prussian system into the control of the rural schools."

Now in theory the old system of choosing the local trustee was an ideal example of home rule, but in practice it was often a joke. There are many

districts where in practice it was hard to get enough electors in attendance at the annual school meeting to go through the form of selecting the officers. Very often the office of trustee has been "put on" a man for the one reason that he was not present to decline the "honor," while quite as often he has been chosen because of his recognized ability to drive a hard bargain in hiring a teacher at the lowest possible wage without reference to their qualifications.

The ultimate test of any educational law is this: Does it secure school efficiency? Surely this question cannot be answered at the end of five months of partial trial, and I do not propose to debate it. I wish the law might have a year or two of fair trial and then if certain changes seem desirable (as will probably be the case), it can be amended.

But there is one outstanding principle of the law that is fundamentally sound, and does not admit of debate, and that is the idea of making the township the unit of school taxation, because it puts the burden on those best able to bear it, and hence makes for what we have learned to call "social justice." If a farmer lives in a district where lands are valuable, where population is fairly dense, and where the amount of taxable property is fairly large, he will surely pay more taxes than ever before. On the other hand, if he lives in a remote locality, where farms are scattered and land values low, and where in the past the maintaining of his poor school has meant a heavy burden, he will surely be surprised at his decreased tax rate, but unfortunately he is not likely to take the trouble to write the papers about it or to express his appreciation to the department at Albany. The law puts into effect the socialistic dictum, "From every man according to his ability."

Now for a concrete example. I live in School District No. 4, Township of Cobleskill, N. Y. It is open country with the farms of moderate value and fairly closely settled, but there is no village and no railroads or corporations to swell our valuation for taxation. The district tax roll is about \$120,000. Last year our school tax rate was 38 cents per hundred dollars and this year it will be 52 cents, and by that token I am entitled to be opposed to the school law because it costs me several extra dollars. But on the other hand, District No. 8 in this same town lies high up on rugged hills with poor and scattered farms and a total valuation of only \$19,000. Last year those burdened farmers out of their poverty paid a school tax of \$1.33. This year their rate will be the same as mine, 52 cents. I believe that social justice demands that the richer and more able districts shall help to bear the special burdens of the remote and less able. I am sure that every voter of District No. 8 will be enthusiastic over the new law.

I do not believe the law is perfect. I think some minor features may be revamped. I do not believe it will bring in the educational millenium, but I do know that there is a great outcry before anyone is seriously hurt and I wish our farm people might keep an open mind, call it at least an honest, well-meant effort toward better things, and wait a year or two to see if it will not justify itself.

February 9, 1918

JARED VAN WAGENEN, JR

Physical Training In Rural Schools

A recent bulletin issued by the State Department refers to the "Comprehensive program of physical training" in the rural schools put on throughout the State this year, and expects it to do wonders, but keeps very shy of detail or the way it was "put over" the taxpayer, or whether it was favorably received or not. Having been about somewhat in two or three counties, I have yet to meet a farmer or taxpayer who is in favor of their school being closed one day each month for the teacher to attend a physical training conference held somewhere in the county most convenient to the traveling instructor, while the teachers generally object to spending more than their day's wages to attend the same. Counting the time and expense, is it not another case of "paying too dear for the whistle"? Were the parents more familiar with the required stunts and supervised games, the whole scheme would be ridiculed to oblivion.

To attempt to teach dancing in a country schoolhouse having on an average less than 30 square feet of clear floor space is somewhat cramped; while pupils prefer to use their own initiative in starting games, rather than to play by rule. To see a gathering of teachers squeezing through hoops, jumping over imaginary brooks, and playing tag and bean-bag games, requires a stretch of the imagination to believe any educational advantages are derived from it. Governor Smith in his inaugural message, when urging retrenchment in public expenses, says: "Many of the proposals for new activities of the State will require money. The wasted dollar not only burdens the citizens, but helps retard the progress of the State." Will the rural residents quietly submit to this entering wedge of enforced taxation? If so, then those proposed \$300 chemical toilets will follow along soon for the taxpayer to settle for as a matter of course.

Autocratic Power of School Authorities

I have been reading the articles in regard to country schools, and have come to the conclusion that what we need in this country is a new Declaration of Independence. With free speech strangled, the press muzzled, and taxation without representation, as in the matter of sanitary toilets for rural schools, it is time there was a change. The autocratic power with which the Board of Regents makes and enforces laws, regardless of circumstances or conditions, would do credit to a Kaiser. Not that I am opposed to any legitimate expense for the advancement of education, but I am opposed to being held up by any bunch of politicians who may come before the footlights.

Last year we were obliged to pay a physical instructor to go to each school two or three times during the year. The farmers protested and the law was repealed, making it optional with each school, and this year those who did not want it are compelled by order of the Education Department of the State to pay and send the teacher once a month to some place to receive physical instruction, thus making us lose nine days' instruction in each school during the year, and incidentally putting another over on the farmers. Some

years ago four school commissioners, elected by the people, looked after the schools, better, and at less expense, in Oneida County, than seven district superintendents, not elected by the people, do at present. So much for politics in the management of rural schools.

C. J. SALMON
March 22, 1919

Oneida Co., N. Y.

The first report of that district school organization comes from Tiega Co., N. Y.

I succeeded in getting the voters in School District No. 3, town of Owego, at Waits, N. Y., to elect officers of the Rural School District Civic Organization; not a single vote against, and will send you the officers elected as requested: J. W. Shumway, president; E. N. Goodspeed, vice-president; T. J. Wait, secretary; Z. Codner, treasurer.

J. B. MEAD

Anyone can see the advantage in having a strong non-partisan organization of this sort in every school district in the State. We shall not be satisfied until we have such an organization extending up through district, township, county and State.

— June 15, 1918

During the fall and winter of 1917 a great deal of organized effort was made on the part of those opposed to the principle of township control of schools to bring about pressure upon the Legislature to meet in the next January, for immediate repeal of the bill. The constitutionality of the bill was likewise questioned and the decision of the courts in this regard will appear in the appendix, part A. We have endeavored to gather together the newspaper articles that would best portray the efforts of those determined upon a repeal of the township school bill.

Free Books for Public Schools

The most important rural social institution is the public school, because the much talked of rural problem is a problem of education. When the country school teaches a curriculum suited to the needs of rural life, when it is manned by trained and efficient teachers, and has the support and cooperation of the public the problems of country life will need only time for their satisfactory solution. In the meanwhile it is well for us to remember that even now we look to the public school in its present experimental and unsatisfactory condition to instill into rural life, nourish and cultivate the germs of progress and enlightenment, and to lay the foundations of the much needed rural leadership.

So much Rhinebeck in common with other similar communities expects from its public schools. In view of this the least we can do and ought to do is to see that the schools are equipped to do the work we require. The schools in Rhinebeck are not so equipped. We will consider but one

defect, but one which of itself is sufficient to prevent good results from being obtained. The best trained teachers in the world, the most alert and willing scholar can not teach or learn without books, and our schools do not furnish books for the pupils. Every child who comes to the Rhinebeck High School for example, is supposed to provide itself with the required books. Supposed to! yes, but what are the actual facts? Some families claim that they cannot afford the six dollars a year necessary to equip each high school student, others who cannot claim this refuge put off buying the books on the flimsiest excuses, the principal must take time off to appeal to the parents and hear their excuses, and then with no result. The school has been in session several weeks, yet there are children in the High School still unsupplied, these are not the children of the very poor either. Other children come to school with the text books their fathers used, books of a generation ago, valueless because long superseded, but doubly valueless because pages have been lost. How can efficient work be done in the face of such opposition? It is opposition, parents may not mean it so, but it is just the same, stupid opposition. Perhaps it arises in some cases from ignorance, but in others it can only be set down to indifference which is worse, but whichever it is it forms a black menace to the future of Rhinebeck. The community ought not to allow it. The school is not an institution solely for the improvement of the individual, its main object is to secure social efficiency, it exists to make Rhinebeck an enlightening, self-respecting, efficient and self-sustaining community and to keep it so; that is why we compel children to go to school. We have no right to allow a menace to the future of this village to thrive in our midst.

But what shall we do about it? We cannot compel parents to buy books, there is no law for that purpose. If some families in Rhinebeck are willing to ride around in automobiles and send their children to school without the barest necessities of learning we cannot force them to do otherwise; it is within their power to so evade the spirit of the compulsory education law. But the citizens of Rhinebeck have the power to make their schools efficient, they can have free text books. This is the best method anyway and all of the best school districts have adopted it. Free text books would insure that all pupils would be supplied at the beginning of the term with materials for work, this would mean the saving of time so needed in the school term. The purchase of text books by the board would tend toward the standardization of the texts in use. No child would then have to study from a book of a generation ago, and all would have the same text to study, which is absolutely necessary if any efficient instruction is to be given.

The cost of supplying free text books would not mean a large increase in taxes. The initial expense for the Rhinebeck Grammar School would be \$628. After the books are once installed it would cost little more than \$100 a year to renew them. The first cost of books for the High School would be about \$500 and the annual support correspondingly less, thus by adding only eleven hundred dollars to the budget for one year and two hundred thereafter this district could make a great advance towards the efficient school which it ought to have. It is not economy to save money to the detriment of the public school, it is tragedy for it means a less progressive, less enlightened and therefore a poorer community. Poverty is seldom the result of mere misfortune, most often it is due to lack of

skill or ability to use one's powers, an efficient school in time can do much to remedy this, consequently to spend the needed money on free school books is to make an investment that in time will yield large returns.

Another point worth noting is that people of the community already pay more for school books than is necessary to supply them without charge. If parents who have children in the grammar school bought new books every year they would spend \$785 each year, the Board of Education can buy the same books for \$628, thus saving \$157. But of course it is not necessary to have new ones every year, the old ones could be used and the books replenished for \$100 per year, that is for the grammar school; parents cannot buy second-hand ones as cheaply. Free books would thus mean a real economy—the small increase in taxes would not nearly equal the amount parents already pay for their children's texts.

This question is worthy of our attention and interest, it means a more efficient school, sensible economy, and a step forward for the village. It must be decided by the voters not by the Board of Education. Section 673 of the Education Law provides that the qualified voters in a union free school district have authority by a majority vote to vote a tax for the purchase of all text books used in the schools of the district. The Board of Education may include this in their yearly budget and the taxpayers can then vote it into effect. Let us urge the board to do so and then see that it is carried.—*Rhinebeck Gazette, October 28, 1918*

Township School System

Cuba Grange, No. 799, Patrons of Husbandry, C. B. Gordon, Worthy Master; Elmer E. Conrath, Secretary

Cuba, N. Y., Dec. 9, 1916

DEAR SIR: I have your letter inquiring as to my observation and experience in the operation of the township school system in Pennsylvania. As I have not time to go into a detailed discussion of the subject, perhaps I can not do better than recapitulate briefly a few remarks I made on that subject before Cuba grange, Patrons of Husbandry, of which I have the honor to be secretary. These refer principally to the practical working out of the township plan, as observed in seven years of teaching under it in Pennsylvania; and some 20 years of close relation to it and observation of it as a newspaper man.

I should say one of the first and greatest results of the township system is to emphasize the country school and make it more important as a community center. I must say that in my teaching experience in three counties in Pennsylvania I did not know of a single school district whose children were transported to a village. In some cases where there is no township high school, the pupils who have graduated from the grades in the country go to the village school to complete their course. But these cases are decreasing in number because the number of township high schools is increasing. So that in general the tendency is to make the country school the educational center and very often the social center as well, for a community. There is a tendency to make a freer use of the schoolhouse, and farmers' institutes, lecture courses, literary societies, etc. are quite commonly held there.

The township high schools to which I refer above are another logical outgrowth of the township system in Pennsylvania and I see the proposed new law for this State wisely permits their establishment here. These are a splendid thing, because in them the course of study can be adapted to the needs of the country boys and girls, which in some respects are different from those of the village boys and girls. This high school is located at a central point in the township, is part of the township system and the pupils of the township schools attend without paying tuition. The course of study is in large measure determined by the township school board and they fix it to suit the needs of the country people, including instruction in agricultural subjects for the boys, domestic economy for the girls, etc. I have attended the commencement exercises of these and I recall that I was struck with the very practical nature of the work they had done in the course.

The standard of teachers, I believe is likely to be higher under the township system and incompetent teachers are more likely to be weeded out. By engaging all the teachers for a township the board has a wider choice, and it is not unusual to have three or four times as many applicants as there are schools to be filled. The contracts are all made at one time, and "school letting day" is quite an event in the community. The board is greatly aided in its work of selection by knowing the character of the work done in each district the year before, what teachers failed, and what ones succeeded.

Teachers' wages are more likely to be uniform, Pennsylvania has a minimum salary law which does not permit any township to pay less than \$50 per month of 20 days, I believe; but even with this law and the free text books of that state, the school taxes, so far as my personal observation goes, do not average as high as they do in this county of Allegany, (N. Y.) because one, two, and three-pupil schools are unknown.

And of course, the taxes are the same all over a township. They are not heavy among poor people with large families and light among the wealthier with small families. Every railroad or other corporation in the township contributes its share toward the support of all the schools in the township, not merely to the schools of the districts in which it happens to be located.

Where the township system prevails you will find more uniform school buildings. There are no "poor districts," because all are on a par.

Textbooks of course are uniform throughout a town under the township system, so that parents who move from one district to another need not buy different books, even where they are not furnished free. In one county in which I taught, representatives of the various townships got together, agreed on a series of books for all the townships, and thus had uniform books all over the county, besides getting them very much cheaper by insuring the dealer a large order. This was before the days of free text books there.

I do not think I ever knew of a case where politics entered into the management of the country schools of Pennsylvania, though political interference has hurt the schools of the larger cities. I have voted for members of the school board when I did not even know their politics. All I knew was that they were good men and qualified for the position of school director. Under the Pennsylvania school code the election of directors is non-partisan, that is, you dare not connect any political title with the candidate's name; and I note the proposed township law for this State is practically the same in that respect. The position of township school director is in no case looked upon as

ELMER E. CONRATH
Editor of the Cuba Patriot and Free Press

a political office, but rather as a sacred trust, having in charge the welfare of the rising generation. It is generally possible to get the ablest men of the community to serve, leading farmers, business and professional men, as well as the best and ablest women. Men will accept a place on the school board who could not be induced to take any sort of an ordinary office. In fact, I know of instances in which the township school boards represented a higher average of ability and efficiency than any other official body in the county, because they were the best men selected from all political parties, not merely from the dominant one.

While there is no provision in the Pennsylvania Code for the distribution of directors over the township, yet I have never known of any tendency to concentrate them in one section, for the reason that it is not considered an office to be striven for, but a duty to be accepted if designated for it, and the directors are usually well scattered over the township. And there is no tendency to neglect any of the schools, whether in a section represented or not. For one poor school reflects upon the whole township and the aim is to maintain them all at the highest possible level.

The matter of school consolidation, which seems to excite a good deal of controversy in this state, is one that I really never knew to be agitated or even discussed in Pennsylvania. Such matters are entirely in the hands of the township school board, which is elected by the people, and so are practically in the hands of the people themselves. If a school for some reason dwindles down to half a dozen pupils or less, it is frequently united with another school and perhaps a new school house is erected, more convenient to the pupils of both of them. I have known such cases where the old buildings were sold for enough to buy the new property and put up a better building than either of the old ones. If the distance pupils must travel is beyond a certain fixed limit, they are transported. But in any event they remain in the country schools and aid to build them up. For the school board having charge of such schools can be counted on not to tear them down in order to build greater the village or city schools, over which they have no authority and in which they have no interest.

These are a few facts concerning the township system as I observed it in operation. There are other natural developments of course, as townships teachers' institutes, township courses of study, a healthy rivalry among schools of the same township, intervisitation among the schools, the advantage of buying supplies in larger quantities, and so on. But most of these are obvious and need not be rehearsed. However, if there is any particular points not mentioned here on which I can give information, I shall be very glad to do so.

Yours very truly

ELMER E. CONRATH

Note: Mr Conrath is now Editor and Publisher of the *Patriot and Free Press*, published at Cuba, Allegany Co., N. Y.—*Sandy Creek News*, December 14

Start Suit to Test Town School Act; Collection Halted

The former trustees of School District No. 8, town of Greenburgh, have started an action to test the constitutionality of the new town school act and papers were today served on William A. Buckley, receiver of taxes, restraining him from proceeding with the collection of taxes until the case is heard.

The plaintiffs are Elmo Brown, Bernard Call and Walter H. Whiffin, school trustees of District No. 8, and William Bunselmeyer, William C. Emerick, Charles H. Shack and Mr Buckley are made defendants.

The suit was brought through Cohen and Richter, attorneys, and the order was signed by Justice Arthur S. Tompkins.

The defendants are cited to show cause at a special term at Goshen, in Orange County on Friday, October 19th at ten-thirty o'clock. The trial is desired in Westchester County.

The papers attack the validity of Chapter 328 which legislated the old boards out of office and created a new town school board. The court is asked to restrain the receiver from collecting taxes and the town board from usurping any of the powers of the district.

Ever since the new town school law went into effect there has been much dissatisfaction because it is considered unjust. Small school districts generally have had their taxes increased because they had to share the burdens of the larger ones. Elmsford, a large district, has had its taxes practically cut in half and it benefits by the law. The case is one of great interest. Few doubt but what the law will be declared unconstitutional.—*Tarrytown News*, October 13, 1917

Orders Test of New State School Law

White Plains, N. Y., Friday.—Justice Arthur S. Tompkins handed down a decision in the Supreme Court to-day in which he declines to pass upon the alleged unconstitutionality of the new State educational law placing town school districts under one town board of education. He directs a trial of the issues.

Elmo Brown, Bernard Call and Walter H. Whiffen, the board of trustees of the Elmsford school district, brought a proceeding before Justice Tompkins to test the new school law, and also sought an injunction restraining the Greenburgh Board of Education from collecting taxes or taking any action at all pending the decision.

More than a thousand school districts in the State may be affected by the final decision in this action.—*New York Telegram*, November 2, 1917

Trial to Test Validity of State School Law

White Plains, N. Y., Nov. 2.—Justice Arthur S. Tompkins in the Supreme Court to-day declined to pass upon the alleged unconstitutionality of the new State Educational Law, which places all town school districts under one town board of education. He directed a trial of the issues. Elmo Brown, Bernard Call and Walter H. Whiffen, constituting the Board of Trustees of the Elmsford school district, brought a proceeding before Justice Tompkins to test the new school law and also sought an injunction restraining the Greenburgh Board of Education from collecting taxes or taking any other action pending the decision.

Justice Tompkins declined to restrain Greenburgh Board from proceeding with its general work under the act, but granted the plaintiff's motion to the extent of restraining the Board from collecting taxes or exercising any authority over school property upon condition the plaintiffs bring the action to trial on the second Monday of November.

More than 1000 school districts in the State may be affected by the final decision in this action.—*New York Evening World, November 2, 1917*

School District No. 8 Wins Temporary Fight on Town Act

The attorney for the trustees of School District No. 8, town of Greenburgh, Julius Henry Cohen of No. 111 Broadway and Hartsdale Road, Elmsford, who argued the case brought against the new Town Board of Education, requesting an injunction restraining this board from any jurisdiction over the school and its property was heard by Justice Tompkins at Goshen on October 19th and briefs were to be returnable to the Judge on October 31st at Nyack, has rendered his decision on same as follows:

Serious questions are raised as to the constitutionality of Chapter 328 of the Laws of 1917, under which the defendant Board of Education was chosen, and much doubt exists as to whether, assuming the law to be constitutional, District No. 9 (Elmsford) should have participated in the selection of the Town Board of Education for the Town of Greenburgh.

All of these questions should be promptly determined, and the department of education, and all concerned should, waiving all formalities and technical objections, unite in an early trial of this action to the end that there may be a final decision respecting the constitutionality of the law and the legality of the election of the Board of Education in the Town of Greenburgh, without unnecessary interference with the educational facilities of that town or any other, and that proper legislation may be enacted at the next session of the legislature if the act in question, or any part thereof is invalid.

It is well settled that the Court at Special Term will not declare a law to be unconstitutional unless the invalidity thereof clearly appears, especially where great injury or much confusion may result therefrom to persons and corporations not parties to the action, and following that rule, I shall not undertake to declare the act unconstitutional, nor restrain the Board of Education of the town of Greenburgh from proceeding with its general work under said act but I will grant the plaintiff's motion for an injunction *pendente lite* to the extent of restraining said Board of Education from collecting or attempting to collect any tax within School District No. 8 and from exercising any control of authority over school property within said district, upon condition, however, that the plaintiffs bring this action to trial at the Special Term for Trials to be held at White Plains on the second Monday of November.—*Tarrytown News, November 3, 1917*

The Morning Sentinel, grossly partisan at all times, is decidedly unfair in its report of the meeting held in this city on Saturday to consider the new township education law. It was shown at that meeting that the law was emphatically for the advancement of public education. The general feeling was not so much against the law itself as against enforcement of it, at this time, in such a way as to put a greatly increased weight of taxation on the shoulders of the people of the rural districts. Assemblyman Davis' statement

of his reasons for supporting the measure was entirely satisfactory, and his position in regard to it will not injure his candidacy for reelection. In passing this law, the legislature simply put New York in line with the rest of the United States.—*Amsterdam Recorder*, November 5, 1917

School Law Is Unsatisfactory

The Board of Supervisors re-convened here yesterday morning for a business session. Supervisor J. J. Hornett of Altona introduced a resolution in which it was declared that the change in the school system, by which the substitution of the township system for the district system is made, is detrimental to the best interests of the school system and imposes an unnecessary hardship upon the taxpayers. Consolidation in this county is practically impossible, said Mr Hornett. The motion was seconded and adopted. The change is made by the new education act passed by the state legislature last year.—*Plattsburg Republican*, November 21, 1917

Want Law Repealed

The following resolution, which will meet with the approval of the vast majority of the residents of this county, was yesterday unanimously adopted by the Board of Supervisors in annual session, the resolution being introduced by Supervisor John J. Harnett of Altona:

Whereas the Legislature of the State of New York, at the annual session for the year 1917, passed a law, which was approved by the Governor of the State, being Chapter 328 of the laws of 1917, radically changing the district school system of the State, and substituting for the district system the township system of schools, and

Whereas it is the opinion of this Board of Supervisors of Clinton County that the change is detrimental to the best interests of our school system, and imposing unnecessary hardship upon the taxpayers of the various towns of this County.

And Whereas the County of Clinton is situated so far north and the distances within the County so great, and our winters are so severe, that the consolidation of our schools is practically rendered impossible.

Now be it Resolved by the Board of Supervisors of Clinton County in session duly assembled that they emphatically protest against the continuance of the said law upon the statute books of our State and do hereby call upon the Honorable James A. Emerson, the Senator from this district, and the Honorable Wallace E. Pierce, the member of Assembly from this County to introduce a bill at the 1918 session of the Legislature, repealing the said law and restoring the former system of school administration and that we ask them to use every effort to secure the passage of such a repeal.

Be it Further Resolved that a copy of these resolutions be spread upon the minutes of the Board and a copy sent to the Senator and Member of Assembly of this district, and a copy to the Governor of this State.—*Plattsburgh Sentinel*, November 23, 1917

Want School Law Repealed

The consolidated school law or Chapter 328 of the laws of 1917 which was passed by the legislature last winter and approved by the Governor is found detrimental in its appliance throughout the northern section. The Clinton County Board of Supervisors while in annual session on Tuesday made known their opposition to this law by passing resolutions which will be presented to the Clinton Assemblyman and Senator James A. Emerson in an effort to have the law repealed this winter.

The radical change from the district school system to that of the township system will, according to the supervisors' resolutions, prove detrimental to the best interests of our school system, imposing unnecessary hardship upon the tax payers.

Clinton County is situated so far north and the distances within it are so great, and the winters are so severe, that the consolidation of schools is practically rendered impossible.—*Lake Placid News, November 23, 1917*

Supervisors Favor Repeal of School Law

The Chemung County Board of Supervisors went on record yesterday as favoring the repeal of the new school or county educational law, which provides for the creation of boards of education in all towns of the State, instead of maintaining the present system of school districts, governed by trustees or directors, duly elected. By a vive voce vote, a resolution asking that the Senator and Assemblyman representing this district be asked to work and vote for the repeal or amendment of this law was passed yesterday.

The law is one against which much has been said and written. It was one of the questions or issues raised by the residents of rural communities during the recent campaign, and both Chemung county candidates for the Assembly stated that they favored a repeal of the measure or its amendment to conform with the ideas of the voters. Both candidates made public statements expressing their views on the question.

Chief among the objections to the measure as it now stands, is that it increases the expense or school tax without appreciably making the school system more representative, and that the present district arrangement is better for both pupils and parents in the rural districts.—*Elmira Advertiser, November 27, 1917*

Supervisors Are Against Law

The county supervisors yesterday went on record as favoring the repeal of the county educational law which requires a town board of education instead of district trustees. Under this law the school taxes of the towns of this county have been much increased, it is said, and there is little if any additional benefit.—*Elmira Gazette, November 27, 1917*

Want School Law Repealed

To Hon. E. A. Everett, Member of Assembly from the Second District of St Lawrence County:

The amendment to the education law approved May 2nd, 1917, has resulted in greatly increasing the expenses of maintaining rural schools while in no way adding to their efficiency.

Therefore, the undersigned, members of the Board of Education of Unit No. 1, town of Canton, respectfully ask you to use your influence with the Legislature to have this amendment to the education law repealed.

L. E. RODEE
S. C. BLOUNT
D. E. HEALY
DAN DONOVAN
O. A. HOWARD

— *Canton Commercial Advertiser*, November 29, 1917

Want School Law Repealed

The consolidated school law or Chapter 328 of the laws of 1917 which was passed by the legislature last winter and approved by the Governor is found detrimental in its appliance throughout the northern section. The Clinton County Board of Supervisors while in annual session last week made known their opposition to this law by passing resolutions which will be presented to the Clinton Assemblyman and Senator James A. Emerson in an effort to have the law repealed this winter. The radical change from the district school system to that of the township system will, according to the supervisors' resolutions, prove detrimental to the best interests of our school system, imposing unnecessary hardship upon the taxpayers. Clinton County is situated so far north and the distances within it are so great, and the winters are so severe, that the consolidation of schools is practically rendered impossible.—*Ausable Forks Record*, November 30, 1917

The following resolutions regarding legislative matters were presented by Mr Webb and passed;

"Whereas the new school law known as the township school bill has been tried in this county with the result of markedly increasing taxation without improving service and,

"Whereas the employment of a physical training teacher to drill pupils physically in the country districts is in our opinion unnecessary, now therefore

"Be it Resolved that we request our representatives at Albany to seek the repeal of both statutes, and introduce bills before the legislature asking the repeal thereof and be it further resolved that we approve the attitude of Hon. Bert Lord on these questions as heretofore expressed by him in his votes thereon."—*Submitted by A. C. Bowers, District Superintendent, from one of his local papers, December 1917*

Spoke Against New School Law

Gasport, Dec. 1.—At the regular meeting of Gasport Grange held in Odd Fellows Hall Tuesday evening last there was a general discussion of the new township school law. John Pease was elected chairman of the meeting. Prof. Wallace Droman of Middleport and former Assemblyman Frank Bradley of Somerset were the principal speakers.

Prof. Droman spoke for the interests of the taxpayers of Royalton, whose taxes have been increased two, three or four times the usual amount and for which they had received absolutely nothing, it is claimed. He explained the workings of the law and showed that the present increase in taxes was but a forerunner of worse things to come. He urged concentrated effort on the part of the Granges throughout the state to try and repeal the law or secure a satisfactory amendment.

Mr Bradley also spoke against the bill and explained that in order to have any weight with the powers that be at Albany there must be some powerful influence at work and as he considered the Grange the most powerful agricultural organization in the state, united effort on its part would do much good.

The Grange appointed a committee to draft resolutions to be sent to the Pomona Grange Dec. 8th at Newfane, asking that body to take some decided action against the bill.

Those in favor of the measure were given an opportunity to show any good points it had, if any, but no one ventured a remark in its behalf.

After announcing another meeting of the town taxpayers at Royalton for this afternoon at 2 o'clock the meeting adjourned.—*Lockport Union Sun, December 1, 1917*

Opposed to School Bill

The *Journal* is in receipt of communications from 20 of the 34 granges in Chautauqua county, containing a record of the action taken by those granges on the proposed rural school legislation. As this matter is to be the subject of formal action and resolutions by Pomona Grange which is to meet at Brocton on Thursday and Friday, a review at this time of what the various subordinate granges have done, is of interest.

Three of the 20 granges from which reports have been received failed to take any definite action.

Three of the granges reporting are in favor of the proposed legislation, with minor changes.

Fourteen of the granges are definitely and decisively opposed to the proposed law.

A brief explanation of the school bill and of the situation may assist in understanding just what is proposed.

It is proposed to enact a law during the coming winter in which the department of education, and the representatives of the grange and other rural interest may unite, to assist in improving the rural schools of the state. The proposed bill which is now before the granges for discussion is not drawn on hard and fast lines for introduction in the legislature, but by the positive statement of the officials of the department of education will be amended in any needed respect whenever rural interests

may agree upon the desired changes. But subject to this possible change if provides for a new system of school administration in New York state.

First, it provides for township school boards to administer all the schools within the geographical limits of such township.

Second, it provides for a uniform township tax for school purposes, the amount to be decided annually by said township board.

Third, while it is not a consolidation measure, in that not a single school consolidation is provided for in the bill, it provides powers to said township school boards, to discontinue schools in any district or districts in the township and to provide for the education of pupils in such districts in other schools.

This is mentioned, not because it is one of the chief features of the bill, but because it is the chief objection now urged to it. Several granges in the county have based their opposition entirely on this feature.

It should be said that the power of consolidation now rests in the hands of the district superintendent, with the approval of the department of education, and without providing for the opportunity of court review.

The effect of the bill, were it enacted into law as it stands, would be to equalize the school tax of an entire township, give the township school board the right to say where each pupil in the township should attend school. The members of the township school board, by the provisions of the present bill, are to be elected by the voters of the township with an equitable distribution between present school districts whose district lines are to remain intact.

So much for the outstanding features of the school bill. Now for the action of the granges of this county.

Those which report unqualified opposition to the bill are as follows: Dewittville, Clymer, Fredonia, Chautauqua, Sherman, Sinclairville, Kennedy, Hanover, Cherry Creek, Portland, Gerry, Cassadaga, Stedman, and Findley Lake.

Those which favored the bill, with suggested amendments: Volusia, Busti, and Union.

No action taken: Ripley, Sheridan and Ross.

The 14 granges which have not responded to requests for information as to their action either to *The Journal* or to the Secretary of the County grange are Westfield, Stockton, Ellery, South Harmony, Panama, Ellington, Villanova, Centralia, Charlotte Center, Ashville, South Ripley, Niobe, Arkwright and Frewsburg.

Really constructive resolutions were adopted by Lombard grange and Union grange. Two suggested amendments proposed by Union grange will undoubtedly attract much attention. The first is to remove all Union Free schools from the operation of the law, leaving them to be operated and maintained under the present boards of education and taxation system.

The second is to draw the teeth of the proposed bill by a provision for real home rule, providing that the school in a district may not be annulled and closed by any township board without the vote of a majority of the voters of such district at a meeting called to consider such proposed annulment.—*Jamestown Journal, December 4, 1917*

Meeting of Town Rural School Boards

A meeting of the various Town Rural School Boards, of whom there are fifty members in the county, five in each town, held a meeting at the Court House Monday to discuss various facts regarding the present school law that appears so unsatisfactory and more expensive to many localities. S. M. Wyman of Shelby was chairman of the meeting and Leslie Tanner of Medina, secretary, Mrs Chas. Jackson, Clarendon; G. E. Snyder, Murray; Howard Pratt, West Gaines; Assemblyman Frank Lattin, Gaines, and others took part in the discussion. There appears to be general dissatisfaction with the new law. Resolutions were adopted requesting Assemblyman Lattin and Senator Geo. Thompson to prepare and introduce Legislative Bills to repeal those portions of the Education Law adopted recently in so far as they apply to rural district schools by requiring a Physical Instructor which work, it is contended can be done by the individual teacher; also to repeal the law requiring physical examination of students in rural schools; and to abolish Town School Boards and go back to Trustees. In Orleans county an added expense of from \$300 to \$500 is created in each town for clerk and treasurer of such Boards; increased taxes of joint districts are also one of the features objected to in the existing law.—*Orleans County Republican, December 5, 1917*

School Law Is Under Attack

The board of Steuben county supervisors yesterday at Bath considered a resolution placing itself on record as against the present town system of schools, and a return to the former system. Such resolution was introduced by Supervisor Ray McCorn of Urbana, and voices the injustice of the system to a majority of taxpayers. The resolution followed the receipt of a lengthy petition from residents of the town of Prattsburg, decrying the town system, and praying a return to former conditions. The resolution was not passed, however, but was tabled.

While the supervisors are perhaps to be commended for showing no precipitate action, yet the fact remains that eventually the board must take action by arraying itself against this system of schools, provided, of course, the supervisors consider themselves the servants and agents of their constituents and bound to serve and act in the interests of the majority of their people. The resolution will be considered later, and if it is not passed, it is up to the people in the various towns to ascertain exactly how their supervisor voted, and then from that supervisor the reason for his lack of support of the resolution.

In the town of Howard, a lengthy petition has been signed and will be forwarded to Albany, against the town system. As an iniquitous and unjust law, this town school system leads the procession, in the opinion of a majority of Steuben county residents. It remains to be seen what the supervisors propose to do in the matter.—*Hornell Tribune Times, December 5, 1917*

School Boards Flay New Law

Albion, Dec. 4.—A meeting of the various rural school boards of the town of Orleans county, was held at the Court House to-day to discuss

various phases of the present school law affecting the rural district schools. There appears to be a general dissatisfaction in the county with the new law, which in most places has proved more expensive to the taxpayers than the operation of schools under the old system, with district trustees.

There are fifty members of the rural school boards in Orleans county. Each town has five members. These members receive no pay but have a salaried clerk and treasurer whose salaries are costing from \$300 to \$500 for each town, which was not required under the old system. In Albion the clerk receives \$300 and the treasurer \$50. In some of the other towns higher salaries are paid.

Numerous objectionable features to the present law were brought out and resolutions were adopted requesting Assemblyman Frank H. Lattin, who is a member of the Rural School Town Board of Gaines, and State Senator George F. Thompson, of this district, to prepare and present legislative bills at the coming session of the Legislature at Albany to repeal the objectionable features of the new school law in so far as they apply to rural schools.

The resolution objects to the employment of supervisory school district physical instructors, a position created in 1916, and to the provision that each district teacher be required to give such instructions with her regular work; also that the law requiring physical examination of students in rural schools, at an expense of from 50 cents to \$1 each, be repealed; and that the plan of having district trustees, with each district receiving its own tax, be adopted again, instead of the present law, giving the money of a joint school district to the town in which the schoolhouse is located.—*Rochester Democrat, December 5, 1917*

Would Change Town School Law

Supervisor James K. Losee of the town of Clifton Park is of the opinion that the present law establishing town boards of education is not for the best interests of the pupils and taxpayers and he will endeavor to have the law repealed. At the session of the board of supervisors Tuesday, Mr. Losee introduced a resolution that the board ask the senator and assemblyman to do all in their power to have the bill repealed. The resolution went over under the rule.

Supervisor Bunyan offered a resolution that a committee be appointed to audit the bills growing out of the appeal of the city of Saratoga Springs from the equalization of taxes.—*Saratoga Sun, December 5, 1917*

Pomona Grange Wants the Township School Law Changed

Deputy Godfrey read a communication from one of the county granges in the eastern part of the state setting forth in emphatic manner their antagonism of the new township school law and asking aid toward a vigorous rousing of action against it that action might be taken in the legislature this winter to repeal the obnoxious portions. Rather free discussion followed for a half hour or more, resulting in the drafting of the following which explains itself:

By Bro. Godfrey Whereas, there is general dissatisfaction among the farmers of the county with the present town school law, in the feeling

that the burden for paying the bonded indebtedness of the union school districts being assessed upon the whole town is unjust and unfair, be it

Resolved, By the Cattaraugus County Pomona Grange that the next state legislature be requested and urged to annul this law in such a manner as to relieve such taxpayers in the towns, who do not reside in the union school districts, from being obliged to help pay off such indebtedness as may now rest on such districts; and further be it

Resolved, That the above resolution be placed in the hands of the chairman of the delegation to the state grange to be presented to that body.
—*Little Valley Hub, December 6, 1917*

Supervisors Would Have Township School Law Altered

Little Valley, Dec. 6.—Mr Lynde offered a resolution which was adopted: "That it is the opinion of the board of supervisors of Cattaraugus that the present township school law is unjust."

Therefore: "Be it resolved that we ask our Assemblyman and Senator to work for the repeal of this law, especially that section of the law pertaining to the purchase of school properties by the town."—*Olean Herald, December 6, 1917*

Supervisor Losee Against New School Law

Ballston Spa, Dec. 4.—According to a resolution introduced at the meeting of the Board of Supervisors here this morning, by Supervisor Losee, of Clifton Park, the present rural school system of town boards of education, consolidation of districts, etc., is not for the "best interests of either pupils or taxpayers."

In his resolution Mr Losee recommends that the Board of Supervisors ask the Senator and Assemblyman to do all in their power for the repeal of the amendment to the school law which provided for the present system. The resolution went over under the rule.—*Hudson Valley Times, December 6, 1917*

Lewis Grange Passed Resolution on School Law

The following resolution was unanimously adopted by Lewis Grange No. 1077 at their meeting Dec. 1st:

Resolved, That it is the sentiment of the members of Lewis Grange No. 1077 of Lewis, Essex Co., N. Y., that the existing school law should be abolished and we hereby request our senator and member of assembly to respectfully use all honorable means to secure the repeal of the school law as enacted 1917, particularly that part of the law pertaining to the physical training.—*Essex County News, Keeseville, December 7, 1917*

Seek Repeal of New School Law

One of the striking features of the closing session was a resolution offered by Supervisor Webb of Otselic to the effect that, inasmuch as the new school law is not improving the present conditions to the extent that it has increased the taxes, it should be repealed as well as the law which

created a physical instructor for every county. The resolution was passed by the board and Assemblyman Bert Lord will be asked to vote for the repeal of the law. Mr Lord also was commended for the stand which he took when the bill was made a law, voting in the negative at that time.—*Binghamton Press, December 8, 1917*

Would Exempt Small Schools

Potsdam, Dec. 7.—At the business meeting of Pomona grange, held Wednesday, action was taken finally on the Machold school law, which provoked considerable discussion the previous day. Resolutions were adopted recommending that schools with an attendance of less than 500 scholars be exempted from the provisions of the law. The grange also passed a resolution recommending the discontinuance of the brewing of beer and various soft drinks, the making of which used up food elements, which the resolution says might be used to advantage elsewhere.—*Watertown Re-Union, December 8, 1917*

Grange Against New School System

The Ulster County Pomona Grange at its meeting at Masonic Hall in this city Friday afternoon adopted a resolution instructing delegates to the State Grange convention to do all in their power to secure the repeal of the Township School Bill, which has been in effect for a short time. The resolution was offered by Clarence E. Davis of Flatbush, and was vigorously opposed by George E. House of Ulster Park. A motion by County Agent W. H. Hook of the Ulster County Farm Bureau to table the resolution was lost by a small majority.—*Kingston Freeman, December 8, 1917*

No More Fooling with Schools

Brocton, Dec. 8.—The legislative committee of the County Grange at a preliminary session held Thursday afternoon, prepared to make a vigorous report to the main body this afternoon, against any further effort on the part of the Department of Education to press its township unit school bill, and in favor of larger financial support for the weaker district country schools.

A large number of resolutions were before the committee on school affairs, and the preponderance was so strong against further township consolidation that the committee had no option except to take the position stated.

New resolutions presented by Benjamin Pringle and Jared Hewes, both of Stedman grange, took up most of the time and were both favored in most details. Mr Pringle's resolution set forth that country schools need different management and different kind of instruction from graded or village schools, and advocated the establishment of Normal schools for training country school teachers, the establishment of special summer courses for the same purpose, the supervision and instruction to be in the hands of persons with successful experience in teaching country schools, and in full sympathy with such schools.

Mr Hewes' resolution was on a county system of taxation for the assistance of the country schools and provided that all property of public service corporations be exempted from school district taxation, and be assessed at a uniform rate of five mills in each county, and that the money raised by this special tax be divided by the county treasurer of each county among the school districts on some equitable plan, preferably an equal quota to each teacher employed.

Mr Hewes' resolution also provided for the repeal of Section 880 of the education law in so far as it makes the decision of the commissioner of education final, and not subject to court review, and demands that the law be amended to provide that there be no further change in the management or control of the individual school districts of the State except as "conditions in the various districts may demand, as evidenced by a majority vote" of the districts.—*Jamestown Journal*, December 8, 1917

Grange Condemns School Law

Dundee, Dec. 10.—The Lakemont Grange held a regular meeting on Saturday, with a good attendance. One of the main topics considered was the operation of the new township school law, and after considerable discussion of the matter by those present, the meeting passed a resolution addressed to the Board of Supervisors of the county asking it to use its influence to have the Machold township school law either repealed or amended, as the granges believe it operates against the interests of the farmer and is at the same time unsatisfactory to the residents of the villages for the reason that it materially increases the taxes and does not in any way improve the school system.—*Rochester Herald*, December 11, 1917

Grange Opposes Town School Law and Physical Culture Exercises

Knowlesville, Dec. 11.—The first afternoon meeting of Knowlesville Grange was held Saturday afternoon. After a roast-beef dinner had been served the meeting was called to order at 2 p. m. The township school law was discussed and the Legislative Committee was authorized to draw a resolution asking the local representative to give his support to any bill tending to repeal the law. A resolution was also adopted asking for the abolishing of the physical culture exercises in the rural schools.—*Rochester Herald*, December 12, 1917

We notice several granges and other organizations of farmers are passing resolutions opposed to the new school law. Their opinion seems to be divided from those who wish to have the law utterly repealed and others who wish to have it modified materially. The great cause of complaint seems to be that the farmer is having to pay more in the form of school taxes than he formerly paid.

The writer of this article was a farmer's son. He went to a district school as long as the district schools would furnish classes for him and then attended the village school, paying tuition at a rate that was dirt cheap for him, but which was a large loss to the village school which

he attended. The education he received at the village school did not cost him nearly as much as the same instruction was costing the residents of the village district. Aside from his failure to pay his fair proportion of the cost of maintaining the school, he never paid a single cent of the expense incurred in the erection of the village school. He can never make up the loss that village school sustained and he does not expect to be asked to do so. During the years he attended the village school, he was an outsider, a foreign student—was treated as such and felt the treatment, but did not at the time understand the cause. Had the present law been in effect, he would have had his tuition paid in the taxes on his father's farm and would have gone to the village school, when the time came, on an equal footing with every other scholar there. He would have been the proprietor and not a hanger-on.

As he came to this time in life and looked back on the events of those days he would have had no thought to disturb his self-respect. He would feel that his way had been fairly paid for him by the one who should pay it.

There may be inequities in the new law. As a usual thing, when a bigger concern takes in several smaller concerns, there is a lack of smoothness in the operation of the combination for a time and this must of necessity be the case where the big concern is a whole town and the smaller ones are school districts. The distribution of assets is a delicate matter and cannot be done without some disturbance. The new adjustment of responsibilities is sure to breed some friction and for a time there will be troubles. In this particular instance the biggest trouble maker is to be found in selfishness. Men whose families have grown up, or men who never had a family, have just been to the collector and paid a school tax much greater than that they have been accustomed to pay and they go away declaring they will have that law repealed or they will work to defeat the reelection of any member of the Legislature who will not help to repeal it.

The one sweeping change we would suggest would be that all schools become the property of the State and be managed by the State at State expense—that every dollar of property should be made to contribute in equal proportion to the support of the schools of the State and that it should be possible for every child who grows to maturity in the State to be taught at State expense some useful occupation, and if he is capable of being educated to the highest point of efficiency, he should be forced to become so educated, and the State should pay the expense.—*Victor Herald, December 13, 1917*

Opposition to Township Law

Another [resolution] had to do with the repeal of the Township School bill, and authorizing the appointment of a committee of three to confer with the State Grange Master, Sherman J. Lowell of Fredonia, before his anticipated meeting with the State Educational Department, and appointing Mr Lowell a committee of one to demand a just readjustment or amendment of the law.

On the Township bill the committee drafted the following recommendation and resolution which carried "Your committee recommends in regard to the discussion on the repeal of the Rural School bill that inasmuch as the time

for investigation has been short for a favorable and thoroughly unbiased opinion as to the merits of the bill, the following resolution be adopted:

"Be it hereby resolved, that the Master of Chautauqua County Pomona Grange appoint a committee of three to take the subject of amendment or repeal of the Rural School Educational bill, under advisement and in conference with the State Master before, if possible, his anticipated conference with the educational department, who after such conference be appointed a committee of one to represent the rural residents and taxpayers as a body in demanding either the amendment of the existing bill or the repeal thereof and the substitute of some form that will more nearly represent the interests of the rural residents."—*Jamestown Post*, December 15, 1917

Give the School Law a Chance

At a meeting of the Pomona Grange in Newark on Wednesday, December 5th, a resolution was adopted asking for the repeal of the town school law. It has come to our attention that a number of members of the Pomona Grange, who stand very high in that order, opposed this resolution, as they did not think the grange should go on record as absolutely in favor of repealing the law. These men, who are quite prominent and well known throughout the county, were in the minority and were voted down. They favored an amendment to the law rather than a repeal of the law.

It is the opinion of The Union-Gazette that the town school law should be given a fair chance, as it undoubtedly has many commendable merits. We have read the law with considerable care and it has some very admirable features which had the sanction of the State Education Department and in our opinion it was a very wise piece of educational legislation.

Under the old system, every township had a number of trustees. There was no great degree of uniformity in the methods of administration among these various trustees. Under the new law, all of these districts are unified under a single town Board of Education, the duty of whose members it is to administer the affairs of all the districts in the same way. We believe this was a long step ahead and we believe that it would be wise if the state would go a step further and include the rural schools and the village schools under a single Board of Education. Whether this would be wise in the cities, which are administered under special charters, is a question. But in the rural communities of the state, like Wayne County, we believe much benefit would be derived by the school children if they were governed by a single board of education, instead of by two boards of education. But the rural school law, uniting all of the school districts under one head, was, in our judgment, a wise and a forward step in educational matters.

We have heard of no really good argument in favor of a repeal of the township school law. The fact that the taxes are a little higher, or considerable higher, is no argument against the wisdom of the law. It is going to cost billions of money to prosecute successfully the present war, but who would have the audacity to say that the generations who will live fifty or a hundred years from now will not see in this expenditure, blessings that we cannot now see, and which will be well worth the sacrifice in blood and in money that is being made by the present generation.

The change of the state constitution, which permits the women to vote, is going to cost the taxpayers in this state thousands of dollars.

But who will say that in the onward progress of civilization it is not wise for the women to vote. We believe the time will come when the women in all countries will vote, the same as the men, on all questions.

Therefore, the mere increasing of the taxes as a result of the town school law is not, by any means, a valid argument that, because of this increase in expense, the law is unwise and should be repealed.

It is possible that there are some features of the law which should be amended. It is not to be presumed that the legislators who enacted this law would be able, in the first draft of it, to so construct the legislation that, in its practical workings, there would be no need for amendments.

The law should be given a fair chance and it should not be condemned as a whole until it has been thoroughly tested; and by all means there should be no snap judgment on this law. If it is to be changed or even if it is to be repealed, it should be done only after thorough investigation and after deliberate reflection. Such investigation and such deliberation are a matter of wisdom; for even these people, who are now demanding the repeal of the law in its entirety, might find, if they investigated the law more thoroughly, that it does contain some merits.

We wonder if all of the grangers who voted in favor of this resolution to repeal the law have given the law careful investigation and due deliberation, or if they merely jumped at a hasty conclusion that the law is all bad because the taxes happened to be a little higher.

It is possible that some other conditions may have entered into the situation this year that caused the increase in taxes and that the entire advance in taxes should not be charged to the rural school law.

The Newark Grange is the largest grange in Wayne County and the Pomona Grange of Wayne County is one of the most influential granges in the whole state. It has a very enviable reputation and that reputation should always be safeguarded and it seems to us that the Pomona Grange of Wayne County acted unwisely when, at its annual meeting on December 5th, it put itself on record as in favor of a repeal of this law which has been in operation practically only ninety days.

Do our good friends in the Pomona Grange think that they are able to give a wise and conservative judgment on a piece of legislation that has been in operation for only three months?

Is it not possible that there may be some features of this law which, if allowed to stand, would greatly benefit the children of the farmers of Wayne County and of the state in general?

If it does contain merits, it would be unwise to repeal the law until it has had a fair trial.

Would it not be wise and a matter of information and of general interest to have discussions upon this law at the grange meetings during their coming winter sessions? There might be a series of debates or papers which would be very valuable.

Why not approach the subject with an open mind and if the law does contain merits, find out what they are? If it has defects, those defects should be pointed out and the legislature would be glad to amend the law; but by all means no rash action should be taken until there has been sufficient time

to test the law and to find out whether or not it was wisely enacted. The law had the sanction of the State Education Department and it is to be presumed that, with their special training, they thought it would be for the welfare of the children of the state, and the experiment should be thoroughly tested before it is condemned.—*Newark Union Gazette, December 15, 1917*

St Lawrence Supervisors Approve Township Bill

Supervisor Hanmer of Massena introduced a resolution, which was adopted, that the board approve the enactment of a law embodying the plan of the Machold, or township bill, excepting that it should be amended so as to exempt all union free school districts from the proposed system.—*Syracuse Post Standard, December 16, 1917*

Auburn Grange Opposes the Township School Law

At the last meeting of Auburn Grange, opposition was expressed to the Machold Township School Law recently enacted and a demand made for its repeal. A resolution was adopted as follows:

"Resolved that it is the sense of Auburn Grange that the present school law is not an improvement on the one which it repealed and that the delegates recently elected by Pomona Grange to the State Grange be requested to use their influence in the State Grange for the repeal of the present school law and for the enactment of the old or a similar law."—*Auburn Citizen, December 26, 1917*

Condemn the Township School Law

Here are the resolutions, condemning the Township school law, adopted by Clifton Springs Grange:

"Whereas, the members of the Clifton Springs Grange, No. 1042, find Article XI, A, the Township School Law, to be unjust, unconstitutional, and oppressive in its operation, imposing unjust, excessive, illegal and inequitable taxes, increasing the taxes in all units from 2 to $4\frac{1}{2}$ times over that of preceding years.

"Whereas, the bonded indebtedness of High Schools, in which the rural schools had no voice in the making and from which they receive no benefit, therefore savoring of tyranny, must be assumed by the rural schools.

"Whereas, it concentrates the governing powers of our rural schools, without limit, into the hands of a few individuals called the Town Board of Education, giving them the power to leave a school without a teacher, obliging the districts to consolidate, thus decreasing the value of the farms on account of the long distances to school, and the heavy taxes placed upon them; and extending their power to designate the school at which any pupil in said unit may be directed to attend without the consent of parents, working hardships upon both parents and pupils of the rural schools.

"Whereas, the law changes the title of rural school property to town property under the control of the Town Board of Education, taking the last and entire control of the rural schools from the rural people, putting it in the complete control of Town Board of Education, which is a corporation.

"Whereas, it further injects politics into our school system.

"Therefore, be it resolved that we members of Clifton Springs Grange, No. 1042, in regular session, Dec. 4, 1917, as a Grange and a community,

demand a repeal of Article XI, A, the Township School Law, at the next session of the Legislature of the State of New York, and urge that the New York State Grange will assist us in getting this bill repealed and that we be allowed to go back to the rural schools and the trustees as it was before this bill became a law.

"And Be It Further Resolved that we will not be compelled to have a change in our rural schools when we do not demand it."—*Ontario County Times*, December 26, 1917

Obnoxious School Law

There seems to be a concerted effort on the part of the people residing in the country districts to bring about the repeal of the township school law that went into effect last fall.

The Granges are registering their votes against it and only last week the board of Supervisors of Wyoming county voted unanimously to have our representatives at Albany do their utmost for the repeal. We understand they did not vote in favor of it in the first place. The assemblymen and senators from the cities were the ones responsible for the passage of the measure.

We have talked with a school superintendent who favors the law. He believes the people should not be impatient and hasty in the matter. Many laws that are unsatisfactory and even obnoxious at first come afterwards to be regarded more favorably. It is the change from an old established order of things that wrenches and displeases. It takes time to get used to a new law and become acquainted with all its beneficial results. Everything that goes a little wrong under the new system is at once laid to the law and gives rise to the desire to abolish it or modify it.

The feature of the Township School law that is most vigorously denounced by its opponents is the increased tax it has caused. If there were no war with its attendant inflation of prices, its call for Liberty loans and Victory loans and its thousands of other demands upon our purses perhaps the people of New York state would be more willing to put up with the new school law and give it a try-out—even though it is more costly than the old system. It is quite possible that after making the experiment they would become reconciled to its radical provisions.

As it is, there is a difference of opinion between the villagers and the farmers. The citizens of the incorporated villages having high schools favor the law because it reduces their school tax. The country people are against the law because it increases their school tax. The majority of farmers say their school tax has been trebled. The rebate in tuition at the high schools in no wise offsets the increase in taxation. Wherever villages having under fifteen hundred population are heavily in debt for new school buildings, the people living outside of the corporations are obliged under the Township School system to help pay the debts on the school property. The farmers had no voice in contracting those debts and therefore they naturally object to help pay them.

At first there was an interchange of good-natured raillery on the subject between the village folk and the country folk. As time goes on the

feeling tends to become more bitter and the remarks are more acrimonious.—*Wyoming County Times, January 3, 1918*

For Township School Law

At a meeting of representatives of farmers' organizations of Herkimer County in the Palmer House here today, a resolution was adopted after careful consideration favoring the passage of the township school law and proposing a number of amendments. It was felt by the representatives present after consideration of the law, that it has been misconstrued and a great deal of misunderstanding exists as to the law which have tended to make people overlook its good points. Although it was felt that the amendments proposed in the resolution adopted are seriously needed, the conferees were united in the opinion that the law in main is much more satisfactory than the old law.

Organizations represented were the Pomona Grange, the Dairymen's League, the Board of Supervisors and the district superintendents of schools of Herkimer County. Representatives at the conference were as follows: Pomona Grange, Lester E. Young, Richfield Springs; W. H. Farber, Poland; Dairymen's League of Herkimer County, Charles A. Shepard, president, Little Falls; John L. Paine, vice-president, Mohawk; Board of Supervisors, D. A. Van Allen, Little Falls; Eugene Swift, Jordanville; legislative committee of the Farm Bureau, W. F. Rasbach, chairman, Herkimer; R. H. Smith, secretary, Frankfort; district superintendents of schools, A. J. Rose, West Winfield; F. C. Kimm, Herkimer; C. B. Keller, Fairfield; B. M. Robinson, Poland. Others present were: C. A. Taylor, manager of the Farm Bureau; A. B. Davies, assistant manager, and John Carey, Richfield Springs.

Eugene Swift acted as chairman and Lester E. Young as secretary. These men are representative of the sentiment of the farmers of Herkimer County and their decision after full consideration of the law will carry considerable weight among the farmers and with the legislators at Albany.

The following amendments are proposed in the resolution adopted: That the union free school district maintaining an academic department should be excluded from the township system; that the school in any district may be closed temporarily and reopened at a later date as conditions may warrant, subject to the discretion of the township board, without loss of public money during the period when such schools may be closed and with the understanding that students of the said district temporarily closed shall be provided for by the town board; that the medical inspection laws as existing in their relation to rural schools should be repealed; that in supervisory districts where registered nurses are employed, medical inspection shall be employed only to examine such pupils as such nurse shall recommend.—*Utica Press, January 10, 1918*

The Township System

Dr Finegan was right in regard to the township system, just as he was right in regard to the city system. Every forward movement starts up a lot of kickers. The state department had nothing to gain by either the township system or the city system except the betterment of education. And it could have escaped all the kicks by simply sitting still and doing nothing.

That might have given them some temporary comfort, but it would not have been doing their duty. And people cannot fail in their duty indefinitely without being found out. In saying that Dr Finegan is right, and that he has given the people of the state a great boon, we would also say that Governor Whitman is not altogether wrong. The governor says that the township system law needs amendment. And so say we. The law should be so amended as to allow the districts to come into the consolidated system, and not to require it. In states where the township system was made optional, the districts have come in with a rush. Compulsory legislation makes the farmers feel that in taking their districts from them, you are taking from them something that belongs to them to give a benefit to other people. And of course from that point of view they would fight. The facts, however, are all the other way. The villages and cities get nothing by the coming in of the rural districts; and the rural districts get everything. The farmers are no longer compelled to abandon their farms to renters in order to get educational advantages for their children. And it is a wonderful farm that can stand renters very long. The farming interest is undergoing destruction, because of the inequality of school privileges. When the farmers belong to the towns they share in everything that the town has to give. Their children during the day enjoy town instruction and town life, and in the evening and night they enjoy what town children do not have. They enjoy the privilege of mingling in farm activities and sleeping on farms under the protection and with the companionship of their parents. The better education of the children and the protection of farm interests and farm values require the township system of education. The little school-house can no longer compete with its big neighbor. The big tree will always destroy all the little trees within its immediate vicinity. The carryall bringing in the country children in the daytime after their morning chores, and bringing them home in the evening time to their evening chores, is the greatest boon that has ever been given to American life. Save the township system by all means; but give to the farmers the privilege to which they are entitled, the privilege of saying whether they will come in or not. They will come in all right. The thing is so plain that nobody can fail to see it.—*Batavia Times, January 12, 1918*

Improve Rural School Law

That the township school law, which is now a prime topic of conversation in all rural districts, has merits which should preserve it from annihilation, is the attitude taken by the *Utica Observer*, in voicing the similar sentiments voiced at a recent farmers' meeting in Herkimer, where resolutions favoring the amendment of the statute were adopted. In the *Observer* appears the following editorial comment on the matter:

The township system of schools is going to receive an overhauling in the legislature. This is certain because the country districts want it, and their representatives in the legislature have signified almost everywhere that they are going to represent the feeling at home.

The best word that has been said about the law, however, has come from the farmers of Herkimer county, who say that the law ought to be amended, but not wiped off the books. This is contrary to much of the criticism that

has come from the country. Generally the desire is to get back to the old system.

The trouble with the system is that there hadn't been any improvement in it since the days before the Civil war, and we'll have to admit that educational methods have advanced along with other professional vocations, like medicine, or law.

The country schools were given a new plan because the country children are entitled to just as good an education as can be had in the cities. It seems to be true that the specifications were not fulfilled, and that the cost of what improvement was made is out of proportion to the gain. Yet it would be a grave mistake to believe that the country school can be improved and at the same time be conducted at the price of operation a generation ago. Improvements cost money, and we should say that most of the increase should go to the teachers. It would seem, too, that the idea of combining schools, where it can be done with reasonable convenience, is not to be abandoned. The country lad ought to have a high school education as easily in his grasp as the city youngster has. Heretofore the village or the city youth has had his education free, while the boy or girl from the farm has been penalized by tuition.

So the legislature may very well go over the law with the idea of improving it, rather than step way back to the old plan. Expenses may be cut down by eliminating some of the overhead machinery which has been built up during the past few years. For instance, there appears to be too many superintendents, and it is all too elaborate, cumbersome and expensive.—*Little Falls Times, January 14, 1918*

The Township School Law

Our local Union Free School District having more than 1500 population does not come under the new township school law, hence we have no particular prejudice in the matter. But what concerns many of our readers interests the Journal, and numerous criticisms of the law appearing in some of our daily papers have led us to consider the matter somewhat. Against the law seem to be: 1 That rural school tax rates are higher. 2 That the bonded indebtedness of a Union Free School district should not be assumed by the township or unit of which it is a part. 3 That local control is lost over the community school. 4 That it is difficult to administer the law so as promptly to care for each and every school.

The question seems to us a little different in a town or unit having no academic school from what it is in a town or unit having one or more of such schools to support. Where the schools of a township or unit are all of the same grade, all elementary, why isn't a uniform school tax rate just as fair and equitable as a uniform tax rate for roads and bridges, the support of the indigent poor, and other usual town expenses? There were some gross inequalities in school tax rates under the old district system, due largely to the great differences in the amount of taxable property in the different districts; wealthy rural districts generally had a moderate or low tax rate, and most of these are now paying a substantial increase under the new law. We have in mind two schools in the same township, each employ-

ing one teacher, where, without any considerable amount of unusual outlay last year in either district, the tax rate in the wealthy district was only 10 cents per \$100 of assessed valuation, while in the weak district the tax rate was 32 times that, or \$3.20 per \$100 of valuation. This year both districts are paying the same rate, much to the relief of the weaker one; but very likely the taxpayers in the wealthy district are not all enthusing over the new law.

We find, too, that under the district system a number of rural districts contracted and some of them paid all their school expenses out of the "public money" received from the State and did not raise a cent of local school tax. Naturally, some of the taxpayers in these hitherto fortunate districts do not like the new law which compels them to pay the same school tax rates as other taxpayers in the same town or unit; probably we should favor the old law were we in their places—it is so natural to want the "long end of the evenner."

The equitable distribution of the bonded indebtedness in some of the Union Free School districts is a puzzling problem, especially where the academic school is so situated as to be conveniently accessible to only a part of the rural children living in the township or unit. It seems pretty well settled in the minds of intelligent thinking people that such are the demands of the modern business and professional world today that a high school education is relatively no better preparation for one's life work than was a good common school education fifty years ago. There was strenuous objection by many taxpayers 50 years ago when our common schools were first made free and were required to be supported by public taxation; and many rural taxpayers object now to being taxed to support the village high schools. Yet the rural children seem to need the high school education, and it is not just clear why the village districts should furnish the buildings and equipment and hire the teachers, the state pay the tuition of the rural children, and rural patrons bear none of the burden of maintaining these academic schools. It is, however, much to be regretted that the township system was not adopted 25 years ago, before the great majority of our academic schools were established; then many of them would have been located where they would better accommodate the rural children of the township or unit. Just how much of this outstanding bonded indebtedness in the Union Free School districts should now be assumed by the other districts in the township or unit is a question worthy of careful study.

In comparing tax rates in any district under the new law comparison should be made with what would have been the tax rate in that district under the old law this year, and not with the tax rate of last year.

The new law is hardly to be blamed because there is a serious shortage of teachers this year and teachers' salaries in rural schools are from \$1 to \$3 higher per week than last year; nor is the new law to blame because coal and wood are hard to get at all and cost much more than last year; nor because all lines of school supplies cost more than a year ago. We fail to find only a small percentage of the increase in school tax rates due directly to the new law. But under all of the war-time conditions this year we wonder what would have been the school tax rates in many weak districts under the old law. About 1300 districts in the state had each only \$20,000 or less of taxable property to support a school; and about 3800 districts had each only

\$40,000 or less of taxable property; now, if the township law is repealed, what will be the school tax rates in those districts? What relief is proposed for them in place of that afforded by the township law?

Some feel that the township law results in a loss of local control over the community school, while others take the view that the power of the school meeting voter has really been extended, and he now has voice at the annual town or unit school meeting in the school affairs of the whole township or unit, instead of simply his local district. The board of education is hereafter to be elected at the annual town or unit school meetings, and if the opponents of the new law have as much interest in school matters as they profess, it ought not to be difficult to secure the election of boards of education that will conserve rural interests.

In these days of automobiles, state roads, telephones, rural mail delivery, etc., boards should be able to look after every school reasonably well if they will work through committees, like the Union Free School boards. It ought not to be necessary to call the whole board together every time a box of chalk or a new broom is needed.

The township law has been in full effect only about four months now, and this during the trying times of war. It looks like child's play to demand the repeal of the law before it has had anything like a full and fair trial. Some amendments are doubtless needed; we fail to recall many new laws that have been entirely satisfactory without some changes. It would seem worth while to remember that every adjoining state has had a township school law for years, and not one of them has ever returned to the district system. The district system originated in Massachusetts, but was discarded there for the township system about 35 years ago, and the Master of the State Grange wrote us last winter that he would regard a return to the district system as a long stride backwards.

The state constitution makes it the duty of the legislature to provide a "system of free common schools wherein all the children of the state may be educated." (Public schools are state institutions not merely local ones.) The state is regulating them more and more closely, and school expenses, like all others in these times, are on the increase. Why not quit fighting the township law and all unite in one big campaign for an increase in the amount of public money paid by the state for the support of our schools. While New York State pays much toward the support of her schools, you may be surprised to know that she is not one of the most liberal states in her per capita allowance for educational purposes.—*Jefferson County Journal*.—*Potsdam Cour. & Freeman*, January 16, 1918

The Township Schools

Dr Thomas E. Finegan, deputy State commissioner of education was clearly right before the State Agricultural Society Tuesday in taking issue with the Governor's ill considered call for repeal of the township school law. We wouldn't undertake to say and presume Dr Finegan wouldn't that the law, which he drafted, is incapable of improvement in any details. But to simply wipe it out would put New York behind the States on every side of her, even little Vermont and bar children of our rural districts from decent education.

Once the school district system was the ideal of democratic government, bringing close to the people the duty they naturally felt to be the highest in love for their offspring, of giving them such an education as would fit them well for the duties of life and put them in the way of the opportunities Americanism opened to them. That was when our rural areas were well populated with husbandmen having good wholesomely large families.

It is a very different matter now when, as Dr Finegan says there are 3800 of these districts having less than 10 children of school age and 900 of them with not more than five. Obviously, even with the best of dispositions it is impossible to support in such districts such schools as it is the right of the children to have; and it is unfortunately true that in many of them the disposition is lacking, the most enterprising of the population having been drained off and leaving a refuse of shiftlessness and ambitionlessness, of moral and intellectual degeneracy that presents the sore spots in our rural life that thinking men recognize to be one of our serious social problems and where healthy interest in schools or provision for their support are not to be expected. Even subsidizing of them can have no satisfactory results. However we may regret it or hope that some time there will be a return of something like the "old days" in these now sparsely inhabited districts, the township system is the only adequate way at present of providing that education for all that is the very foundation stone for free institutions. (Indeed, it is a question if this change is not too much instead of too little guarded from abuse by the provision that it can only be on a vote of a majority of its citizens that a district can be consolidated into the larger entity.)

Governor Whitman says the change has increased taxes. Except as the trouble be an administrative one, this, of course, can only be true to the extent that better education or facilities for it are afforded. And this is not an age or this a land for such an objection to prevail.—*Albany Argus, January 17, 1918*

Charges School Tax as Imposed now Is Illegal

A tax litigation which if successfully prosecuted will seriously involve real property assessments in every town in New York State, brought by James W. Wadsworth, United States senator, against Charles Menzie, Joseph A. Krenzer, Joseph D. Donohue, James C. Foote and Peter Carmichael, constituting the Board of Education for the town of Caledonia, and Henry Feeley, tax collector of the town of Caledonia, will be submitted on briefs to Supreme Court Justice William W. Clark, in this city. Since the question involved in the litigation is purely constitutional, the opposing attorneys have stipulated to forego argument and submit the matter entirely on briefs.

Senator Wadsworth is represented by Elihu Root, and Frank K. Cook, a deputy attorney-general of this State. Archibald M. Little, of No. 820 Insurance building, represents the town officials and Frank B. Gilbert, chief counsel of the University of the State of New York, represents the educational and tax departments of the State.

Senator Wadsworth charges that the amendment to the State education law, taking effect on August 1st last, abolishing the school district as a unit of taxation and providing that school taxes be paid pro rata by all real

property owners in a given town, is unconstitutional. Senator Wadsworth is owner of 1900 acres of land in the third school district of the town of Caledonia. This property is assessed at \$112,200. The real property in the district is assessed for a total of \$405,018.10.

The third school district has existed as a tax unit for more than fifty years. According to Senator Wadsworth, the schoolhouse is valued at \$1000. One teacher is employed and the average attendance for the last several years has been ten children.

The expense of maintaining the district in the year 1916 to 1917, including repairs to the schoolhouse, was \$802.52. In the year 1915-1916 the school expenditure was \$580.65, and the preceding year, \$569.94. The school tax for each of the three years was \$1.50 for each \$1000 valuation.

The village of Caledonia has a brick schoolhouse valued at \$50,000, carries \$28,000 in bonded indebtedness on the schoolhouse and the annual cost of maintaining the school is \$12,000. Because of the new law the school tax in the town of Caledonia is \$6.50 a thousand, which was levied on real property owners in the third as well as the other districts.

Senator Wadsworth charges that the amendment which raises his school tax in the third district from \$168.30 to \$729.30 is unconstitutional in that it taxes one unit for benefits derived by others. He claims that the school facilities of the village of Caledonia are not accessible to children residing in the third school district because of distance and weather conditions, especially in the winter.

Senator Wadsworth charges that the school facilities in the third district are adequate and that the charge of \$15 a year made upon children of the third district when attending the higher grades in the school at Caledonia is equitable. He charges that no benefits whatsoever are derived from the taxpayers in the third district from the payment of the increased tax. The third district is situated several miles from the village and is made up almost entirely of farming property. Senator Wadsworth made application to Justice Clark for an injunction restraining the town authorities from collecting the tax but after Mr Little on behalf of the town stipulated to withhold the collection until after the determination of the action the Senator withdrew his application.

Many taxpayers throughout the State are opposed to the new law and Governor Whitman, in his message to the 1918 Legislature, recommended its repeal. The law increases taxes of owners of valuable farm property situated in towns containing villages in which a number of school children reside. They are assessed pro rata on their farm property at the same rate as taxpayers in the village. The benefit to the village taxpayer is apparent from the fact that the rate in the town of Caledonia this year is \$6.50 a thousand, while the 1916-1917 rate was \$10 a thousand.

Owners of property at summer resorts in which there are few children are obliged to pay more under the new law. The school tax on some summer homes in Monroe county has been increased nearly 500 per cent. Senator Wadsworth brings the action on behalf of himself and other taxpayers in the Genesee valley. Many farmers oppose the law.

Should the 1918 Legislature repeal the law the question of the constitutionality of the 1917 assessment will be determined by the courts. Papers

in the action have just been filed and the briefs probably will be submitted in three or four weeks.—*Rochester Democrat*, January 23, 1918

Township School Law

The State Board of Regents has aroused the State of New York over the passage of its township school law last year. The Chautauqua county board of supervisors unanimously adopted a resolution submitted by Supervisor Ray G. Crandall of Poland protesting against the law and calling upon the Legislature for its repeal at the present session. Similar action was taken in other counties of the State. Now the press dispatches tell us that Senator James W. Wadsworth has begun suit in supreme court here to contest the constitutionality of the amendment to the State education law taking effect last August, which made whole townships instead of school districts units for the assessment of school taxes. The suit is brought against the board of education and tax collector of the town of Caledonia in Livingston county and seeks to annul the levy of school taxes for this year on 1900 acres of land owned by Senator Wadsworth in the third school district in the town on the ground that the levy includes taxes for the benefit of other districts in the town, especially the village of Caledonia which maintains a school plant costing much more to maintain than that which has existed in the third school district and from which children of the third district derive no advantages. The tax rate for the third district has been \$1.50 per \$1000 for the last three years; this year under the new law it is \$6.50 per \$1000. Senator Wadsworth's school tax is raised from \$168.30 to \$729.30.—*Jamestown Journal*, January 23, 1918

Favor Town School Law

"We, the members of the Parent-Teachers' Association of Holland Patent High School and residents of School Unit, No. 2, of Holland Patent, town of Trenton, Oneida County, N. Y., in meeting assembled, do hereby express our approval of the principle of the township system of schools. We believe that it is a step forward in rural education and that time and experience will vindicate the principles involved. We are opposed to its repeal.

"Therefore, Be it resolved, that a copy of this resolution be sent to the assemblyman representing the Third Assembly District of Oneida County, and to the senator representing Oneida County, as an expression of our views of the township school law."

Holland Patent, Jan. 23—Unanimous approval of the township school law was evidenced tonight at a largely attended meeting in the Holland Patent High School, held under the auspices of the Parent-Teachers' Association of the school. Residents of the village and districts in unit No. 2 were out in force and after listening to an able address by Ray P. Snyder, superintendent of District No. 1.

Mr Snyder said that this township law was the first step taken in rural education since 1795, and he pointed out that almost any step taken showed an increase of interest, hence he proceeded to speak in favor of the law. He said that opposition was found to almost every advance and he cited

a law that was passed in 1866 by which free schools were established. At that time there was opposition. He showed how the things we now approve have always had opposition when they were first broached, just as there was opposition when the city schools were first taken out of the control of wards.

Mr Snyder touched upon the various things that had been said as being against the working of the law. He said it had nothing to do with consolidation of schools; that there is no new expense except the salaries of a clerk and treasurer. He pointed out that the expense that has come is due to increased cost of everything, which is from 20 to 30 per cent over last year and would have come whether this law was passed or not. He said the budget had been made on a basis of 33 1-3 per cent, average for the entire State.

Mr Snyder said that the great howl was higher taxes, but he said it is not of necessity due to the township law. It had nothing to do with the expense of physical training or of medical inspection of nurses' service. He read statements from superintendents of other states, all of which endorsed the law. Among them were: Vermont, Pennsylvania, Massachusetts, Maine, Rhode Island, Michigan and West Virginia. In none of these has the law been repealed and in fact, he said, no state has ever repealed the law after having it passed.

The talk was enlightening and the unanimous action of the meeting was proof positive that this section is in favor of the township school law, no matter what others may think of it.—*Utica Press*, January 24, 1918

Oswego Grange Opposes Repeal of Machold Law

Oswego, Jan. 15.—Resolutions to be presented at the annual meeting of the New York State Grange at Syracuse next month were adopted by the Oswego County Pomona Grange at a special meeting at the State Armory this afternoon.

The organization by a divided vote went on record as opposed to the repeal of the Machold township school law, which went into effect last year, but it approved certain amendments.

Those who did not approve the report of the legislative committee of the grange were in favor of having the law repealed. Some were also in favor of more extensive amendments than were contained in the resolution as presented for adoption. However, the report of committee was approved.

The amendments to the law as recommended would provide for the election of a district school trustee, the same as under the old law, and would make him the custodian of school property in the district.

The grange is also in favor of an amendment to the law which would provide for the election of town board of education by the district trustees of a town, and any amendment which would re-establish and strengthen the community spirit providing that such amendment does not injure the efficiency of the schools.

In connection with the school proposition the grange also went on record as favoring physical training in the schools, but urged that the instruction be given by the teachers instead of employing special physical instructors for the work.

Repeal Machold Law

To the Editor of The Post-Standard:

The farmers and grangers of Oswego county want the Machold school law repealed. I could go on and state the reasons, but the matter has been pretty well threshed over in your columns. It makes us hot under the collar for some to say that the principal reason why we oppose the law is increase of taxes. We are incensed not because we have to pay more taxes but because those increased taxes bring no benefits.

Why cannot this Machold law be repealed and if we must have a new country school law, let the representatives of the different farmers organizations confer with the educational department officials and our representatives at Albany and draft a bill that when passed, will be acceptable to the people who are actually affected?

Pulaski, January 17

—Oxford Review Times, January 25, 1918

To Fight School Law

Albion, Jan. 24.—The Orleans County Patrons league was organized here yesterday by nearly 100 residents of the rural communities who are opposed to the new town rural school law. Justice of the Peace Charles H. Porter of Albion presided. W. Reed Curtis, a Carlton farmer and former nominee for assemblyman, was secretary.

In each of the school districts an organization will be formed. On February 2d, the voters of each district will elect delegates to attend a county convention at the courthouse here on February 9th.

About 200 delegates will be present at that time to discuss the matter of securing legislative action to repeal the present township school law and recommend to Assemblyman Dr Frank H. Lattin and Senator George F. Thompson changes that would prove more satisfactory to those who have children to educate and those who foot the bills.—*Buffalo Express, January 25, 1918*

Grange Favors Trial of the Township Law

Gouverneur, Jan. 30.—Gouverneur Grange has indorsed the action of the St Lawrence County Pomona Grange in not asking for a repeal of the Machold school law at this time, deeming it best to give the statute a year's tryout.

The measure was thoroly discussed and explained, and three amendments were offered: That the township lines be the boundaries of the unit of taxation, that union free school districts with a population of 500 or over be districts by themselves and that no appraisal be put on school property.

The question of military training in schools was also discussed but not approved, as it was advocated that such training should be given elsewhere in order to reach all young men. The ages of nineteen and twenty were agreed upon as the proper time to receive military training.

Physical training in rural schools was approved. It was advocated that the regular teachers be prepared to give such training rather than to compel the employment of special instructors.

Six applications for membership were voted upon and accepted and two were referred to a committee.—*Ogdensburg News, January 31, 1918*

The Township School Law

Editors of the Star,

DEAR SIR: I read Mr Faulkner's letter in last week's issue of the *Star* with much interest. I want to call to mind two or three points that Mr Faulkner and his sympathizers in the general discussion of the school law appear not to comprehend.

The Township School Law means — First, taxing all the township alike for the maintenance of the schools of the township; second, the election by the voters of the town, five men of their choice to manage the business of the schools.

These men hire teachers, keep school property in repair and look after all the details of the business management. They make a budget of probable expenses and determine the amount for which the town is to be taxed for the running of the schools.

This is, manifestly, not taxation without representation, for the men who pay taxes elect the board.

One good point is that all property in the township is taxed alike for running the schools of the town, the same as for keeping roads, paying the bills of the poor master, and supplying public money for all public work. This means that all are taxed alike, as they were not before.

Every farmer in New York State has been dodging for the past forty years, trying to get out of being school trustee. Now the work formerly performed by the trustee is done by the school board for the town, with the clerical part put on the shoulders of a clerk paid in most cases from \$100 to \$150 per year.

Railroads are now contributing about twice as much toward the support of schools. Under the old system they got off with a low tax rate, because the tax was universally low in districts containing railroad property. Now the rate is the same for the whole town.

I live in a so-called hill district in Otsego County, with no railroads or other big corporations. My taxes have been increased a little, but I am surprised that it should not be more with the increase in the cost of fuel, teachers' wages, the added expense of physical training, and general war price for everything.

Friends of the old district systems want to remember that our teachers are all now teaching under contracts made with the old trustees, under the old district system, many of whom thought it was a good chance to "sting" the town because they hired the teachers and the town would have to pay.

Our school board had to start this year without any surplus left over from the year before, so it was necessary to raise enough money to run the business and will probably have \$800 or \$900 left over to apply on next year.

I think some lose sight of the fact that physical instruction, medical

examination, the installation of sanitary toilets and the increase of the size of the school yard are State laws passed before the township law was passed and have absolutely nothing to do with the township law. These things together with the general rise in all costs, particularly teachers' wages are responsible for most of the increase in taxes over last year.

A lot of people are calling for a repeal of the Township Law without knowing what the bill is. Has Mr Faulkner read it? Each farmer should read the bill and figure out what it is that makes an increase in taxes before he condemns the township bill.

Yours truly

FRANK E. SMITH

The Plea of "A Rural Mother"

It will be a hard blow to those of the rural districts if the proposed plan for centralizing rural schools goes into effect. The passing of the "district school" means a great deal to the farmer and his family. His children deserve, without question, as good an education as can be given them, but carting them off in the early morning to a place appointed by outsiders, and at the close of day bringing them back, little and big alike, looks very much like taking away a parent's rights.

Every year something is taken away from the rural districts' authority—until there is precious little left, yet they must settle the bills just the same.

Now every one knows that all children are not alike in temperament, etc., but no matter, bundle them all in, as a farmer ships his calves to a distant pasture, and even he distinguishes between the weak and the strong.

While the cities are striving to awaken new interest in its schools, with its social centers the one bulwark of the farming community is to be ruthlessly taken from them. Individuality will be lost, the pride taken in "our" school and "our" teacher gone and in a few years the country schools will be run by one or two man power.

It is paternalism with a vengeance.

Haven't the parents who bear the children anything to say? Must they yield those children up to be educated as some man or men with certain ideas in their heads, deem best?

If the mothers of the State were permitted to vote on this question it would very soon be decided that the district school should stay.

Consolidation is a hobby with some. I suppose we will have community farms next, where each will be allowed a patch of ground and the necessary tools with which to work it.

The only boy on the honor roll in the graduating class of the Elmira academy in 1915 was a country boy, one who had attended a country school.

Yet the country school must go. No good.

One boy said last year: "When we get to high school we are just one of the units to make the whole, we don't count as individuals as we did in our school."

And that is why, as a rule, you will find the country child better grounded in elementary subjects than the city pupil. The teacher, if she is good for anything, knows each child's deficiencies as well as his disposition and can treat him accordingly. She can know the condition of each child.

Those wise men at Albany have some ideas which seem most queer to us simple farm folks.

That of teaching boys how to raise potatoes, for instance. It is asking a good deal of a girl to add the profession of agriculture to her education, and if she does not, how is she going to teach it?

The average country boy knows a heap more from practical experience than his teacher can tell him. Of course she can help about some things, just as discussion on any subject helps.

Practical knowledge is what counts whether it be on a farm or in a counting-room.

Whatever you do, oh State educators, leave us our little district schools.

A RURAL MOTHER

Improving the Rural Schools

Editor Telegram —

"The Plea of a Rural Mother" for protection to our district schools is one of the best articles that I have read on the subject. It is full of facts that cannot be disputed by the would be dictators of our schools. Everyone should read that article, and I hope that you will publish many more for the district school is a subject that is dear to our hearts. Our authority over our schools has been growing less each year, and now it is planned to take the schools from us and centralize them so that they will be more convenient for the officials to visit. The present law intends that superintendents shall visit the schools all of the time except when actually engaged in office work. For a time we received much attention and the schools improved. But when the "wise ones" encouraged them to attend all kinds of conventions and other "doings" expenses paid, and many found it easier traveling away from the backwoods school.

Many small groups of superintendents have organized and hold little "conventions" and social gatherings of their own. They have frequent and agreeable meetings but I believe that the time should be spent in Visiting the Schools as the Law says it shall be.

Too much time is spent in advising the legislature when it could be more profitably employed in assisting some struggling teacher in her task of converting the raw material into the finished product. It is a very noticeable fact that "conventions" are never held during the three months of no school.

Much has been published to show that over fifty per cent of our country schools should be closed for lack of patronage. Statistics show that less than four per cent of our rural school children are attending schools where the attendance is less than ten.

The concentration scheme would make less work for some officials, but the rights of the parents and the convenience and safety of the little ones ought to be of more importance. The Empire State should never abandon the little red schoolhouse.

Respectfully yours

Big Flats, N. Y.

W. H. TURNER

"The Little Red Schoolhouse"

To the Editor of the Herald:

Under the caption, "Another Dangerous Bill," there appeared in The Herald of March 30 an editorial article opposing the bill now before the Legislature which proposes the township system for New York State rural schools. The comment is based on the opinion that the present system of district control is the nearest approach to nonpartisanship that can be found in any educational organization; that it is free from political intrigue and is the purest and most lovely form of democracy in existence.

If the writer of the article ever had any personal experience with the "little red schoolhouse," it must have been long forgotten, and in its place have come a few sentimental memories which have entirely smothered the grim, hard realities. This is nature's way of making early hardships seem pleasant in later years. Whittier's description of a schoolhouse in his beautiful poem, "In School Days," causes almost everyone to wish that he might have spent his childhood attending a rural school, but he touches only the sentimental side of it, as does the above mentioned article.

A clear, practical and unsentimental description of the schoolhouse mentioned in this poem would tell us of a building which, to say the least, could not bring out the best in the boys and girls who studied in it or put crude "charcoal frescoes on its walls." That there was a "ragged beggar" being sunned is nice to think about from a poetic viewpoint but it is not a pleasant thought to live with six hours a day. Let us not decry sentiment, but we can not mix it with law-making at Albany. Business is business. Facts are facts. Here are some facts:

Some of the most narrow, crooked, underhanded workings of partisan chicanery are carried on annually in rural school districts — worse than are perpetrated in any division of state government. Who pays the cost of such conditions? The ultimate consumer. The ultimate consumers are the defenseless pupils.

For example, in a district numbering one hundred families, only thirty of these families send children to school. Through lack of interest, one way or another, there are about twenty voters present at the annual meeting. They happen to be representatives of families where there are children of school age.

These voters desire a good school. They elect an intelligent trustee who has a vital interest in other things affecting the school besides holding taxes at a minimum. He hires a good teacher and pays her a modern living wage. He improves sanitary conditions, spends about \$500 in improvements and repairs which should have been made years before. He visits the school and encourages the best in the teacher and her pupils. He spends a few dollars on shrubbery and playground apparatus. He was a brave man.

He had a splendid school in every way, but the tax rate went up one-eighth of 1 per cent, and the wrath of the "little old red schoolhouse" graduates of the class of 1850 or thereabouts descended upon him like a bomb from an aeroplane, and at the next annual meeting there was a revived interest in school affairs.

The good old patriarchs and patriarchesses whose sons and daughters have long since ceased to be school children, and those who have never been blessed with any, assemble at their alma mater and declare vehemently that taxes are too high. "Why, my tax is a dollar more than it was last year!" They elect, with no difficulty, one of their own number, a man who visits the school building once a year, that visit always being when he comes to the annual meeting to vote for a cheap trustee, a cheap teacher and a cheap school, so that his pocketbook may be protected.

Who suffers because of this system? The children. Thousands of boys and girls in this state are suffering to-day because of the inability of the present system to give them that which educators in this state know to be their legitimate heritage. Thousands of men and women are to-day holding inferior positions because the strong arm of the state has not thrust aside these narrow-minded, ignorant, thick-headed, childless taxpayers and given to its children its protection against the ignorance and tyranny of petty neighborhood quarrels and prejudices.

The state does not let its farmers starve their stock. Why should it permit them to starve the minds of the children in their district, and in some instances, through improper conditions, corrupt their morals?

You say that a rural school district wants, first and last, a good teacher and a well conducted school. The present system under such conditions can not give this to the majority of schools. At least it has failed to do so thus far, and who can say the present system has not had a good long trial? Only one illustration of political immorality has been cited. There are many other brands of the same kind of politics in vogue in rural school districts, but space forbids their discussion.

Monroe County rural schools can not be taken as a standard from which to judge other rural schools of the state, because rural school districts adjoining large cities are always of a higher type than those where the population is sparse and scattered. Monroe County should be proud of its rural schools, but listen, and from other less thickly populated sections you may hear a Macedonian cry.

What the township system may do, we do not presume to know, but we do know that conditions in our rural schools at present are far from being perfect, and that the "little red schoolhouse in the valley" will eventually go the way of all other institutions that have outlived their time and usefulness, and in its place will come an institution, larger, better and stronger equipped to carry on the work of education.

READER

West Webster, N. Y., March 31

Concerning the Township School Law

(Written for The Recorder)

I Q. What is the township school law?

A. The township school law places the administration of the schools of a township in the hands of a single board of education consisting of five members. This law does away with administration by districts, the old system in which, say, twelve or fifteen independent groups of trustees conducted school matters.

The township school law provides that the whole township assume the expense and the duty of educating all of the children in the township. This means an equalized tax rate for all districts in a town.

2 Q. Is the township an unreasonable unit for administering school affairs?

A. No. Unless we believe that the township is an unreasonable unit for administering other affairs also. We are as responsible for all of the children of the town as we are for all of the highways of the town or for all of the poor of the town. To claim that each district should have its own separate and independent trustees is the equivalent of claiming that each district should have its own supervisor, its own overseer of the poor, its own superintendent of highways, its own clerk, its own justices of the peace, its own assessors. If having a town superintendent of highways, for instance, is efficient, having a town board of education is likewise efficient.

3 Q. Is the township unit for school purposes anything new or radical?

A. No. Every state east of the Mississippi, for instance, with one exception has as its school unit either the township or the county. Massachusetts, for example, has administered its schools under the township system for more than fifty years. Two years ago Ohio, after forty years of the township system discarded it as being too limited and adopted the county system.

4 Q. Does the township school system bring about enforced consolidations?

A. No. Under the district system, the district superintendent of schools had the power to consolidate schools, if he chose to exercise it. Under the township system, this power is no longer enjoyed. The power now rests entirely with the people of the districts. In paragraph 330, the very first paragraph of the new law, we find this: "No order consolidating two or more school districts shall be effective until such order is approved by a majority vote of the town board of education of the town or towns in which such districts are located, and thereafter approved by a majority vote of the qualified electors of each district present and voting at a meeting of the districts consolidated by said order." This portion provides all possible defense against consolidations not desired by the people themselves.

5 Q. What can be accomplished under the township system which could not be accomplished under the district system?

A. I All the schools in a township can be brought up to at least a minimum standard of buildings and equipment for the purpose of health, sanitation, comfort and convenience. This was impossible under the district system, in which some prosperous districts neglected to do anything for the improvement of their schools and other districts, with low assessed valuations, could illy afford to do anything. Under the district system there were to be found in each town a few schools properly kept up and more schools improperly kept up. Under the education law, the children in one section of a township have rights equal to those enjoyed and possessed by the children in other sections of the township. The township system, since it looks after all the children of the town, is faced with the obligation of seeing that all of the children have their rights. Among these rights stands foremost the right to healthful and sanitary school surroundings — oiled hardwood floors, seats which fit the pupils, fresh air, sufficient warmth, an abundance of light

from the proper directions, blackboards which the children can use without teetering on top of a bench and which are not full of shiny reflections, sanitary toilets. These rights it will be possible for the township system to provide for all of the children. That the district system failed in this respect can be readily shown by a cursory examination of our rural schools.

II All the schools in a township can be brought up to some definite standard of school work and scholarship. Uniform text-books for a township will be the first step. Under the district system, each district, being an independent unit, used any and every kind of text-book it fancied. A uniform length of school term is another step, already taken in several townships in this section. Under the district system, some schools ran forty weeks, others, thirty-six or thirty-eight. Why, in a public school system, should some children in a township be entitled to four more weeks of instruction each year than other children in the same township? Supplying all of the schools in a township with a certain amount of material for the proper teaching of writing and drawing and other required subjects would be a third step toward some definite standard. Under the district system some schools were provided with this material, others were not, and the same quality of work could not be required of each of these two types of schools. The township system can raise the quality of teaching throughout a town and teachers can be chosen and retained for their actual worth and accomplishment. Under the district system, some teachers were chosen and retained in this fashion while others were chosen and retained because they were the first who happened along or because they "made a hit" with the trustee or because the trustee had no time to bother with a group of applicants. Uniform text-books, a uniform length of school term, uniform supplies, and a certain teaching standard are all within the possibilities of the township system and beyond the possibilities, as long experience has proven, of the district system.

6 Q. Is school administration under the township system upon a more efficient basis than under the district system?

A. Yes. Wherever authority is centralized, increased efficiency results. We see this demonstrated in city school systems; we see it demonstrated in the nation's war preparations. The more heads there are to any undertaking, the less, as a rule, is accomplished. That is why a single unit of five members, a town board of education, can do far more for a town than twelve or fifteen separate and independent units such as the trustee groups were. When a board of education does something, whether buying library books or establishing a uniform term, or putting in sanitary toilets, it does this for an entire group of schools, not for a lone school here or a lone school yonder.

7 Q. Is a board of education, under the township system, an undemocratic institution?

A. No. Unless the town board, which consists of the supervisor and the justices of the peace, is also undemocratic. Unless the board of supervisors is also undemocratic. Unless our state legislature is undemocratic. Unless congress is undemocratic. Unless city boards of education are undemocratic. If all of these are Prussianized institutions, then, too, is our town board of education a step toward Prussianism. But we vote for our town

officers, our county officers, our state officers, our national officers, and we also vote for members of the boards of education. Every man or woman qualified to vote for a district trustee is qualified to vote for members of the board of education. The first boards of education were chosen by the district trustees, who, in turn, had been elected by the people of the districts. Beginning next May, the school voters of the township will directly elect members to their board of education. This is as near democratic and representative government as we can get.

8 Q. Is an equalized school tax rate in a Township without a High school unfair?

A. No. Unless we disclaim responsibility for the welfare and education of boys and girls in districts less fortunate and more in need than our own. If it is unfair that we should contribute to the support of schools other than our own, it is unfair that the people in the cities of the state should be required through their taxes to contribute eighty per cent of the public money which the country districts receive. Why should the people in the cities be obliged to contribute \$100 or more to each rural district each year while those who receive the \$100 or more cry out against contributing anything toward the support of schools other than their own? What is sauce for the goose, is sauce for the gander. If we maintain that poor districts should take care of themselves and that they are deserving of no consideration, we should rightfully protest against the State's giving the largest public money quotas to the poorest districts. That would also be unfair, if nobody is duty bound to assume responsibility for the less fortunate. An equalized tax rate means that every part of a township assumes its just share of responsibility for the boys and girls of the community. If it is unfair that the large school taxes paid by railways and other corporations should be expended for the benefit of all of the children in a township and not merely for the benefit of the children in the lucky districts where the railroad happens to pass, it is just as unfair that the other large taxes paid by the railways and corporations should be expended for the benefit of entire towns and counties and not solely for the benefit of the lucky districts. The people in the districts where railways happen to pass haven't done anything more to earn the advantage which comes from big railway taxes than people in neighboring districts where railways don't happen to pass.

9 Q. Is an equalized school tax rate in a township maintaining a High school unfair?

A. No. For years, under the district system, villages have at heavy expense maintained High school courses. The smaller the High school, the smaller the village, the greater, proportionately, the cost of maintenance has been. To these High schools in the villages, boys and girls from country districts have come and have been instructed and have been required to contribute nothing in a financial way toward the cost of their education. The people in the villages have borne the great brunt of expense. A majority of country boys and girls who have High school educations can thank some neighboring village for their opportunity. There is no great unfairness in a system where rural districts begin to pay something toward the cost of institutions whose advantages they have enjoyed so long free of charge.

10 Q. Is it generally true that small districts have to contribute, under the township system, to the support of larger and more expensive schools?

A. No. Some exceptions would be found perhaps, in the cases of the townships maintaining High schools, but these High schools are open to the boys and girls even of the small districts. Very generally the larger and more expensive schools are in districts with correspondingly large assessed valuations. The rich districts are more likely to be contributing to the support of small districts than small districts to larger and more expensive ones.

11 Q. To what extent does our attitude toward the township system depend upon our feeling of responsibility toward our community?

A. Almost entirely. And our community, as we look upon it in these days, is much farther reaching than any school districts. Almost daily it grows in breadth and we accept our responsibility toward it unquestioningly in every respect except in respect to education. We do not spend our money for good roads merely in our school districts; our money also helps build other roads, too, roads which we may seldom or never use but which other men will use and enjoy. Here we have the larger community. We do not limit our sympathies to the poor and unfortunate in our school district alone; we establish and pay for county homes, homes for the feeble-minded, children's homes, old people's homes, and send millions of dollars to help the hungry and homeless in France and Belgium. Here, too, we have the larger community. We are not concerned with the sick only in our own district; our broader concern is shown by our paying for general hospitals, hospitals for the insane and tuberculosis sanatoria. Here again we have the larger community. And just as surely our responsibility includes the boys and girls of a community bigger than our school district. The boys and girls of a township, say, are our care. Once we acknowledge this responsibility, we believe in the township system of schools, the sole purpose of which is to bestow greater opportunities, greater advantages, greater care upon the township boys and girls, all of them, all of the children of the expanding community.

12 Q. Has the township school system caused an increase in school taxes in all districts?

A. No. Many districts are paying practically the same amount of school tax this year as last. Some districts are paying less this year than last. These facts can be proven in every section of the state. The clerks of the boards of education have the exact figures, if these should be desired.

13 Q. What feature of the township school law has been the principal cause for increased school taxes?

A. That providing for an equalized school tax rate. The expense of maintaining all of the schools of a township has become a charge against the entire township. This has resulted in considerably increased school taxes for many rich districts with small and cheaply maintained schools. It has resulted also in some rather heavily increased school taxes for those districts whose school taxes were paid for the most part by the railroads and corporations they happen to possess. Their happening to possess them gives them no more exclusive right to the large taxes paid for school purposes than to the large taxes paid for town and county purposes. The railroad, for instance, has no children attending school and is, in its impersonal way, just as much interested in the children of the back districts as in the children of

the railroad districts. The equalized tax rate has also increased the taxes deservedly for those prosperous districts which have, with false economy, neglected to keep their schools up in shape.

14 Q. Were the improvements made by the boards of education done under compulsion from the township school law?

A. No. The boards of education are charged with the same duties in the matter of maintenance and improvement of school property as were the district trustees. When a board of education has made repairs or improvements, it has done so because it has seen and attended to some of the most glaring and immediate needs. It was as much the duty of the district trustees to attend to these needs as it is now the duty of the boards. The only difference is that some groups face their duties more conscientiously than others. The greatest improvement made and one which added the greatest item to the school budget was the installation of the approved sanitary toilets. These toilets were put in not only because they are decent and moral and sanitary but also because they were required by a regulation of the state board of regents — a regulation put in force several months before the township school law was even discussed in the legislature. Neither the toilets nor the other improvements and repairs, few in number, are due to any provisions in the township school law. In fact, this regulation and these duties would confront the district trustees today if they were still administering the schools.

15 Q. Why have some boards of education had to do so much more than others in the matter of repairs and improvements?

A. Because some boards of education inherited whole groups of schools which hadn't even been fairly kept up for a period of years. An accumulation of long-deferred needs were handed over to these boards. The boards are not to be blamed for what their predecessors failed to do. A more progressive school spirit has prevailed in some sections than in others, with the result that there was no special accumulation of needs facing the boards when the township law took effect. In the first supervisory district of this county, for example, fifteen schools were equipped with approved sanitary toilets before the new boards of education took office. Had this supervisory district had fifteen toilets installed under the district system, it would have been as though the boards of Glen and Mohawk had found every rural school already fitted out when they assumed office, it would have been as though the board of the town of Amsterdam had found all of its schools fitted out and the board of the town of Florida had found about half of its schools fitted out, it would have been as though the principal item in this year's budget had been cut down by half or each of the towns mentioned. This supervisory district had one approved toilet and that but half paid for when the new boards took up their duties. That is but one striking instance. Had there been a properly awakened school spirit throughout this end of the county, the new boards would have had very much less on their hands this year. What have we here to show for our progressiveness in comparison with, say, the second supervisory district of Fulton county, which borders ours on the north, where seventeen new school houses have been built in as many years, or with the sole supervisory district of Schenectady county, where twenty-five new school houses have been built in less than that number of years? So

little that our boards are to be pitied rather than condemned for what they have found themselves obliged to do this year.

16 Q. Are the boards of education paid a salary?

A. No. No more than the trustees were compensated under the district system. They give their services to the community, which is more than is asked of the town boards of health, or of the town board itself.

17 Q. What officers connected with the board of education are paid?

A. The clerk, the treasurer, the attendance officer and the medical inspector. The two latter, however, were paid for their services under the district system and do not, consequently, enter into the present consideration. The compensation of the clerk and treasurer is not fixed by the township school law. If the boards of education could secure clerks for a dollar a year, they would have a legal right to. The clerks in this section, at least, are not overpaid, considering the new and more business like accounting system and various other numerous duties which a centralization of management brings about. The volume of protest formerly arising from the trustees because of the clerical and accounting work would indicate that a paid clerk for school matters might be considered a welcome relieving force. The treasurers are paid a nominal sum for the financial responsibility they are obliged to assume. Had the trustees been compensated for their clerical work and for other work now done by the clerks of the boards of education, the small salaries of these clerks would be a decrease in the school expenses of the towns rather than the very small increase that it is.

18 Q. Are the teachers being paid more per week under the township system?

A. No. Only five teachers out of the seventy in this supervisory district have been hired by the new boards. Small increases over last year's were paid to four of these, which was due to the fact that teachers grew increasingly difficult to obtain as the summer wore on and war-time demands became more insistent. The trustees elected last May had the right to hire teachers and to agree upon the salary. If the other sixty-six teachers are receiving more per week this year than last, it is only because the trustees themselves were willing to grant the increase. Some teachers are teaching two weeks more, others four weeks more this year than last. In this round-about fashion they receive more money but have to render correspondingly longer service.

19 Q. Can the public learn how school moneys are being expended?

A. Yes. All of the records of the clerk and the treasurer of the board of education are open to inspection at any time. There is no more secrecy about these records than about those of the supervisor or the town clerk or the overseer of the poor or the superintendent of highways or any other public officer.

20 Q. Have the boards of education an undue amount of financial power?

A. No. With ten or a dozen times as many school houses to take care of, the power to expend money for the proper upkeep of these schools had to be increased several-fold. Even though some boards of education can, if there is need, spend as much as five thousand dollars in a year for repairs and improvements, they will not exercise this power in any high-handed fashion. When taxes go up, their taxes as property-holders go up as fast as anybody's, and as high, since a majority of the board members have good

big valuations subject to taxation. This being the case, we can rest confident that they will not soon be willing to enter upon a régime of extravagance. In other matters, such as teachers' wages, fuel, and so on, the trustees under the district system had as much power as the boards of education now have.

21 Q. Will the boards of education, as some fear, proceed to equip rural schools with grand pianos, marble-tiled bath-rooms, mahogany furniture, oil paintings, stained-glass windows, and electric lights?

A. Yes. If people who say such things succeed in their tireless efforts to drive sensible men mad. Otherwise, no.

22 Q. Can the boards of education do their manifest duty by the public school boys and girls without spending somewhat more money than formerly?

A. No. The condition in which a great many schools were taken over by the boards shows that approximately nothing could be done for the building up of the schools without spending more money than before.

23 Q. Can rural schools be brought up to any standard of respectability at all without the expenditure of money?

A. No. Unless in that happy but distant land where we get something for nothing.

24 Q. Do modern schools cost more than antiquated ones?

A. Yes. Up-to-date farms cost more than rundown ones. Automobiles cost more than democrat wagons.

25 Q. Which is better for our boys and girls, a pleasant, healthful well-equipped school presided over by a good teacher or the other kind of school with the other kind of teacher?

A. Why, the good school, of course!

26 Q. How can we have this good school?

A. Only by being willing to spend money wisely.

27 Q. Why are our boys and girls worthy of having this money spent for their welfare?

A. Because they are American boys and girls, soon to be the men and women of America. Every advantage that we can give them now of health, understanding and knowledge will mean an American community that much richer and more generous in real manhood and real womanhood only a little later on.

28 Q. Should the district system of schools be considered sacred and unchangeable because it was established one hundred and twenty-two years ago?

A. No. There is no more sacredness or perfection in the district system of schools than there is in the eighteenth century system of farming or the eighteenth century system of transportation or the eighteenth century system of communication or in the eighteenth century system of living. If profound changes in these various systems brought increased comfort and convenience to humanity, a change in the school system is not likely to prove the undoing of our civilization. If we are going to cling to an eighteenth century school system simply because it is one hundred and twenty-two years old, we must likewise cling religiously to all of the rest of the equally old and cumbrous systems; we must piously insist upon travel by horseback and

canoe and flee as from the devil from railroads, steamboats, macadam roads, automobiles, trolley cars and aeroplanes; on our farms we must devoutly use the ox-team, the scythe, the cradle, the flail, and spurn in righteous horror the tractor, the grain drill, the mowing machine, the binder, the threshing machine and the gas engine; we must worshipfully content ourselves with mail once a month or so, with even rarer newspapers, with no telephones and pray to be delivered from the R. F. D., the daily newspaper, the weekly and monthly magazines, telephones and telegraphs. We must faithfully do all of these things; then, and only then, can we properly say that improvements are sinful and that the district system, too, is sacred and unchangeable.

29 Q. Has the district school system been able to meet the demands made upon it by modern conditions of living and thinking?

A. No. The condition of the majority of rural schools today is the living proof. We need but to contrast them with city schools and village schools and all schools which endeavor to meet the needs of the times and to furnish the best which experience and study recommend, in order to see how wide the gulf is that is fixed between them. The contrast in outward appearance is typical of the contrast in equipment, sanitation, comfort, convenience and studies really preparing for life. City schools try to keep abreast of modern conditions and demands. Some rural schools have tried; many have not done even that much, each doing, under the district system, much as it pleased, with exceedingly uneven results, in the matter of recognizing or ignoring the demands of the advancing times. The township system with its centralization of authority and its broader field is in a much more effective position to cause the rural school to keep abreast, at least, of modern rural life and its silent though insistent requirements.

30 Q. Is there any need to "fear" that our rural schools under the township system, will presently be as healthful, comfortable, convenient and well-equipped as city schools?

A. No. The cost of bringing our rural schools up to this point would be prohibitive, and members of the boards of education also have to pay school taxes and are no more anxious than anyone else to make school costs exorbitant. While, perhaps, the rural schools can not reach the highest standards even under the township system, there is no excuse in the world for their failing to reach a good standard. This standard is the goal of every conscientious board of education. It is but the recognition of the undeniable rights of country boys and girls, rights not even considered under the district system in altogether too many shameful instances, as the condition of the rural schools today makes manifest.

31 Q. Was the township system of schools established for the benefit of taxpayers or for the benefit of the children of the state?

A. The township system was established for the benefit of the children, to give them better facilities, advantages and opportunities. From the viewpoint of many taxpayers, the most beneficial legislation for them would be legislation closing the schools entirely, or legislation causing the parents of children in school to bear the whole expense. Taxpayers who expect such benefits have failed to learn the greatest lesson of a more closely united world, the lesson of responsibility to the whole community.

32 Q. Is there any sense in the accusation that the township system is to blame for the poorness of rural schools today?

A. No. Some of the bitterest opponents of the new system maintain, with great simplicity of mind, that rural schools are in very poor shape. The district system alone must answer this accusation. The district system had one hundred and twenty-two years in which to make good. With their own mouths, the advocates of the district system declare that it failed to make good when they try to blame the rural schools' poor condition on the township system. Surely the township system can not be expected to accomplish in six months what the district system could not accomplish in one hundred and twenty-two years. Rural schools certainly did not become so poor and so bad in a night, the night of July 31, 1917, the night before the township law took effect. If the opposition claims that the new system should have remedied all defects by this time, in some six months, it is acknowledging that the new system is a marvel, as, indeed, it would be, doing in that short time what the old system could not do in more than a century. But the township system itself does not make any such wild claims in its own behalf. It needs much more than six months to remedy years of backsliding.

33 Q. Is there any sense in the accusation that the township system is to blame for the present poor quality of teaching in the rural schools?

A. No. Ninety-three per cent of the teachers employed in the second supervisory district of this county were hired by the district trustees. If their teaching is so poor, the trustees had no business hiring them and the district system is to blame. As a matter of fact, though, this accusation against the teaching force is both false and unjust. The great body of the rural teachers work hard and earnestly, at smaller wages than city teachers get, enduring far greater handicaps and discomforts than any city teacher has to endure. Records in abundance are on file giving the figures which show that rural teachers, for the most part, are hard and successful workers.

34 Q. What has the township system to say to those who claim that schools good enough for them thirty and forty years ago are good enough for the boys and girls of today?

A. Merely this—that it is only conceit which makes people declare that their own education was the last word in completeness those thirty and forty years ago, and only selfishness which makes them begrudge better schools and better advantages to the boys and girls of today. Conditions have changed greatly in thirty or forty years; life has grown much more complex; more and more is demanded of people, competition has grown much keener. If country boys and girls are to hold their own in the complexity and competition of modern life, they need better schools, for one thing, than those of thirty and forty years ago. In the competition of living, "good enough" fails to get people anywhere.

35 Q. How does a typical rural school, the kind generally inherited by the township system, compare with its surroundings in the matter of taking advantage of modern science and modern thought?

A. The surroundings usually are years and years ahead of the schoolhouse. Here is a school with a macadam road running past it. Is the schoolhouse as good an example of an up-to-date schoolhouse as the macadam road is of an up-to-date road? No, nine times out of ten. Automobiles hurry up and down the road. Is there anything in the schoolhouse as efficient and comfortable an example of its type as the passing motors are of their types? No, nine times out of ten. We have only to look at a few

things, such as heating, lighting, ventilation, or seating, to understand the truth in that answer. Has the school as modern educational equipment for its purposes as the adjoining farm has modern agricultural equipment for its purposes? No. The school probably has as much as a catalog of modern school equipment and supplies, but the farm next door actually has its cream separator, milking machine, ensilage cutter, potato planter, mowing machine, reaper, binder, gas engine, some or all of them. Does the schoolhouse look as good and well kept up as some of the barns visible from its windows? No. Compare the two in almost any district and judge for yourself. Are the children in the schoolhouse as well looked after and as comfortable, judged by human standards, as the farm animals are, judged by good animal husbandry standards, in many of the barns to be seen from the schoolroom windows? No. Not in our typical rural school, with its roasting and freezing sections, its foul air, its water pail, its eye-straining shadows and cross lights, its ill-fitting seats where children sit in uncomfortable and unhealthful positions.

36 Q. Is the township system a harmful system because under it conditions will be favorable for the employment of school nurses and physical training teachers?

A. No. Unless we believe that better health is a worthless consideration. Unless we believe that country children are so healthy that they do not need the physical training and medical attention which city children receive. This belief, however, is based upon complete ignorance of the actual facts and figures. The long and careful investigations of the National Education Association and the American Medical Association show this conclusively. In every one of fourteen common health defects, the percentage of cases was much greater among country children than among city children; often the percentage of cases was twice as great among country children as among city children. Where we learn that sixteen out of every hundred rural children suffer from malnutrition, we also learn that but seven out of every hundred city children suffer from this handicap. While 3.5 per cent of rural children have spinal curvature, only 1.3 per cent of city children are similarly afflicted. This comparison could be carried out at length, and the end would show what the beginning shows—that country children have many more health defects than city children. If country children do not need physical training, how are we going to dispose of the statements of the officers of the present American army who find that the boys from the country can not stand up under the strain of strenuous army life as well as boys from the city? When country boys are the ones most frequently dropping out of drill from sheer exhaustion, we dare not say that city boys need physical training and that country boys do not.

37 Q. Is the township system a harmful system because under it conditions will be favorable for the employment of agriculture and domestic science teachers?

A. No. Surely instruction in agriculture is as vital for a country boy as manual training instruction is for a city boy. Surely instruction in domestic science is as vital for a country girl as for a city girl. The chart truly says—"Education is that training which fits for the duties of life." Agriculture and domestic science would certainly do as much toward fitting children for the duties of life as learning all the counties of the state,

for example, or all of the rivers of the world, where they rise, in which direction they flow, and what they empty into or any of the other many things tradition expects us to learn temporarily and which are heartily approved of by those who consider agriculture and domestic science most unnecessary. If we ever expect to keep our country boys and girls on the farms, we must give such subjects as agriculture and domestic science some standing; we must raise them to positions of dignity and respect; we must show the boys and girls that their work at home is a science and a business and worthy of their mettle; and this can be done best by honoring agriculture and domestic science with a place on our rural school program. The rural school course of study must educate our boys and girls not away from the farm but to it; it must vitally interest them in their interesting and varied environment. Country children are as entitled to their special teachers of agriculture or domestic science as city children are to their special teachers of manual training, domestic science, music, drawing, and so on.

38 Q. Is there any reason in the world why country boys and girls should not be entitled to as good educational care as city boys and girls?

A. No. They are all together alike citizens of Uncle Sam's commonwealth, those who will be the nation itself in the not distant future. Country boys and girls are as good and deserving in the eyes of the nation as city boys and girls. Their rights are as clear cut and undisputed. And seeing that they have their rights is not the necessary evil that many seem to think but a positive good and a genuine satisfaction to all true-hearted and right-minded men and women.—*Amsterdam Evening Recorder*, February 4, 7 and 9, 1918

Discussion Waxed Warm on Township Law

Herkimer, N. Y., February 4.—Saturday afternoon's meeting of farmers, their wives and teachers of the various schools, held at Herkimer High School, showed emphatically the strength of the feeling that has arisen in Herkimer County regarding the township school law. This was to have been the last topic on the program but the anxiety of the meeting to bring it to an issue made it the first, and it was debated at such length and vigor that it proved to be the only subject. Chairman Morey was called on at times to rule on parliamentary questions, as there were many anxious to be heard and many motions in the air at times. Among those to speak was John Carey of Richfield Springs, who favored retention of the township as a basic unit for financial administration of the schools. The district, he thought, is too small to enable an equitable taxation and distribution of service is also better maintained over the larger area. The township law, he said, is charged with many things for which it is not responsible, such as consolidation of schools, in which regard the new law gives greater safety than the old. The remedy for most of the evils laid to the former will be found to lie in amendment by legislation of previously existent laws. Other factors to which the speaker called attention were that new town boards must start even without a cent of money and are necessarily "up against it" in determining just what amount is going to be required for necessary expenses. The result will be some overestimates that would not occur on the second year. Also there is the effect on the schools of the

general trend toward ever higher prices and cost of living, with proportionate effect on supplies and salaries.

Manager Charles A. Taylor of the Farm Bureau, who held a perfectly neutral attitude in the discussion as considering that it properly belonged to the farmers themselves, presented as a neutral and for the information of all to be used by either side, a tabulation of school money expenditures in the county.—*Little Falls Times, February 4, 1918*

The Township School Plan

The township school law has a number of things in its favor, if we may believe its friends, and the law is of interest to city people, who contribute 80 per cent of the public money which goes to the country districts every year.

If each school in Utica had its own trustee and was supported financially by the ward in which it was operated, we would have a fair comparison with what existed in the country before the township law was put into operation. It would then happen that in some wards the schools would be kept four or five weeks less than schools in other wards were kept. In some wards the big mills would pay most of the taxes and the residents would pay hardly any. In some wards the trustee would hire the first teachers that came along, or he would hire the ones that jollied him, while in other wards trustees would make a specialty of securing teachers of superior training and would pay them fairly well, instead of endeavoring to pay the least possible.

In other terms, there would be no centralization of control, and consequently the efficiency of centralized control would be lost. Massachusetts not long since abolished the town unit of control in order to have the advantages possible in a larger unit, namely the county system.

The township system, of course, has not had time enough to have a fair trial, but the purpose of it was to raise the standard of teaching in those districts which were behind the times, and to provide better school buildings and equipment. That these things are needed is manifest to any one who will look over some of the school buildings common in the country. Bad air, bad sanitary arrangements, poor light and some other things have been the rule for many years in numerous districts and would continue to be tolerated, unless remedied by the infusion of some outside agitation. The township system, at any rate, has served to stir up a consideration of the country school, and that alone is worth while.

Under the old system the high schools have been maintained by the villages, which was not quite fair with the villages, inasmuch as boys and girls came from the surrounding country and were not required to contribute greatly toward the support of the schools. In this way the surrounding territory was fortunate, like a district which had a big corporation to pay most of the cost of conducting the school. The new system tends to equalize the cost throughout the town.

The country districts can well afford to give their schools more consideration, and look more carefully into the township law. The more one learns about it the better it looks, although it is entirely possible that it should be

improved. A new system usually has room for improvement after it has been tried out. That may be the case with the township plan.—*Utica Observer, February 8, 1918*

Registered Protest in Mass Meeting

Representatives from many of the school districts of Chenango county met at the court house in this city Saturday morning and afternoon to register their protest against the Machold township school law. The meeting was called largely through the efforts of M. L. Simon of McDonough who issued notices for same and aroused the sentiment which was already to kindle.

Mr Simson called the meeting to order shortly before 11 o'clock and called upon Assemblyman Lord to explain to the men the provisions of the Machold law and his position thereon and toward other legislative matters. This Mr Lord did, saying that he had always been opposed to the law and that he did everything that he could to prevent its passage at the 1917 session of the state legislature. He spoke of its provisions, how it had worked out in the majority of up-state counties and assured the representatives that several counties approved and that the Tammany crowd in the legislature would probably try to block a repeal of the bill. There is to be a hearing on the measure and its repeal February 27. Mr Lord told his constituency that during the early fall he had contemplated offering a bill urging the repeal of the Machold law, when his friend, Representative Martin of Oneida, wrote him asking his endorsement of the measure he has drafted and presented.

Mr Lord assured Mr Martin of his support and then turned his attention to another school law over which much dissatisfaction has been felt in rural communities, the physical training law. He now has a bill in the house which on passage would make optional with the district the employment of a special physical training teacher and making the local teacher the instructor in physical training in her grade or district school. This bill has the approval of the state grange.

Then Mr Lord told the men present, nearly all of whom were members of the Dairymen's League, of his effort to work out an amendment to the Donnelly act to relieve farmer organizations from prosecution.

All of these measures he freely discussed with the men, exchanging views and vouchsafing information.

Mr Simson then called for an organization of the body and this was perfected with W. E. Stover of Smyrna as chairman and D. E. Edgerton of Greene as secretary. Leon M. Walworth was elected delegate to file the Chenango county protest at the legislative hearing on the two school bills on February 27.

The following resolution was adopted:

Your committee on resolutions, reporting, offer the following resolution and move its adoption:

Resolved—that we favor the repeal of the so-called Machold Township School Law. That we offer this resolution believing that the experience of one year thereunder has demonstrated that no improvement in service has been obtained, but upon the other hand a marked increase of taxation has resulted.

In fact the operation of the law has caused hardship and unnecessary inconvenience to the school children and patrons of the district by compelling them to travel long distances in an exposed condition. Further an increase in taxation over even the present high rate will follow under the law if it is continued.

Further, that we favor the adoption of the Lord bill which relieves the districts from the necessity of hiring a physical training teacher.

Further Resolved, that we present a copy of this resolution to our senator and assemblyman.

Further Resolved, that we express our approval of the stand of Hon. Bert Lord in opposing the original passage of the township school law and the physical training law, and we commend his efforts in the present session looking to the repeal thereof.

The foregoing is a copy of the report of the committee on resolutions unanimously adopted at a meeting held at the courthouse, in the city of Norwich, N. Y., on February 9th, 1918, attended by representatives from all the school districts of Chenango county.

—*Norwich Sun, February 9, 1918*

Unanimous Action of the Schoolmasters of the Southern Tier at Elmira, February 9, 1918

Whereas, The township school law of the state of New York is again under discussion and will probably be before the legislature for reconsideration, and

Whereas, We do not believe that this state should take a backward step which no state having once adopted such a law, has ever taken, be it

Resolved, That we unanimously commend the fundamental principles of the present law and believe that it is elevating the standards of the rural schools and that it is giving that equality of opportunity which is his right to every child in the schools of the state.

Township School Law

The proposed repeal of the Township School Law is in response to a widespread demand from rural sections all over the state, on account of the increased burden of taxation which it is alleged to have caused. The primary object of the law was to provide better educational facilities in the country by combining several small school districts into one. It is claimed by the Department of Education and by advocates of the law that its obnoxious features are due to the mechanics of the measure, that its main principle is sound and desirable, and that existing defects may be adjusted by proper amendments. Governor Whitman called attention in his annual message to some phases of the law which he considered objectionable and recommended their correction.—*Port Jervis Union, February 11, 1918*

Town Schoolship System Should be Preserved

A bill has been introduced at Albany to repeal the law providing for a township school system. We are assured by Senator Thompson of this

district that it is the intention to have a new law passed which will contain some features of the present statute.

The only changes that are needed apparently are those which would affect the provision in the present law calling for an equalization of the burden of paying the interest and principal of the bonded debts of the several districts. It is felt that each district should pay its own bonded debt, assumed often for the building of a superior class of school buildings.

As to maintenance of buildings and payment of teachers' salaries and standards of education, the tax rate for those should be uniform throughout the township if we are to have a unified and improved system under which the poorest boy or girl in a rural district can get as good an education as the city child.

The new system is in the interests of economy in that it provides for the consolidation of a number of the districts where there is too small attendance to warrant the maintenance of the school. A system of transportation would be provided for the children who would have to travel too far to walk to attend the school in the consolidated district.

Dr Thomas E. Finegan, Deputy Commissioner of Education, in a recent address before the New York State Agricultural Society, said that we are maintaining at the present time 15 schools in each of which there is just one pupil; 86 others in each of which there are just two pupils; 166 others, in each of which there are just three pupils; 258 others, in which there are just four pupils; 357 others, in which there are just five pupils; 600 districts in which there are less than 7 children in attendance. There are 3800 rural schools in the State in which there are less than ten pupils. The average assessed valuation of each of these districts is less than \$40,000. In 2000 of these districts the average assessed valuation is less than \$20,000. As Mr Finegan says, the entire State has an interest in putting an end to this state of affairs. The financial interest lies in the fact that the State is contributing \$200 per year for the support of each of 2000 school districts above named and \$150 to \$175 each for the smallest of them. We Long Islanders have to help put up for them and have an interest in seeing a township system in operation that would do away with a large portion of them. Moreover, we have another interest in seeing that all the children of the State get at least a good grammar school education, such as is impossible under the present system.

Mr Finegan says that there are 100,000 less children in attendance upon the schools maintained in the agricultural regions than there were 35 years ago. It is the salvation of our country to have a large and better educated rural population which will induce better systems of farming and business conditions in the rural sections. This is a State question.

We are behind New England and other sections. Every state bordering on New York has adopted the township system.

There are plenty of safeguards provided against an unjust or unfair consolidation of districts. More than there were under the old law. The District Superintendent has to take the initiative and it then has to pass the Town Board of Education and it must then be submitted to the voters of the districts affected.

It has been urged against the law that it requires physical training. This law was passed in 1916 and has no connection with the Township School

law. It requires physical training to be given in all schools, regardless of whether they are under the township law or not. It is a highly necessary part of our system of training the young to-day if we are to have a nation fit to perform the duties of the citizens of a republic and a nation. Are the boys and girls living in the agricultural regions entitled to receive an education which will enable them to meet the problems that confront the men and women who are to bear the responsibility of the great burdens involved in the proper solution of the problems of our rural life? Are we to establish a system of education in the agricultural centers of the State which shall be equipped to deal in a comprehensive manner with the great social, economic and political questions which confront the people living in the rural sections of this country? In the solution of these great problems should we not profit by the experience of other States? Should we not take into consideration the fact that not a single State which has adopted the township system has gone back to the old district system? And should not that be regarded as evidence in favor of a fair trial for the township system? Does not the experience of this State for the last half century under the district system show conclusively that the great educational necessities of the agricultural communities of the State can not be adequately supplied under the old district system? Shall not this State, after having adopted the township system which has adequately met the needs of the rural communities in half of the States of the Nation, give that system a fair trial, instead of plunging the State into educational chaos by the repeal of such law? — *Long Islander*, February 22, 1918

The Township School Law

Those who have registered their opposition to the Township Education Law have emphasized the points of its cost and of its centralization of power. They have not considered its educational value to the boys and girls of the country schools.

The question of cost is, of course, important, but it is relative, particularly in school matters. To maintain a school plant and an entirely efficient teaching force costs good money and it is right that it should. The main point from a money point of view should be, not altogether the absolute cost, but should deal with the business of a proper return on the investment.

There can be no doubt whatever that large minded men and taxpayers in this state will grant the right of school children to enjoy proper school environment and good teaching.

From reports that we have been looking over recently and particularly from our own observation, we are convinced that the children have not had a fair deal. The condition of school houses, school equipment and sanitation are way below a safe minimum. The teaching is better than the material equipment, but not what it should be, and still largely underpaid.

The old district system has not exactly broken down, but it has served its day. It is not adequate to the demands of modern education.

The township system promises better things, better educational opportunities for the children in rural schools. It should be given a fair trial. There is no single item of cost in its administration that should not be in the budget of a rural school under the old system, including clerk hire, janitor service and the like.

As to the centralization of power in a few hands and taking prestige from individual trustees, there would seem to be no valid argument. The township is a convenient and safe unit of popular government. Voters have the same rights that they enjoy in selecting supervisors, superintendents of highways and other town officers. They elect the members of the Town Board.

The legislature would be guilty of monumental folly in repealing the Township School Law.

Let us keep the new school law, watch it, revise, improve it as we go along; but never let up in our effort to give the children of this state the best possible educational opportunities; for in the sound and broad education of the children lies the safety of the state and its institutions.—*Cold Spring Recorder, February 22, 1918*

Plea for School Law

The following letter is from a former Sullivan County school teacher:

Chicago, Ill., Feby. 9

Ed. Watchman: Have read in your valued paper about the effort to repeal the township school law. Are you not making a mistake in helping this along? True, taxes are higher, but as every move we make costs twice as much as formerly, how can this be helped?

People living in large towns having an independent school system do not realize the great difference the new law makes in country schools. Are you aware that there still are district schools where the teacher works for \$18 and perhaps as low as \$9 per week; where the building is so poor that the winter winds whistle through inch wide cracks, where there are outbuildings which are no more than shacks open to the weather and which have not been cleaned in years; where the teacher struggles to keep herself and children warm with a small box stove with green wood coated with ice, and where year after year there is a trustee elected whose only idea is to get school business done as cheaply as possible?

This is not right. People are not so pinched to the last penny. The same ones who would object to buying a new water pail for the school, think nothing of investing in a one or two hundred dollar phonograph or a Ford car.

The township law with a board of education in control promises much improvement. It is not right that some teachers should be receiving \$10 and others \$18 for exactly the same work. Simply because, in some cases, the favored one happens to be a friend of the trustee or engaged to some of his wife's relations. Nor should the size of the school make so much difference. It takes as much time and energy to teach 10 or 12 pupils as it does to teach 30 or 40. The boards should decide what the town can afford to pay and make all schools alike or nearly so.

Also, the township system has a tendency to put the better and more representative people in control, and they are not changed so often, more interest is shown in the schools; the personal element is largely done away with in hiring teachers. It also is fairer—equalizing the taxes so that one district alone cannot have the benefit of the railroads, pipelines, telegraphs etc., but the whole town benefits, as it should.

Also, let us hope that the physical training be not taken out of the schools

entirely; its benefits are apparent. If the rather expensive special teacher cannot be afforded let us hope that the regular teacher be given some training in this and a certain amount be required, and so strike a "happy medium."

Don't do away with the township system. It promises good. Our children are our country's most valuable asset. They are just as precious, just as deserving as our gallant soldier boys. Let us give them the best that we can. It is their little hands that must carry on the torch and their task will not be light.

Also let us hope that gradually the mothers will show more interest and that in every township there will be at least two of its most intelligent mothers on the board of education. "A board of education without a woman on it is like a home without a mother."

Attached to this is a part of a bill introduced into the State legislature:

Efforts are being made to repeal the new township law, that was passed by the legislature last year. While some injustices have been occasioned by the working of the new law, which will undoubtedly be rectified by the present legislature, on the whole the measure is a great step forward in the betterment of the rural schools of the State, and helps to put New York State on a level with other States. The old school district dates from 1795. There are still 4000 schools in the State with less than ten pupils each, and over 3500 school districts where the total amount of taxable property in the district is less than \$20,000. The taxable property in one school district may be \$500,000 and in an adjoining one may be \$15,000. In the first district a man might pay a school tax of two mills on the dollar and the school in that district would have plenty of money. In the adjoining district a man might be obliged to pay 10 mills on the dollar and the school in that district would not save money enough to give the children any advantages whatever.

The law makes the township the unit of taxation in place of the school district, and all the property in the township is taxed equally and the money apportioned where it is needed. A board of education elected by the voters of the township takes the place of the school trustees. This board of education may, if they think best, consolidate the small schools of adjoining districts.

Union free school districts of 1,800 population were excluded from the provision of the law and all union free school districts employing fifteen teachers or more.

A budget for the following year must be made out for all the schools in the township by the board of education and be published in the local newspapers and posted where the public may see and discuss it.

There is much misunderstanding of the new plan, and some of the things objected to are temporary, due to putting the plan into operation.

The new boards of education came into existence without a penny in the treasury and had to make a budget large enough to cover the expense of getting the new plan started. They also had to assume the contracts already made with school teachers by the old school trustees, so that while they had to raise more money last year than may be needed next year, they made less improvement in the schools last year than they will make next year and this has led to some dissatisfaction.—*Monticello Rep. Watchman, February 22, 1918*

Mr Kelley Would Retain Machold Law

Editor Malone Telegram:

DEAR SIR—For many years the rural schools of New York have been waning, i. e., they have been decreasing in size and efficiency.

Out of these acknowledged facts came the effort of the Education Departments of the state to do something to improve the educational facilities for the rural boys and girls.

The department succeeded in establishing the township system in place of the old one. It would be a waste of time to urge the superiority of the township system over the single district system. That system is in operation in all of the New England states (I understand). It also is largely operating in the west. Everywhere it has been tried it has proved beneficial to the children. In New York it has not had a fair trial. It came at a time when the cost of everything was greatly enhanced. Even the district school would cost more than formerly. The farmers complain that taxes are higher under the new system and they ask the legislature to send them back to the cheaper one. Now the question of repeal is involved in a political disagreement in Albany.

I quote from an editorial in the Burlington Free Press Feb. 19, 1918.

"The contest between the two systems is involved in personal politics in New York—Speaker Sweet was credited with being behind the measure (to repeal the township law). In spite of this the Governor sent in an emergency message urging repeal and Speaker Sweet is indignant over the apparent effort of the Governor to win credit." The Free Press further says that recently Speaker Sweet's friends have been urging him to enter the governorship contest against Whitman and that in the political conflict thus started little if any attention is given to the merits of the school question. The same Free Press editorial says the New York State Agricultural Society, the State Grange, the Conference for Better County Government have strongly endorsed the township system and that Drs Finley and Finegan have issued statements in its support. According to the same editorial Dr Finegan says there are fifteen districts in the state with just one pupil in each, eighty-six in which there are two. One hundred sixteen with three pupils, two hundred fifty-eight with four pupils, three hundred and fifty-seven with five pupils and six hundred schools each with less than ten pupils in attendance. It is impossible to maintain in one of these districts anything worthy of the name school. These are the kind of schools that the rural districts are clinging to with such tenacity.

Some eight or ten years ago a teacher from the Malone Grammar School accepted a position in a North Dakota school. It was a rural school conducted under the township system. She found, in a country place, a fine large substantial building, well lighted, well equipped and furnished. Several teachers and farmers carry pupils as far as six miles to that school. The salary they paid was large enough to induce our teacher to go there to teach.

They, however, were mostly Swedes and Norwegians. They had intellectual ideals, apparently, very different from ours.

Without much comment on our rural schools it is apparent that the system under which they exist is more outgrown than the highway system which

was discarded a good many years ago. A district with only from one to five pupils in it can hardly be said to be alive for school purposes.

Do the farming communities pay exceedingly high taxes for the support of schools? The usual rate in Malone village is from 12 to 15 dollars per thousand of valuation. I doubt if many rural districts pay as much. Malone schools have received non-residents for a long time for much less than the actual cost of their education. In addition to this the state has heretofore paid the tuitions for non-residents attending our high school so that tuition for non-residents has cost the parents nothing. The actual yearly cost of carrying students through our high school must be about fifty dollars per student. The state pays but twenty and somebody must pay taxes to make up the balance. Malone village cannot quit because the cost of education is increasing, and ask the legislature to vote them back to some old, worn out, decayed and cheaper system. It must pay the cost, whatever it is. Why shouldn't the rural communities do the same?

Dr Finley and Dr Finegan are two very able educators. When they examine a system and recommend it the people of New York will make no mistake in giving it a fair trial.

JOHN KELLEY

Town School Law

Editor Union-Star: May a rural subscriber of the *Union-Star* venture to differ with the editorial statement that the enactment of the town school law was ill-advised? The demand for improvement of the rural schools by patrons of the rural schools was general, and the law as enacted is approved by them, as well as by Dr Finley and all educators, down to the cheapest little school teacher of the cheapest school in the state.

I am a farmer and am sending six of my children to school. If I hired a governess for my children like Senator James Wadsworth, or like Governor Whitman, or if I lived in a city like the editor of the *Union-Star* with educational facilities at hand, from the kindergarten to college, I would not consider that I could utter the last word on rural schools or the operation of the town school law. Having lived a little over a half century on the farm, I believe that I am fairly conversant with real rural life.

The consolidation of rural schools is approved by progressive parents because of improved service and greater economy, but tax-slackers throughout the state are using the severest winter on record as an argument to discourage this reform. Two of my children are walking three miles and riding fourteen daily on the cars to get an education, while my younger children, four in number, walk two miles daily to and from the rural school. Wherein is the hardship, Mr Editor, in a walk of two or three miles or a ride of three or four over a snowy country road?

Now a word as to the people who are disaffected by the town school law. Has the editor of the *Union-Star*, or has one of the tax-reformers, honestly compared last year's school tax under the district trustee system with the first levy under the town school law? Let me compare them dispassionately that you and your readers may judge.

The last levy under the old system called for just enough money to conduct the schools for one year. There was already a surplus in the hands of the local school officials throughout the state to pay teachers' salaries and other expenses for three or four months, or until the next annual tax was collected. This surplus, which has been carried from year to year to provide especially for monthly payments to teachers, was returned pro rata to the taxpayers from whom it had been collected shortly after the town school law became operative. To provide for this rebate and to meet the resultant deficiency it was necessary for town boards of education everywhere to appropriate for approximately fifteen or sixteen months school expenses at the beginning. This fact is well known to every intelligent man who is conversant with the operation of the new school law.

Does the editor of the *Union-Star* remember a little more than a decade ago when the unit of taxation was changed from the district to the town and a money tax was exacted instead of labor for the repair and maintenance of our district highways and for snow removal therefrom? The change was compulsory and immediately successful. The howl of protest was as loud as it is today over school taxation. Let us have no more cheap functionaries like the old highway overseer or the obsolete district school trustee. Between their service and that of the dollar a year dignitaries at Washington there is a decided analogy. Let us apply the same principle to our schools that has proved so successful on our highways. If the town school law must be repealed to placate a certain class of economists let us re-enact the so-called "free school law" of seventy-five years ago when those who sent their children to school paid all the school taxes. Tax-reformers would then repress their noble rage and we who financed the schools would patronize and control them.

Delanson, N. Y.

W. W. CHRISTMAN

—*Schenectady Union-Star*, February 25, 1918

Rural School Law

Editor Post Express:

In your editorial on the rural school law in Tuesday's edition there is one sentence which seems to me to put the whole thing in a nut shell, if true. "Under the present law a general and undue rise in cost for rural education is not producing desired results." From the point of view of one township I would like to speak of that statement.

(1) There has been an advance in the school rate, chiefly for the reason that under the old boards the schools in certain districts had fallen into such a bad condition that the first task of the new board was to put them into shape at some extra expense. Better teachers have been hired, and teachers' salaries have been increased along with all other salaries and wages. If these things are taken into account I question whether one can say of this particular district of which I speak, that there has been an "undue rise in cost." There has been a rise in cost due to much needed improvements.

(2) But these improvements have not been spectacular enough to dazzle the eye of the people. Education is a process in which time is an essential factor. The full effect of the new law cannot be seen in a few months, but

with characteristic American impatience for "results" many people are ready to throw aside the old law before it has had a chance. If we remember that results in education take time then may we not ask whether the "desired results" are reasonable. Whatever these "desired results" are should they be expected in so short a time? Have we any right to expect such results? I believe that as much as ought reasonably to be expected has been accomplished by the new law.

I do not assert that the experience of the township of which I speak is typical, but I hope that those who write and speak on the subject will investigate the facts along these lines before they act.

Auburn, February 21, 1918

HELPER

— *Rochester Post Express, February 23, 1918*

The Township School Law

To the Editor of The Knickerbocker Press:

SIR: In the last annual message issued by Governor Whitman a severe attack was made on the new township school law, evidently inspired by the farmers of the state, many of whose taxes have been increased under this new law, it being the same law, by the way, approved by the Governor less than a year ago and which no one can claim has been given even half a trial. A special message has also recently been issued urging the repeal of the law, and much has been said and written both for and against it. Assuming the best of motives on all sides, I have good reason to believe that the opponents of the law are more scared than hurt, and as one deeply interested in the welfare of our schools and therefore strongly in favor of the township law, I venture to modestly also offer my mite in the general discussion.

At the outset I might say that the business in which I have been engaged for more than thirty years, to say nothing of having been a trustee and patron of a rural school for several years meantime, has brought me in close touch with the schools of this and many other states, thereby giving opportunity to obtain first-hand information in this connection, and because of this fact I might also add that it fell to my lot some years ago to prepare a paper on this township subject for a state association of school boards of which I was a member at the time. Submitting this brief explanation as my license for offering this communication, I will first cover the facts and figures gained for the occasion just referred to, and follow with more recent information along the same line.

And just keep well in mind, please, that the law which the Governor now desires repealed is the one that met with his approval last year; that his attack is based largely on the score of increased taxes among the farmers, regardless of any increased benefits under the law, and further, that this law was framed and fathered by the state education department after long years of experience and presumably with a fair knowledge as to the crying need of a better rural school system.

Now coming to the pros and cons. Let us first take a look at the benefits to be gained under a township system, and right here please take note that, contrary to the belief of many in our midst, a large number of other states

already have a township, county or other consolidated system, some of which have been in effect for many years. The little state of Vermont, for instance, adopted a township system more than twenty years ago, and in response to my inquiries when preparing the paper referred to, the state department of education advised me that the Vermont legislature did the heroic act in passing a township law with probably nine-tenths of the towns opposed to it, and that after a few years trial probably not three towns in the whole state would vote to return to the old district system, and here are some of the benefits set forth by the same authority:

"Better teachers on account of more judicious selection on the part of school boards and a sense of greater moral support on the part of teachers; better schools on account of better teachers, better equipment and greater interest; more economical expenditure of school funds; equalization in support of schools and a wiser administration of affairs. Under the district plan each succeeding committeeman felt constrained to maintain school a shade cheaper than the previous one in order that he might live comfortably in the community."

And yet under the township plan it was found that the "cost per pupil per week during each of the years of the township system was less than in any of the last five years of the district system, not including construction or repairs." The Vermont township law is the pride of the state today, and in recent years it has been made still stronger. A state board of five members appoints the state commissioner of education, his assistants and all superintendents in the union districts.

And in Massachusetts a township system has been in full effect for more than thirty years, from which state I also secured interesting information on the same occasion. The testimony of one of its veteran rural school officials was cited by the state department of education as illustrating the sentiment in the rural sections, as follows:

"For eighteen years we have had the best attendance from transported children, with less sickness and no accidents. The children like the plan exceedingly, and we have saved the town at least \$600 a year. Everybody is converted to the plan. We encountered all the opposition found anywhere, but asserted our sensible and legal rights and accomplished the work. I see no way to bring the country schools up but to consolidate them."

The Massachusetts township school system is today one of the oldest and strongest in the Union. A strong township system has also been in effect in the state of New Jersey for more than twenty years. Two attempts were made to repeal the law in the two legislatures immediately following its passage, both of which failed, and after which the law steadily increased in favor until practically all opposition vanished. At the time of my advice the state department briefly summarized the township advantages as follows:

"Equal school privileges for all, equal school burdens for all, better school buildings, better equipment, longer school terms, better qualified teachers, better supervision, increased attendance and interest, and more economical expenditure."

The state department also reported as on file about one thousand opinions gathered from prominent educators in every state in the Union, without one dissenting voice. "All commend the township system." And after more than twenty years' experience the department now reports general approval

and that the expense is less than formerly as compared with benefits, because the results under the township system are infinitely greater. And down in Pennsylvania a consolidated system has been in effect so long that the old district system has been forgotten, and our Canadian neighbors have also outstripped us in the consolidation of schools.

But suppose we now take a look at the objections to a township system here in New York, some fancied serious ones, and analyze them a little. It is pretty well understood that the big objection is on the score of increased taxes, largely among the farming class, and right here I take off my hat to the tiller of the soil as about the only fellow in the ring that we could not long exist without. And with all due respect for his objections the farmer is in fact the very one to derive the greatest benefit from a good township school law, and later on he will doubtless feel grateful to those who now stand against his objections.

What of the expense, anyway? Why have any schools if they cost money? Or, if we have any, why not have the best that money can procure? The plain truth is, Mr Farmer, the other fellow has been paying part of your taxes under the old district plan, while under the township plan you are required to stand a fair share of the burden. This really tells the whole story, but let us also look at two other minor objections advanced by the opposition, one of these being that the township plan takes away local control. That's a good one if you only think that way, but if it's a question between local control and good schools it ought to be taken away. If of so much importance in the country, why not also in the city?

Take Albany for instance, or any other city, who would listen to having a special trustee for each school, thereby creating no end of confusion and lack of uniformity in school management? At this point please note that under the old district plan there were more than ten thousand separate districts, each having one or more trustees in control, and consequently with about ten thousand different opinions as to school management, while under the township system there are less than one thousand school boards, each board having jurisdiction over all the schools in the town, perhaps a dozen or two, which means more uniformity of action and at the same time gives ample "local control." These town boards consist of three to five members each, according to size of the town, and can be selected from different districts in the town if the people so desire. It is strictly up to them to select an efficient business board.

Now comes the matter of conveyance to and from the schools. This is another staggering one, if you can only see it that way. Many children have too far to walk, for inclement weather, under the old district plan, and that plan has not yet been changed to any extent, while under a completed township plan a good system of conveyance would naturally follow, as in other states, transporting the children to and from school, with dry feet and dry clothing, instead of letting them tramp through mud or snow, in all kinds of weather.

Our timid friends tell us, however, that they fear to trust their children in a public conveyance for a few miles ride to good schools, while under the old plan large numbers of boys and girls, because of lack of good school facilities at home, are seeking advanced schools in the cities and villages all over the State, going back and forth daily by steam or trolley car, or other

conveyance, for five, ten, fifteen and even more than twenty-five miles, and of course at heavy expense to their parents.

Why not abolish the steam trolley car, and the automobile, all of which score a daily toll of accidents and lives in all directions? Of course all precaution should be taken to protect school children from possible accidents, but there seems no good reason to shy at a school carryall any more than at other modes of conveyance.

Here you have the three stiff objections to the township system—taxes, local control and the transportation of children to and from school, the fallacy of which seems well established by the evidence from the other states as cited above, backed by long experience. It would be a fine thing if all taxes and all accidents could be abolished, but of course no law can do the impossible.

Now let us take a little look inside and see if any real educational advantages can be found in the old district system over the new township plan. I have yet to discover a single one advanced by township opponents, but possibly some "benefits" can be found in the district plan, from the following references, which I submit with proper respect for the districts in question and without being too personal.

I have in mind, first, a district over in Rensselaer county with only about twenty pupils, but with an assessed valuation of more than \$500,000, more than half being against railroads and other corporations, from which it is easy to see that the individual tax is next to nothing. This district has a small school, with one teacher, and has been under the same trustee, a most estimable gentleman, for more than forty years. A few miles beyond this district is another one with more than ten times as many pupils and several teachers, but with a valuation of less than \$700,000 and less railroad and other corporation property than in the smaller district. No argument is needed to make clear the injustice of this system of taxation for school purposes. I also have in mind another district in the same county with only one pupil a year or so ago, and without even that one before the school year had half elapsed, and yet the teacher continued her daily visit to the schoolhouse and drew her pay just the same. And another district over in Columbia county having only one pupil, and with a valuation of less than \$70,000, paying at the rate of \$400 for the schooling of one pupil.

I am also reminded of a case reported some years ago, when the State paid only \$100 towards the salary of each teacher, to the effect that a certain trustee contracted with an adjoining district for the schooling of the children in his district at five dollars per year, taking the other ninety-five dollars himself for transporting the children back and forth. And he probably had a legal right to make such a deal, even though it was later discovered that all the children in the district belonged to this same thrifty trustee.

One more illustration of the benefits of local control under the district plan comes from a district in Albany county, having a small school and a valuation of less than \$20,000. It appears that the schoolhouse is also used for Sunday school purposes, or was a few years ago when \$15 worth of chairs were purchased, which led to a lawsuit, after a change in trustees, to determine whether the chairs were district property or Sunday school property. This litigation lasted for a year or two and cost the taxpayers over

\$1,000, to say nothing of the time and old friendships involved. And as a climax it developed in filing papers in the case, that about half the voters of the district were unable to sign their names except with a cross.

I cite this case as no reflection whatever upon the integrity nor good intention of anyone in the district, but as a crack at the district system under which it occurred, and no one is likely to be bold enough to assume that such a mishap could occur under a township system, with one board having control over all its schools.

I dare say that the State Education Department might reveal numerous other cases all over the State, more or less similar, discrediting point blank any system that tolerates them, if it could with propriety hold the details up to public scrutiny. It may not be amiss for me to here say that this article is written without knowledge of the State Education Department, but I have the facts from various sources in support of every statement.

At this point just make note that over 3,000 schools in this State have not more than ten pupils each, several hundred hardly half that number and a few with only one pupil each, and still our farmer friend objects to consolidation. And it may not be generally known that throughout the entire rural section there is an army of more than 500,000 boys and girls who must be content with the meagre education to be secured in the rural schools, except a small percentage whose parents may be able to send them to advanced schools outside. Now, I submit that these boys and girls, reared in the open, mostly with rugged constitutions and keen for a ripe education, are not being fairly treated, and that it is high time the actual rural school conditions are laid bare, wherever and whoever they hit.

Probably no school system could be devised that would suit every taxpayer down to the last point, but whatever the faults of the new township law it is a long stride in the right direction and should be made still stronger. Eventually every town with sufficient population should have a central school with a high school course and where vocational subjects are taught, so that every ambitious boy and girl in the town can be well equipped for the school of life. This doesn't mean the closing of all the "little red school-houses" of fond memory to the fathers and mothers in the rural districts, but it does mean closing the small and useless ones.

I respectfully submit that the great State of states, the most populous and wealthy of them all, which invests \$25,000,000 for a political winter resort, \$150,000,000 for a canal system, and untold millions for new roads, should not begrudge its children sufficient education to properly care for these legacies in future years. Let's all be fair to ourselves and give the present township law at least a few years' trial before we even attempt to condemn it, and then if it doesn't bring good results we will all oppose it.

I feel sure that it goes without saying that it would be a disgrace to the State to repeal the law at this time, as well as a gross injustice to the great rural army of boys and girls of today who are to become the men and women of tomorrow. And to save the present township law every man and woman at all interested in educational affairs and every boy and girl as well, should immediately appeal to their representatives in the Legislature to stand up and be counted in its favor at all hazards.

And I would especially urge those residing in the cities and villages, already enjoying good school advantages, to join in this campaign for the

benefit of their rural friends. And do it now. Why? Just listen a minute more, please. It appears that the farmers all over the State have been fairly burning the telephone wires for the last few weeks, and plowing through the drifts, regardless, in their frantic efforts to secure petitions and arrange neighborhood meetings for the purpose of creating a big repeal sentiment and making an impression in the Legislature. And, take it from me, they are doing it. Stacks of letters, petitions and telegrams have been flowing into the Capitol from the opposition in all directions, and the friends of better rural schools should come to the rescue of the township law in droves and quickly.

Every chamber of commerce, every mothers' club, every school society and every other progressive organization, as well as every individual at all interested, should express their views to their legislators by wire, letter, petition or in person. Otherwise your wishes will not be known when the question comes to a vote, and that day is fast drawing near.

The result will be far reaching, and it is up to the friends of better schools to say whether they shall move forward or backward—and to that end all sections of the State should speedily rally around the present township law and insist that its foundation stones be not tampered with.

Albany, February 23.

W. A. CHOATE

—*Albany Knickerbocker Press, February 25, 1918*

Gets after Foes of School Law

Styling opponents of the township school law, "penny pinchers," Will W. Christman, a farmer of Duanesburg township in Schenectady county, has written a letter to the editor of *The Knickerbocker Press* appealing to the Legislature to keep the present law on the statute books. Mr Christman has nine children who are now attending the schools or have done so, one daughter being a school teacher.

Mr Christman also makes a warm defense of the present Welsh-Slater physical training laws, against which some objections have been voiced to the Legislature from the rural districts. His letter follows:

To the Editor of The Knickerbocker Press:

"Sir: Mr Seibel should have included Senator Wadsworth in the cartoon recently published in *The Knickerbocker Press* in which he depicted Speaker Sweet and Governor Whitman in a sprint for the rural vote. It looks like a neck and neck race between the senator, the speaker and the Governor to placate the penny pinchers. But has Governor Whitman reckoned with the progressive farmers who have no objections to the town school law, but who did object to the régime of the obsolete district school trustee? From present indications the state administration proposes to take a step backward, to return to the moss-grown system, or rather lack of system of our great-grandfathers.

"A true indictment of the district school trustee is found in the speech of A. A. Lavery, published in the report of the state conference on taxation for 1915. Mr Lavery was chairman of the legislative committee of district school superintendents and a portion of the indictment follows:

"The ever changing school policy of districts consequent upon the change of trustees makes it impossible to fix and maintain any systematic methods either pedagogical or financial. It is a sad fact that in but few communities will a self-respecting man consent to be a trustee. Neither is this strange

when the only recompense received is the dislike of neighbors. This is much more serious than may be apparent, and in many districts it means that the last man to move in is elected, while it is a fact that even worse is true.

"The local difficulties experienced by trustees willing to do their best for the schools by petty jealousies, grumblers about taxes, and those who wish to make a trustee's life miserable and the consequent dislike of a self-respecting man to incur the displeasure of his neighbors, whether their complaints are well founded or not; the loss of taxes as a result of such grumblers and the neighborhood animosities consequent upon such returns as are provided by law; the petty, depressing local disputes met by every trustee over trifles are some of the reasons."

"Examples of neglect, inefficiency, lack of patriotism and ignorance were so common in the administration of rural schools under that system that I hesitate to classify those that were especially notorious. Cases of chronic truancy have escaped the law for months because trustee and teacher wished to avoid trouble.

"I have observed a delay of four months in a case of this kind and then action was taken by one outside the little official circle. During the last four years when the flag should have been displayed at all times it has been folded and laid away for months, because the trustee was too busy or too negligent to purchase a rope. I number among my acquaintances an ingenious slacker, the last school trustee in his district before the town school law became operative, who sent his fifteen year old son to school this term with instructions to give his age as fourteen years. On the school register of the previous term and in an application for a work certificate at that time the boy's age was given as fourteen years.

"It was learned that the parent planned for his son to evade the draft by a gradual reduction in years should the war continue. I recall an occasion when a rural district voted to dig a well near the school house rather than carry water used at the school from a nearby farm house. The trustee at that time had original opinions on sanitation and the well was dug within fifteen feet of the unspeakable school toilet.

"And this is the régime that our critics love. In one respect the department of education has been accessory to the crimes and misdemeanors of the system, for all the official inspection of our rural schools has been the perfunctory, annual half hour visit of the district superintendent.

"Critics of consolidated schools will wring your heart if it is 'penetrable stuff' because children must take those long, cold drives to the central school. That is not, however, the rural sentiment. Our own district with fifteen pupils, the largest in this section, I find after careful investigation, has a majority of voters in favor of consolidation, if there was a strong central school with which to consolidate. Two of my children in attendance at the Altamont high school, walk one and one-quarter miles to the station, ride seven miles and walk one-quarter of a mile from the station to the school. This is a walk of three miles and a ride of fourteen daily. Four of my children are enrolled in the rural school which is a little over one mile from our home. This compels the youngest to walk a little over two miles daily.

"On January 21 and 22, two of the Garfield holidays, my son, fifteen years old, walked from our home to Altamont for examinations, owing to the discontinuance of the weekly train service. On January 22, my daughter, seventeen years old, accompanied him, making the trip in two hours. The distance is six miles as the crow flies. On both mornings the thermometer registered zero. Every winter we have cases of frost late and we fail to see that the hardship would be greater if our children were compelled to ride three and one-half miles to Delanson where our central school should be located.

"Impossible owing to climatic conditions,' with these words Mrs Merritt dismisses the subject of consolidated schools in a letter to the Altamont Enterprise. The Altamont high school has been closed on several occasions this winter, so has the Delanson village school, and so has every rural school in this section 'owing to climatic conditions,' but that does not alter the

fact that when it is possible for a child to walk one or two miles over a country road, it is equally possible for them to ride three or four. My children have made the trip to Altamont twice this winter and found the school closed owing to the cold.

"Impossible, Impracticable!" So some of our predecessors argued while the first steamer crossed the Atlantic. 'Impossible! Impracticable!' so they cried when the rural mail delivery was introduced. I have a neighbor who still goes a mile and a quarter to Duanesburg postoffice for his paper, when the rural delivery from Delanson has passed his door for six or eight years. My neighbor also opposes the consolidation of schools.

"We agree with the conscientious objectors to physical education that our children are getting considerable physical training outside the curriculum, but if we speak here and now in defense of the physical training law or go out in the barnyard and wave a red flag at the Holstein bull, we place ourselves in an analogous situation. Our opponents may be stoop shouldered, short breathed, or anaemic from wrong living but they cannot repress their noble rage when the subject is mentioned.

"While the physical education law has the earnest approval of progressive parents, it is usually confounded with the town school law by its critics, in both senses of the word. It is a matter of rather recent history that the introduction of the study of physiology in our schools was the signal for a similar clamor. Educators have learned that a trained body is just as essential as a trained mind. In spite of the boast that the law should not apply in the country owing to the fine physique and robust health of our young men, the provost marshal's report of the operation of the selective service act contains the interesting statement that the percentage of physical disqualifications was almost exactly the same in urban as in rural districts.

"I cannot attest for Mrs Merritt that our district school buildings have been kept in good condition. From personal observation extending over a long period I can corroborate the testimony of Mr Herrick. At this moment I can designate two school buildings that upon proper complaint and investigation would have been condemned several years ago. Besides years of inattention and neglect, many of our buildings lack the modern requirements for ventilation and light. There are other improvements required not less essential. I refer to the perennial condition of the out-buildings or toilets, which are a menace to health and a disgrace to civilized beings.

"Regarding an appropriation by the board of education for the town of Guilderland, Mrs Merritt writes: 'More than \$2,000 for what was formerly done without any compensation whatever.' We have samples of the kind of service our critics love in the dollar-a-year dignitaries at Washington, and Mrs Merritt has been a country resident long enough to remember when we tried the same cheap functionaries on the town highways until the highways overseer became a joke.

"It is acknowledged that the repeal of the town school law is demanded because of increased taxation. The increase was inevitable as the increase in cost of food, clothing and shelter was inevitable. Last year my daughter taught eleven pupils in an Albany county district. This winter she has six pupils in the same school and an increase in wages (she is paid \$11 a week and does the janitor work). Next year this school will enroll three pupils and the teacher will have another increase in wages.

"Unless the law provides for the consolidation of schools the tax per district or town will continue to increase regardless of the decrease in pupils.

"United States Senator Wadsworth has brought suit against the board of education of the town of Caledonia, Livingston county. Elihu Root is the senator's attorney. As reported in the newspapers Senator Wadsworth charges that the amendment which raises his school tax in the third district from \$168.30 to \$729.30 is unconstitutional in that it taxes one unit for benefits derived by others.

"Because of the new law the school tax in the town of Caledonia is \$6.50

a thousand which was levied on real property owners in the third as well as the other districts. The rate of \$6.50 a thousand is not unusual or excessive in those sections of Schenectady county, where little corporate property exists. My own rate was almost exactly that amount before and after the town school law became operative. In reality the first tax levy under the town school law was approximately for fifteen months' expenses. Unhappily Senator Wadsworth, Speaker Sweet and Governor Whitman are each in his own characteristic way, using the situation to the limit.

"I have in mind a picture of Senator Wadsworth and Elihu Root, a picture that should be impressed upon the minds of the recently emancipated voters of the Empire State. Senator Wadsworth is a farmer, in the kid-gloved class, an opponent of prohibition and a versatile and dangerous enemy of equal suffrage. Mr Root was once elected to the United States senate when that office was indirectly elective. He was an uncompromising opponent of the election of United States senators by the people and unfortunately for his own further political preferment voiced that opinion in a speech to the legislature, thanking them for the honor conferred. Since his voluntary retirement he has not added to his popularity by emulating Senator Wadsworth in opposing votes for women. Take the picture with you, my newly emancipated fellow citizens; study it well. Is not the attitude of these two gentlemen on the improvement of our rural schools very natural and characteristic?

"In a previous paragraph I referred to the obsolete highway law of two decades ago. When the state arbitrarily changed the unit of taxation from the road district to the town and exacted a money tax instead of labor for the repair of our dirty roads and the removal of snow, there was, I think, a louder howl of protest than we now hear against the central control of schools. The 'money system' as it was called, has proved its efficiency and economy.

"Now, out of the wreck of socialistic ideas in the world war we have salvaged and will utilize probably for all time, the government or central control of railways. On this subject Oscar Straus writes:

"'With only three per cent increase in equipment they (the railroads) have shown twenty-six per cent increase in transportation service, simply through being permitted to operate their properties on a national instead of a sectional or local basis.'

"Let us apply the principle which I have illustrated in the administration of our schools.

"One of the stock arguments against the town school law is that it meets the approval of officials and teachers only, while ninety-five per cent of the rural population are demanding its repeal. Another argument is advanced that parents everywhere opposed the consolidation of schools. I am not a teacher, and I have for years persistently and consistently refused the office of district school trustee for one of the very reasons given by Mr Lavery, namely, 'that no self-respecting man could accept the office.'

"I am a farmer, born and reared on the farm where I now live. My wife and I are taxpayers. The cost of tuition and transportation has compelled us much against our wishes and interest to send our children to the rural school until they are fourteen or fifteen years of age. The ultra tax reformers might well work themselves into a fine frenzy had they children of their own to educate.

"We have nine children whose ages range from twenty-four to nine years. Our eldest boy is a graduate of the Altamont High school, was a teacher in the rural schools for three years and is now a noncommissioned officer in the 105th United States infantry.

"Our eldest daughter is a graduate of the same school and is teaching her second term in an Albany county district. Our second son, age eighteen, completed his second year at the High school last spring and enlisted in the regiment with his brother. Our second daughter and third son are now in their second and first years respectively.

"Our railway station is Duane, seven miles from Altamont. Car fare is \$27.50 per school year for each child. At the close of this school year our

total contribution to the D. and H. company for transportation for our children will be \$347.50.

"It has been said that education weans our boys and girls from the farm. This we deny. If our sons survive the war they will return to rural life and occupation. So will our son-in-law who was a farm laborer and is now with the colors in France. We love the farm, our children love the farm, and with some privation and much labor we are educating them for the farm by the farm.

"The legislature has been moved by the clamor of tax slackers to consider the repeal of the town school law. Its repeal would placate a minority of unprogressive and ignorant economists. The department of education has given fair warning that its repeal would be disastrous. Education has made equal suffrage a fact. It has made an immediate prohibitory liquor law possible.

"In education lies the safety of our laggard democracy. Let us not take the backward step, gentlemen, let us go forward and consolidate the schools."

Albany Knickerbocker Press, February 26, 1918

Township Schools

The Legislature is now considering a new school law. It repeals the present Township Law; it provides that the present district school of a town shall elect trustees, which trustees shall unite and form a town board of education, very similar to the present town board of five members, excepting that union schools maintaining an academic department are excluded from such organization and themselves shall return to the old system of a separate board of education and separate tax for their own support. The proposed law puts the rural schools back entirely into the hands of the people of the rural districts, the only change seemingly being a united board of education and an equalization of town school taxes outside the village high school districts.

This removes from rural districts the burden of helping the high school or academic school district taxes only along the lines of tuition which they must pay as now for rural pupils attending the high school or academic school.

Speaking candidly the proposed change thwarts largely the purpose of the present Township System in one particular and that is the taking out of the hands to a considerable extent the care and maintenance of rural school buildings from the taxpayers of the separate districts. The rural school buildings, with occasional exceptions, have been shamefully neglected, and in many instances the children of rural communities may be grateful for the immediate action during the past year of the Township Board of Education, which began at once after organization to make repairs and improvements to rural schoolhouses long needed and found in a dilapidated and disgraceful condition in many instances.

If the present Township Law is abandoned or changed as proposed, then the Rural District Superintendent is the power that stands between the children and the taxpayers and comfortable and properly equipped school buildings. If the school officer has got sand enough and is not afraid of war he can bring about the conditions needed—and he always has the State Department behind him.—*Morris Chronicle, February 27, 1918*

Reply to Mr Lord

To the Editor of the Sherburne News:

It is with much interest that I have noted the recent articles in your paper upon the Township School Law. As a taxpayer and District Superintendent of schools I think it my duty to make a statement in regard to this matter:

First: So far as I am able to learn the chief objection of the Township School Law is the increase in the rate of taxation, a condition which after careful study I am convinced will not be helped to any extent by repeal of the law. Especially will this be true among those districts lying back at a distance from the prosperous centers. Teachers' wages have advanced and will advance still more, and it is my opinion that it will be a difficult matter another year to obtain the services of a country school teacher for less than \$12 per week. We have difficulty even this year to obtain teachers for this wage. The cost of all supplies, repairs and other items of maintenance have advanced from 30 to 50 per cent, and a repeal of the law cannot reduce this additional expense in maintaining a school. In my judgment we should have asked for more state aid instead of the repeal of the law. When a district school could be maintained for \$400 the apportioned perhaps \$175 to that district, now it will be a difficult matter to maintain a district school for much less than \$500. The State still apportions \$175 to the same district. It is no more than right that the State should be asked to bear its apportionate share of this advance in the cost of maintenance.

Second: I also desire to call to the attention of those opposed to the Township Law that six months is altogether too short a time to give a fair test of operation. In the first place, there was no balance on hand at the beginning of the school year. In the second place, repairs which normally were made during the summer vacation, had to be attended to and paid for later in the season. Teachers' wages were raised this year, not by the town boards, but by trustees elected under the old district system. This item alone I have found to amount to from one to three dollars per thousand dollars valuation in many of the common school districts. This advance in wages ought not to be charged against the new system. A sum also had to be raised to provide for repairs during the summer vacation of 1918, and also to provide for a balance on hand with which to pay the first months' salaries of the teachers at the beginning of the next school year. Funds also had to be raised for new record books, and many other additional expenses resulting from a change to a new system. Many of these things will not have to be provided for another year, and it is my opinion that the tax rates next year can be somewhat lowered in the various school units of this supervisory district, even though there be some advance in teachers' wages. At least time should be given for a fair test of operation before the township system be so severely condemned, for I am of the opinion that the schools of any town unit can be maintained more economically under a township system than it would be possible to have them maintained under the old district system.

Third: The principle of the township system is right. Nearly every state east of the Mississippi river and north of the Mason-Dixon line has a township system of schools. Simply because changing from the district system to a township system has resulted in an increased tax rate the first

year, causing some of the prosperous communities to pay a fair and just proportion of taxes for school purposes, is no proof that the principle involved is wrong, and even though I myself, had to pay more than double the school tax this year than formerly, I believe that the equalization of taxation for school purposes is right and just. To return to the old district system means high taxes for some districts, low taxes for others, and higher taxes for all. It also means a retardation in educational progress for at least ten or fifteen years. What our communities should ask for is not a repeal of the Township Law, but amendments which will do away with the objectionable features, bring more aid from the State, and warrant the successful operation of the schools under this system.

Yours respectfully

ALBERT C. BOWERS

A Reply to Mr Lord

Editors Sherburne News:

I have a high regard for Mr Lord but I can not agree with him on one point in his article in your last issue in which he deals with taxation for school privileges. He argues that those who receive the greater school benefits should pay more than those who receive less. He says, "If the children of a man have the opportunity while living at home to easily attend a school with an Academic department he should pay more for it than the taxpayer whose child only has the benefit of common branches." This seems reasonable, but I believe it proves too much. If a taxpayer should only pay according to what he or his family gets, what about those who have no children? The man with six children to be educated should pay six times as much as the man who has one; and many times as much as the man who has none; in fact as the latter gets no direct benefit from the school, either district or high, he should pay nothing at all. I have heard this argument advanced. I remember a very wealthy and childless judge berating the fact that he had to pay for the education of the numerous progeny of the immigrants. I asked him whether he would like to have a horde of ignorant and untaught foreigners vote on matters affecting his property and the welfare of his city or would prefer to have these voters educated and trained as far as possible in American ideals. The fact is that education is a benefit not merely to the man who has children to go to school but in a general way to all alike. We would all prefer to live in a country where education is more or less general rather than in one of almost universal ignorance like Russia. Education is not like other village or city privileges such as water and lights and police and fire protection which are of greatest advantage to those who live in the city or village and are rightly paid for by village and city people and not by those outside who do not profit by them. Education on the other hand is of advantage to all whether they live in the village or the country and should be paid for in equal proportion by all. I think that is the American theory.

At the same time, Mr Editor, the school privileges in all parts of a town should be made as nearly equal as possible. That is why I believe in the

township system as it is and has been for many years employed in neighboring states. The trouble as I understand it with our present township school law is that it is neither one thing nor t'other; neither fish, flesh or fowl or good red herring. It ought to be made one thing or the other. It might be repealed. I believe we would be in line with modern progress if instead we should make it what it ought to be and carry out in good faith the township system as found in other states. According to this system the old districts would be entirely abolished. The school business of the whole town would be put into the control of a board representing the whole township. Schools would be combined and as soon as practicable modern school buildings with all needful appliances and conveniences would be built in one or two well chosen centers outside the village. If the system is carried out as far as it is in many towns free transportation would be furnished to those who need it. In this way school privileges would be equalized as far as possible through the whole township.

Something like twenty years ago, Mr Editor, I wrote some articles for the *News* on the township system. I had come from a state where the old district system had then been long abandoned as antiquated and inefficient. I trust that "An Interested Party" and myself are not the only persons in Chenango county today who favor the new way. New York is now one of the very last of the states to see that the district school system is prehistoric. "The little red schoolhouse" is very poetic and all that but it belongs to the age of the stage coach, the spinning wheel and the tallow dip. Sooner or later it will be superseded by something better.

Yours truly

WILLIAM A. TROW
Sherburne News, February 28, 1918

The Township Education Law

Commenting on the attacks upon the Township Education Law the *Union* expressed the opinion that the real animus behind the criticisms of the law was the alleged increase in the cost of maintaining schools. We further expressed the opinion that this alleged increase was in no sense attributable to the law.

When the schools came under the operations of the township law last August there was not a dollar in the town treasuries as a working capital for the school system. The districts of the State which then came under the provisions of the law had been in the habit of carrying a balance from year to year for working capital which in the aggregate amounted to between one and two million dollars throughout the State. The towns were without this working capital and it had to be included in the amount raised by tax for the first year. No figures are available to show just what the amount by which the first year's school tax was thus increased amounted to, but in the cities and villages where such funds have maintained, the records show that the balance from year to year has averaged about 10 per cent of the total tax. It is reasonable to assume therefore that at least 10 per cent of the amount raised under the township law for this first year is due to the necessity of raising this working capital and not in any sense to the provisions of the law.

A study of school taxes raised this year under the township law shows an increase of about 30 per cent over the last year under the old district system. Ten per cent of this, we have seen, may reasonably be attributed to a necessity which will not exist after the first year. The remaining 20 per cent is easily accounted for. The cost of maintaining schools, like the cost of labor and materials going into any other line of activity, has materially increased during the year. Reports from nearly fifty cities and incorporated villages in New York State show that the increase in the cost of maintaining schools has been from 15 to 30 per cent during the past year and that the average increase throughout the State is not far from 20 per cent. There is no reasonable ground for the statement that the township law has increased the school tax.

What it has done is to equalize the school tax throughout the town so that every \$100 of assessed valuation in the town pays the same amount of school tax, just as every \$100 assessed valuation pays the same highway tax, the same general town and county tax, and the same State tax. Every \$100 of assessed valuation in a town pays the same tax for the maintenance of improved highways, although the improved highway passes by very few of the acres so assessed. The result has been to increase the school tax in some portions of the town and decrease in others. The records show that the tax has been decreased in more school districts than it has been increased. It is the people who live in the districts where the increase is effective who are making the noise. The people from the districts where there has been a decrease have not been heard from.

We do not believe that, on a sober second thought, the people who are criticizing the new law, will be proud of their precipitate action. They will, we think, come to realize that the school system of the State is one of its important foundation stones, that its maintenance is for the benefit of the whole State and that the proper unit for distributing the expense is the town, just as they have come to recognize the town as the proper unit for every other form of local taxation.

There are undoubtedly defects in the township school law. Its most ardent supporters do not claim that it is perfect. But we believe that its principle is sound and that its critics might be much better employed to improve it than in an effort to destroy it and return to an antiquated system which has no merit to recommend it.—*Chenango Union, February 28, 1918*

The Little Red Schoolhouse

The Eagle has often agreed with Governor Whitman and much less often with Senator Elon R. Brown, but on the issue of the "little red schoolhouse," Senator Brown is right and Governor Whitman is wrong. The idea of capitalizing the sentimental interest in the "little red schoolhouse" in order to secure the repeal of the township school law is political buncombe, in this case fitly contracted to "bunk."

The interest of the farmer in the "little red schoolhouse" is not because the district school system gives better teaching than the town system, with its opportunity for the farmer's children to pass on from their neighborhood school to the town high school, but because the district school system gives more patronage to the political leaders of the school districts and

enables them to keep their school tax down. There is a teacher to be hired for the district school for every term, and so long as her selection is in the hands of the district committee she becomes an item of patronage which is convenient if not profitable. In the old days there were districts in which every family having a daughter who had put up her back hair "got a whack" at the summer term of the school. In the summer the big boys and girls stayed at home to work, and it was held that any girl whose father had a vote was a good enough to teach the little shavers.

The compulsory education law may have destroyed that primitive form of graft, but the power to choose teachers and to buy material when a new schoolhouse is to be built is still attractive to the sort of men who are elected on school district committees. The wiping out of their "home rule" under the town school law is the root of a good deal of the effort to swing the State back to the old and utterly inadequate district system. Half a century ago, when the "little red schoolhouse" was all there was for rural communities, it started many fine men up in the world. But in those days the demand for good teachers for cities and big towns was not so strong, teaching had only begun to be an organized profession and a great many college students and young women of the type who now become high school teachers were glad to get district schools to teach. The only chance to secure that grade of instruction now is through the town system, which gives the good teacher a steady job instead of one held at the will of the local committeeman. The town system has come to stay and Governor Whitman in trying to stop it suggests Mrs Partington and her broom at the seaside. He seldom gets on the wrong side of so sound and progressive a measure as the town school law.—*Brooklyn Eagle, February 28, 1918*

The Township School Law

To the Editor:

The township school law seems to have us all going and coming. It has not had a fair trial. As a former trustee for the 10 years previous to the taking effect of this law, and as a member of the present board, I would not repeal it, but amend it. In making the town the unit of taxation it is good and the district that I live in pays one-third of the taxes, and would have had a tax rate this year of four mills. Under the township law it was 6.15. The good point was, that two districts for several years did not keep school, therefore paid no taxes. Now everybody does. The same faults in the township law were in the old law. The rural schools are held down to grade work, the main reason being for lack of taxable property. When the mortgage tax law passed this district lost \$9000 of assessable property another nearby district lost \$6000. There went what would make five good farms in assessed valuation or nearly one-half of some school districts. No property should escape school taxes. No one should be in any school office that does not have children in school. There are too many without them, that are put in for the purpose of keeping down taxes, regardless of any good to the children. I agree with Mr Yager in that the new bill affords no better school facilities. But it is a better business method for running them. If the department had with a little more foresight buried the sanitary closet order until after the war and the State not enforced the

physical training law in rural schools until it could have been carried out, half the fault with the present bill would disappear. Consolidations should never be forced and no school should be maintained without 10 pupils. High school girls should never be sent out to teach us hayseeds farming until they know that twisting a cow's tail never milked a cow, none but normal graduates with agriculture training at Cornell or some other place should be allowed to teach in rural schools. By my experience in serving in the regulars during the Spanish war, I know that physical training is a great thing for anybody. The way it is done in Richfield is by proxy. Our district superintendent hired the physical training teacher and schools had been going five weeks before we knew it, and we were asked to pay one month's salary before contract was signed. Since then the teachers in this town have each received one letter per month and each school has been visited twice by the teacher, during the 20 weeks of school. The parents are asked to sign a card stating their children have put in three hours of physical activity at home during each week. The State will pay one-half of this and the town one-half. Why not furnish each teacher in town with some book upon physical training and save this graft or unearned salary? The best way is to oblige every rural teacher to learn it and not allow them to teach until they do, in the meantime suspend the law.

If the State would select the central school district of each town and support it to the extent that taxes would not be or amount to confiscation obliging such school to teach agriculture and high school work (at least two years high school), would reduce the rural schools by one-half in less than 10 years. Unless something like this is done to stay the flow from the rural districts to our industrial centers, and where proper schools are maintained, you will all pay higher and higher for what is needed to sustain life and any law like the old or present, until it contains something like the above, will not be popular.

Richfield, N. Y.

FLOYD B. PALMER

—*Richfield Spa Mercury, March 1918*

The Rural School Question

Editor Post Express:

This is no time to waste money. We have paid twice and three times as much for our schools this year. They are no better than before. We all know of injustice, unfairness, poor teachers, poor schools, the time of the children wasted, the money of the parents wasted. We all know what we don't want. We have talked, we have written letters, we have criticised. Things are not right, more money spent, no results. This is extravagance, inefficiency or graft. The schools are in a mess. Now we will have to go to work to get them out. We must decide what we want, then go ahead and get it. Everything is possible where the stake is the welfare and future happiness of our dearest possession,—our children.

1. We want equal educational opportunity for every child in New York state, whether he live on a farm, in a town or in a city. We want equal educational opportunity.

Fifty years ago we were a homogeneous people with agriculture as the basis of our economic life. City and country were practically on an equality,

socially and economically. The educational opportunities of the city child and the country child were equal. With the introduction of machinery, the building of large factories and industrial enterprises, the wealth became centralized in the cities. There was a corresponding period of depression in the country. The country school has remained what it was because better schools mean more money. The cities had improved, the money had improved their schools until now the opportunities for education are very unequal, a most undemocratic condition.

Fifty-eight and five-tenths per cent. of the children between 6 and 20 years of age in the United States live in the country, and 41 per cent. of the adults. So less than half of the people are asked to educate more than half of the children.

The percentage of illiteracy in the country is just double that in the city. And 50 per cent. of the country children never get beyond their own districts.

The solution of the problem how to give to every child in the state equal educational opportunity, is to make the state the unit of education; not districts, nor townships, nor counties but the state. All the property in the state, including city property, should be taxed for the support of every school in the state, a uniform tax rate. There should be a state department of sufficient strength to direct and unify the educational development in the state and entrusted with the control of all the school funds. This would mean that every school, wherever located, would be a state school. There would be one standard for all in buildings, equipment and teaching force.

This would distribute the corporate and other wealth now centered in the cities, over other territory where it is so sadly needed.

A standardization in education is not a new idea in our state. For many years we have had the Regents' examinations, which insure a standardization of results, but not of the means by which these results are attained.

Why should the wealth of the cities help support the schools in the country?

First, because it costs more to educate a child in the country. In Michigan in 1902, in schools of less than six pupils the cost per pupil was \$99.50; in schools of less than fifteen pupils it was \$41.50, and in the cities it was only \$19.50.

Second, because the country feeds the city. A recent report shows that 45,000,000 producers are feeding 90,000,000 consumers. It shows that at the present rate and without a war, in 20 years from now we won't be raising enough wheat for our own consumption.

Food will win the war.

Don't waste it.

Food will win the war.

Help raise it.

Food, food, more food. The city people must have food.

The farmer wants his children educated.

The successful farmer can afford to move to the city in order that his children may be well-educated. But the city can't afford to have him leave the farm because he is the man who can make two blades of wheat grow where one grew before.

There are 350,000 teachers in the rural schools of the United States. Of these 68,000 have no professional training whatever, and only 1,100 are college or normal school graduates. Would this be tolerated in the cities? Our

Normal schools are State schools for the benefit of all. Are these schools training girls to teach in the country? Are they trying to create an interest in rural work?

We want our children in the country to have at least the medical care received by children in the city schools.

A child is an asset to the nation only when he has health, trained ability and a living desire to serve the state.

Is the health of our children being conserved when they are compelled to assemble in a school building and are not protected against infectious and communicable diseases?

The discrimination against the health of country children has gone on long enough. Not to protect them is a crime.

We want our schools out of politics. One of the greatest obstacles to rural school progress is partisan politics and factional favoritism. A noted educator has said:

"The only remedy for such evils is creation of public sentiment that will demand that all public school officers make merit the determining force in the selection of teachers, and public economy their motto in the administration of public school funds. In the management of public schools all distinctions, social, political and religious should be banished, all differences hushed. This management should recognize neither party nor church creed, condition nor station, but it should be so administered that its bounties and benefits will fall in equal measure upon all."

Favor School Law as Forward Step

Downsville, N. Y.,

February 26, 1918

Editor Reporter:

I did not intend to say anything for publication relative to the township school law. I have refrained from doing so by main strength. But I am not willing to allow the statements of my good friend, A. P. Cook, of Cooks Falls, as published in last week's *Reporter*, to go unanswered because they relate to the acts of the town board of education of which I am a member, and his statements are based upon a misunderstanding of the law or a misapprehension of the facts, or both. The desks removed from the school house at Cooks Falls for use in the new department recently organized at Horton, have not been appropriated upon the assumption that the town owns them under the law. It does not. They are the property of the Cooks Falls district and will continue to be until appraised and paid for. The board has had occasion in other instances to remove certain school furniture from one district where it was not needed to another district where it was needed, but an account has been kept, and all such articles of property will be credited to the district owning the same or returned to the owners and rental paid for the use of the same.

Section 353 of this township school law provides that an appraisal of all

school properties in the several districts shall be made within one year from the time the law went into effect, and the value thereof apportioned among the taxpayers of each district in the ratio of their several assessments, and certificates of credit issued and delivered to each taxpayer, which will be paid in the manner provided by the law, and can be used and cashed at a bank in the same manner as a town audit. This appraisal would have been made last fall except for the fact that opposition to the law developed among certain farmers whose taxes had been raised by equalizing the school taxes and making the town the unit of taxation instead of the school district. Not knowing what would be the fate of the law this winter it was deemed advisable to defer the appraisal of school properties throughout the state until spring. If the law is not repealed the properties will be appraised this spring. If it is repealed the school furniture taken from various districts will be returned to the districts owning the same and the rental value thereof paid. This is all I expected to say, but having the paper in my typewriter I would like to finish out this sheet if I will not be taking too much of your valuable space.

I would like to state first that because I happen to be a member of the school board and privileged to work in that capacity for nothing and board myself, I am not biased in favor of the law, but think I can judge of it fairly upon the merits. This law has increased my real estate school tax seventy per cent, so it does not work to my financial advantage, but it does square with my sense of justice. I think I should be required to pay for the cause of public education in the town where my property is located at the exact rate which the other taxpayers in the town pay. For the past thirty years I have taken a lively interest in the education of children in the public schools, as a school teacher, as a school commissioner, and as a member of our village school board, and have kept in touch with the school affairs of this state, and to some extent in some other states. Feeling this interest I have read all that has been published in adverse criticism of the law in our county papers, and also many articles in papers published in the cities, and I am frank to say and candid in saying it, that there is a very great amount of misinformation abroad concerning the provisions of this law. In nearly every article which I have seen written in opposition to this law, its provisions are misconstrued or misstated. What is needed in reference to this law is not its repeal, but the enlightenment of the public as to its provisions. Take for example the three letters published in last week's *Reporter*, not that I desire to criticise the writers, for any other letters written in opposition to the law which have come to my attention would do as well. The complaint of Mr Misler and Mr Downer is that the law is to blame for taking their children away from Burnwood or Elk Brook and conveying them to a school many miles away through zero weather, etc. Now, as a matter fact neither the school at Burnwood nor at Elk Brook has been closed, and no children conveyed from either district, and there is not the remotest probability of any such event happening. There is no provision in the law requiring the closing of any district school and the transportation of the children to distant places. In fact the law provides in the very first section that no district shall be consolidated with another district without the approval of a majority of the voters of both districts. And so it goes. The same sort of criticism runs through all the letters I have read.

They take some old clothes of fiction and stuff them with their imagination and set up this scarecrow and call it the real thing and proceed to throw stones at it.

If those disposed to condemn the law would take the law itself and read it, and not base their judgment upon what somebody else says about it, and compare it with the law as it existed before the township amendment, there would be much less opposition to the law. Educators have fought and bled and died for this law. It is the result of the well considered and mature judgment of men and women of wide knowledge and experience in rural education, who have had the advantage of understanding the practical workings of township school laws in other states where the plan has been worked out and tried out and succeeded. In those states they have seen the same opposition when the law was first put in force, that they now see in this state, and they have also seen that opposition fade away and after a few years the most violent critics became its firm supporters. And that is what would happen in this state if the repeal of the law could be deferred for a year or two and give time for a fair trial.

It would seem that a law thus conceived and worked out in the cause of education in rural districts, and which has the support of the education department, regents of the university, district superintendents, school teachers, and all educational associations, ought to receive respectful and sympathetic consideration from those who have made no special study of those matters. There is a lot of camouflage used to hide the real cause of the opposition to this law. The foundation of all the opposition that has arisen may be found in the fact that the big farmer who assumes to speak for farmers generally, and who lives at or near the rich and valuable portions of the town where taxable values are high and where the railroads and corporations are located, have been compelled under this township law to pay his just and equitable portion of taxes for the support of schools in his town, and by thus equalizing the tax rate over the town, his taxes have been materially increased over what they were under the district plan. The fact that the small farmer living on cheaper lands and remote from creameries and village has had his tax lowered proportionately does not concern the big fellow. It is the big farmer who is doing the kicking. It is he who attends farmers' gathering and does the talking. It is he who talks about preserving the little red school house, which by the way is not in his school district, but is situated in the back district where the farmer has been paying under the district plan as high as \$60 school tax on a thousand dollars assessment, while the farmer who is now assuming to speak in his interest has been paying as low as \$8 on a thousand. Under the present law they both pay about \$15 on a thousand.

It must not be supposed that all who have had their taxes thus increased are opposed to the law; it is only a portion of such, and a small portion at that, but a very noisy portion. They are ashamed to admit the real cause of their opposition, and are assuming to base their opposition on other grounds, and even assigning provisions to the law which are not in the law at all. Most of what we hear against the law is said in good faith, but based upon what somebody says about the law and not upon the law itself.

Governor Whitman approved the township law one year ago; in his annual message last fall he asked that the law be amended; later in a special message

he demanded its repeal. Speaker Sweet says that the Governor obtained from him in confidence what he and the other politicians had agreed upon with reference to this law, and then incorporated this in his special message. In other words the Governor stole Speaker Sweet's thunder, and the Speaker did not like it as he had notions of running for Governor himself next fall and he wanted to win the favor of the farmers by acceding to their wishes in respect to the school law.

The politicians at Albany are not at all concerned about the rural school law. With them it is anything to get back into the good opinion of the farmer in order to get his vote next fall. So the politicians have introduced a rural school bill which repeals the present township law and enacts another law in its place, and this new bill has been scattered broadcast among the farmers and farmers' organizations to ascertain if it suits them. This bill was drawn without consultation of the education department or the regents of the university or any other educational body. Even the chairman of the Assembly committee on public education refused to introduce the bill, and the one who did introduce it is evidently unwilling to father it as he requires the statement in the heading that he introduces it "by request." About two-thirds of this bill is copied verbatim from the present township law. Some of the new matter cannot be understood and would lead to confusion if enacted into law. Some of its provisions are unjust and will greatly aggravate the "evil" it assumes to remedy. If this bill is enacted into law, the fellow who is now kicking against the present law will find that he has jumped out of the frying pan into the fire.

I don't know that the politicians who drew this bill are to be much blamed. They were called upon to do the impossible thing. They undertook to provide a remedy for an evil that was not contained in the township law at all, but resided only in the imagination of those who were opposing the law. Allow me to make just one comparison between the present law and the proposed law drawn to correct what they call an injustice in the present law. And in doing this I will take the matter alluded to by Mr Cook in his letter above referred to, and make the comparison concrete, so no one will fail to understand what I mean. Mr Cook said that Cooks Falls has a school house costing \$2,500, well equipped, and he feels that it is unjust to ask the taxpayers at Cooks Falls who have already been taxed to build and equip their own school house, to pay their portion of the tax to build a new school house in another part of the town from which the Cooks Falls people can never receive any benefit. I will assume that the valuation of all the taxable property in the town is one million dollars; that the value of the Cooks Falls school house and equipment is \$2,000; that the assessed valuation of the property in the Cooks Falls district is one hundred thousand dollars, and that Mr Cook's property in Cooks Falls is assessed at \$1,000. Under the present law when the school properties are appraised and certificates of credit issued to the taxpayers in the several school districts as provided in the section above referred to, Mr Cook will receive \$20 as his proportion of the value of the school property in his district. Pepacton, ten miles away, needs a two room school house at a cost of \$2,000. This amount will be assessed on the whole town and Mr Cook will pay as his proportion the sum of \$2. That is the way the matter works out under the present law.

Now how does this proposed law meet the situation? It would lay the tax on the whole town to build the school house at Pepacton, except the Downsville district, and deducting the valuation of the property in the Downsville district, Mr. Cook's taxes would be \$2.50, and he would have no credit whatever on account of the valuable school property in Cooks Falls. Under the present law every district receives full credit for its school properties, so that each district is placed upon an even footing. Under the proposed law the district having valuable school properties is reduced to the same level as the one having none at all. There are other provisions of the proposed law that "remedy" the evils of the present law in the same fashion. All of which proves the truth of the adage, that a shoemaker should stick to his last.

It is unfortunate that we have so many politicians at Albany and so few statesmen. Allow me to quote the words of Robert G. Ingersoll in his great tribute to Roscoe Conkling delivered before the legislature at Albany.

"The politician hastens to agree with the majority, insists that their prejudice is patriotism, that their ignorance is wisdom; not that he loves them, but because he loves himself. The statesman points out the mistakes of the multitude, enlightens and enlarges their minds and educates the conscience, not because he loves himself, but because he loves and serves the right."

If those who are running affairs at Albany were statesmen instead of politicians, instead of yielding to the behest of those who do not understand the law, they would enlighten them concerning it and point out the mistakes of the opponents of the law and disclose its merits. Then practically all opposition would cease. In every farmers' gathering in this State where the township law has been discussed, and opportunity has been given to some educator to explain and interpret the law, opposition has been overcome. One instance of this was at the recent meeting of the delegates of the state federation of farm bureaus at Ithaca representing a membership of 50,000 farmers, where Professor Work of Cornell University explained the merits of the law, and answered every objection so satisfactorily that the report says that Mr Work made a defense of the law, which carried 1,000 persons who heard it with him. Only yesterday the representatives of the New York State Woman Suffrage party, who claim a membership of 1,000,000, issued a statement strongly opposing the repeal of the township school law, and declared that its repeal "will be little short of a calamity." The politicians who have started out to wreck the rural schools in order to promote their own political fortunes, may find that they have also wrecked their political fortunes.

E. E. CONLON

Delhi, N. Y., Feb. 26, 1918

Editor Reporter:

In the outcry against the present system of school maintenance and government, raised in many parts, the objection heard oftenest and urged with the greatest vehemence, is that it has greatly increased the tax on property without contributing to the comfort or efficiency of the schools. The fact that an increase in taxation was inevitable under any system is entirely lost sight of. To bring this act clearly to the attention of the people, as briefly as possible is the purpose of this article.

Records in my office, compiled from the annual reports submitted by the trustees whose terms of office expired July 31, 1917, show that the aggregate amount raised by the towns forming the third supervisory district, excluding the high school districts of Delhi and Walton, during the school year 1916-17, was \$15,602.04, divided among the towns composing the district as follows: Delhi, \$4,016.01; Hamden, \$4,778.61; Walton, \$6,807.42. As a matter of interest, I may add that the Delhi high school district alone raised during the same year \$13,292.50 and the Walton high school district alone raised \$24,967.69 or \$9,365.65 more than all the common school districts of the three towns raised in the same year. The registration of Walton high school last year was 768; the registration in all the common schools in the three towns was 883. In other words, Walton high school district expended \$32.50 for each pupil enrolled in its school while the average expenditures in the common schools of the supervisory district was but \$17.65. A whole volume of commentary is wrapped up in that difference.

The new town boards of education began the exercise of their duties on August 1, 1917. They adopted budgets for the current school year aggregating \$22,055.52, an apparent increase of \$6,453.48. This aggregate budget is divided among the towns of the supervisory district as follows: Delhi, \$7,000; Hamden, \$6,755; Walton, \$8,300.52. These sums were levied upon the taxable property of the towns.

I intimated at the outset that an increase in taxation was inevitable under any system. Prior to the enactment of the township law, the state legislature had provided that all of the old outside toilets should be abolished and toilets installed inside of the school buildings. This provision is to be carried into effect on or before September 1, 1918. To meet this requirement, the several boards included in the budgets adopted the sum of \$3,200, or approximately one-half of the total increase in expenditure. It is not expected that this \$3,200 will complete the required installation of inside toilets and in all probability an additional appropriation will have to be made for this purpose.

Another enactment of the state legislature previous to the passage of the township law, is the law providing for physical training in all of the schools of the state, public or private. Last year, the cost of this training to the common school districts of the supervisory district was \$389; this year it will be approximately \$720, or an increase of \$331.

Last year the aggregate amount of wages paid to the teachers of the supervisory district was \$10,628.23. This year there will be paid according to contract for teachers' wages, \$12,519.56, or an increase of \$1,891.39. These wage items do not take into account the public money received from the state, but are the actual amounts levied upon the property of the districts; and this increase would have been more than \$1,000 greater than it is but for the fact that these town boards have been able to temporarily eliminate five schools by distributing the pupils of those schools among neighboring districts, thereby saving the cost of maintenance in large measure, and affording the pupils better school advantages than they could otherwise have enjoyed.

It must be remembered that nearly all of the teachers engaged at the present time were tentatively contracted with by the trustees who were

elected at the annual school meeting held last May, the new boards merely ratifying the agreements made then, consequently the township law is in nowise responsible for this increase. A raise in teachers' wages was absolutely necessary and a still further raise will be necessary if our best teachers are not to be diverted to occupations that offer more attractive salaries. Salaries in other occupations have advanced much more rapidly of late than teachers' wages.

Another item of actual increase that cannot be charged against the township law is the amount of money that was left in the hands of the several school collectors on July 31, 1917, the last day of the district system. The aggregate of the sums in the hands of the fifty-five collectors in the three towns was \$1,691.77. The new town boards were obliged to credit the districts with these several amounts and to start with an absolutely clean sheet, whereas the districts would have had these amounts as a capital asset.

It will readily be seen that these four items of increase, the \$3,200 for inside toilets, the \$331 for physical training, the \$1,891.39 increase in wages and the \$1,691.77 virtually paid back to the districts, wipes out the \$6,453.48 added to the tax burden of the supervisory district and leaves a margin of \$660.68 to the credit of the more efficient management of the new town boards. Then add to this margin of credit the further facts that these boards have provided more generously for school libraries; for repairs; for janitor service and for contingent expenses than has ever been done before, and the statement I made before the county grange last year, and also in the public prints about the same time, that "The township law stands for increased efficiency at relatively decreased cost," is amply justified. Taxes are higher to be sure; the aggregate of taxes would have been higher still under the old system. They will be still higher for some years to come under any system than they are now. School facilities in very many places are wholly inadequate to present day needs. Many buildings must be extensively repaired or replaced. School grounds must be enlarged and equipped. Transportation facilities must in some sections be provided for and instructional equipment must in almost every place be largely increased. Facilities that sufficed a half century ago are wholly inadequate now.

The question is frequently asked me, "Why have not some of these requirements been provided for during recent years?" The question is a perfectly proper one and perhaps this is the proper time and place to answer it for the benefit of all. I have been in this office six years. When I entered upon its duties, it was with an enthusiastic determination to improve rural school conditions, as some sections know. Four years ago the township bill was introduced into the state legislature; that and each succeeding legislature struggled with the problem until the present law was enacted a little less than one year ago. As I studied the various bills that were introduced and became aware of the fact that none of them made provision for the reimbursement of districts that had made expensive repairs, it required no especial keenness of perception to see that a double burden would inevitably fall upon those districts if the bill should become a law. That they would not only have paid for their own improvements, but would also have to help pay for the improvements of other

districts. It seemed but the most ordinary business sense to go slow, and for the past three years I have gone slow. If that be a matter for criticism I must abide it. Still there have been some improvements: two entirely new school buildings, not counting the ones erected by high school districts; several repaired from the foundation up; fourteen combination out buildings (woodhouse and toilet).

Six years ago the children in several of the districts that came under my supervision were condemned to the old wooden benches; every one of these, except in district 15, Walton, has given place to new iron seats and desks. I found a number of schools without a semblance of a school library; now the smallest library in the supervisory district has thirty-four volumes and there are but seven districts in the three towns that have less than fifty volumes and nineteen of the fifty-five districts have more than one hundred volumes each. Then but very few schools had anything better in the way of blackboards than the old greasy wooden ones; now hundreds of square feet of slate boards are in use. Bookcases, wall clocks, water jars, wash basins, soap and towels and reputable wall pictures and many other conveniences and comforts before almost unheard of are now to be found in most of the schools. All of the schools have been provided with the syllabus prepared by the state and in addition to that with the monthly syllabus outlines prepared by the district superintendents of Delaware, Otsego and Schoharie counties, an invaluable aid to the work of the teacher. The grade work is much more closely followed and an increasing number of grade certificates is sent out from this office each year. And still more gratifying, perhaps, than all else, is the fact that each succeeding year sees a greater number of regents' preliminary certificates earned in the rural schools.

Another objection that is very frequently and very persistently urged against the township law is, that it is going to obliterate the school districts as they have existed heretofore and consolidate them into one or more central schools to which the children of the outlying territory must be transported. How this belief originated, or why it continues to exist, is difficult to understand; nothing can be further from the actual facts than this belief. I am sure that those who constantly reiterate it have never even read the present law. The very first paragraph of the township law reads as follows:

Section 330. School districts continued. Each school district in the state is hereby continued as such district exists at the time this act goes into effect or until modified as provided in this chapter. No order consolidating two or more school districts shall be effective until such order is approved by a majority vote of the town board of education of the town or towns in which such districts are located, and thereafter approved by a majority vote of the qualified electors of each district present and voting at a meeting of the districts consolidated by said order.

Those who are fearful of consolidation should be the very last to ask for the repeal of this law and a return to the former law. Let us briefly compare the procedure in consolidation under the old and the new laws. Before the adoption of the township system, a district superintendent, and before his day a school commissioner, could make an order consolidating

two or more school districts. He did not have to consult the trustees of the districts, nor the people of the districts; he simply abolished the old districts and made a new one. The only redress the people had if they did not like it was the doubtful expedient of an appeal to the Education Department at Albany. The method of consolidation under the present law is as follows: The district superintendent may make an order consolidating two or more school districts; that order must then be approved by the town board of education and then it must be submitted to the people of the affected districts and voted upon by them. If either the town board of education, or the people of either district refuses to vote in favor of the consolidation, the order of the district superintendent becomes null and void. How, in the name of common sense, is this procedure subversive of the principle of home rule? There are two chances now to defeat consolidation without an appeal to Albany and there was absolutely no chance to do so under the old law.

I have hoped and worked for the enactment of the township law; I believe in it; it has not yet had a chance to demonstrate its greater efficiency. There has had to be some experimenting and there have been some mistakes made; it would be strange indeed if there were none in the inauguration of any new system. Very many of the other states have discarded the district system and adopted the township system and not a single one has ever gone back to the district system. I hope our great Empire State will not be the first to take a retrograde step in this matter.

EDWARD O. HARKNESS

Dist. Supt.

—*Walton Reporter, March 2, 1918*

More About Township Law

Editor of the Enterprise:

In rebuttal to Mrs Merritt's testimony regarding the Wadsworth's, I wish to state that I am a regular subscriber and reader of two daily newspapers, one Republican and one politically independent; that I am more than an occasional reader of several others, both Democratic, Republican and Socialist; that I am also a reader of the *Rural New Yorker*; that several papers which I have read, printed the report that United States Senator Wadsworth had sued his home town, Caledonia, in Livingston county, because his school taxes were excessive and unconstitutional; that the *Rural New Yorker* printed the same report in its editorial columns and commented on it in its usual demagogic style, and that Mrs Merritt in one of her letters on the township school law and school taxation used these words: "We will take the case of our United States senator, who is also a real farmer, James W. Wadsworth, who at this time is suing his own town for excessive school taxation, employing the best legal advice obtainable—that of Elihu Root." But it is really immaterial whether the senator or the senator's father proves an alibi; the party which the Wadsworth's represent has gone on record as an enemy to the improvement of rural schools.

"To my certain knowledge," writes Mrs Merritt, "there has not been left standing in my town of Guilderland a school building answering to

anything like the description you have given of yours." And again: "Education we must and intend to have and, as in the past, the best obtainable, but we do not intend to have a group of city theorists, and a few slackers from our own communities tell us how, when and where we are to obtain these things for our children. . . ."

These criticisms of Mrs Merritt's I have answered at some length and in a general way, both in the *Union-Star* and in the *Knickerbocker Press*. But they have been answered tersely by different members of boards of education in Albany county who have congratulated me on the stand which I have taken for the improvement of rural schools. Here is a quotation from a letter to me written by a board member, dated March 6: "I have read your articles in the *Knickerbocker Press* and I wish to thank you for some of your statements. I have visited most of the schools in our town and know the conditions as they are; some of the schools have been very much neglected." Here is one from another member dated March 12: "I wish to congratulate you upon your stand for the township school law. From my experience as a member of the board I find the chief objectors to it are those who are most able to pay and nine-tenths of them have no children in school."

These letters vouch for the neglect which I have censured and tend to prove that the violent minority in the rural districts which we have antagonized is composed largely of the exponents of race suicide or birth-control.

WILL W. CHRISTMAN

— *Altamont Enterprise, March 2, 1918*

Township School Law

As so many objections to the so-called Township School Law have appeared in the agricultural papers during the last few months, nearly all of which seems to come from those who are apparently hurt by the law, I ask space for a few arguments from the other side. Section 331 of the law provides that a Union Free School district with a population of 1,500 is a separate school unit, therefore the extra expense of such school cannot be considered in the so-called extra expense of the town unit. This excludes nearly all of the village schools from consideration under this law. Second: One of the best features of the law is that providing for an equalization of taxes, for why should District No. 1, with an equal or greater number of children and paying the same amount for teacher, fuel, janitor etc., as District No. 2, adjoining, pay a tax four or five times as great simply because the property in District No. 1 is less in value than in No. 2.

My home town contains 17 school districts. During 1916 and for several years preceding one district with only three or four children contracted with another district to take the children for fifty dollars per year; the balance of the two hundred dollars received from the state was given to the party who conveyed the children and the mortgage tax apportioned on the basis of attendance and a penny collection taken at the annual school meeting paid the insurance. Thus this District containing some railroad property and one or two summer homes, for several years escaped taxation for school purposes while a district within three miles with seven

or eight children paid a tax of from \$2.25 to \$2.60 per hundred dollars valuation. This is not a wild or imaginary statement, but is a matter of record in the Education Department at Albany. In 1916 the tax rates ranged from 35 cents to \$2.30 per hundred in a town 7 miles by 9. Under the present law the uniform rate is \$1.00. As to the increased expense, the amount raised in 1916 was \$5,700.45, in 1917, \$6,311.84. Of this difference of \$611, \$243 is for Physical Instructor, \$150 for Medical Inspection, formerly paid for the most part by the parents, and an appropriation of \$75 for Truant Officer which was formerly a town charge and paid for by taxes levied although under another name. These are all items that have no connection with the new law. The balance includes premium on collectors and treasurers' bonds. The figures for the budget were taken from estimates furnished by trustees at the School meetings last May and in most cases were approved by the voters of the several districts at that time. Therefore there is at least one Board that cannot be charged with reckless extravagance with the people's money. As to consolidation of Districts and the passing of the "Little Red School House," if the writers of the opposition would read the law they would find that they are more fully protected than under the old law, as the present law provides for approval by the Board and majority vote by each District affected before such consolidation can take place. It would therefore seem that if proper care is used in the selection of the members of the Board (and there is little chance of getting persons who are not thoroughly interested in schools to serve without pay), there is nothing to fear from this source. There is, of course, as in all new laws, much chance for improvement in this one but if the people who are benefitted will make as much noise as those we have heard from there is no real danger of its repeal. I might say that after a careful count of the several pieces assessed in this town, 294 show an increase and 511 a decrease in the amount paid in taxes under the present system as compared with 1916. Whether this applies to all localities I am not in a position to say, but from my investigation am led to believe that a large majority are benefitted, and believe after the law is understood and is fairly in operation it will give satisfaction. I would be glad to hear from others who favor the law.

Respectfully

W. G. ROBINSON

Greenfield Center

The Township School Law

To the Editor of the Knickerbocker Press:

SIR: When we were boys an old uncle used occasionally to visit us. It seems but yesterday although it was more than thirty-odd years ago when he came and slept in the bed opposite ours in the big bedroom upstairs. Uncle Dan was a man of methodical habits and vigorous speech. One night one of us rose silently while he slept and with malice prepense removed his pants from the chairback, where he invariably hung them before retiring and substituted a pair of our own which were several sizes

smaller. Uncle Dan was an early riser, and we too on this occasion were alert, but feigning slumber when he arose. I well remember the white night-capped head moving about in the dim morning twilight, the stertorous, short breaths while he struggled with those pants, the final futile attempt to adjust them to his rotund waist, then the quick suspicious scrutiny and the climax when he exclaimed: "If I had a yaller dog that didn't know more than them boys, I'd shoot him—I would!"

I was reminded of this incident by those gentlemen of the present Legislature who by pretext or camouflage propose to repeal the township school law and re-enact the old district trustee system, to force upon the people an educational system long since out-grown, as appropriate and useful to us of today as those substituted pants were to our estimable uncle. To carry the analogy further I promise for the progressive parents of the State that when these gentlemen arise for reelection that they will have arrived at the end of their political fortunes and for the same reason that fate overtook us for our juvenile delinquency, instead of Uncle Dan's hypothetical yellow dog.

It may not be amiss to restate two of the reasons why I favor the township school law and the consolidation of rural schools. One reason is that those of my children who are from eight to fourteen years of age must walk two miles daily to attend a school where no systematic pedagogical method is maintained, in a building insufficiently heated, improperly ventilated and lighted and generally neglected; and where the sewage disposal is a threat to health and disgraceful to the State which tolerates it. Another reason is that two of my children have each walked approximately 2,400 miles and ridden 11,200 on the cars in taking a four-year course at the Altamont high school. This you will observe makes a total of 27,200 miles, considerably more than the circumference of the globe, traveled in securing their education.

Township School Law

The following is a copy of a letter written by F. G. Wadsworth, Y. M. C. A. educational secretary, and an authority on educational matters through his connection with the Massachusetts State Board of Education:

Hon. DeWitt Talmage, Assembly Chamber, Albany, N. Y.:

MY DEAR MR TALMAGE: In view of the discussion relative to the school district law and the activities of certain agencies looking toward the repeal of the law I am taking the liberty of writing to you to express my opinion regarding the law in question.

My experience as a Superintendent of Schools in Maine and as agent for the Massachusetts State Board of Education has convinced me that the law as it now stands on the statute books, while not perfect, is a step in the direction of better schools for the rural communities of New York State.

I have been located here on Long Island since August 1917 in the capacity of Educational Secretary for the Nassau-Suffolk Counties Y. M. C. A. During this time I have had an opportunity to observe the workings of the

township law, also to hear the criticisms of farmers and others who favored the repeal of the law and I am of the opinion that their attitude is not due to any one cause but to a combination of causes.

The new law is criticised (1) because the tax rate has been increased; (2) because there have been few, if any immediate improvements in instruction; (3) because there has been no apparent increase in the scope of educational opportunities; (4) because the larger administration unit does not provide for adequate representation in the Board of Directors. These criticisms are practically the same as were made in the state of Massachusetts when the township law was under consideration there. In the practical operation of the law over a term of years, however, these criticisms will lose force.

The law as it now stands will no doubt need to be modified from time to time. The fundamental principal, however, of "taxing wealth where it is for the education of children where they are" to the end that a more equal educational opportunity may be provided throughout the commonwealth, is absolutely sound. Provisions should be made whereby (1) the work of the teachers in the rural communities may be more closely supervised; (2) systematic training of teachers in service may be carried on; (3) the enlistment of the interest of school masters may be obtained, through frequent round table conferences held in numerous centers throughout the State, in the improvement of school organization and administration.

I trust that this statement of conditions as they appear to me may be of service to you.

Assuring you of my desire to cooperate in any way possible in the promotion of a sound educational program, I remain

Sincerely yours,

F. G. WADSWORTH

—*Greenport Watchman*, March 9, 1918

The Agricultural Press and the Township School Law

To the Editor of the Knickerbocker Press:

SIR: While the daily press, the Legislature and farmers generally are discussing the township school law it may not be amiss for a farmer to analyze and perhaps to criticize in a friendly way the editorial opinion of the agricultural press.

A monthly farm periodical, having, I think, a larger circulation in this State than any other agricultural publication, is printed in an adjoining state where a township school law has been operative for many years. This magazine has refrained from venturing an opinion, editorial or otherwise, on the subject. It is apparently satisfied with the school law of its own and of the Empire State and is adverse to conserving anybody's chestnuts or fanning the political fire of any faction or party.

It has been asked why the two largest agricultural weeklies circulated in the State are publishing malignant contributions and violent editorials denouncing the township school law and demanding its immediate repeal. I think that the question can be easily answered. In the first of these magazines every contributed or editorial column on this subject might well be

W. W. CHRISTMAN
An advocate of the township law

headed "Political Advertising," and carry a picture of Governor Charles S. Whitman at the top. The paper is printed in another adjoining state where a town school law has long been operative. Not one word condemning their own law has escaped them, but the editors have discharged their flammenwerfers indiscriminately at every public defender of the New York law. The reason for this remarkable editorial diplomacy is obvious. They expect to get subscribers where Governor Whitman gets votes.

Their competitor for the affections of the farmers of the Empire State is also a weekly magazine and published in New York. It is defendant in a \$250,000 libel suit brought by the rival publishing company which claims to have been injured to that extent. * * * Their contributed and editorial condemnation of the township school law has been more vitriolic than any I have read, but their columns of disapprobation, which might also be designated "Political Advertising," should carry a composite picture of United States Senator James W. Wadsworth and Mr. Elihu Root. But this is really a camouflage to the swelling ambition of its publisher and associate editor. One of its editors resides on a farm in still another adjoining state where a town school law is also operative and which he has approved editorially. Its associate editor and publisher is a resident of New York and was not long ago appointed to an important office from which he was summarily removed. * * *

To the rural readers of The Knickerbocker Press who still retain two opposing wisdom teeth I recommend the following sentence which I quote from this editor's comment on the township school law hearing at Albany on February 27: "Governor Whitman signed the township school law last year, but since the demand for its repeal became so pronounced he characteristically abandoned it and is now courting credit by opposition to it." Personally I would not object if these gentlemen stopped the clock while they fought to a finish, but when they propose to turn the hands back for half a century I offer strenuous objections.

The gayety of their readers has been constantly augmented for the last two years by the recriminations which have been flung back and forth by the rival and belligerent editors whom I have mentioned. Were their magazines published in the same city personal encounters would possibly result. But I believe that the editorial opinion of those who shout "felon" or scream "liar" should be discounted in advance of its publication.

WILL W. CHRISTMAN

—Albany Knickerbocker Press, March 15, 1918

Repeal of School Law

It is worth noting by the people whose ideals are those of civilization that in the Assembly Wednesday there was just one Republican that had the pluck to vote against the repeal of the township school law. The rest of the negative vote was cast by Democrats and Socialists. The bulk of the vote for repeal was Republican. Does such a contrast mean anything? Unfortunately there are men in all parties that will "play politics," yield to what they know to be unreasoning clamor if they think there is personal or party advantage in so doing. The judicious and conscientious voter in deciding where his support should go has to consider in which party this

evil tendency is most controlling. How can he have any doubt after the exhibitions this Legislature is making? Even the man whose name the law bears joined in the vote for repeal in confessed obedience to clamor.

Democratic Leader Donohue did not misstate the fact at all when he said:

I have waited for a good and sufficient reason to be advanced why this law should be repealed, but in place of a reason comes a tirade of abuse against the State education department officials.

The nearest approach to a reason was that given by Assemblyman Martin, of Oneida, when he said:

When this law was enacted a rural school teacher that I know who had been getting \$9.50 a week resigned and was later hired at \$11.50 a week. She taught in the same way, in the same schoolhouse, from the same books.

That is, her wage was raised a trifle over 21 per cent. How does that compare with the addition to what she has to spend to live, with all other wage increases, with the increases the farmers are getting for what they sell? It ought to be a matter of shame to every true man of New York that such stuff can be put forth on its representative floor.

Yet in such just facts as this, in surpluses or necessary revenues provided by new taxation to take the place of those returned to taxpayers of consolidated districts, and in the cost of the provision of sorely needed better schools has been the basis of all the howling that we have been hearing. Not a man has even attempted to show any other source of "increased taxes." Of course, talk like that of Assemblyman McCue that the township law violates the home rule principle was the sheerest nonsense. It ought to violate it in those districts that cannot or will not provide proper education for their children and those that used to pay no taxes whatever for that purpose, farming out the work on State money received. But McCue knows perfectly well that not one of these districts can be consolidated into another for the sake of better schools except upon its own vote.

Our Republican misrulers are doing about the wickedest thing they can do in catering to this spirit, subversive of all that is best in Americanism, its duties, its ideals and its aspirations. These misrulers are also stupid as well as vicious. For this spirit is small in comparison with the noise it has made. It surely misrepresents our average farmer. To believe otherwise is to distrust democracy itself and to say that the great cause we are fighting for in the world war is a fallacy.

It is still open to hope that the howlers will be camouflaged after the repeal of the township act by passing another embodying its essential features. But even that will make the course of the misrulers more, rather than less, despicable.—*Albany Argus*, March 15, 1918

Vote in Favor of the Rural Schools

Both sides agree that the fate of the township school repeal bill depends upon the Kings county senators. Woman suffrage, prohibition and other issues have so fully engrossed legislative and public attention of late that it is more than likely that the importance of the pending bill is not fully realized.

Should repeal come, confusion worse confounded would immediately follow. The rural, elementary schools of the State, of which there are

nearly 400 with less than one pupil and more than 3,000 with not more than five, would be thrown back into the stagnation and isolation of former times, and the working arrangements, financial and administrative of the new system, already well co-ordinated and functioning much more smoothly than could have been expected, completely dislocated or "scrapped"; in other words, a condition approaching chaos would fall upon the entire elementary up state school system.

Anyone who has followed the matter need not be reminded that so far, despite all invitation and opportunity, no argument worth the name has been advanced for repeal, merely a clamor, motive and source of which is everywhere understood personal and political, but with no substantial support, not even a respectable echo, based upon real, existing conditions.

Naturally "slackers" who have, through the combination of circumstance, schools for which they have never paid, would like to continue to enjoy immunity from taxation and education of their children at the expense of their neighbors, but that this sort of thing should be successful in civic and educational affairs, is no more popular nor creditable than in our great national and international contest.

To starve the schools of the State is, of all policies, the most penny-wise and pound-foolish; that New York in its public free schools is now to fall to the rear and far behind the rear of all its neighboring states and go back to the times of the turnpike, the stage coach and horse-drawn canal boats seems almost incredible. Kings county senators and their constituents ought to be grateful for the opportunity to decide the question of rural education rightly.

A Wisconsin governor, "Jere" Rusk, of civil war fame, after he had done a courageous act, remarked: "I seen my duty and done it," words which, excusing the grammar and applauding the deed, Kings county will repeat to its senators who defend and maintain schools of the State.—*Brooklyn Union*, March 19, 1918

Give Township School Law a Fair Trial

Resolutions regarding the rural school question were adopted unanimously by the Tompkins County Pomona Grange at its last meeting as follows:

"1. That the township law be retained and given a fair trial; that it be amended so as to cut out all schools maintaining academic departments.

"2. That the academic fund be increased from \$100 to \$1,000 per year.

"3. That the state tuition for academic pupils be increased from \$20 to \$40.

"4. That the public money for district quotas be made \$200 for each rural school district.

"5. That physical training teaching be continued in the schools but that as soon as possible the local teachers be required to give all the work and thus eliminate a special teacher in said subject."

The report was submitted by a committee composed of Fred A. Beardsley, Hattie K. Buck, M. D. Batty, E. T. Wallenbeck.—*Ithaca Journal*, March 20, 1918

Democracy and the District Schools

Editor Eagle-News:

The feeling of the deep dissatisfaction with the new rural school law in New York State and the accompanying feeling of resentment and antagonism are the result of what I believe to be an unwise tampering with our rural school system without sufficient forethought on the part of those who advocated and pushed through the legislation. Such important changes as those affected by this law should be, when contemplated, made the subject of a thorough and extended, state-wide discussion. That is the only fair way of dealing with the public on the part of officials of the state education department, who are presumably responsible for the law, and members of the state legislature should have been closely enough in touch with their constituents to have known that the wishes and interests of the public were being antagonized, and they should have suggested and brought about, in default of such a step being taken by the education authorities, a referendum of the subject to the people of the state with ample time for thorough consideration and discussion.

That this law was thrust upon the people without a knowledge generally of what was being done is proved by the event. Had there been such knowledge it is undoubtedly true that opposition to the bill would have made itself felt as it is making itself felt now. According to all that I can learn from the newspapers concerning responsibility for the measure, it seems that the Grange organizations, or many of them, advocate it and used their influence, or allowed their influence to be used, to secure its passage by the legislature. Although not a member of the Grange myself I am heartily in sympathy with the work that is being done by that organization but I consider it a great mistake for any organization like the Grange, who include in their membership perhaps considerably less than half of the adult rural population of the state, to assume to speak, specially in such an important matter, for the entire body of citizens.

Still more culpable than the politicians or the Grange is the State Department of Education in its sponsorship for a law, concerning which it did not know whether it would meet the wishes and needs of the great body of rural school patrons of the State. There does not seem to be a realization on the part of the members of the State Department of Education of the real breadth and scope of the question with which they have been dealing. Their exclusive manner of handling the question without consulting the people shows this to be true. And the manner in which they have ignored the salutary and beneficent effect of the rural school system on the rural population in the past and the possibilities for good of that system in the future also shows this. In the pamphlet issued by the education department summarizing and explaining the provisions of the law and bearing date of July 2 last, attention is called to the fact that "the old school district system was adopted in 1795." Whether the writer of this pamphlet meant to stigmatize this system as antiquated and out-grown I cannot say, but this, it would seem, is the implication sought to be conveyed by his words. In contrast with the "old school district system," he states, in the sentence preceding the one containing the quoted words, "this law provides an entirely new plan for the administration of the rural schools of this state." Do the members of the

State Department of Education consider that the mere fact of "newness" is a proof of superiority? If so, they need only to be reminded, as we need to remind ourselves, of the antiquity of some of the most useful and precious of our laws, our customs and our institutions. I wonder if they consider that they, or any other body of men of the present day, could make an improvement upon the division and apportionment of powers and responsibilities devised by those who originated and planned our State and national governments and who wrote their constitutions? If so, they would find themselves opposed to the wisest and most learned of men since those early days, for it has been the task of such men to expound the principles laid down by the founders of our institutions, and instead of changing those fundamental principles, to express loyal allegiance to the wisdom and foresight of the founders who gave us those institutions.

The school district system is a part of, and fundamental to, our democratic system. There could not be a more perfect example of home rule than that afforded by the school district, and the loud and deep protests against this law are a sign that democratic government is still prized most highly by the people. The school district is the smallest of the units of government in our country, and its electors and elective officials constitute just as truly a unit of self-government as do the township, the county and the state, each in its own sphere and with its clearly defined powers of legislation and administration. The district school, I repeat, is fundamental in our scheme of government and education for it is there that the principles and duties of self-government are taught and responsibility for such teaching and close association with the work are absolutely essential to the integrity and highest usefulness of the rural school system. Education could not be brought closer to the people than it is brought by the district school, nor could opportunities for sharing in the work of education be increased or made easier, and this undoubtedly was the object of those who planned the system of country schools.

It is a very important fact, a fact that we need to remember, that democracy in this country and in every other country possessing any degree of freedom in government, is not a finished, a perfect product of previous experience. Here in America, which is certainly as far advanced in this respect as any country, there are pitfalls and dangers of many kinds threatening us and making of our experience thus far only an experiment, an experiment that may be ultimately overthrown. We cannot afford at any time, and least of all at this time when the freedom and progress of the whole world are threatened by the most powerful retrogressive movement known in history to allow any backward step or to introduce any element of weakness into our free democratic government. It is on this ground, therefore, of adherence to our principles of self-government that so many people throughout the state are demanding the repeal of this law. The other reason, which we see so often and so forcibly stated, namely, the added expense entailed by the law, an expense that many persons of good judgment believe will grow and become more and more burdensome, is perhaps in itself sufficient for a repeal, but whether so or not, certainly the people of this state and nation cannot and will not tolerate any interference with the rights and duties of self-government.

I wish to suggest that after this law is repealed the state education department with the co-operation of the people of the state, especially the rural population, enter upon a campaign for increasing the efficiency of the rural schools as they now exist. Let the officials of the department direct their energies to the development of better teaching ability in rural schools. However much may have been done in this direction in the past surely much more can be accomplished. The best results in education are not obtained by the machinery of a system such as this law has created, or by externals, or superficial routine. The teacher is the great instrument of progress and of results in education and this truth is witnessed to by the whole history of education. Let the department also seek to develop in the district superintendents, who are in reality a part of the teaching body, higher inspirational and cultural ability as well as practical administrative capacity, and to enlist them more than ever before in an effort to impart to teachers and schools whatever they possess in the way of such ability. School directors, trustees and the entire rural population should be included in this effort on the part of the education department. I believe also that, in order to increase the usefulness of the schools by bringing them movement which has made great progress in some parts of our country. The campaign is already under way. There never has been within the memory of persons now living such an awakening of the people of this State on the subject of education. Opposition to this law should not be allowed to slacken; it should be kept up till the law is repealed, and this campaign for popular rights should be made the beginning of a serious and persistent effort to improve the condition of the school, and so remove all pretexts for destroying or fundamentally changing our rural schools. Let the people continue the demand for the return of responsibility and power of action to themselves, the source from which it emanates and the place where it belongs, and let every assistance that can be obtained be welcomed and accepted. The whole body of citizens of this State interested in their schools and working for them will be an incalculably great influence not only for the better education of children and youth in the schools but for the education and development of all the people. This problem of better results in rural education cannot be solved by superficial methods and external changes any more than the parallel and related problem of the country church can be solved in this way, larger numbers in rural communities, greater interest, and more earnest, intelligent and devoted effort are needed. It is work that develops and it is activity that promotes growth. And this activity cannot be delegated to others without a corresponding loss in growth and development.

I ask that this question be looked at in this larger, more inclusive way and that thoughtless effort which dissociates education from the practical duties of citizenship be avoided. Our education should be directed to the development of the various powers of the individual and the object should be to continue the education, in its broadest meaning, of all citizens beyond the early period of formal instruction and preparation. To that end it is essential that citizens demand for themselves as a right the exercise of public duty, and that they perform every kind of public work that it is possible for them to perform, thus securing for themselves the strength and the growth that result from the exercise of responsibility.

Regarding the educational situation in which we find ourselves in this state, I make the following suggestion which is applicable to all matters concerning which legislative action may be taken, and which is a summing up, in part, of what precedes: Whatever expert knowledge may be required to deal with any given situation, and whatever confidence officials may have in their ability to deal with a given situation, action should not be taken without knowledge of the condition of public opinion and even in many cases without waiting for the development and education of public sentiment. That is to say, there should be an understanding and co-operation between the people and their representatives. And, more important still, the people should keep in closer touch with their legislative representatives and should watch closely what they are doing and what they propose to do. If public servants would take this view of their duties to the public, and if citizens in private life would more generally and faithfully perform this public duty, I believe far more satisfactory results would be attained in legislation.

CHARLES E. ROBBINS

Staatsburg, N. Y., March 11, 1918

Poughkeepsie Eagle News, March 21, 1918

The Township Law

Out of the discussion concerning the township school law throughout the State a new situation in the legislature has developed. It is assumed that the township law will be repealed, at least in those features which have proven objectionable and burdensome and in the place of these features will be substituted a liberal policy of State aid.

Under this policy each district maintaining an academic department will receive a district quota of \$250 and an academic quota of \$600.00, or a total of \$625.00 more per year than they have been receiving heretofore. It is proposed that the quota for each rural school be raised to \$250—an average increase of \$100, while district quotas for teachers will continue in addition.

It is further proposed that union free school districts maintaining an academic department shall not be a part of the township system; that the people retain the power to create units smaller than towns whenever the interest and convenience of any particular community require; that school district boundaries remain the same as at present until changed by vote of the people concerned; that contiguous school districts in different townships or counties be permitted to unite whenever the people by vote so direct; to give the people authority to establish independent districts whenever the public interest and convenience require; to increase the number of members on boards of education in the larger units, to preserve the principle of home rule and in other ways to increase rather than diminish the power of the local community in regard to the management of its schools.

Additional public money for Wayne County would be \$31,075.

As 87% of the assessed valuation in the state is in the cities, it follows that the cities must pay 87% of the increase.—*Clyde Times, March 28, 1918*

Our Senator and Assemblyman are no doubt doing their best to preserve the good parts of the Township School Law and to do away with the objectionable features of this law. They are having a hard time of it, what with the bigotry of some rural gentlemen who are afraid their taxes will be raised on the one hand, and the desire of the education department to put New York State in the van educationally on the other. The Assembly has decided to repeal the Machold Township Law which has been in operation the past year. The Senate will probably follow suit unless they can be forced to see the advisability of amending it to conform to later and better ideas. All rural well-wishers of a better educational system for our country schools should look up the provisions of the new law and make their wishes known to our lawmakers. They want to hear from the people. In our opinion the proposed new law eliminating High and Union schools altogether from the Township system and providing for a payment by the State of \$250, to each rural district, and \$600, to each Union or High school, is a fairer arrangement than the present law and will overcome many of the objections to that law.—*Hamilton Republican, March 28, 1918*

Discussion of school law was next on the program and it started with explanations about the law by Manager Taylor and Dr. Kimm, district school supervisor. It was pointed out that as the township law had been repealed that it was not intended to return to the old system but that the new proposed act called for the allowance of \$250 to each school district in a township and that \$500 was to be allowed each district having a bonded indebtedness. There would be a salary only to the clerk and the treasurer and the teachers for the various schools were to be hired by an educational board whose membership of three or five would be elected by the qualified electors of the township at an annual election called at some central meeting place in the township.

There is to be a custodian of the school building in each district.

The present bill if enacted would bring to the rural school district the additional sum of \$1,500,000 and would mean \$22,000 for Herkimer County. All academic schools are left out of township moneys, and leaves consolidation of schools to the local board. Some one made inquiry about the percentage of tax paid by the incorporated cities and villages, the country districts and the city of New York, and it was pointed out that the city of New York's percentage was 70, the other incorporated cities and villages, 23, and the country districts 7 per cent.

Dr. Kimm suggested that the bill would be considered by the state senate next Wednesday and urged that a resolution be sent Senator Robinson favoring its enactment. Questions were asked about various features of the law and it became apparent that all was not harmony in favor of the proposed law.

Various persons made known that they favored a return to the old district system and claimed that the township system was not best for the interests of the pupils or taxpayers.

However, a motion was made that a committee of three be appointed to draft resolutions relating to the proposed law and this motion was carried, Grant Wright, C. W. Crim and Dr. C. D. Huxtable being appointed.

Then the discussion started as some of those present stated that the time was not opportune to favor or disapprove of the measure as not sufficient study had been given to the bill. The assertion that steam roller methods were to be used was quickly denied and instances of the ill favor of the repealed township law were mentioned.

Loren E. Kelley, veteran member of the bureau, was recognized and he declared that he had been through the district school and he didn't know why the boys and girls can't get their A. B. C.'s there.

The committee following consideration of the matter finally presented a report that the individuals present could sign if they chose a resolution favoring the enactment of the bill. There was no effort made to place the meeting upon record.—*Evening Journal, March 28, 1918*

The Township School Law

That people in rural communities are at last taking school matters seriously was indicated as never before by the attendance at a big mass meeting last Saturday in the Courthouse, Riverhead, for the purpose of discussing the township school law. There has been almost unanimous disapproval of the little understood school law which recently went into effect. There were many spirited debates at the meeting both for and against the law, with the result that instead of 100 per cent. of those present, who represented every district in the county, being opposed to the school law, over 50 per cent. came away favoring it. Mrs. Ruth Litt, of Patchogue, made an appeal for the retention of the law in which she implored:—Don't go back to the old system of education in rural schools. We must look after the children better than we have in the past. We must keep them in the country. We must give them the scientific training that they need, beginning with scientific farming, if you please; we have not been giving them the things they need, and that is why they have left the country and gone to the cities. This meeting has been a splendid thing, a debate of school matters, which has never before taken place in the 275 years of Suffolk's life." Dr. Thomas E. Finegan, Deputy Commissioner of Education, gave an interesting history of the law and advocated that it not be repealed. He said there was not the need of 10,000 one-room schools in the State, 3,000 of them with less than 10 pupils; 88 with two and 15 with only one. He said the law will increase the amount to be paid by the State to schools and where \$100 is now paid, it is proposed to increase this to \$725 to each village high school. A system of military training in connection with physical training, which are now State requirements in rural schools, is impractical for the little one-room school. Every country community owes it to its children to give them the benefit of all the training made possible by modern, centralized high schools. The much abused and generally misunderstood new township school law makes this possible and why go back to the impossible old country school system.—*Binghamton News, March 29, 1918*

Push the New School Bill

The new Township School Bill which is pending a vote in the Senate deserves your support. It will bring a big increase of state aid to all schools and thus lower all school tax rates. Write Senator Towner at Albany at once to use his influence to secure its passage. Superintendent F. O. Green is devoting night and day to the task of disseminating information about the provisions of the new bill and deserves great credit for his unselfish and unremitting labor.

Educational Legislation — State Aid

A new crisis has developed in the rural school situation. It is assumed and anticipated that the township law will be repealed. But it is the general, if not unanimous, opinion of those who have favored and those who have opposed the township law, that something must be done to improve the condition of these schools, and that we can not go permanently back

to the old system. The question arises, "why should we go back to it at all?" Can not some immediate improvement be assured? Other states surrounding New York have gone forward. Shall New York State not do something, and at once, instead of confessing herself helpless in the face of conditions which are admittedly not to be generally improved under the old system?

A proposal comes from the Senate committee on education to meet this crisis by calling upon the State to contribute a greater part itself toward meeting the expense of education throughout the State. The State allotments have remained nominally the same for a quarter of a century, but are actually less than they were twenty-five years ago, and are relatively greatly diminished. While the local expenditures for rural schools have been doubled in that period (three millions to six millions), there has been no increase in the State appropriations to these districts. The entire increase in the State appropriations has been apportioned to the cities and villages. Moreover, New York State is now thirty-first in the list of States in the proportion of state to local expenditure for school purposes, and it is twenty-fifth in the proportion of State aid to total assessed valuation.

Under the proposed increase to \$250 for each district, the State would not be meeting more than a fair share of the burden due to changed conditions and increased cost. Under the provisions, therefore, of the plan contained in the bill of the Senate committee on public education, the county of Otsego will receive an increased allotment from the State of \$35,300.

In the second place, it is proposed to eliminate from the town school unit all the union free school districts which maintain academic departments, and to make an allotment to each in the amount of \$600. An especially heavy burden rests at present upon many of these districts.

In the third place, it is proposed to maintain the larger, that is, the town, unit of taxation and administration, except when the towns are too large for one board; but to consolidate no districts except upon the vote of the districts affected.

New York State is hesitating at the moment. There is a strong demand for the repeal of the township law. Its enactment has, however, served a good purpose in inciting a greater interest in the schools of the State. But it would be a disaster to the State and a cause for humiliation in the eyes of all the States, if New York were to accept as inevitable a system which every other State in this part of the country has abandoned, and were to decline to bear a fair share of the expense which an improved condition of the schools makes imperative.

H. COSSAART, *Dist. Sup't.*

Circular Letter Sent Out by Wolcott Grange No. 348,
February 25, 1918

Wolcott Grange, No. 348

WOLCOTT, N. Y., Feb'y 25th, 1918.

DEAR BROTHER GRANGERS:

At a meeting held by the Wolcott Grange, No. 348, Saturday, Feb'y 23d, 1918, the whole question of rural school laws of New York State was met:

carefully and thoroughly considered. And this was the result, that we ask all the Granges throughout the State to write to their respective Assemblymen and Senators urging them to secure the repeal of all additions and amendments to the Educational Law passed since 1909; for these reasons: 1st, the rural school law, as it stood in 1909, had worked well for the preceding thirty years. 2nd, the taxes were far less for maintaining the Educational Department at Albany. 3rd, in our own County our school taxes for 1908 were less than twenty-five per cent. of our school taxes for 1917. 4th, and there has been no improvement in the rural schools since 1909. One of the most prominent High School principals of this State made this statement.

Now, Dear Brother Grangers, this we know, that since 1909 there have been various amendments and additions to the Educational Law, none of which has in any way benefited the rural schools, but each of these amendments and additions has taken more money from the taxpayers, and put it in the pockets of some cheap politician, until the aggregate of these stealings amounts to more than three times the cost of maintaining the schools in 1909. If you do not believe these statements look at your own tax receipts and be convinced.

During the past generation a persistent effort has been made to make of the schools a political football, to be kicked back and forth by the politicians, for the sake of the money they can get out of it to pay political debts.

A prominent member of the Legislature once told the Legislative Committee of this Grange that if the granges would pull together they could get any legislation they asked for. Now, Brothers, let's pull together and secure the re-enactment of the Educational Law of 1909. Write your members of the Legislature and do it now, and do it often.

Fraternally Yours,

LEGISLATIVE COMMITTEE OF THE WOLCOTT GRANGE.

By F. W. KNEELAND, *Chairman*,

F. H. EVERHART, *Secretary*.

Letters from John B. McManus, District Superintendent of Schools, First District, Otsego County, to the Wolcott Grange,

Cooperstown, N. Y., March 2, 1918.

Worthy Master and Fellow Patrons of the Wolcott Grange:

I have your letter of the 25th of February and appreciate what you say relative to the ability of the grange to secure legislation at Albany. The grange is now in a position to get what it demands and with this influence comes added responsibility. We must now give most careful consideration to the questions that come to us for decision and in doing so be mindful of the welfare of those outside of the grange as well as those who belong to our order. The grange was founded to "promote the welfare of our country and of mankind." The welfare of the grange is not mentioned but the fathers of the order were wise men and picked the sure road to the success that the grange has achieved. I have been a member of the grange for twenty-two years and have watched it grow into its present position

of influence and power. That prestige was built up on wise, conservative and deliberate action and by such only can it be held. Indiscretion on our part may lose to the grange all that it has taken long years to gain.

Let us now consider some of the points raised in your letter:

First—We had good schools under the old law but not in all districts.

Some of the districts in Otsego Co. are weak financially and cannot afford to maintain good schools. Shall it not continue to be the policy of the grange to act unselfishly and consider the education of all the children in all the districts.

Second—New York is the "Empire State" but it is the 33rd on the list in the matter of appropriations for its Educational Department and public schools. The State tax this year was 11 $\frac{1}{4}$ mills, the expense of all Departments being met for the most part by automobile and various other kinds of licenses.

Third—Our school taxes are more but is this exceptional? In 1909 I sold milk for 90¢. We now receive \$3.20 for 3 $\frac{1}{2}$ % milk. I do not think of anything that has not increased in price. Each school and all the schools cost more to maintain, administer them any way you will. I have farms in two school districts and the new law increased my taxes in both cases but the increase goes to help out some of the weaker districts, in one case lowering the tax from 17 to 10 and that a district supporting a grange, and while as an individual I may complain I cannot do so and speak the policy of the grange. The State Grange in 1917 asked to have the town made the unit of organization and taxation. See page 115 of the proceedings. Did we make a mistake? Let us be sure before we act for we can't afford to make too many.

Fourth—Suggests to me a good subject for debate between the older and younger members.

If the principal is of the standing mentioned I should be glad to know his name and if he is sincere he will be glad to have it used. We send the best we have to Albany and if they are thieves there is some consolation in knowing that "it might have been worse" if we had sent some who remained at home. Statements of this kind create distrust in our representatives and do not "promote the welfare of our country." We get more consideration than, probably, any order or society in the State and should not be heard to complain if we don't get everything we ask. We are but a part of the State and the whole is greater than any of its parts. The Legislature represents us but it also represents other interests and we bind ourselves as grangers to respect the rights of all orders and societies.

In 1907 I was trustee of my school district and hired a teacher for \$6.25 a week. The teacher, hired by the trustee not by the incoming board of education, is now receiving \$12.50. I bought wood for \$1.50. Now it is costing \$3.25. The cost of everything has increased but the State still makes the same apportionment to this district that it made in 1906 and has not come forward with its share of the increased cost. If the state paid this district \$175 in 1906 should it not now pay \$350?

The State fixed the rate of tuition for non-resident pupils at \$20 in 1903 which at that time was not unreasonable. But now that the actual cost of

instruction per pupil has doubled the State should appropriate double the amount that the children from the rural districts may still enjoy free high school privileges.

Here in Otsego we seek corrections the same as you but we are not as a grange asking for the repeal of the Township Law for while it will let some of us out on the tax question it will not reduce the tax in the town as a whole and we seek to aid the brother from the weak as well as from the strong district.

Assemblyman Nesbit of Delaware, County Grange Deputy, has introduced a bill that would give to each rural district double the State aid that it is now receiving (or nearly so). Otsego will favor this measure.

Assemblyman Bloomfield of Otsego has introduced a bill providing for an appropriation of forty dollars from the state for the tuition of each rural child attending high school.

Our county grange has already endorsed this measure.

Legislation of this kind is sure to bring relief to the taxpayers in the country districts and until we secure such enactments we do not look for lower taxes whether the schools are administered under the township system or the old district plan.

Letter from H. A. Zimmerman, Albany, N. Y., to Mrs Lena L. Severance, Buffalo, N. Y., February 13, 1918

Your letter of the 9th instant, relative to Township School Bill, is at hand.

A vast majority of the people effected by this law are so intensely opposed to it, that it will be repealed.

If two or three changes, which have since been proposed, had been incorporated in the original bill, I doubt very much, there being so much opposition. At least, the attack would not be so successful.

Two omissions to which I might at this time make reference, are:—

1st—Creating Town Boards of Education, consisting of a trustee elected in each school district; then all of the trustees constitute the Town Board of Education.

2nd—Where a school district was heavily in debt, owing to one or many conditions which might exist, the indebtedness should be cared for by that particular district, and the future expenses of maintaining schools, borne by all of the districts as planned in this law.

People throughout the country have confused the Provisions of the Township School Law, with the laws providing for Manual Training, and improved sanitary conditions, which are required, and have lost sight of the fact that a great many districts were avoiding many expenses towards school maintenance under the old law; whereas, under the new law, every district has been required to pay something towards the maintenance of our public schools.

Personally, I am very much in hopes that a new bill will be introduced which will in reality cure the defects of the old one, but as I said before, I expect the repeal of what is known as the Machold Township School Bill.

The following letters to the State Department and to members of the Legislature from individual members of town boards, parents, citizens and others interested in the township system are of interest.

In the opinion of the board of education of the town of Caton, the township law has resulted in greater expenses without increasing the efficiency of the schools.

Sentiment is strong in this town for the repeal of the law.

From my study of the situation, and conversation with people in all parts of the town I would suggest that if the law is to be retained the practical working would be better if each district should elect a trustee as in the past to have direct charge of the local affairs of the district, the Board of Education to be composed of the trustees.

I would suggest that the trustees should receive a uniform rate of compensation for their services, say \$20 per annum or perhaps even less, and penalized for non-attendance at board meetings by withholding a part of their salary.

January 18, 1918

Very truly yours

HARRY I. DOW

Corning, N. Y.

You may be interested in learning what we have observed in relation to consolidating various rural districts with the Union Free school district of this city some two or three years ago.

The estate I represent owns property in two of the outside districts brought in, and we think the change has been beneficial.

Educational opportunity in these districts has been greatly increased, bestowing upon children living at a distance all the school advantages enjoyed by the children of the original town district. The comfortable and convenient places at which children assemble, and the automobile transportation to the High School building, make it almost as convenient for children of remoter homes to attend as though living within the city limits. Life for parents in these more distant districts is now more attractive because families may be kept together while the children are receiving a splendid education—in the agricultural, commercial, or other courses.

Farms now may retain those who would move to villages for better educational facilities. Thus these farms are more desirable and consequently more valuable than before.

March 6, 1917

Yours sincerely

W. S. OBERDORF

Danville, N. Y.

I want to thank you for your kindness in sending me copy of the Township School Bill and I am very glad to note that it has become law.

My first impression of this bill was that it was intended to head off consolidation but upon learning more fully about it I find it a well planned study in that very direction giving all school children the opportunity of free education and placing the burden of taxation equitably upon all the property of the town.

Again thanking you, I remain,

May 2, 1917

Yours very truly

E. B. JOHNSON

Chaumont, N. Y.

Do you consider that the matter of equal suffrage has placed women who do not have children of school age in schools but who are American citizens, on the list of qualified voters, to the extent that we can use them as Inspectors of Election at our school election in May, as we find it hard to find good men who can find time to serve, and we have several ladies who are much interested in our schools and would gladly take hold of the work rendering good service, and also give them a better knowledge of how the work is handled.

I am much in favor of the township school law as I was not favored with the present day advantages, in the one-room school which I had the privilege to attend in my boyhood days, and I wish to do all I can to aid in the betterment of the schools throughout the State.

February 5, 1918

Very truly yours

ORVIL E. SMITH,
*Clerk, Board of Education, Town of
Niskayuna, N. Y.*

Probably you have had full information on the Farce that was called a hearing on the Township Bill before the Grange last week. I want to add my testimony that the infamous worsted cat chased by the still more infamous asbestos dog, had a walk-over in comparison with any chance that bill had before that committee. The chairman took it on himself to badger the speakers, and cut off what might be said for the bill and let the opponents yell their vituperations. When I was about coming to the real nut of taxation he interrupted with an unimportant question, before I got that half answered he put in another, then I told him that I wanted to finish what I had started to say, and he gave me to understand that my time would be extended so I could, and fired a question, when I got that answered he slurred at my answer and then he told me to sit down and of course was backed by the mob they had there. What I got was the common allowance interruptions by the chairman, side-tracking questions and told our time was up. The only man apparently who was allowed to speak as long as he pleased, and at least three times (I don't how many more) was a chap shouting personal abuse of you as the thing that unequivocally condemned the bill—honest I didn't get another thing to it, nothing against the bill, nothing against you except being the villain that made all the trouble—the chairman said that it was a fine speech and I said let him yell some more whenever he felt like it, which seemed to me most of the time. Men glowered at me as though I was trying to burn their babies. I asked a woman who was sitting next to me for a name I hadn't caught. I might have been an angleworm and perhaps she would have shuddered, as it was, she never moved an eye-lash in my direction. I concluded the more that I said the worse off the bill would be. One of its most vital defects was that the school superintendent, teachers, lawyers and village people were the ones that wanted it retained. As an example of the kind of a chairman we had, a gentleman whose name I didn't get was giving him a good many reasons for retaining the bill, when as usual he,—the chairman,—broke in and wanted to know where the school meeting was to be held in which the rural people could have a voice and a vote. The speaker told him in as many

parts of the town as they wished. The chairman disputed that was provided in the law, and wanted the speaker to show it. He said he didn't care to lose his time searching the law, but it was there. Knowing what would happen to him, if he ever let himself on the side line, I took out a copy of the law, walked over to the chairman, and pointed out clause 2 Sec. 355. He scowled over it a while and then muttered something to the general effect that it would take a Phila. lawyer to tell what that meant. Mind you this man was the chairman of the Committee that was supposed to be giving a hearing on the bill.

February 14, 1918

Yours as ever

JOHN D. CARY

Cary Cottage

Richfield Springs, N. Y.

The forty-fourth session of the New York State Grange is over and as you already know a resolution endorsing the Township as a unit and a Town Board of Education was passed without a dissenting vote. Many delegates were sent to oppose the proposition but they were either won over or made to think they were compromising.

Nearly all the suggestions made in the report of our committee were included in the resolution which the Session Committee presented to the body for adoption. We did not deem it wise to mention the matter of extra quotas for consolidated districts, but I posted a friend (Prof. Works of Cornell) who was asked to help draft the resolution and he made a provision for such a matter. I met eight of your District Superintendents who were present as voting delegates. One of them, Mr. C. M. Pierce of Adams, who introduced the first resolution favoring a Township School Law two years ago at Oswego, did good work for it. He succeeded in getting a Mr. Conrath, an editor from Cuba, N. Y. to be on hand to speak for the bill before the sessions committee. Mr. Conrath was also asked to help draft the resolution. Pierce has been sending out some good literature during the past two years. I believe it has counted.

One of the best things that has come about as the result of all this agitation is the better feeling which the Country people as a whole have towards your department. The discussion before the committee helped to dispel a certain fear which has seemed to exist to some extent.

I understand that Sec. W. N. Giles says that our committee is to be abolished so we shall probably not meet officially again. However, if at any time I am able to do anything for your department in the interest of better schools I shall be glad to do so.

Thanking you for the courteous treatment which you gave our committee, I am

February 12, 1917

Sincerely yours

JAMES PRINGLE

Ashville, N. Y.

Can you inform me whether the Department intends to push the Township School Bill this session? We hope it will be done in the same form. The suggestions by the State Grange are, in my opinion good in part, but

that suggestion that each district elect its own trustees as at present and limited to two members strikes me as absurd. First,—the size of the Board thus created would be so large as to be cumbersome. Second,—the Union School would be at the mercy of the rural districts with only two of their own trustees to protect themselves. Why not let the representation on the Board be based on assessed valuation of districts, then if necessary two contiguous districts could combine to elect one trustee. In our town, the assessed valuation of our district, No. 2 is \$313,038 while the average valuation of the 12 other districts is \$70,906. To say that we should be allowed only 2/14 of the voting power would be rank injustice. We are maintaining a high grade Academic department with agricultural and home economic courses, and I greatly fear that with so little power on the Board our school would be crippled.

February 23, 1917

Yours truly

E. A. PARKS

*President of the Board of Education (Also Editor of
Wyoming Reporter)*

A discussion today with Principal Glasier of Warsaw and L. A. Cass, publisher of *Western New Yorker*, the leading paper of Wyo. County, showed me why some people are opposing the Township Bill. Warsaw now draws a large amount of money from the State on account tuition of non-resident academic pupils and fears they will lose a large part of tuition, if pupils have to pay it themselves or if towns not having high schools contract with other nearby towns rather than with Warsaw. They say, if the State would pay such tuition where towns are unprovided with High Schools and pupils could attend where they pleased they would not seriously object to the bill. I have tried to get Mr. Cass who is a Republican State Committee Man, for this county to actively support the bill and then Mr. Sage, our assemblyman would fall in line. Of course you are familiar with all these objections and I only call your attention to it to explain why I cannot probably succeed in getting Mr. Cass to help me. In fact he objected to my advocating the bill in our paper here, which he owns, until I made it a straight personal issue. I sincerely hope the bill will go through.

April 10, 1917

Yours truly

E. A. PARKS

Wyoming, N. Y.

I also have a copy of Chapter 328 of the Laws of 1917 and am glad to see that the Governor has recommended its repeal or amendment. It has certainly worked monstrous injustice to the taxpayers in the rural districts. I do not know enough about such legislation to discuss the details of its proper amendment, but for the sake of justice would like to see every word of Chap. 328 repealed, excepting so much as provides for the collection of school taxes by the town collector instead of, as heretofore, by a board of school district collectors.

Almost every man owning any considerable area of farm land has hitherto been taxed in two or more school districts.

In respect to my lands in Putnam County, I have been yearly compelled first to ascertain who is the new collector in each particular school district for the new year, thereafter to find out where he lives, and in the end to go and get from him my tax bill.

January 16, 1918

Truly yours

STUYVESANT FISH

New York City

The people of the town of Newfield are about all opposed to the Township Law because the school tax in nearly every district is higher than ever before. Most of the people wish to return to the old system.

Personally, I am in favor of this system as we all have the same rate of school tax. Several school districts in the town by combining, transporting, etc., have never paid any school tax at all, for many years, until this last year. Naturally they holler.

The people in this town are all opposed to medical inspection, physical instruction, sanitary closets, etc. If we had not been forced to pay for these things this year, the people would not have had so unfavorable an impression of the law. I believe that all these things are very nice for the children, but not necessary. And nearly all feel that in these hard times that the schools should be run as economically as possible.

I feel that the department at Albany is not in as close to the people as it should be. It considers only the good of the pupil, without stopping to consider whether the people can afford more tax.

In this town someone should be given the power to consolidate school districts. They are altogether too many school districts for the number of pupils. One district has only one pupil. If the town board had the power to re-district the town, we could save money and have more efficient schools.

In conclusion, would say whatever you do, keep the school taxes down until after the war; and you will meet with the approval of all. The people will not stand for increased school taxes now; no matter what the benefit.

June 15, 1918

Very truly yours

DONALD S. CUTTER

Newfield, N. Y.

Your circular letter asking for opinion as to the operation of the Township School Law received, and the matter carefully considered. I have not only been interested in the matter as a trustee, but have conferred with District Superintendent, checking up my understanding of the intent of the law, before replying.

In reply I would say after careful consideration, that I believe the entire law should be repealed, and if necessary a new law drafted to cover in a simpler manner the points really to be desired. I am speaking, not only as the present chairman of the town board of education; but from past experience as a member and president of the former board of education in this union free school district.

I say repeal, rather than amendment, because it seems to me that the present law is already sufficiently difficult for all to understand, without further complicating it.

My reasons for taking this stand are substantially as follows: The fact that as far as my experience goes the law must be more expensive in operation than has been the case, should be offset by some evident advantage. The only possible advantage I have been able to see is the possibility of putting into effect in towns a policy of employing a higher grade of teachers, especially in the smaller schools. This is a possibility, and not necessarily a result of the law. Inasmuch as this is the case, I consider the law an unduly method of gaining this point.

There may be other merits in the law as it stands, but I think of no one that is sufficiently important to justify the law as a whole; nor do they appeal to me so, taken collectively.

On the other hand, there is widespread dissatisfaction over the law, on the part of the people as a whole. This in itself may not be sufficient condemnation. But I have found it so far in this town very unsatisfactory.

For example, much as the old-time trustee has been belittled, it must be admitted that if he was good at all he had direct interest in the affairs of the district. It gave the district an independence which has now been taken away from it. I found in our case here, that while before the new system went into effect, I was very much interested in our union free school district and high school, somehow this law has taken the edge off this interest; it is no longer "our own," and our responsibility must extend to the whole town. The same is true with the smaller outlying districts. They had at least some one to look after them before; now, while there is a member of the board delegated to look after each group, the interest and responsibility do not seem direct, and everyone is complaining of the effect. And I believe we have conscientious representatives on the board; as good as they can be expected to average.

If some change from the old method is considered necessary, why can it not be arranged in some way so that each district feels that it has direct representation and supervision? I am not at all in favor of the present system of monthly meetings, concerned in a general way with the affairs of the whole town. We are being centralized all too fast, it seems to me, for a democratic people. I recognized that it is done in the name of efficiency; but efficiency as the one goal to be desired, I believe has been discredited.

I understand you wrote to the Town Board of Education, Carlton, N. Y., asking opinion and suggestions of amendments to the present school law.

I am not in favor of the present school law in regards to the Town Board System. I would like to see that Law appealed and return to the old District system.

If not appealed, amended so that the Town School Board can secure compensation for services rendered.

I would be in favor of having the Law amended in regard to employing special Physical Instructor for District Schools until the school teachers are qualified to give those instructions, in addition to their present work.

It is my opinion with the present system, we do not receive the added benefit in comparison to the extra expense incurred.

Jan. 14, 1918

Yours respectfully

E. J. BURT

Member Town School Board, Carlton, N. Y.

I am frank to acknowledge that this section is sparsely inhabited; distances are great, roads on the whole none too good, weather conditions in the winter likely to be very bad. But there must be other sections of the State of about the same description. Here the Township Law, in some of its features, may not work out as well as in other localities. But while it is not possible to have laws that are perfectly fair to everyone, it seems to me that this law works too much hardship, in its intentions and applications, upon such rural districts as this.

All this I have intended to submit respectfully and not in a sense of mere fault-finding. I am not fitted to make any suggestions of value. But I am honestly of the conviction that the present Township School Law is not at all acceptable to the people, and is unwarranted.

Jan. 18, 1918

Yours very truly

ELLIS W. BENTLY

Sandanah Farm

In answer to your request for statements from town boards as regards the township school law, will say I am in favor of the repeal, for the reason it is too expensive for the rural districts. Our taxes are from 50 to 75% more and we gain nothing.

Another reason is that as the law now stands it places too much power in the hands of a few.

I have no suggestions to make as regards to amendments, but would favor the old law.

I would like to call your attention to the physical culture humbug, we want that buried, so there will be no resurrection.

C. W. CLARK

Wappinger Falls, N. Y.

I find a circular letter in my mail which I judge is meant for the President of the Town Board of Education. This letter asks for an opinion regarding the Township Law. This law does not intimately concern the school in which I am interested, but I venture an opinion in view of the fact that I am mid-way between two Townships and can see the working of the law from an intimate standpoint. Permit me to say that the trouble is not in the law but in the men who are but slightly attempting to work out the provisions of the same. The tax rate is the great cry, but I know one school which until the past week or so had two physical training teachers. One was hired by the old Board and the Commissioner placed the second. Why not have waited until the new system was working before a duplication of officeholders?

There are two district schools in a Township adjoining this place, one with three scholars and another with five. The one with five is within two miles of our High School with walks all the way. We offered to take all the scholars at \$21.00 a year.

One school closed for days on account of no glass in the windows, the same school went six weeks without chalk or erasers.

What can you expect a law to do with such management? Whenever I attempt to help a farmer in the interpretation of the law he dislikes, I am accused of playing for the tuition the Town is supposed to pay for

scholars going to High School. Such is not the case, Mt Morris has earned many times every cent a Town Board is supposed to pay us but has not as yet.

The physical training is a sore spot, to the thinking of a farmer the humped up, stoopshouldered, deformed farmer boy is a perfect man. He walks two miles to school with a shuffle that is all the exercise he needs. The writer was on the Draft examining Board of this County. He saw dozens and dozens of young country workers physically unfit.

The ratio was far more than the village boys. But must know all the items I express, it is an old story with you, pardon my answering a question put to the other man.

Jan. 9, 1917

Very truly

DR. W. H. POVALL

Mount Morris High School

I saw in the Hoosick Falls Democrat a request from the Hoosick Town Board of Education concerning the Township School Law and where Mr. Stevens said he thought it was a good thing. Now I think Mr. Stevens might make a good politician but I don't like the way he said about the Schools being better. Now I do not live in Hoosick but live in Pittstown. I know all the men on the school board in Hoosick though. I would like to write a little from a school district in Pittstown. I don't know what the school board is doing in Pittstown. I guess not much of any thing. If you say anything much to any of them they say they don't get much money out of it. I have talked with a good many in the town and they don't like the way the schools are run. *Now we want it back the old way so we can run our own District.* Now we cannot have anything to say in our own District. There was a lot of window lights out. The teacher kept blinds shut to keep out the snow and wind that was nice for the children. Now the water pail has given out so they come to our house to borrow a milk pail to bring water in. Some of the blinds are off and the hinges broke but we in the district must keep still and let the good school board go on. Another thing that is about the biggest and foolish piece of business is this physical culture.

Another thing is a foolish idea is the having the Doctor come and examine the children and charge \$6 or \$7 and some of the scholars he never sees but gets his money just the same, a little more graft. Now Mr. Finegan, I hate to see the schools go on in this way and I know I could bring you a lot of names that would the same as I have from the town of Pittstown. We would like to have this new way wiped out entirely and the old way back and run our own schools.

Politics may be all right but lets not have them in our schools. Hoping this may do some good I know I am awful sorry to see it go on this way. Another thing, none of the school board ever comes to the school house. They don't whether the teacher teaches one day or five. I don't believe any of them have ever seen the teacher. You may think that this letter don't amount to much but I have seen quite a lot. Hoping this school law will be changed, I remain a resident of District No. 7, of Pittstown.

Jan. 25, 1918

NATHAN COTTRELL

Hoosick Falls, N. Y.

I have received from the department a copy Act No. 1016 introduced in the Assembly by Mr. Machold to amend the education law by creating town boards of education etc. Am I right in interpreting section 331 paragraph 2 to mean that the results of our Dansville consolidation will be set at naught if the bill becomes a law? Our consolidated district now extends beyond the limits of our village. If my interpretation is right to what district or districts will the parts of which we would be shorn belong? We have taken from some of these districts desks, maps, globes and the libraries which are now in use in our school. If this bill becomes a law shall we have to give them up? Our Board of Education is contemplating the sale of some of these schoolhouses. If they were sold before the law goes into effect would our district become liable?

We are beginning to plan for next year, but before we make any definite move even in the hiring of teachers, we want to know if our district is liable to be decreased in size and valuation. What in your opinion are the chances of the bill becoming law?

March 5, 1917

Very truly yours

J. M. FOSTER

Supervising Principal, Dansville High School,

Dansville, N. Y.

Utica, N. Y., January 24, 1918.

I enclose herewith a clipping from this morning's "Utica Daily Press" containing a report of a public meeting held at Holland Patent last evening and including a copy of the Resolution adopted at such meeting. I thought that it might give you some encouragement to know that your efforts to improve the educational advantages in rural districts through the agency of the Township principle was appreciated by some rural communities.

Some time ago, as president of School Unit No. 2, Town of Trenton, I received a circular letter from you asking Boards of Education to make suggestions and recommendations with reference to the Township School Law.

I appreciate that the main thing, at this time, is to retain the principle of the Township system and that the main thing at the time the bill was passed was to establish the principle of a Township system and that in accomplishing the main purpose compromises had to be made and provisions written into the law which nullify to some extent the fundamental principle. I know that you will receive many suggestions that cannot possibly be incorporated into the law, especially at this time, but I have one or two observations to make for your consideration.

I have heard that some of those who are opposed to the law have taken the position that they will not continue to oppose it, if all Union Free School Districts are exempted from its operation.

To include such a provision in the law, in my judgment, would be to nullify the principle involved, to such an extent, that the boys and girls of the rural communities would be deprived of the educational advantages that a Township educational system is intended to give them. In fact, one of my criticisms of the present law is that by Subdivision 2 of Section 331, towns where there are two or more Union Free School Districts, are

divided, they are divided into as many School Units as there are Union Free School Districts. This provision was not, as I remember it, in the law as originally introduced, but is an amendment to the original measure, and was one of the compromises effected. I would very much like to see Subdivision 2 of Section 331 stricken out and the law so amended as to make each Township the unit for school administration. There are probably more difficulties in the way of such an amendment than I realize, but at the same time, I cannot refrain from making this suggestion.

With reference to the subject discussed in the preceding paragraph. It may be impossible to bring Union Free School Districts of 1500 or more under the operation of the law, but it ought to be possible to bring all Union Free School Districts not having 1500 population under the provisions of the law without dividing the town in which they may be located into so many units. To illustrate my point, I would cite the Town of Trenton, Oneida County as an example. At Holland Patent we have a high school at the village of Barneveld in the same town they do two years high school work, in the village of Hinckley in the same town they have a full high school course. As a result the town of Trenton is divided into three school units. While this is an improvement over the old system, in my judgment a much better educational system could be devised for the town of Trenton. If we were operating under one Unit instead of having three schools doing the same kind of work we might have a High School course and agricultural course and a business course, giving to the boys and girls of the town and surrounding towns a much better educational opportunity, with very little, if any increased cost of operation.

The second suggestion that I would make is that the original provision providing for the election of the District Superintendent by members of the town boards of education within his supervisory district be retained. The present method provided for the election of the District Superintendent is very faulty. In many cases the School Directors now serving are the ones originally selected and no attention is paid to the matter of selecting School Directors. Partisan politics determines the selection of the School Directors and therefore has too much bearing on the selection of the District Superintendent.

I call your attention to Section 353 which relates to outstanding bonds and existing school property. The suggestion of the State Department, that boards refrain from carrying out the provisions of this section until further notice from the Department was very wise. A great majority of people do not know of this provision of the law and if they did the demand for the repeal of the law would be much stronger than it is to-day, from the taxpayers in districts other than Union Free School Districts maintaining Academic Departments. I believe that this provision of the law could be stricken out without causing any adverse comment or opposition from residents of Union Free School Districts, whereas the carrying out of this provision will intensify the opposition of the outlying districts to the Township bill. There may be some constitutional objections urged against the striking out of this section. You probably have given this particular feature of the law careful consideration and realize as fully as I do the effect it will have upon the outlying districts. If there is any possible way that this section can be stricken out I believe that it would be the best thing to do.

The law provides considerable red tape and formality in connection with school elections. It may all be necessary, but if the procedure can be simplified to some extent, I think that it would be advisable.

It seems to me that the provision requiring candidates to circulate a petition and secure thereon the signatures of at least 25 qualified electors serves no useful purpose. Subdivision 2 of Section 360 provides that blank spaces shall be provided so that persons may vote for candidates who have not been nominated for the offices to be filled at such election.

Subdivision 3 of Section 335 provides that the polls for the election of members of the board of education shall be open from 9 o'clock in the morning to 4 o'clock in the afternoon. During the progress of the voting it would not be possible to have a school meeting such as has heretofore been held when the board had the opportunity to present its reports and the residents of the village had the opportunity to examine the school officials with reference to the conduct of the affairs of the school. To omit from the law, a provision for a meeting such as I have indicated I believe is as great a mistake as the abolition of Town Meetings.

The law as I read it does not furnish the opportunity for the members of the Board to meet with the voters of the district. I think some provision should be made in the law to retain the more essential elements of the former school meeting of the district.

I trust I have not wearied you and would ask you to accept these suggestions in the same spirit as they are given.

January 24, 1918

I am very truly yours

DAVID B. LISLE

Utica, N. Y.

May I say this? I believe you are right in using means to better the conditions of the rural schools. You say "It is impossible to maintain efficient schools under the old district system." I am sure this is true. I live in a rural community and I know what a bogus education the country child is getting. The most inexperienced teacher is hired by an equally incompetent board. As a class the average farmer resists a new idea, and hangs back like a spunky child. In all the "resoluting" against this new measure I have not seen one word where the best interest of the child was considered. It takes a big man to fight such opposition and out of all this there should come better conditions for the rural schools.

January 17, 1918

Very respectfully

MRS J. G. BLY

Sherman, N. Y.

[Letter from Senator James A. Emerson to Mr W. H. Miner, Chazy, N. Y., February 21, 1918]

Governor Whitman has sent a special message to the Senate of the State of New York demanding absolute repeal of the Township School Law. Also, the Board of Supervisors of Clinton county have passed a resolution directing their senator to vote for the repeal of this law.

I note what you say in your letter and personally I have no reason to doubt but what your thoughts in the matter are worthy of the highest

consideration, but it is an established precedence when a board of supervisors in a county direct their senator to support or disapprove any measure, he is supposed to be duty bound to follow their directions.

[Letter from W. H. Miner, Chazy, N. Y., to C. J. Vert, Clinton county, Plattsburg, N. Y.]

Referring to the enclosed letter from Mr James A. Emerson, senator from the Northern District of New York, would it be convenient for you to find out why the Board of Supervisors of Clinton county has passed a resolution as outlined in the first clause of Senator Emerson's communication. I feel certain that the members of said board could not have given the subject such consideration as was warranted under the circumstances.

If these supervisors will come to the Chazy Central Rural School and acquaint themselves with the actual necessary expense involved in educating a child properly, and then compare the work in said institution with that which is being attempted in the old-fashioned district schools, they will surely get the message and will forthwith recall their resolution.

It costs at least \$100 per school year to do the necessary things whereby a child may have an opportunity to obtain an installment of real education. Most of the country school districts in the State of New York raise from \$175 to \$250 to defray the educational expense of each school year on account of from twenty-five to thirty-five children. How perfectly absurd such a sum of money is in comparison with the true requirements! If the farmers really stopped to consider the value of their own children as educated competent citizens compared with the value of the same children improperly educated and confronted with all of the handicaps which lack of education involves, they would be "whooping it up" for the Township Bill and for every other bill which could in any manner increase the chances of their children in the matter of obtaining a thorough education.

I wish you would make it clear to the Board of Supervisors that the repeal of the Township School Law would be a crime against the children of the State of New York—and nothing short of a crime. The only trouble with the Township Bill is that it does not go far enough.

People who live in the cities make every possible sacrifice to educate their children, but the farmers unfortunately hold a different viewpoint and feel that the old district school is plenty good enough. However, I think the farmers of Chazy have already learned that the old-fashioned method of trying to teach a child "Reading, Riting and Rithmetic" is a delusion and utterly unworthy as a measure of the interest of parents in the welfare of their children.

[Mr Vert's reply to the letter of Mr Miner, March 4, 1918]

I have your letter of February 28th, in regard to the Township School Law. What Senator Emerson says is true. The Board of Supervisors not only adopted a resolution favoring the repeal of the Township School Law, but also selected a committee from their number and instructed that committee to go to Albany and work for the repeal of the law, which they did at the public hearing held on Wednesday last.

I have talked not only with members of this committee, but with others of the Supervisors, and I never encountered such a situation in this county.

They simply will not reason in regard to the matter, and no one representing the opposition to the law, did any reasoning at the hearing on Wednesday last. It was simply a howl for the repeal of the law; the only understandable contention being, that their taxes had been increased, with no corresponding benefit. They attacked the physical instruction provision, which, as you doubtless know, is no part of the Township Education Law, and this is simply a sample of their ignorance of its provision. Another sample of their methods was displayed when, unable to meet the convincing statements of the fact by Dr Finley they simply raised a hoodlum howl of "Repeal, Repeal, Repeal!" It is practically impossible to meet an attitude like that with reason.

In the light of the revelations made at the public hearing on Wednesday last, I am preparing a pamphlet, which will be the substance of an argument, I propose to make at a later hearing at the Capitol. This, of course, will be prepared for distribution among the Legislators themselves. I am satisfied that if the main features of the law are to be preserved, it must be through the votes of the members of the Legislature coming from the cities, who are in a decided majority in the Legislature, if they will stand by provisions of law which tend to give children of the country advantages which their children enjoy. The farmers, as a class, seem to have simply gone mad over the situation. The Rural New Yorker a very influential farm paper edited by a man by the name of Dillon, who spoke viciously against the law on Wednesday last, has been a great factor.

We are surely up against a stiff proposition when the Governor of the State sends a special message to the Legislature for the repeal of a law, and the repeal is backed not only by forces of the Governor, but by the Speaker of the Assembly. Senator Elon R. Brown, was the only political leader who had the manhood and vision to stand up for the principle of the present law. However, I think you are absolutely correct that the forces which stand for progress and enlightenment along this line, must make the fight and make it to a finish, even though temporarily defeated. The principle embodied in this law must ultimately and permanently win. Otherwise, there is no such thing as progress.

As for getting the Board of Supervisors together to repeal their action, I am afraid this may prove impossible; furthermore I am satisfied that at present it would be no good. They are almost unanimously, fanatically, not reasonably opposed to the law. You can have a little idea of how perfectly rabid they are. However, I will make the effort.

[Letter of W. H. Miner, Chazy, N. Y., to Dr Thomas E. Finegan,
March 6, 1918]

Enclosed herewith please find a letter from Honorable Charles J. Vert of Plattsburgh with reference to the Township School Law. I am sure Mr Vert will do everything possible to aid in saving the law from repeal.

I received letters from Representative Pierce and Senator Emerson and they stated the matter about the same as Mr Vert outlined it in his letter of March 4th herewith. I am sorry conditions are so adverse and trust that as suggested by Mr Vert, we may be able to obtain favorable action through the representatives who come from city districts.

The Chazy Central Rural School is progressing in a manner which brings great satisfaction and pleasure to me. I am looking forward to a visit from you at your convenience later in the season and am sure you will note much improvement in the children of this vicinity.

The dental work which is now well under way is being handled apparently to the entire satisfaction of the children and their parents. Dr Schieb is extremely busy and is taking up his duties like a veteran. You will surely be pleased to note the records which we are producing in regard to the physical and mental condition of the children.

Tully Grange No. 617 today passed the following Resolutions to transmit to Speaker Sweet: .

"The township law has proven very satisfactory in our town still we would not oppose the proposed bill if it were not for the injustice that it works to the union school districts.

We recommend that the union schools be reimbursed for the burden of maintaining an academic department.

We further recommend that the trustees be elected for three years; one-third being elected every year."

I am sending a copy to my senator and assemblyman.

Very sincerely

February 27, 1918

M. E. HINMAN

Albany, N. Y., March 31, 1915

My Dear Superintendent:

The Legislative Committee, representing the State Association of District Superintendents, have been in Albany the greater part of the week working in behalf of the township bill. Anonymous circulars, copies of which you have undoubtedly received, have been distributed broadcast throughout the State, misrepresenting the provisions of the bill and therefore arousing considerable opposition to the measure. The friends of the township plan have not been active in writing their representatives in the Legislature. The letters and telegrams have been in opposition on the measure. The interests which inspired this opposition succeeded in getting a large number of letters and telegrams to members of the Legislature this week. There is still a strong sentiment for the measure and members of the Legislature say that the principles involved are sound. It is necessary however to have members of the Legislature feel that there is a sentiment behind this proposition and that school men and other citizens are earnestly advocating it.

It is our judgment that district superintendents of each county should meet at once, communicate with their representatives and get influential people who are known to be favorable to the proposition, members of boards of education, etc., to write members of the Legislature in behalf of the bill.

It should be made perfectly clear that this bill neither alters present school district boundaries, dissolves a single district nor consolidates districts. School district boundaries throughout the entire State are left under the bill as they now stand. If it is unnecessary to maintain school in any of these districts, the town board is given authority to discontinue the

school. In other words, the broad principle of home rule is clearly written into this bill and confers upon officers chosen by the people themselves the power to determine what schools should be maintained to meet the needs of the town.

Unless effective work is done by superintendents at once the measure is in danger. We believe that, if superintendents take an active interest in the measure immediately and can succeed in inducing prominent and representative citizens to communicate at once with their representatives in the Legislature, the measure may receive favorable consideration.

Very truly yours

A. A. LAVERY

MANIFORD D. GREEN

CHARLES M. PIERCE

Legislative Committee

At a meeting of the Chateaugay Grange, Friday, February 22, a motion was made and carried to the effect that our secretary petition our representatives in the State Legislature not to vote for the repeal of the Township law.

Very truly yours

February 27, 1918

MYRTLE E. MACDONALD

Chateaugay, N. Y.

I have your circular letter of December 28th with regard to the operation of the Township Law. The law is not applicable to our town and has made no change in our school system. We are, therefore, not in a position to pass any judgment upon the law.

I notice that several of the Boards of Supervisors throughout the State have passed resolutions requesting the repeal of this Law. It would seem to me that the Law ought to be left in force for a sufficiently long time to try it out. According to my information the system has hardly gotten to working as yet.

Very truly yours

RALPH HASTINGS

Tupper Lake, N. Y.

The operation of the township law has given very good satisfaction so far as I have been able to learn, in the town of Rensselaerville. The schools are well looked after by our town board of education provided with good teachers, etc.; teachers' salaries are somewhat more than last year, fuel higher, clerks and treasurer salary making a small raise in our taxes. I think our rate was \$7.04. In the past, several districts in this town have been paying \$2 and higher; it seems the burden is more justly borne. One of my friends told me his school tax was one-half of the amount he paid last year.

Yours respectfully

H. HENSHALL BATES

Now in regard to the present Township School Law I am very much opposed to the repeal of it. I think if with some minor changes it will work out all right. It certainly equalizes the taxes in the rural towns. The best of any law yet and if you change this law and go back to the old law it is going to throw the high schools in small districts and towns out of business on account of high taxes. With school teachers' wages going to seven hundred and more small high school districts can't stand the taxes.

I appeal to leave the Township School Law just as it is for now and see how it works out. It is certainly yet if you lessen the taxes.

If the physical training teacher and the medical examinations were optional with the rural towns they will eliminate some expense that can be got along without. If you could see the schoolhouses you would not wonder that the rural districts are finding as they expected that the new law was going to make them new schoolhouses in one year, but that was out of the question but nevertheless I assure you that they have had as good attention under the new law as they ever did under the old. Once more, leave the law as it is and it will work out all right.

Yours truly

February 25, 1918

HIRAM HASKIN

President of the School Board, town of Cherry Creek

This new school system is a grand good thing in my estimation. I have served under the old system as well as being a trustee at present.

The childless taxpayer, especially, thinks it no good, "taxes too high." The welfare of the child is little thought of by him.

Under the old system it was hard work for the trustee to get through an appropriation for necessary repairs, say nothing of sanitation.

When the new board first visited the various school buildings in our township, we found them or most of them in a dilapidated and filthy condition. If you were to visit them today, you would find the buildings, including outbuildings, in a respectable and sanitary condition. Who would begrudge an extra dollar so spent?

This system is new and if a chance is given it, it will work out all right.

If the different districts had placed the schools as they are now their taxes would have been as high as they now are, and I assure you nothing was foolishly spent.

Under the new system, the rural scholar has the same chance as the one in the larger schools, a chance to get a high school education, I wish it was included in the law that were compelled to have a high school education.

The unlearned taxpayer can tell the educated in office at Albany how to run the educational department. Mr Finley would be a fine man to them, if he ran the schools "cheap."

Everything that is being done at present, is for the future welfare of the scholar, the men who will control the affairs of this the "Greatest Country on Earth."

When the Compulsory School Law first came out the greedy and shiftless parent fought it. Was it a good thing? Think so.

The majority of the people who are fighting this system know only one thing about it, it costs more, or his tax was more this year.

As to the physical training. Do our boys in camp just learn to aim a gun straight. No, they go through various exercises that they may become strong and healthy and able to endure. Chopping wood and hoeing corn is not the only exercise our rural scholar needs.

As to the medical examinations. Go to the dentist, for instance, and ask him how many more young mouths he has looked after since this became a law.

Is it essential to have good teeth?

This system is O. K.

January 15, 1918

GEORGE W. ABBOTT

Trustee of the Township, Town of Wappingers

I am one of the Board of Education of the Town of Montgomery. I wish to state a few facts about how I found things in the eleven school districts. I was appointed caretaker of all the schools at no salary. I am interested enough to do the best I can on the job. In regard to the taxes being higher, seven are not higher, (why) because almost without exceptions they did not vote enough money to pay the difference in the higher cost of teachers' wages, also not enough for coal.

One case the teacher had to dismiss the school. The fire would not burn. The clerk and I went over on a Sunday and cleaned out the chimney and pipe. It was chuck full and we had to dig it out. It had not been cleaned out in years.

We found window lights out of our school. Window shades were off six to eight windows in the same building. No interest taken in a great many of these. Four of the districts, the taxes were lower. They were in debt. Most of the people from these districts are pleased with the law. What kicking is done, is done by a man on account of the cost and some of the rest holler like sheep. Even when they really think it will be a good thing after it has worked out. There are people in all the districts for it and against it.

There should be more power given to the Board in regard to closing the schools. We have one with only one scholar. The superintendent said I could let the teacher go to the child's home and teach so as to save coal.

As a whole they would like to send the children to our high school or to Walden High School, same town. Out of the town district we have sent about 25 or 30 above the sixth grade to the Walden High School as that was nearer than ours for the pupils. I think about 50 have come to our High school.

Two or three of the schools are hardly better than hog pens. I wish the most of the people of the State could see things, that would settle most of the kicking.

W. S. HANLON

January 11, 1918

Montgomery, N. Y.

Today I have paid the school tax for a man that is assessed for \$2500. He has a wife in an asylum, a daughter that has fits. They own a farm that produces very little. The farm is mortgaged and they are really poor.

The school tax is 38 cents. Tax \$11.50 last year, the assessment was the same but the tax was \$3. The \$7.50 increase was because of this new and unjust law.

You said we ought to give the law a trial before we condemn it, and we have given it about four months' trial and I find that every time there is a meeting of the unit I have to travel eight miles instead of two as formerly.

I find my school tax was over \$50 instead of about \$15 last year.

I find that the teachers are inconvenienced by this law.

None but those that receive a salary speak well of it.

Not a child derives any special benefit from it so far as I can learn. Therefore it seems to me that outside of salaried officeholders a man is either a knave or a fool that favors it.

Am I not right?

Yours

December 11, 1917

MERRITT S. HALLOCK

Member of School Unit No. 2, Rocky Point, N. Y.

[Superintendent Young's reply to Mr. Hallock.]

I received your letter and in reply allow me to remark as follows: I do not desire to reason along the line as some people do about the Township Unit Law, for I could not conscientiously do so. Why do these people not murmur about the road tax? If the road tax would be levied as by school districts the taxes would be ever so much lower. People say nothing about road taxes, they complain only when it pertains to their boys and girls the most precious of creation. The same people say nothing when they have to pay taxes to pay for office, etc.

These same people, maybe, will pay per annum many times more money for luxuries,—yes, for strong drinks, than for taxes to educate their offspring * * * All great movements have been abused in their formative stage, the Township Unit Law can theoretically bear the same treatment for it has the floor and it will stay, likely some modifications will be made, but it is in line with civilization and human progress.

I find in the main that the law is not overbearing but an improvement on the old stingy or miserly rural customs. Forget not that school taxes are not for local purposes but for a state of general usefulness. I want to be fair, however, with my patrons and all I can do is to suggest that you make your complaints and grievances to our representatives and they will serve you I am sure.

[Extract from a letter to the Hon. Gilbert Seelye from Miss Mary A. Callaghan, Ballston, N. Y., February, 1918.]

It has come to my attention that a strong effort will be made in the near future to repeal the township education law passed last year. May we hope that your vote may be cast against the repeal.

True, the act has been in force but a few months, and a fair trial has not been given it, but from my observation, a distinct gain over the old system has already been made.

Similar acts have long been in force in all the leading states of our country and shall we of the boasted "Empire State" return to the anti-

quated methods of a century ago, which then served their purpose, but under changed conditions have certainly been found wanting?

There seems to be an erroneous impression that compulsory physical training is a part of that act, whereas, as you know, the physical training law was passed the previous year.

There has been much complaint in regard to increased taxation, but are we not paying double the price paid for commodities only a short time ago? Necessarily, the expense of conducting schools would increase with all these things; besides the present boards of education, in most cases had nothing to do with hiring teachers for the present year, that having been done by the old trustees before the newly elected members of boards of education assumed office. Again, there were expenses this year for equipment etc., which will not have to be repeated next.

Many of the people have been misinformed as to the provisions of the law, who, I am sure, would change their opinions did they have an opportunity to understand its real meaning. For instance in this town people have been told especially by the tax collector in making his rounds, that members of the board receive munificent salaries which accounts for their increased taxation.

Now, Mr. Seelye, may I not ask that you will put forth every effort to give the new law at least a fair trial? We certainly hope that, before many years have passed, we, of Charlton may do as you have done at Burnt Hills, and consolidate a number of our very small schools, and give our young people the privilege of a high school education in their own town.

MARY A. CALLAGHAN

[The following are letters to the Hon. Elon R. Brown:]

Will you kindly use your influence to get repealed as speedily as possible the unjust and iniquitous school law passed by the last legislature?

A law whose effects in operation would be more unjust and worse in their results on the school, could not well have been devised.

We have a good-sized new school for which we are paying and those who have children (we have none) are getting the direct benefits from it, while childless property owners are benefited by enhanced real estate values. Certainly in all justice we who benefit either directly or indirectly from the school are the ones to pay for the school, but this year my school tax is \$10 less (approximately) than it has been at the least since the building was constructed. Now, I am willing that someone else should pay that \$10 if they want to; but I have a strong suspicion that the people in the small outlying districts who are not at all benefited by our school are not overjoyed at being compelled to pay that additional tax. In fact, from what I hear they are pretty indignant and justly so.

I taught in another state under a somewhat similar law and the result was a continual row about supplies, high taxes and the whole school business thrown into politics, a thing earnestly to be avoided.

Thanking you for your attention to this matter, I am

Sincerely yours

(MRS.) EDNA C. JONES

Dec. 17, 1917

Nanuet, N. Y.

I was at the hearing before the joint committee which was held in the Assembly Chamber on the 27th ult.

I was very much impressed with your speech upon that occasion and must congratulate you upon the stand you have taken and hope that you will be successful in your battle for better rural schools.

You are distinctly right in saying that to return to the old system of a single trustee school would put this State back twenty-five years and would make us a laughing stock for our sister states to jeer at.

You are just as right when you state that those who oppose the present Township Law do so more because of higher taxes than for the reason that they think the schools were on a higher plane under the old scheme.

There are, possibly, defects in the present Township Law although I can't lay my hands on them, but the fundamental principle of having the township instead of a school district the unit with a Board of Education composed of three or five members to administer affairs, is beyond doubt correct. And, should it be deemed wise to amend the present law or adopt my friend Speaker Sweet's idea of a commission to determine on a new law next year, this fundamental idea must become the basis of such new legislation.

There is no reason why the rural schools should not take on Visual Instruction, Socialized Recitation work and the good things going in the city schools. At present the rural schools are far behind the times, antiquated and returning little for the outlay. The principal reason for this is because of the single trustee system. He could not comprehend Visual Instruction. He was not capable of judging whether Socialized Recitation would be a good thing for his school. He had no scheme, or policy of education. His administration depended for its success upon whether it was economical or not.

The Board of Education meeting once a month with the Supt. of Schools in attendance, can and does discuss such matters, do adopt courses which tend to place the schools upon a higher plane of efficiency. There is no possible doubt about this. The records show and it is a matter of common knowledge. This tendency will grow as the various Boards become used to doing things and determining what matters ought to be looked after to get a better return for the monies expended.

Whatever changes may be proposed, let the Board of Education of three or five members be the basis of any composition.

Let me congratulate the people of this State in having a leader with your pronounced powers of vision.

You will pardon me this long letter?

Very truly yours

H. I. FISH

March 11, 1918

Williamsville, N. Y.

Another trouble we are having is this new Township School Law and I am reliably informed you can do more this winter in the Legislature, than any one else, to help us out.

Of course you city folks are not affected by this law, and it is I suppose even doubtful if you have any first hand information as to its workings.

I have sometimes doubted, if the Educational Department at Albany really knew what a mess it is and the opposition it has created. For it seems to me, if they were aware of conditions as they actually exist, they would be so anxious to get the law repealed as we are, provided of course, that the department is composed of real educators and not politicians and bureaucrats. You can't help much in educational ways, when you give people the idea you are grasping for dictatorial power and robbing them of their money to build up a political machine.

Now the objections to this law on Long Island are these:

1. A little Union Free School village with less than 1500 inhabitants is arbitrarily made our educational center. Ever since the Academy in a neighboring village closed, most of the children in our school district as soon as they finish in our school go to the Port Jefferson school there. This arrangement allows several members in a family to go to the same school and the older can look after the younger. It is simply common sense that the center of trade for a dozen or so hamlets should be their educational centre.

Under the new law an attempt was made to hook us to Setauket Union Free School a little berg beyond Port Jefferson. By scraping around carefully, the village officials counted over 1,500 and that let them out. The only other Union Free School is at Marches. I believe on the south side of the Island, 15 miles away.

2. The method of running the schools under the new law is extravagant and wasteful. A very conservative estimate will give the increased cost at 10-30 per cent., with no corresponding advantages. To have a man go 10-20 miles to put in a window light is throwing the taxpayers' money away. But within a week I understand the District Superintendent wrote the Chairman of our Board of Education that we ought not to say anything as long as the tax rate was under \$75 and \$100. With six districts, without a Union Free School and giving the clerk only \$400 our district tax rate jumped 210 per cent.

3. Some of the Districts in the Unit are usually without a local representative on the Board of Education. In our Unit there is one; in a neighboring unit 6 or 7.

4. The law is an unmitigated nuisance, both for the teachers and the individual members of the Board of Education. It is almost impossible for the teachers to get their money by mail in less than a week after it is due. While the most of cases must travel from 100-1000 per cent. farther to do the same business, they did as trustees. To a hard working farmer this is a serious matter.

5. The law tends to produce bad feeling between villages or an excessive tax rate. Where all districts pay the same tax all schools must have the same appliances whether one-half dozen children or two score. In reality a teacher with a small number of children with inferior equipment can often give them a better education than a teacher with a larger number and superior equipment. But the law makes no distinction.

6. And finally the law opens the way for politics to creep into our country educational affairs. You know as well as I that any easy job that pays \$1000 or \$1500 a year has a lot of applicants and that the way the law reads, means politics.

I hope I have been able to give you a little idea why we are so bitter against this law. Both our local and County Grange condemned it soundly. Our Senator and two Assemblymen are pledged to fight against it. If again the Department of Education still afflict us with this accursed law I hope you will stand with us simple farmer folks as you have in the matter of the selected draft for common sense and the public weal.

Yours truly

DANIEL W. HALLOCK

Dec. 11, 1917

Rocky Point, N. Y.

Kindly allow me to inform you that about ninety-five per cent. of the people of the rural school districts throughout the State are very much opposed to the present Township School Law.

We are determined that it shall stand as it is now, and hope that at the present session, the matter will receive such attention as is necessary to prevent further discussion.

Respectfully yours

W. A. BUCK

Jan. 8, 1918

Phelps, N. Y.

I read that you are not convinced that the opposition to the Machold school law is general. I think you will find that the farmers are against it to a man.

In my case my school taxes were raised 475 per cent. that is, I pay the same rate as the man living next to the school building, who enjoys electric lights, village water, sewers, cement walks, nearness to stores, railroads etc., while my children have to travel three miles to school—at present through two feet of snow. Is there anything right about that?

I ask you as man to man if this centralization of power doesn't tend to autocracy?

We farmers feel that you should use your influence, which seems to be considerable, to repeal this law.

Very truly yours

B. R. HALL

Dec. 17, 1917

Camillus, N. Y.

I am writing to ask you to use your great influence to effect the repeal of the present Township School Law.

I am a member of the Town Board of Education of the town of Romulus, New York, and can see no advantage in this new Township System, over the old school system of individual districts with trustee or trustees elected by the parents and taxpayers of such districts, who administered the affairs of the district in accordance with the wishes of such taxpayers, and parents of the pupils in attendance at the school.

While the new Township System undoubtedly will increase the taxation, yet this to my mind would not be objectionable, if we received a proportionate increase in educational advantages. As a matter of fact, there is no more efficiency, and it is a serious question in my mind whether the

efficiency of the old district system will be maintained under the Township System.

And when it comes to the consolidation of the schools in the town, which I understand is the purpose of the Educational Department at Albany to effect, that proposition applied to the rural districts appears to me to be just as ridiculous as it would be to enclose a sufficient area in the central part of each town, to pasture all of the milch cows in the town, using the argument that the cows could be more efficiently handled, as it would eliminate the cost of fencing farms, and the cost of equipment and maintenance on each individual farm.

It seems to me if the purpose and intentions of the Educational Department at Albany, as affecting the rural schools was carried to its logical conclusion, it would lead to the establishment of large institutions adjacent to the centralized schools, similar to the present Orphan Asylums, whereby the children could be cared for, during the time they were not in school. This, of course, would destroy all home life, and family ties, but we would have our children in school, where a proper corps of instructors would be maintained.

If conditions in the rural districts were as they are in the cities, it is possible that the idea of school consolidation would work out all right, but when it is remembered that in many of the towns of the State of New York it would mean a trip of many miles, to and from these consolidated schools each day, much of the time the roads are impassable, from mud and snow, and the weather below zero during a good part of the winter months, with the conditions on the farms as it is today, with farm help excessively scarce, it appears to me to be almost an act of lunacy to attempt to consolidate the schools under the present conditions.

I certainly would not attempt to advise the population of any of the cities or towns of the State, as to the proper methods under which their schools should be conducted, yet we have in our Department of Education at Albany, men who are evidently as ignorant of the conditions confronting the rural population, yet they are entirely willing to try to bring about conditions, and impose hardships of which they have no conception.

Each rural school district, as it was organized under the old law was taking care of the school children, furnishing and maintaining the proper building and hiring instructors for the school. If in some cases, the buildings were not as good as they should be, I dare say that is also true regarding the city schools and school buildings.

In short, at the present time when all the resources of our country are being poured out to "make the world safe for democracy" our Department of Education through this Township Law is seeking to impose its autocratic and arbitrary will on a people who until very recently believed that they were living in a free country. If it were a matter of winning the war, we are willing to submit to almost any condition, but this is a matter that has nothing to do with war. We feel we have a right to control our children, to look after their mental, as well as their physical and spiritual welfare.

Very respectfully yours

F. S. WILLIAMS

Jan. 3, 1918

Genoa, N. Y.

I am Physical Director for the schools of the town of Newfane, Niagara Co., and have under my supervision the twenty-six teachers employed in the seventeen schools of the town.

We understand that an effort is being made to do away with the special teacher in physical training and put the work in the hands of the regular class teacher. None of our teachers have had special training in this work, and knowing the great harm that will come from unwise handling, every one has asked that in justice to themselves and the pupils, the present Physical Training Law be retained.

In this town the expense of the special teacher is ten cents on a thousand dollars. Will any loyal American refuse the price of one cigar a year to make us a stronger nation physically than the draft and our school medical inspection have proven us to be?

Will you not use your influence to help our country boys and girls, and their teachers?

Yours for a stronger, cleaner, happier America,

VESTA McKEE

March 6, 1918

Newfane, N. Y.

I had the pleasure of meeting you at Ithaca Farmers' Week, and I remember what you said in regard to the new Township System of schools and I heartily agreed with you. I really believe it is a decided improvement over the old system, and I earnestly hope it will not be repealed as it would be a step backward.

As president of our town board, I am in a position to know that it has worked to advantage in the outlying rural districts. The only people who are doing any kicking are those living in districts where the railroad pays more than half the tax. They had a rate as low as \$3.49 per M and some farmers in the outlying districts nine miles from the railroad had a rate of \$13.50 per M. The average rate last year before the new system was \$7 per M. This year it is \$8. The addition of \$1 is due to increase in teachers' wages, longer term of school, and installing several new sanitary closets.

The teachers in all of our sixteen districts tell me they are well pleased with the new system. I think the law as a whole is a decided improvement over the old system, but I believe there are some improvements that could be made, and I earnestly hope they will not repeal this law as it would be a step backward.

Very truly yours

Mar. 16, 1918

F. W. BAUDER

President of Town Board, Fort Plain

I very sincerely hope that you will see your way clear to vote against the repeal of the township law. To go back to the old district system would be as much to the disadvantage of the country child as to go back to the old method of having farmers work out their road taxes. I do not think any of us would be willing to return to that even though we do pay taxes for improvements on roads in parts of our town where we never drive.

Most, in fact, all of the opposition I found to the law, has been based solely on financial reasons, or because of injured pride locally. Never has any one convincingly put forth any arguments that the law is going to injure the country child. In fact his rights seem to be utterly ignored by those who are bitterly opposed to the law. Most of the articles written show an absolute lack of knowledge of the details of the law. Even Governor Whitman's first message to the legislature in which he urged a reconsideration of the law showed he failed to distinguish between consolidation and the township law which are by no means synonymous.

After six years' supervision of rural schools I am absolutely convinced that any real permanent plan of improvement can not be carried out under the old system. Much of the objection to the law is because of fear that there will be improvement. I can not find any rural school supervisor who does not honestly believe that it is for the good of the schools to retain the law. In my opinion this and the physical training law are two of the most needed, most constructive laws for rural children that have been passed in years.

All the states in which there has been most real development in the country have such a school system. Why should New York lag behind from purely selfish opposition.

To say that the law has failed after five months' trial in a year of utterly abnormal conditions is ridiculous. Boards did not take office until August 1. Owing to scarcity of labor and short time they were not able to expend all the money raised in the budget for necessary repairs. Most of my boards have made reasonable intelligent plans for the following summer based upon the needs of the town as a whole, and in every case with special consideration for the child in the weak remote district who never had half a chance before.

For these reasons and many others I will forbear mentioning, I sincerely hope that you will place the rights of the country child ahead of every other consideration and vote to retain the township law. The only excuse for the schools is that they be a real benefit to the children. Under the old system the children never will get full value for a dollar expended.

Under the new law my family pay heavy taxes in various districts where they were much lighter last year. None of us wish to see the law repealed though no children in the family are involved. Pardon the personality but the common attitude seems to be that school officials would feel differently if they paid their taxes.

Respectfully

Feb. 11, 1918

RUTH M. JOHNSON

Dist. Supt. of Schools, Port Leyden, N. Y.

Being very much interested in the Township Law, and knowing that you are making a fight to retain the law on the Statute Books I am taking the liberty to write you, the following is a copy of a letter I sent to Senator James A. Emerson of this district, I also wrote Assemblyman Raymond T. Kenyon of Essex County the same.

I wish to register my protest against the repeal of the Township Law, this is a good law and a just law, and should be allowed to remain on the statute books as it now stands.

I am not going into a long argument as to why it should stand, but I want to put you right as far as our town is concerned in regard to the resolution adopted by the Board of Supervisors of Essex County. The Supervisor from Essex did not represent a majority of his constituents in voting for the resolution to repeal the law, I firmly believe that were this law allowed to come to a vote of the town, that it would receive a good majority.

As a matter of fact the Supervisor from Essex is the owner of a farm located in school district No. 8 in which district there has been no levy of taxes for school purposes for eight years, they have taken their public money hired their four or five scholars transported to schools in Essex and Whallonsburg, and so far as the High School in Essex is concerned, we have furnished the scholars from district No. 8 and all other rural districts of the town, with school building, corps of teachers, free use of library, apparatus of all kinds, have furnished them with text books FREE, with no tuition or expense of any kind to them, now is it right that they should help us maintain this High School? Why should they be permitted to get away from taxation altogether, while we are burdened with a tax of from twenty to twenty-five mills on a dollar. We of the village of Essex have maintained this High School for the last eighteen years as a free school with no tuition, and have welcomed the scholars from the outside districts with open arms. As a matter of fact we have in our school to day twenty five non-res. pupils, who are furnished as I said before with every thing FREE even Hot Lunches. Now because a law has been passed forcing them to share and share alike with us the tax proposition, you would think from the howl they make that they had hit in a vital spot.

Yes, The rural tax payers, under the old law, have got by with a low tax rate for school purposes, and let me tell you, they as a whole, havent spent much money, and they havent much to show for what they did spend. I have found conditions in schools that I have visited that should not be tolerated, I have found schools with no Text books, No Primary readers for the little ones, no spelling books no histories, no arithmetics, no geographies, the only text books that I could find in this school was two that were bought and paid for by the teacher, No blackboards that were fit to use, in some cases nothing but oil cloth painted sometime in the long ago with black paint, in fact I have purchased and installed under the directions of the present Town Board of Education over 200 hundred square feet of slate blackboards and it would take an additional 500 square feet to supply the needs.

I have found as a rule the buildings too small to accommodate the number of scholars. I have one school in mind with 16 scholars four or five of them big husky boys of fourteen or fifteen years of age, the room is small and stuffy, the seats are too small for the large boys and too large for the folkes, with no blackboards, nothing to do with, the out houses a disgrace, the one for girls with the roof rotten letting in the rain and snow, the sills rotten so it stands on one corner, and the side with cracks so big you can throw a cat through anywhere. I drove over to this school last fall on a fine warm day and found the teacher with her sixteen scholars doing the physical culture exercises on the grass by the roadside near the school building, as I approached the teacher turned to me and said I take the children out here for physical exercises because I am afraid they

will go down through the floor it is so poor. In another district they don't even own the ground upon which the school building stands, of course their tax rate has been low in the past and why not, their policy has been to hire a teacher regardless of qualifications, give her a cord of wood and a box of chalk and tell her to teach school, are such conditions giving the future generations a chance to get even the rudiments of an education? I say NO Emphatically NO.

Let me tell you the other side of the story, another district in our town with an assessed valuation of over one hundred thousand dollars they the finest little school building you ever saw, with every thing to do with, books, blackboards, and maps and a library, a fine teacher, and no SCHOLARS, she has but four little ones from five to eight years of age the most of them live quite far away from the school and what is the result, there are many days during the severe winter weather that the most of these children cannot get to school, there are sometimes one and sometimes two scholars in school and the teacher has nothing to do, a waist of time and much valueable cord wood.

Again is there any reason why the taxes from the D. & H. R. R. with an assessed valuation of over \$85000 in our town be paid over to but three school districts? I sent it right and just to the three districts among all the schools of the town?

As a matter of fact the tax rate has been lowered under this new Township law in three of our districts, our high school has been helped a little, some of the districts that do not get a slice of the railroad tax have been helped a great deal. In one district the rate under the new is \$11.20 per thousand, to day were they under the old system, with the increased cost of everything, Teachers wages, fuel and other things, the tax rate in this district would have been over \$16.00 per thousand, and district No. 8 gets by with no tax whatever, this is absolutely wrong and should not be.

Well Dr. This has been rather a long letter, but I hope you will receive it in the same spirit in which it is written, and that is for the benefit and the uplift of all schools and an even distribution of the cost of maintaining these schools.

Very truly yours

March 17, 1918

NELSON A. LA ROE

Clerk Board of Education, Essex, N. Y.

Enclosed find a copy of resolutions concerning the township school question which were passed at our Pomona Grange meeting recently. As secretary of the Grange, I was instructed to forward a copy of these resolutions to you. I hope you may give them your attention.

Yours very truly

March 18, 1918

E. S. SAVAGE

Ithaca, N. Y.

The committee on Education for Rural Schools recommend:

1. That the township law be retained and given a fair trial; that it be amended so as to cut out all schools maintaining academic departments.
2. That the academic fund be increased from \$100 to \$1000 per year.

3. That the State tuition for academic pupils be increased from \$20 to \$40.
4. That the public money for district quotas be made \$200 for each rural school district.

5. That physical training teaching be continued in the schools but that as soon as possible the local teachers be required to give all the work and thus eliminate a special teacher in said subject.

[Signed] FRED A. BEARDSLEY
HATTIE K. BUCK
M. D. BATTY
E. T. WALLENBECK

When your Committee was here Farmers' Week, I attempted to illustrate two points, but the details that I used as illustrations became the subjects of discussion so that the two points that I wished to make were lost.

I had not planned to mention the school law except as an illustration, but, since it became the chief subject of discussion, I would like to add one or two more points to what I said at that time. I stated then, and firmly believe that the best thing to do with this law is to repeal it. Even if the law has some merit, the people do not want it and are, therefore, not in a position to give it a fair trial. Since I really believe in democracy, I do not think it desirable to make people accept such a law when they do not want it.

Furthermore, I do not believe that the law is a good one. So far as I know, the two points in favor of such a law are:

1. To have a larger taxation unit.
2. To have schools consolidated.

The law might accomplish some good by having a larger taxing unit, but is, in my judgment, not the best way to bring this about. Many of the school districts that are poor are situated in townships where the entire township is poor. I believe that if the taxes paid by public service corporations outside of incorporated places were distributed between the school districts within the county, much more would be done toward equalizing taxation than is accomplished by this law.

Townships are not an important governmental unit. They are wholly unrelated to natural school district lines. If we are to have consolidated schools, the consolidation should be around the natural school centers which are wholly unrelated to the township lines.

Consolidation of schools is by no means a universal remedy for all ills. There are many communities in which consolidation is desirable and *many others* in which it is *undesirable*.

The most serious rural school problem is adequate provision for high school instruction within convenient reach of the farms. In some cases consolidation of schools will help to bring this about. I believe, however, that the State should give special attention to aiding the small high schools, and am of the opinion that if this is done, immensely more will be done to help the rural situation than could be accomplished by attempts to help the elementary schools. The amount of compensation that the village schools now get for non-resident high school students is altogether too small. I have rarely known a farmer to leave his farm because his elementary

schools were unsatisfactory, but have known of thousands of farmers who have left the farm to obtain high school facilities.

Without making any considerable provisions for improvement the present law provides for a much larger unit of control. Other things being equal, the smaller the unit of control, the better.

I am not a professor of pedagogy, but, by choice, I live in a rural school district and have six children to pass through these schools. I am very glad, indeed, that they have the opportunity to go to an ungraded district school, rather than be required to attend the grades in city schools. The township school law is causing a great and unnecessary expense and is not giving satisfactory results, nor do I see any expectation of its bringing good results if it is continued.

Very truly yours

March 26, 1918

G. F. WARREN

Ithaca, N. Y.

Fearing that the Township School Law will be repealed and we will revert to the old system, which we consider very unsatisfactory at best, we are writing to ask you to use your influence to secure the passage of the substitute bill proposed in the senate. We feel that this bill is a step in the right direction.

March 28, 1918

Yours for better school legislation

WM. A. GAFFEY, *Clerk.*

D. D. CADY, *Chairman of Board of Ed.*

J. T. McKOWN

J. EDWARD SMITH JR, *Prin.*

Maryland, N. Y.

At a meeting of the Board of Education of this Town, held March 30th, they requested me to inform you that they were in favor of the Senate Township School Bill, but were not in favor of the compulsory hiring of a Physical Trainer in the rural schools, as they think the teacher could give them sufficient training along their lines.

Respectfully yours

April 2, 1918

J. I. LANFEAR, *Clerk*

Board of Education, Town of Worth

As a representative of the interests of the people of New York State, we respectfully ask you to consider the injury done the Farmers of this State by the Township School Law.

We insist that the patrons of our Rural Schools are capable of administering the affairs of their own schools efficiently. We insist that they be accorded the primary rights of self-government. We insist that they more than any one else, are interested in the welfare of their children.

We know from direct information, that our own rural schools have not had proper attention, under the new school law; and that the High School in the town, has more than its share of attention.

In our own district, with a valuation of \$250,000 we have in the past maintained the school with every advantage for 1000 dollars a year. This past year, under the Township Law, we raised \$2375; which is paying \$1375 to help support the mismanaged High School, which gives us no material benefit, and over which we have no control.

We ask you in all FAIRNESS to work for the Repeal of the Township Law.

Yours for Good Government

Jan. 17, 1918

C. A. BURTON

Brocton, N. Y.

I would like to call your attention to the new school law, and to ask your opinion in regard to it. It is very unpopular here and we would be very glad to have it repealed. We believe it to be an unjust and discriminating law, because it favors the villages at the expense of the country districts.

Although I do not live in your district I am hoping to get you interested. Knowing that it would be a decided advantage to have you on our side.

Hoping that you can see your way to favor a repeal, I remain,

Yours truly

Dec. 26, 1917

W. W. BOARDMAN

Boonville, N. Y.

Among a lot of rotten deals that have been foisted upon the rural population of New York last years school law is one of the D——est ever perpetrated.

Yours truly

Jan. 4, 1918

J. W. EATON

Slate Hill, N. Y.

Just a word about the new school law. Can it not be repealed or amended in some way? In the town of Amenia, Dutchess Co., the school tax was from 25% to 300% higher than under the old law. At first the outlying districts supposed they were helping to support the high school in the village of Amenia, but from investigation found even the village people were paying a higher rate. Why should this be? If the law is not repealed it should be amended so all property owners pay school tax in their own town that is in the town in which the property is located. We own a farm in the town of Washington where assessments are about full value but are unfortunate in that our property is located in an overlapping school district from the town of Amenia where assessments are low. The Amenia school tax rate was \$11.80 per thousand while in the town of Washington it was but \$6.00 per thousand. A number of the taxpayers along the town line are in the same position, paying about double the school taxes our next door neighbors are who pay their tax in our own town. The injustice this works needs no further explanation, what applies to our town will apply in the country and state.

I am an assessor in the town of Washington, Dutchess Co., and have been the past eight years, and have a good knowledge of the local taxes and assessments.

Trusting you will give this matter your attention, I am,

Sincerely

Jan. 7, 1918

S. S. BENHAM

Wassaic, N. Y.

I am just one more to voice my protest against the Township Law.

I beg of you to give us back Democratic rule. The reasons for its repeal you have already received. No use of adding to them, they are good and sufficient.

Yours very truly,

Jan. 7, 1918

JAMES S. WHITAKER

Penn Yan, N. Y.

Will you kindly let me know if the Township Law will be repealed this Legislature. There is great dissatisfaction in this State as you no doubt know. I think this law should be repealed. The taxes are just twice what they were last year in this district and I do not see that we have any better school and we have no improvements at all. The teachers salary is \$2.00 a week more this year than last year, and this is all we are getting for the extra taxes. If we were getting the value of our money, there might be some justice in the present law and I would be the last man to put a kick if I felt we were getting value received.

Yours very truly

Feb. 18, 1918

L. U. BENJAMIN

Richford, N. Y.

Have canvassed the situation pretty thoroughly concerning the Machold Township School Law. The sentiment seems to be practically unanimous for a repeal of the law. Only a small proportion being in favor of an amendment.

Yours truly

Jan. 9, 1918

NAT L. ROWE

Port Byron, N. Y.

If the matter comes up looking to the repeal of the Township School Law please work for its repeal. We in this section do not like it.

Yours truly

Jan. 9, 1918

WILBUR BERKE

Albany, N. Y.

I want the township school law repealed. You are aware of the injustice of it, so I will not take your time to enumerate facts which have already been presented to you concerning it but—*WE WANT IT REPEALED.*

Yours respectfully

Jan. 29, 1918

ALVIN B. PINCKNEY

Freeville, N. Y.

We are very anxious to see the repeal of the present township law, as it does not work out as it was probably intended to.

Also we wish to see the passage of state prohibition, as well as the ratification of the federal bill to secure a dry nation.

Therefore we ask you to work for the passage of these bills.

Thanking you, we are,

Sincerely yours

Feb. 16, 1918

MELVILLE NILES

HARRY W. NILES

Alfred Station, N. Y.

At a meeting of Riverbank Grange Friday, March 1, 1918, the question of rural school laws was thoroughly considered, and as a result we ask you to use your influence in every way possible to secure the repeal of the educational laws since 1909, and to secure the re-enactment of the educational laws of 1909.

Fraternally Yours

LEGISLATIVE COMMITTEE OF RIVERBANK GRANGE

Mar. 4, 1918

Mrs Morris F. Meister, *Secretary*

E. F. Linstruth, *Master*

To-days N. Y. *Tribune* says that you are against the repeal of the Township School Law and that the farmers were for the measure last year.

The farmers in this section were not consulted whatever to my knowledge and no meetings called or vote taken to my knowledge in several districts.

Mr. Senator the men responsible for the continuance of that Township School Law no matter if fostered by a million or two million from other source for a year or two (with the intention of dumping them) will be voted against regardless of party lines.

When that legislation was passed without consulting us, (if we are willing to have our children hauled to school several miles and mingling in such numbers as in union schools we will tell you)

The conditions are the worst this year in our district in 18 years, the school house not banked, excrement from closets merely thrown over the fence, instead of buried, body louse crawled off the seat on my child's hand recently. Fifty at one time were sent home from the nearest union school with vermin.

The physical training teacher is even worse. What do country children need physical training for (in the cities it may be all right, I do not know

the conditions there) that also we had no voice in do and always did condemn.

Just continue legislating any excuse for *graft* on us that can be conceived and a brand new party with the help of the women will sweep you dear old line people out of existence for good.

Sincerely

Mar. 4, 1918

FLOYD A. DURLAND

Hurleyville, N. Y.

Can you tell me why the Rural Communities are picked out for a goat. This new school law is an unjust tax law, nothing fair about it. I have been a silent tax payer with no voice in public affairs but thanks to the fair minded men and women of our State they have delivered us out of an unjust bondage that ignorance had placed us. I believe you are able to help us in this matter. I know I am speaking for everyone in this town.

Thanking you in advance

Dec. 19, 1917

MRS MYRTLE HALE KING

Livonia, N. Y.

I am a farmer of Madison Co., N. Y., owning an alfalfa farm of 240 acres.

I was induced to come from Kansas to N. Y. 4 years ago. I think that the State of New York is all right but the many laws you have here that are so detrimental to the farmers, makes every western farmer wish to return to the west where laws are more favorable to him.

Take for example the *infamous* school law that was passed last winter. I am sure that 90% of our people are bitterly opposed to it. Now everybody knows that the paying of taxes is a great burden yet we must bear that burden but why not make it light as possible. For instance in the western states taxes are paid first half Dec. 20 and last half the 20th of the following June.

Why demand the entire tax in the fall?

My dear Senator, I write this to you fully believing that you are one of the great power of good old New York as to her law making. Won't you give to us some good wholesome laws that will benefit the agriculturist and thereby benefit everybody, I shall surely believe you will.

C. F. HAIGLER

Dec. 16, 1917

Munnsville, N. Y.

The undersigned, residents and taxpayers of the Town of Mexico, County of Oswego, New York, being opposed to the Machold School Law, hereby urge upon you that the same be *repealed* at the present session of the Legislature.

We are opposed to such law upon the following grounds, viz:

First, Upon the ground that by increasing our school tax, without conferring corresponding benefits, it in effect takes away our property without just compensation.

Second, Upon the ground that it is taxation without representation, in that it allows persons, in the selection of whom we have had no voice, to fix the amount of the tax to be raised, and how it shall be expended.

Third, Upon the ground, that allowing the Town Board of Education, to provide that school children may be transferred out of the district wherein they reside, into adjoining districts, it may be the means of abolishing the District School entirely.

Fourth, Upon the ground that it discriminates in favor of the Village, as against the rural districts, making the latter bear more than their share of the burden of taxation.

Fifth, Upon the ground, generally, that the whole spirit of the law, is opposed to the right of self-government.

Yours truly

A. W. AUSTIN

F. J. BOIGEOL

GEO. FELLERS

C. MARTINET

Feb. 4, 1918

From School Dist. No. 15 Town of Mexico, N. Y.

As a majority leader in the New York Legislature, you have a great influence in regard to the bills to be passed and become laws or not passed. I would like to call your attention to the new school law of this year, 1917. It is working great injustice to the tax paying rural inhabitants, in this way, we have no voice in saying what we shall be taxed to keep up our schools. Also the new law costs from three to four times the amount to keep up our school and no better schools.

My taxes—school—were \$7.62 in 1916, this year, 1917, they were \$27.83.

Please to use your influence in having this law repealed and oblige,

Yours very truly

Dec. 26, 1917

E. E. SHERWOOD

Wurtsboro, N. Y.

I am writing to ask you to give your support to the Machold Law, one of the wisest laws ever made.

We teachers of Lewis County are unanimously in favor of this piece of State Legislation. If the public could only understand the provisions of the Machold Law, and its importance as a step forward in education, they would be without question in favor of it.

In this law we see at least three wise provisions relating to the teacher: permanency of tenure, better salary, and better results in teaching.

Heretofore, no matter how good the teacher may have been, he has been ousted from his position whenever the trustee felt like it. The reason has usually been, that one of the people of the district had a relative who had a desire for the school. A teacher may show his capabilities in three or four weeks in a school, but it is only after two or three years that the

fruits of his labor can be thoroughly appreciated. This condition, change of good teachers, will be removed by the Machold Law.

Again we find in so many of our schools an utter lack of uniformity in the matter of text books, progress in the grade work, and comfortable sanitary conditions. If the principal of the High School could supervise the work on the rural schools, nearby located, very soon would the conditions mentioned be markedly improved. In this matter we see the superiority of this excellent Machold Law.

Coming to at least one other vital question, salary of the teachers, we see that this Law will in due time take care of it. This ought not be a time when the attention of the state is directed toward lowering the teachers salary, as it surely is, when the Executive asks that the Machold Law be repealed. The Town Board will, I am sure, in due time, increase the salaries to at least a point where the teachers can live comfortably. At present our teachers do no receive salary enough to carry them through vacation, no matter how economically they live. Should we take the step backward, and allow the trustees, modern Czars, as some have been, to put the salary down to a starvation wage, we should find a crisis on our hands, lack of teachers.

And this question is serious. Our best material in school, nowadays is being turned into other professions than that of teachers. Why? I imply because the salary will not attract them. If our school children of to-day, make the state of to-morrow, what kind of a state can we expect, unless we can have the best teachers to instruct our boys and girls?

Our cities were originally organized on the old district basis. Today they have administrations similar to that provided in the Machold Bill. Would the present city go back to the old method?

And we come right down to the consideration of our own country. Shall we provide for the best education that can be afforded for our children, or shall we step backwards to the days of the "cheapest that can be bought." I am sure you will help us teachers and citizens of Lewis County.

Thanking you, I am,

Respectfully

Feb. 12, 1918

EDWARD W. GLASBY, *Principal*

We, the undersigned, are residents and taxpayers of School District No. 4, town of Cheektowaga. We wish to call your attention to the Finegan Bill, and particularly that portion of the township school law relating to the consolidation of school districts.

We are bitterly opposed to the entire bill, as are all of the other taxpayers of our district, for the reason that we receive no benefit from it in any way, shape, or manner. Our taxes have been increased so that this year we were obliged to pay fully three times the taxes we did last year, and *our* school has not benefitted in the least.

We object to having our school affairs handled by outside parties, people not living in the district or taxpayers in the district, because we are not consulted in any way as to what shall or shall not be done with the district's property, or *what* teachers we will have to instruct our children. In fact we have no voice in the matter whatever. All we are called upon to

do is to pay taxes, and "Taxation without representation is tyranny." You will recall that that was the reason our country declared its independence in 1776. The principle still lives and cannot lawfully be taken away from any one.

For your information we would say that when this consolidation of school districts was underway everything was kept very secret all through this section. No notices of the proposed change were sent out, no meeting was held, the idea being to railroad the thing through no matter whether it was right or wrong, and our present school commissioners and those in authority did all they could to keep us from learning the truth by withholding and delaying information when it was asked for. Now you know this is not right or just. The burdens that this bill has brought upon the country people are unbearable. The taxes are so high that it is almost impossible to pay them. Then we would not say so much if we or our children were deriving any benefit. Our school property is not taken care of as it should be. The whole system is entirely wrong and we respectfully urge and request you to use your influence and energy for the repeal of this very erroneous bill. We want the whole thing repealed and the rural school districts put back in the control of the district people, where they were before the present school law was enacted. We can look after our own school affairs much more economically and satisfactorily and have a better school than under outside management. We want our children to go to our own school and not be carried to some other school a long distance away, often by a careless driver, and subjected to long rides in all kinds of weather. This feature will certainly not improve the health of any of the children.

We also feel that it is time we had another deputy commissioner of education in place of the present Dr. Thomas E. Finegan. Ever since he has been in authority there has been nothing but disturbance and trouble and schemes to absorb the district property and take away the peoples rights. Surely the past year will prove that his ideas are far from practical. We ask for his removal.

Trusting that you will give this matter your prompt attention and that you will use your influence against this bill, for which attention we thank you in advance, we remain,

Yours truly

MARY G. BOOTHROY

GEORGE BOOTHROY

Fork, N. Y.

Jan. 25, 1918

The people of Greene Co. are watching the present Legislation very closely in regard to the repeal of the Township School Law.

As secretary of the Patrons' League of this county, I believe I can speak more authoritatively than any one other individual, that the present school law is not only offensive to the majority of our citizens, but very detrimental to the welfare of our rural schools. In fact if one district has been benefited financially, ten of our rural districts have been damaged physically and educationally.

Nothing short of an absolute repeal will ever satisfy the people. Even if the basic principles of the present law should remain, it would mean disaster to many a rural school in our county. Repeal the law, and then put up an educational law that is efficient and broad enough in its scope so that it does not kill ten rural school districts to benefit one suburban district.

I am sure that if you thoroughly understood the deplorable conditions caused by this law and its workings, and knew the vital facts concerning it, you, too, would join in with the other senators and help to repeal it.

The issue is too great, and the result would be too disastrous to patch-work a law that is faulty in its very fundamental principles, and wholly lacking in its purpose to better the educational advantages in the rural schools of our state.

Yours very respectfully

March 29, 1918

FLOYD C. MILLER

Coxsackie, N. Y.

At a meeting of this Association, held on Saturday, Dec. 29, 1917, the following Preamble and Resolutions were unanimously adopted:

WHEREAS the new Township School Law (Chapter 328 of the Laws of 1917) imposes heavy, and in some cases unbearable burdens on the people of the rural communities of the state, in doubling, trebling, and even in instances quadrupling the school tax, and

WHEREAS instead of deriving any administrative advantages from the operation of said law, the rural communities are made to suffer in that under said law a controlling number of members of any town board of education may be elected from any one of the respective school districts of any town, thus in many instances hazarding proper and effective administration of the school affairs of the other districts, and

WHEREAS the general trend of said law appears to be in the direction of discontinuation and abolition of the rural schools a tending toward centralization, by promoting consolidation of existing school districts, it being proposed that the difficulties arising from such a proposition be overcome by furnishing public conveyances for carrying pupils residing at a distance, to school, and

WHEREAS by reason of weather conditions in this state, such a method of getting the children to school is, in a general way, utterly impracticable, and

WHEREAS, to recapitulate, under said law the local management of the rural schools is made much less effective than it formerly was; school attendance will become very difficult, and in many instances wellnigh impossible; and all this coupled with an enormously increased school tax. Now therefore be it, and it is hereby

RESOLVED that we in meeting assembled, most emphatically declare ourselves as being unequivocally for the repeal of said law, and be it, and it is further

RESOLVED that we hereby respectfully petition the New York State Legislature, and each and every member thereof to aid and support the

proposition of bringing about the repeal of said Chapter 328 of the Laws of 1917, and the enactment of legislation necessary to restore the rural schools to their former status.

Adopted unanimously.

LOUIS P. FERUBACH

Secretary

Cheektowaga Taxpayers' Protective Association

As a taxpayer and a voting resident of Ontario County New York I am writing to ask you to use your influence to repeal the Township School Law which is saddling upon the farming communities of the State a tremendous expense without any adequate return. In fact many instances can be pointed out where the school conditions are not only no better than they were under the old system but they are actually worse. It may as well be understood that the rural districts are still able to run their own local affairs and that they do not have to be led and fed by the Department of Education at Albany under any specious plea of higher education. The farmer boys of the state always have held their own and always will do so. I think you will have to admit that I am an old time Republican when I tell you that from 1902 to 1906 I held a legislative clerkship under John Raines and I used to greatly enjoy and now well remember the days when he held the position which you now hold and when you and Senators Brackett and Elsberg were called "insurgents" by the daily press. But I believe as much as I believe that the Township Law is a useless expense that, if it is left on the books, it will bring about the defeat of the Republican State and Legislative tickets at the next election. I therefore urge you to vote for the repeal of this bill not only from the standpoint of justice to the farming communities but also from the standpoint of political expediency.

Yours very truly

W. S. THROOP

January 26, 1918

Ontario County

The enclosed petition is a copy of the original which was sent to our Assemblyman, Mr. Alvord. A copy has also been sent to the Senator from this district, Mr. Towner.

From the many articles in the newspapers, it appears to me that there is a misconception as to just what the taxpayers are kicking about. The idea seems prevalent that it is the increase in the taxes while the fact is, it is the lack of any benefit derived from the enormous addition that we have had to pay that is the cause of all the trouble.

I have been a taxpayer in this country many years and have been, also, school trustee many years and I know that the farmer and all other taxpayers here are always ready to vote any amount necessary for the maintenance of their schools up to the highest standard commensurate with their requirements. A High school is a good thing in its place but that does not mean that every district should support one by direct tax. We all support, indirectly, every school or college that receives support from the State.

The present law should be repealed, not doctored, and then, later, after careful consideration of the requirements of the rural districts by a competent commission of legislators, and not a lot of Hobby riding professors, a new law enacted that will cut the overhead expense and increase the efficiency. There is too much supervision that does not supervise, in fact too much politics. A point in view: the secretary of the village board gets \$50. per annum but the secretary of the school board gets \$200. per year.

If you wish to improve the rural schools see that only qualified teachers are given a permit. Squeezing through a High school does not always mean that a person is competent to teach.

Sincerely yours

AUGUSTUS F. BIESEL

March 18, 1918

Niverville, N. Y.

It is reported that you are about to present a bill as a substitute for the township school law, which among other provision provides that the state furnish an equal appropriation with the rural district in bringing the educational system of that district up to the proper standard. It seems to me that such a law would be just as ineffective as the district trustee system, unless you take the management of the rural schools entirely out of local control.

You remember, I have no doubt, that the neglect of our country roads caused the legislature to take the roads out of the hands of the little bosses in each district and place them under a single town superintendent directed by the state. This was not done without a roar of protest from the farmers, but it was easily done, as urban legislators saw the absolute necessity of it. In the case of our rural schools a similar incentive to the urban representative is lacking. He thinks perhaps that if the farmer wishes to deprive his children of an education to lessen rural taxes that he ought to be allowed to do so. But it is not the parents of rural children who object to higher taxes, or to improved or consolidated schools. It is the tax-slackers, the exponents of race-suicide or birth control.

I am a farmer. Six of my nine children are now enrolled in the schools. I have lived on a farm all my life. I know rural conditions, while you gentlemen at Albany have only a theoretical knowledge of them. I beg that you will not substitute any law for the township school law unless you first provide for the absolute central control of our rural schools by the state department of education.

Sixteen years ago I proposed that our district buy a larger ground for the children. The playground was about 23 by 43 feet. They refused to consider the proposition. I offered them an acre of land free if they would move the school building to my nearest field, which is about a half a mile away. Again they refused.

I suggested that they build a new school house on the acre which I again offered them, and again met with refusal. This school building if properly inspected would have been condemned any time these last ten years. Senator do not disgrace the state and outrage the children with another district trustee system.

The mismanagement of the rural schools has made itself apparent in the Federal census report of 1910. The boasted Empire State is No. 23 in the

column of illiteracy, just half-way down. It has over 5.5% illiterate to Iowa's 1.7%. Iowa is the lowest record for 1910. And to prove my contention, the statistics show that there is a larger per cent of illiterates per 1000 of the population than in the urban districts, and that they are American born. Senator, stand your ground for the Township School Law, without substitution, unless that substitute provides for the compulsory consolidation of rural schools and absolute central control.

I note that one lone Republican in the Assembly voted to retain the school law as it stands. If this outrage on the children of the state is the policy of the Republican party, it is also the end of that party as a controlling factor in the state. Gov. Whitman had three votes from my family at his election. This year adding my wife and daughter he will have five against him.

Very sincerely yours

W. W. CHRISTMAN

March 18, 1918

Delanson, N. Y.

You have expressed yourself so clearly and intelligently the last several months regarding conditions in farming sections that I strongly rely on you to defeat the present camouflage for the pernicious and unworkable Township School Law. That law should be repealed, and kept repealed till the war is over—not partially repealed and the Town School Board and equalized taxes retained, but totally and completely put out of business. Why do Finegan and Finley want to force the law upon us? Not one man or woman in the 550 votes here is in favor of it. Dare they permit the law creating Town School Boards to a referendum? Ask them. All clerks of boards in this County (I am one of them, at a good salary) declare the law a farce. No one comes to board meetings; all pride and home interest in the near-by district school seem gone; men who would spend days working for the home school for nothing now want the highest pay for the smallest service; there is no one responsible for anything—"nobody aint nothing"—excepting the clerk, and in a year or two more of this law he will be Supreme Dictator, the School Man Almighty. It is a damnable German System, making one man an autocrat in a town, instead of having at least thirty men in a ten-school town personally interested and teaching their families; how to be trustees, treasurers, tax collectors, etc. I tell you, Senator, there is not one man in this town of Hamptonburgh who will allow his name to be used as a candidate for member of the Town School Board. And I will be d—d if I will act as clerk again at any salary. I will not be associated with such ridiculous, cumbersome, un-American, unrepresentative rural school system. I helped build this school at Campbell Hall; I am one of the large taxpayers of the town; and my taxes are lower under the new law because I am central. But I don't want any help from the outlanders in supporting this school any more than I want them to help me to support my home. The equalized tax Finegan boasts of is unjust. I benefit in money, but Gus Peters, Harry Bull, Frank Crist et al. are hurt and get no compensating benefits. Finegan says the old law is responsible for the fact that there are 3,000 teachers in the State with only elementary educations. That is silly. The Department fixes the standards of qualifications for teaching school. They can change them whenever they please. And so on

throughout all his pointed statements in favor of a Township School Law. The Department seems totally unable to administer the new law; District Superintendents are too busy with statistics and examination papers, and there are no farmers in rural towns with time to spare for six-mile trips to board meetings to consult about schools ten miles away that they do not know about or care anything for. Both Finley and Finegan seem unable to see above in below the dollar mark. But it is not the dollars; it is the injustice, the unworkableness, the cumbersomeness of the law that annoys. Swing in and help pass a total-repeal bill, will you Senator?

Respectfully

HAROLD BENEDICT

Campbell Hall, N. Y.

February 24, 1918

We want that school law repealed, not amended but repealed root and branch. I have heard but one in the district speak favorably of it and he is on the board. Needless to say he is hot after any office he can pick up.

Nearly every one condemns the Physical Culture Training, the teacher included, and don't want it, some have asked if they couldn't forbid their children taking it, they get enough exercise without it. It is a needless expense.

Then if parents want their children to go to high school, after finishing the district school, let them send them themselves, if not let them keep them at home and put them to work, there is no need of their going to school till they are sixteen if they do not want them to go badly enough to foot their bills. We cannot see why we have to foot them for them. If we can pay our own we are doing well. There may be two or three in the district, who are profiting by that part of the law, in favor of it, but the most are decidedly against it.

We think we should have the right to say how our money shall be expended and we think we know what we want.

Yours truly

HENRY CHILDS

G. H. STANCLIFFE

February 15, 1918

R. D. Malone, N. Y.

An organized effort to repeal the present Township School Law is being made at Albany. The educational leaders of the state believe that the township law is the most important advance of the last half century in educational legislation. They believe that to repeal this law, which has had but a few months trial, would be a great step backward in the educational policy of this state.

Prompt action on the part of the friends of the measure is necessary to save its absolute repeal. We ask you, as one interested in preserving the good features of the law, to fill out the slip at the bottom of this letter and return it at once to Supt. George W. Miller, Nanuet, N. Y.

Yours cordially

HARRY W. LANGWORTHY

President, Teachers Association of Rockland Co.

Spring Valley, N. Y.

I was informed a few hours ago by Assemblyman, F. D. Gaylord, that the education bill now under consideration, with perhaps a few changes, would probably pass the legislature. I had just read the bill very carefully and put up to him objections something as follows:

1. Very many towns of the state have a rich section and a poor section, either the highlands and the valleys, or the section having the railroad running through it and the section not having any railroad. The result would be two very different tax rates, and would be very little or no improvement on the old district system.

2. It would cause *factional feeling*, especially the rural schools against the villages, which would probably make the proposed law no better than the district system.

3. The schools of the town would not make up a perfect system as under the township law.

I had sent to him before this letters telling why I considered the township law a *good law* (See enclosure). After I had talked to him for some time he informed me that the Department were in favor of this new law, to which I replied that I was sorry to hear it, but that I could see no good whatever in the new law.

It has seemed to me that the school authorities of the state have quered this law with the people. The Dist. Supts. have demanded a vast amount of repairs. In this town of Ontario the cost of repairs this year was about ten times what they were last year, and Mr. Gaylord tells me that there was a great increase in the town of Sodus. The increase in teachers' wages over last year was great, near \$2000, the Dist. Supt. informs me.

I suppose it is too late now, but the Department could easily lower the cost of teachers by lowering the requirements. There are probably a half dozen young women in this town who would make good teachers for the district schools, were they able to get certificates. That would make it possible to get teachers at a reasonable price true all over the state. The training classes could easily be manipulated so that there would be plenty of teachers. The shortness of teachers is the most effective cause of the increase of taxes, and the opposition comes entirely from the great increase of taxation.

I believe that there are a great many people, especially in the villages, who are very much in favor of the present law. They have not said anything, because they have no grievance, but they are in existence.

Would it not be possible to have a conference with the opponents of the law, and show them that the great increase came largely because of the war times, and assure them that the Department would let down the requirements so that taxes will not be so high. When this law passed I believed that it was the very best law possible, except, perhaps, a county system, and I still believe in it.

Yours truly

C. D. HILL

Prin. Ontario High School

Ontario, N. Y.

February 23, 1918

Some of the Reasons why the Township School Law Should Be Given a Fair Trial

1. All the states bordering on N. Y. state have adopted the township system, and are not only satisfied with it, but are well pleased.
2. A very large number of the states of our United States have adopted it, and find that it works well.
3. The highest educators of our state and our nation are unanimously in favor of it. They believe it to be the very best system for educating the children of our state and nation.
4. It has not had a fair trial in this state. Practically all the teachers were hired and all expense incurred when the present township board of education came into office. It can be shown beyond a doubt that nearly all the increase in cost of running the schools came from causes entirely without the township law. The increase in wages alone in the town was nearly \$2000 (town of Ontario, Wayne County).
5. It will equalize the taxes in the different districts of the town. The author of this article has in mind two towns, one with a valuation of about \$12,000 and a tax rate of .02, and the other with a valuation of about \$110,000 and a tax rate of less than .005. The last named district had a vast amount of railroad property in it. Such a condition was manifestly unfair.
6. A very large number of the union and high schools in the villages of the state have educated the children from the rural schools for the \$20 tuition allowed by the state for each foreign academic student, while it was costing these schools from \$30 to \$70 or more to educate these same students. If the villages charge these rural students for the extra cost many of them will not be able to get a high school education. This will take from many of our most likely young people the opportunity of getting a high school education.
7. Owing to the fact that the board of education will be able to purchase the supplies for the schools at a wholesale rate, the cost of running the schools will be decreased. It should be borne in mind that this year considerable of the increased tax was caused by the fact that all the money on hand was given back to the taxpayers, so that the new board of education were obliged to raise about a thousand dollars more than they would need to after the law gets into operation.
8. Owing to the fact that the board hire all the teachers for the schools it will be possible to put the strong disciplinarians into the hard schools, and thus have good work in all the schools. Often it has happened in the past that a young and inexperienced teacher has been hired in the hardest school of the town while a strong and experienced teacher has been hired in a district where the pupils are all very young. The young teacher would be able to do well in the last named school, but will probably make a failure in the one she has taken. This condition could be easily remedied under the township system.
9. It will be found that the school buildings and grounds will be very much better cared for under the township system.
10. It makes the schools of the town a complete system from the primary through the high school. Soon there will be uniformity of text books, of the course of study and kind of teaching, in fact there will be all that goes

to make an efficient system of schools. An illustration may be taken from the work of the town board of the town of Ontario, where they have authorized the teaching of a system of writing in all the rural and graded schools of the town, and required the teachers to spend a reasonable amount of time in teaching this very important subject.

Some of the Causes Leading to the Great Increase of Taxes for Educational Purposes during the Past Years, and a Brief Discussion of Some of Them.

1 A great increase in the cost of rural and grade teachers. This increase in the cost of teachers has been going on for several years and comes from the following causes principally.

a A great increase in the required qualifications.

- (1) The doing away with the English course in Normal Schools.
- (2) The requiring of subjects for entrance to the Normal Schools, differing from the college entrance requirements.
- (3) A great increase in the requirements for entering training classes, amounting to three years of high school work.
- (4) The practically doing away with all certificates that might be obtained by examinations.

b Certain regulations and requirements that have made it very difficult for rural high schools and rural village schools to prepare young people to teach.

- (1) That every school conducting a training class shall have a separate room for the class.
- (2) The training class course of study so arranged as to take nearly all the time of one teacher.
- (3) The uncertainty as to what would be the requirements for entrance from year to year.

This increase in the difficulties of getting certificates is probably the most effective cause of the great cost of the schools, causing more of the increased cost than all other causes together. It should be noted that the increased requirements in education are in subjects entirely beyond the subjects that the young teacher will be required to teach. But great as these requirements are it is very likely that the schools would have taken care of them were it not for the regulations in conducting training classes.

2 A second cause for an increase in taxation is the fact that every town must employ a supervisor of physical training, \$500 to \$1200 per year.

3 The Medical inspection law. About \$500 per year.

4 The great increase in the cost of the supervision of the schools.

5 In many districts the new in-door closets.

6 The addition of four weeks that each rural school must hold school each year. About \$50 per district.

7 Clerk for the town board of education, about \$300.

8 Great increase in the cost of all necessary supplies.

An estimate of the increased cost for the town of Ontario is given below. In the first column is an estimate of the increase during the past few years, and in the second column the increase during the past year.

Increase in teachers' wages.....	\$3600		\$2000
Physical Training	488		100
Medical Inspection	500		
Increased cost of supervision....	400	Clerk of board.....	300
New In-door closets.....	2000		2000
Four weeks' more time.....	650		
Contingent fund	1000		1000
Increased cost of supplies.....	200		200
	<hr/>		<hr/>
	\$838		\$5600

The increase in the contingent fund was made necessary because all money on hand in the districts was paid back to the taxpayers so that the new boards had nothing on hand. Of course this would not be necessary another year, that is, the increase.

It will be seen from the above figures that very little of the increased tax of the present year has been caused by the township law. Why not study these other causes and try to see what can be done to make these increases in the township law a fair trial?

I very much regret that my own illness and serious illness in my family have prevented my taking any active part in a campaign favoring the township law. I believe in the law and wanted to see it have a fair trial. What I have done in its behalf seems very little.

1. I kept still at a time when a very little argument in its favor would have sent many opposing resolutions and protests to the Legislature. Because its friends seemed indifferent its enemies discontinued the campaign which they tried to launch.

2. We worked in Pomona Grange until the resolutions favoring its repeal were lost and a resolution favoring its amendment in some minor points was carried. However, Pomona's resolution was overruled at State Grange so that was wasted effort.

3. The school board of the town of Sandy Creek authorized one of their members to write yourself and our representatives in Senate and Assembly favoring the measure. There my action with the boards was stopped because of illness. I feel sure that signatures of at least 90% of the voters of Orwell township could have been secured on a petition if I could have worked it. Redfield board would have favored it. Boylston would have protested and asked its repeal.

I am today writing Speaker Sweet and Senator Elon R. Brown giving them in some detail an idea of the working out of the measure in my part of their respective districts. Am enclosing copy of one of these that you too may know something of our conditions.

Regret exceedingly my inability to do more and will undertake now anything you may suggest but I suppose it is too late now for effective action.

Very truly yours

MILDRED G. PRATT

Lacona, N. Y.

Feb. 23, 1918

In order to secure more accurate information in regard to the operation of the township law and also suggestions as to possible amendment that would improve its operation and administration, a circular letter was sent on December 28, 1917 to the presidents of all town boards of education and to the district superintendents. Of the 275 letters received from the town boards in answer to this request, 155 expressed opinions very favorable toward the township organization and 120 expressed opinions either strongly or mildly opposed to the township organization. The following tables give the reasons and the number of times that each of these reasons appeared as approving or disapproving the system in question.

For the township bill

	Better sanitary conditions	Equaliza- tion of taxation	Should have fair trial	Approved but no reasons given	Improvement in teaching and school conditions as a whole sanitation, building etc.	More economical
No. of times reason was given.....	10	35	45	67	42	7

Against the township bill

	In- creased taxes	Phys- ical training	Repeal; no reason given	Opposed; no reason given	Abolishes home rule; oppose consoli- dation	In- creases teachers' salaries	Not effi- cient	Sani- tary toilets
No. of times rea- son was given	65	30	37	15	10	2	3	2

In answer to my letter to the district superintendents about 250 replies were received. The summary of the arguments for and against the system as indicated in these letters is as follows:

For township system

	Better buildings, equipment, teachers etc.	Equaliza- tion of taxation	Should have fair trial	No reason given	School easier adminis- trated under board
No. of times reason was given	52	15	59	56	12

Against township system

	Taxes	Prefer local control	No reason	Object to consolidation	Repeal demanded	Cost of improvements	Consolidation kills local pride and interest	Objection due to lack of knowing law
No. of times reason was given	20	5	21	12	9	2	3	12

Summary of the Desired Changes in Township Law as Expressed in the Letters from Town Boards and District Superintendents

The five changes most desired as judged by the number of times they are mentioned are the following:

1 District boundaries should be readjusted so that no district lies in more than one town.

2 Power to consolidate districts or to close schools with fewer than about five pupils should be granted to the town board without the necessity of securing a vote of the district and without loss of public money.

3 Union free school districts should be separated from township units.

4 Members of town boards should be paid at least a sufficient amount to offset their necessary expenses and the loss of time from their own work.

5 The method of election should be changed, especially with regard to the circulation of a petition. Election of town board by one elector selected by each district is frequently suggested.

Changes in the bill suggested less frequently are the following:

1 The school tax should be a part of the town tax.

2 The appraisal of buildings and payment for same should be eliminated.

3 The composition of town boards should be changed by increasing the number, selecting one from each district, selecting not more than two from any district, etc.

There were frequent suggestions concerning the clerk, such as: "clerk and treasurer should be one officer"; "board should not be restricted in the choice of a clerk"; "clerk should be given greater responsibility regarding administration of routine matters."

These letters were again arranged in accordance to the counties from which they came. Of the letters giving reasons why they were in favor of the law, 92 came from the following counties and towns:

<i>Albany co.</i>	<i>Greene co.</i>
Berne	Athens
<i>Broome co.</i>	<i>Hamilton co.</i>
Kirkwood	Inlet
Harpersville	<i>Jefferson co.</i>
<i>Cattaraugus co.</i>	Depauville

Although it would seem highly desirable to reproduce all these letters, the lack of space made it necessary to select such a number as to present both sides of the case in its true light. In order to

do this great care was exercised in selecting both the strongest and weakest letters from both those who favored the good points in the system as well as from the opposition.

EXTRACTS FROM LETTERS OF DISTRICT SUPER-INTENDENTS OF SCHOOLS

The criticisms of the Township Law seem to be based almost wholly on the ground of increased taxation in certain localities and on ignorance of its provisions.

I think this law should be so amended that a district which would contract under the old system may still transport its children without actual consolidation. In the town of Wilna there is a district where the school house burned in August. The children are being taken care of in the surrounding schools, transportation being furnished when necessary. Owing to local conditions the people in that district are not in the right temper to listen kindly to a proposal to consolidate. Mr. Gilbert advises me that we shall lose the public money in this case. In the town of Champion one school had seven pupils at the opening of school. There was a change of tenants on January 1st. Now there are two pupils both as near other schools as they are to this one. In cases like the above the Boards of Education should be given power to close the schools without loss of public money. This would give greater flexibility to the system than would actual consolidation. It often happens in the remote districts, owing to the moving of tenants, that a district with but two or three children so situated that they may easily be transported may the following year have several children so located that it would be very desirable to reopen the school. I believe that with these changes we might in a few years so educate the rural population that they will demand central schools for their children.

Under date of January 5th, I received a report from your office of the inspection of the physical training instruction in this supervisory district. With reference to this report I beg to state that when I assumed the duties of this office no physical training supervisor had been engaged. As soon as it could be done I secured the authorization of the several Boards of Education to secure a qualified supervisor. On October 22d, Miss Bess L. Martin, a graduate of Battle Creek Normal School of Physical Education, entered on the duties of this position. On November 7th, Mr. Kelly of the Military Training Commission made his official inspection, the findings of which form the basis of your report to me.

At the present time every teacher in this district is substantially fulfilling the requirements of the Syllabus. Besides visiting the schools in the district, Miss Martin is holding frequent conferences of the teachers for the purpose of instruction. In fact Mr. Kelly was informed that the first one had been called for November 10th. The teachers themselves are growing enthusiastic over the work. Principal Baldwin of the Philadelphia High School is carrying the work on creditably with the full co-operation of his faculty.

To secure the best results from this work, I would suggest that it be placed entirely under the direction of the Education Department.

J. C. KNAPP

Philadelphia, N. Y.

January 14, 1918

I am very favorably impressed with the operation of the township law. Personally I consider it one of the most progressive educational measures that has been enacted in this State in years.

It seems to me to need no radical modifications. The only one I would suggest would be to allow districts to contract as formerly and still be entitled to public money.

There has been no serious opposition to the law in this supervisory district. Practically all opposition has been due the fact that some one is paying more taxes than last year. But the criticism has nothing to do with the merits of the law for no fair minded person dares to question the fairness of a uniform school tax for a town.

In my opinion much of this criticism of the township law is due to a fear of consolidation of schools, in some cases to an extreme enforcement of the physical training and medical inspection laws. If the physical training and medical inspection laws could be somewhat modified and the taxpayers fear allayed in regard to the "Central School," I think the township law would work out admirably.

So much has been said and written against the township law and each ending by telling how much more tax he is paying than formerly without any good argument against the law itself that these letters and statements are beginning to appear somewhat ridiculous and in my opinion public sentiment is tending to a more favorable view of the law. People are seeing the unfairness of the opposition. In another year with the modifications that I have mentioned there would be very little opposition to the law in this supervisory district.

Thus far nothing has been heard from those who favor the law and I am quite sure that the law has many strong supporters, even among the farmers whose tax has been increased. Should those who have worked so earnestly for the law allow it to be repealed or radically amended then you would probably hear from the other people whose criticisms would be more difficult to answer than the one who finds fault with his tax.

D. D. T. MARSHALL

Redwood, N. Y.

December 31, 1917

There is considerable opposition to the township law among the farmers in this section because their taxes have as a rule increased. In many instances they have doubled and tripled. The increased cost of everything, the physical training law and the rule making installation of sanitary toilets compulsory, are to a great extent responsible for this increase but it is hard to make them understand this.

The boards in my districts have tried very faithfully to make the law work successfully. Members situated in villages at the extremes of the towns have found it hard to attend meetings lately because of the weather and because they are not directly connected by railroad. This has led me

to think that it might be more satisfactory if it were possible to make a couple of units in a town or sometimes to create a unit from parts of two or more adjoining towns. These units would be bound together by more common interests than towns often are.

It seems to me that it is most necessary that some amendment should be made to the law which would allow a district to consolidate with a district in an adjoining town.

The purchase of the school property by the town may be a hardship upon the farmers in a town where several expensive village school plants are to be purchased. I do not think villages would object to turning them over direct to the town without payment. If it would be constitutional it would seem best.

To me the chief trouble seems to be a lack of knowledge of the law and its intents and purposes.

M. GAZELLE HOFFMAN

Lewiston, N. Y.

January 4, 1917

Perhaps you would like the latest information of the situation here as far as the township law is concerned.

Three of my boards, Wilson, Newfane and Lewiston have framed letters to the Department stating they are opposed to repeal of the township law. The fourth and last, Porter, will probably do the same.

Saturday a motion to ask for repeal of the law was voted down in the Pekin Grange.

January 9th the Lewiston Board of Trade went on record as favoring it and voted to take active measures to prevent its repeal.

The only organized effort against it in my district is in the town of Wilson. A few taxpayers led by W. S. Droman, former Middleport principal, are going to contest the power of the board to collect taxes; \$5000 out of \$21,000 are still uncollected although the 60 days are up January 27th. We are trusting that it will be settled before the time is up.

People have insisted on confusing the law with the one requiring physical training teachers and the rule in regard to installation of sanitary toilets. The situation is growing better here I think as the people are becoming better informed.

M. GAZELLE HOFFMAN

Lewiston, N. Y.

January 11, 1918

The township school law has given rise to much adverse criticism in some of the towns of my district. For the most part this criticism has seemed to me to be based upon no grounds worthy of serious consideration. In the great majority of the school districts the tax rate has risen sharply this year. It is needless to argue that under the old system with conditions as they have been during the past year there must have been at least some increase. In general, the Union School or the "village school" in each unit has shown a decrease in its tax rate and this arouses the ire of residents of districts so remote that they can make no use of the advantages of such a school. In the town of Ellenburg with twenty school districts I believe the unit is too large to be efficiently handled by one board, at least

until we can secure better co-operation from the residents of the different districts. One of the difficulties we have found is that of getting anyone in the district to make repairs or to sell wood to the district. In many cases there seemed to be concerted opposition to the work of the town board.

Another cause of complaint will arise when the town takes over the school property. It would seem to me just as satisfactory to cause each district to give over its property to the town without question as to its value. It is true in my district that in nearly every case where the school property has been extensively improved, there is still a bonded indebtedness which the town has assumed, so that in reality the district is losing little more than its just share.

Briefly, the principal opposition to the law is based upon the question of taxes.

E. B. SARGEANT
Ellenburg, N. Y.

January 2, 1918

In general I consider the township system a fine thing for our schools. The rate of taxation in some of our districts was formerly around \$2 on a \$1000 valuation while in other districts in the same town to maintain the cheapest kind of a school would cost more than \$10 on the \$1000 of valuation. Under the district system the \$2 man was pleased while the \$10 man felt that the arrangement was unfair. Under the new uniform system of taxation it is quite natural for our \$2 man to feel that he has a grievance. I fail to see a just one.

In accord with the general conditions of our war time it is costing more than ever before to maintain our schools. We are paying about \$2 per week more salary for each of our rural teachers this year than we did last. Fuel, janitor service, and all school supplies are higher in price. These things together with the added expense of employing a teacher in physical training bring the average increase of expense for each of our rural schools up to about \$100. But these conditions were not brought about by the township system, although many people try to ascribe them to that.

The salaries of our clerk and treasurer and the cost of holding the annual meeting are the only outlays for which I can see the township system is responsible and the benefits that may be derived for our schools by the organizing and systematizing of our work, in my opinion, far offset said extra expense.

In this supervisory district we are maintaining several schools each having a registration of from one to six pupils. I wish the law might clearly give the town boards of education the power to close such schools temporarily and to reopen them any time occasion might require. Where a school is so closed, the few pupils living in said district should have transportation furnished to convey them to and from some other nearby school. Perhaps it might be well to limit the amount of salary that the clerk and the treasurer may be paid.

S. B. SMITH
East Chatham, N. Y.

January 1, 1917

First. The town boards should say which schools should be in session and which should be contracted or temporarily united with some other school. Consolidation is not the proper thing where the number of pupils vary so widely from year to year.

Second. The course of instruction, the school calendar, the enforcement of the attendance, the granting of temporary permits to teach elementary school should be vested in the district superintendent.

Third. No teacher should be hired without the district superintendent's written approval.

Fourth. The district quota raised to \$500 per school. A proportion of all high school teachers salary (say one-half) for quota, equalizing the special teachers' quota with the others. The present quotas do injustice to the best teachers' salaries.

Fifth. Require physical training to be taught by special teachers in the high school, by the day teacher in the rural school, supervision of it in rural school is too expensive, it can be well done by conferences.

Sixth. Best of all let the State assume the support of all schools (for the school is truly its asset) then assume the full responsibility.

J. G. McCONNELL

Prattsburg, N. Y.

Jan. 1, 1918

The criticisms of the township law have been very drastic especially by the farmers. However, mostly because of the increased taxes. I believe it will make for advancement all along the elementary education. We have had difficulties that would not come in ordinary years. Such as the fuel situation, the harvest last fall, and the teachers were generally hired at salaries ill proportionate to the school position. Most of these can be regulated next year. On the accompanying sheeting I am enumerating some things that seem to me would be an advantage to the law as it now exists. We will need to fortify for the country districts are going to make a fight to have the whole law repealed.

J. G. McCONNELL

Prattsburg, N. Y.

Jan. 1, 1918

The township law is meeting with the most vigorous opposition in Niagara county. No indignation meetings have, to my knowledge, been held in the second supervisory district, but such has been the case in other sections of the county. One body of taxpayers, I am told, have gone so far as to refuse to pay school taxes and have served an injunction on the town board of education. A portion of the adverse criticism may be warranted, but a much larger portion, I believe, is due primarily to a general misunderstanding of the law and its operation. Certain extraneous matters have apparently done as much to foster opposition, as certain provisions of the law itself.

For instance, the public seems to persist in associating physical training with the township law. Not physical training itself, but the enforcement of the physical training law in rural sections, is a subject that is probably more unpopular than any other educational measure in years. Medical inspection, as the law has operated, seems to share the unpopularity of

physical training in rural communities. Through misunderstanding again, the public looks upon the township law as affording a centralization of power with the education department at Albany. The public reasons that if physical training and medical inspection were thrust upon them in direct opposition to public sentiment, what can they expect to have forced upon them with a centralization of power or authority.

The installation of chemical toilets, in accordance with the regulation requiring all schools to be equipped by September 1, 1918, which is in no sense a part of the township law, but may have been facilitated by such law, has been associated with the same. The representatives of chemical toilet companies certainly made abundant material of such regulation or law. When the township law was going into operation, which law did not show any excess of strength in the Legislature, and in the face of greatly increased cost of maintaining schools, this matter of chemical toilets was rushed through the tax rates of respective towns were very materially boosted. In my supervisory district this matter probably did more to create opposition, indirectly through a protest against increased taxes, to the township law than any other single feature. With no spirit of criticism, in my opinion the forced installation of chemical toilets just at this critical time was an unfortunate circumstance. The public seems to persist again in attributing same to the result of centralization of authority at Albany.

The principal objection to the township law is of course the increase of taxes. The creation of a new working balance, the matters already mentioned, increased costs owing to abnormal financial and industrial conditions, all seemed to make the advent of the township law inopportune. If improvements had not been pushed quite so hard, and boards had been, in some instances, a little more conservative just at this time, I do not believe the township law would be facing its present danger. I do not presume to suggest any definite plan, but I do believe that provision of the law whereby a township incurs the bonded indebtedness of an incorporated village within its bounds, ought to be altered in some manner. That provision presently works a hardship, in some instances, upon the taxpayers of sections of the township remote from such village by way of greatly increased taxes with little or no material advantage to such taxpayers. Many taxpayers complain that they have this year paid from two to four times the amount of school tax they paid in any former year with positively no direct advantage by way of a better or more efficient school in their community, or any material advantage from a union school situated at a point from ten to fifteen miles, or more, away.

Again, the opponents of consolidation labor under the misconception that the township law spells consolidation. Let me repeat that in my opinion opposition to the township law is due more largely to certain untoward circumstances, than to any direct objection to the law.

ORRIN A. KOLB
Lockport, N. Y.

Jan. 4, 1918

The chief criticism on the operation of the Township Law is that of taxation. The residents of the school districts in which the tax rate has been abnormally low in years past are critical and condemn the law at every opportunity. Such districts naturally are found in the good farming sections and contain the most influential men of the town. These men are heard from while those that are pleased with the law do not make their opinions known.

In this section of the State there is a desire to have the Township Law amended so that the unit of taxation will be bounded by the town lines and join district property taxed for school purposes in the town in which it lies.

M. G. NELSON
Franklin, N. Y.

Jan. 2, 1917

The township law is a most unpopular one in my district. It appears that there has been a decided increase in taxes without any material advantage resulting therefrom. The people feel that they have been deprived of their rights, as the boards select the teachers, determine the amount of taxes to be raised, etc.

I have found that the members of the boards are unable to keep in touch with the schools. They direct fuel to be delivered at the schools but whether the full amount is delivered or not it is difficult to determine. They engage a man to make certain repairs on a schoolhouse only to find some weeks later that the desired changes have not been made. There are many seemingly trivial matters neglected. Door latches, window lights, flagpoles, etc., need attention but the boards do not feel that they can afford to send a man to a district simply to attend to these little matters and so they are neglected.

I am not satisfied with the operation of the law. I have no suggestions relative to the amending of the law.

January 7, 1917

PAULINE L. SCOTT
District 6, Oneida Co.

The chief criticism of the law which has reached my ears in this supervisory district is the increase of taxes in certain districts which were formerly districts of high assessed valuations. But I answer that argument by saying that it is true and only fair that they should help the weaker districts with their burden. I had such a forcible illustration of that condition in the town of Kortright last year where the school tax of two adjoining farms of comparatively equal valuations were \$110 and is I recall now \$16.

Another criticism has been that it takes the control and operation of the schools "so far away from the people of the districts." Some people seem to fear that politics are now going to dominate the school.

For my part, I'll admit that I was not at first an enthusiastic supporter of the proposed law. But I'll also have to admit that I am liking it better all the time and I have never been able before to secure so many improved physical conditions in and around the schoolhouse as this year.

I also find it more satisfactory working with the town boards of education than with the old and individual trustees. It would not seem to me

necessary to amend the law yet this year. Granting that it may be defective in some respects, one year is hardly a fair trial when we were all inexperienced and very much in the dark for a long time as to its most efficient working.

Jan. 2, 1918

ARTHUR C. HAMILTON
North Harpersfield, N. Y.

Taxpayers in districts remote from high schools, whose taxes have been greatly increased, are not favorable to the law. They believe that benefits derived do not correspond or are not proportional to the taxes paid.

Some farmers favor the law but generally they do not.

Most of the people in the village who are familiar with the law favor it.

Many farmers want more direct representation on the "Board of Education." They favor a district school meeting every year if only for the purpose of electing a trustee whose sole power or duty would be that of voting on the election of the members of the Board of Education. They seem to prefer that way of creating the "Board."

The appraising of the school properties and the issuance of certificates to property holders in the amount representing the equity of each in his local school property would I believe, cause endless confusion and an expense so great as to offset the advantage of the adjustment. Personally I would favor the modifying of that section of the law.

I believe in the matter of coal, etc., although the criticism is heard that it costs the districts more than formerly because then much of the training was done for nothing, that the Board of Education have in the coal crisis, been able to care for the school better than they could have done separately.

I have heard no complaint of moment against the administration of the Board of Education. I wish to go on record as saying these boards have been conscientious in their work. They have had the welfare of the schools in mind. They have met frequently and given much valuable time in the service.

This has been a year of organization and there are many things I now see that I could have done differently, and I assume this is true of the Boards but as far as the efficiency of the schools is concerned I believe there is some improvement. I would not say it has been great but would say that there has been some.

Jan. 10, 1918.

J. C. MALLOCH
Churchville, N. Y.

The operation of the Township Law is for the benefit of the schools, and is a great improvement over the old system. In my opinion, the law has not been in operation long enough to warrant serious criticism.

As far as this supervisory district is concerned, the main criticism of the law is that the taxes have been raised, and the schools are no better. The first statement is true but the latter is not. Taxes are necessarily higher because it costs more money to supply the needs of the schools at this time than ever before. It would cost more under any system. More repair work has been done to school buildings in this supervisory district during

the past year than ever before. This was necessary because of the lack of care under the old system, and the desire on the part of school authorities to keep down expenses regardless of conditions.

R. O. BRUNDIGE

Jan. 2, 1918

Ontario, N. Y.

The township law is in its infancy and has not been in operation long enough to be thoroughly tested. Like any other law, it must be thoroughly tried before criticism can justly and fairly be given.

The most unfavorable criticism that comes to my notice, is the increase in taxes. In most instances, the taxpayers report that their taxes have either doubled or tripled, and they cannot understand why this should be, as they cannot see as the schools are any better equipped or the children are receiving any more benefits in education, since the passage of this bill than before its passage.

In a few cases, the taxes are somewhat lower, but they are very few. Although, I believe that a uniform tax rate throughout the town is far better than a separate rate for each district; because, I know of some districts that have not paid school-taxes for the past few years, because they have contracted with an adjoining district, and the public money has paid both, tuition and the cost of transportation.

I find that with a town board, I can more easily get equipments for the school, than with the individual trustee. For instance, in one town, the board has purchased sanitary drinking jars with faucets for each of the schools of the towns. In four other towns, I have been able to get the boards to purchase books for the libraries.

I believe the law should be so amended as to give the town boards the right to say what schools shall be maintained in the town. By giving them this power, fewer and better schools may be maintained at a less expense.

I find that the cost of educating the Academic students of the towns that do not maintain schools with Academic Departments is one of the greatest expenses, and that is one of the objections that the taxpayers have to this law. In towns having a population of fifteen hundred or less or maintain a high school of fifteen teachers or less; the taxpayers claim that the increase in taxes is enough more than to offset the tuition they would have to pay, were they not under the township law.

I believe that if Article 353 of the township law where there is no outstanding bonded indebtedness, could be dispensed with, and the school property could be turned over to the town, it would be much better than to appraise it and then issue certificates of credit stating the amount so apportioned.

Some of the teachers claim they have more trouble and others less trouble in getting supplies and things done with the town board than with the individual trustee. I find on the whole, that the boards are willing to get supplies and whatever is needed for the schools, but it is the same with them as it is in all kinds of business at the present time; it is hard to get the material and the help to do with.

I feel that it was very unfortunate for the township bill that it was passed at this, the most critical time in the history of the nation; although,

I feel that with some amendments, it is just what we need for the betterment of our schools, and sincerely hope that it may be so amended as to meet with the approval of the majority of the taxpayers through the State.

R. G. CONKLIN

Jan. 7, 1918

Tuscarora, N. Y.

While the Root Board has not yet decided that the Township School Law is a good thing, they have very emphatic opinions on the Physical Training Law. They say that the Law ought to be repealed.

I note that the Governor is asking that the present Township Law be amended. It seems to me that the statements contained in his message do not show a clear understanding of the law as it is. The law may have been designed to bring about consolidation, but in actual practice, it will postpone such action. For instance, had I had the power last fall when we voted in two different districts on consolidation, I am positive that I would have made two consolidations last fall.

I call your attention to the suggestions that our Root Board made at our yesterday's meeting:

Regarding the election of officers: Allow the elections to be held in *each* school district and at these elections select one man from each district as a director whose sole duty shall be to meet with the other directors for the purpose of electing the Town Board of Education. This does away with the election expense and brings the elections nearer the homes.

This Town Board does not particularly complain of the cost of the system as at present administered, but that is a factor in the opposition. Not cost particularly, but unnecessary cost—for instance in the Town of Root we have to pay \$216 for the physical training, \$125 for the clerk, \$50 for the treasurer, \$50 for the attendance officer, the cost of janitor work has jumped 50 to 100% in each town and all of this expense seems unnecessary—especially the physical training teacher's salary.

N. BERTON ALTER

Jan. 4, 1918

Fort Plain, N. Y.

With reference to the new Township Unit Law, I will say that in general it is working very well. I have spoken with principals, teachers, members of the unit boards and patrons, and very few are dissatisfied. I send you enclosed a letter that comes from the Setauket, No. 2 Unit: The average tax rate has increased from last school year average .24 at \$100 to .38 at \$100 caused from the fact that Setauket school district No. 2 withdrew from the unit which has a high assessed valuation. The principal just murmur that I can allow is that members of the several unit boards are all busy men and to spend a day every month to go and attend the school meeting without pay together with the other duties in the office is naturally to be considered. If I could make improvements in the law I would make a salary for the members of the boards and have a person from every school district to represent its district on the unit board. I have this plan in operation in most of my unit boards but some units are made up of twelve school districts where one member has more than his district to look after, hence confusion and objections.

In fact the first year with the objections in the beginning, has a bearing on the operation of the law, the surplus money in many districts which can not practically be divided and the bonded debt in other or many districts are troublesome factors in making the law agreeable, and I think that the department or a law should name an easy and just practical method of adjustment of these conditions.

J. HENRY YOUNG

Dec. 29, 1917

Second Dist., Suffolk Co.

I am of the opinion that if the township law were given a longer trial, so that some of the advantages could be brought out it would be viewed from a different point of view. Of course, it would require some time before these advantages would come before the public.

The principal criticism in my district has been the expense. However, had the same things been done under the district system the only expense that would have been saved is the salary of the clerk and the treasurer. Aside from these two items I believe that the cost would have been practically the same. In fact, a member worked it out in this way for his particular district and found that it would have cost the same for his own school had they done the same work.

Many people are opposed to the law from the standpoint of expense or tax, although they have not even read the law in regard to it.

It seems to me that the method of election is a cumbersome and too expensive process. Perhaps some improvements could be made in this part of the law. I believe this part could be done a great deal easier.

CHARLES B. EARL

Jan. 5, 1918

Waterloo, N. Y.

In the main I am well pleased with the operation of the law.

The taxes seem exceedingly high for the amount of improvement they secure to the student body of remote rural schools. These expenses may be reduced another year as many extraordinary repairs were made by Boards of Education that would have been neglected by a sole trustee. It will require at least one year to prove to the public that they are getting value received for the amount of investment.

Very truly yours

WILMER S. WILSON

Dec. 31, 1917

First Dist., Seneca Co.

It is unfortunate that the township law was born at such a critical time in our industrial affairs. The greatly increased cost of materials and labor caused higher taxes for the support of schools and the trouble in getting supplies and scarcity of labor have furnished conditions that led to criticism of the new system.

The major part of the criticism has come from the penurious fellow whose tax rate has been increased. Others who are broader-minded have said to me, "My tax has been increased but I can see the justice in having the rate uniform for the whole town." Teachers too have been among the critics. Their schools have not been promptly supplied with needed sup-

plies. They should bear in mind that the system has not yet become thoroughly organized and that all branches of business are having trouble in obtaining all kinds of merchandise. Our town boards are composed of good men who want to do the right thing but have been greatly handicapped. I admit that some things have moved slowly but did they not under the old system? I tried all last year to have a certain trustee repair a large hole in the roof of the schoolhouse but with no success. This year that building has had a new roof, new single desks, and other needed attention.

I saw from the first that each board should have some executive head to look after the little details that would arise all the while. Members of the board who receive no pay do not feel like leaving their business and going over the town to look after these things. My suggestion was that a good business man be employed as clerk with a reasonable salary and he be given power to attend to all those details. This was done in Esperance and it is working well. Of course this plan means a larger salary for the clerk and was not generally favored. In most towns each director undertook the oversight of several schools in his part of the town. This looks nice but the directors are too busy at home.

I believe the law should be given a fair trial before being condemned or repealed.

District superintendents should be elected by the school boards of the respective towns.

Much of the criticism could be avoided if all the academic schools were made separate units by themselves but I suppose that would defeat in a large measure the purpose of the law.

SILAS SPRINGSTEAD

Jan. 31, 1917

Cobleskill, N. Y.

The township law has been very satisfactory in this supervisory district when the many problems of changing systems and the short period of operation are considered. Nevertheless there seems to be much dissatisfaction and the chief criticisms are:

1. High taxes and unnecessary expense.
2. Loss of district pride and representation.
3. No better schools.

The matter of collecting taxes in joint districts lying in towns or counties having different rates and bases for assessment has been the great problem in this district. If this phase of the law could be amended to make taxation conform to town lines I think the operation of the law would be improved.

ALBERTA SPAULDING

Jan. 4, 1918

Burdett, N. Y.

There is no question that the law has not been fairly tried out. There is much opposition to it but solely on the question of increased taxes as nearly as I can ascertain. It is unfortunate that the law was first put into operation when everything was costing more and there was greater expense than heretofore any way. As nearly as I can find out the districts whose taxes are increased by the law are enraged; the districts whose taxes are lowered are pleased. The question of the efficiency of the schools has nothing to do with the criticisms.

The boards have had much with which to contend this year, brief time in which to carry out their improvements for which some of the objectionable taxes were raised, scarcity of labor and abominable weather to work in, scarcity of teachers and fuel. If everything has not been attended to at once there has been more complaint than when the question was in local hands, despite the difficulties with which clerks have had to contend. However with all these drawbacks I have every reason to believe that the system is tending to work out more efficiently in every way and would continue to do so unless the people, enraged by their taxes, set out to elect boards whose sole objects was cutting down expenses. I have feared this somewhat and if it should be brought about that such boards were in power a town would be worse off than formerly under the old trustee system. On the whole objections to this law come largely from the people who knew nothing or still worse cared nothing about the very poor conditions of rural school plants and work under the old systems.

As regards amendments of the law the only ones which seem imperative are those you suggested yourself in a letter to me last September, some arrangement whereby pupils could continue to be transported from one district to another as under the old contract system without a vote for consolidation. Otherwise the tendency toward consolidation which is all too slight will receive a distinct set back and schools will be reopened which have been contracting. In my own territory there are districts in sort of a transition state where foreigners keep moving in and out. I still feel far too uncertain as to which way the population is going to swing to feel willing to advise the definite giving up of the district or the building of a new school. Carrying the children to another district is the only solution I can see for a few years. The shortage of teachers in rural schools, if it continues, is going to make the closing of some schools temporarily necessary. It would be desirable if it could be possible for a board to make such arrangement where it seems imperative without the peoples vote. I wrote you about such case last fall and you replied we could do nothing legally but hire a teacher. I secured a temporary license for a girl who is a flat failure. We are obliged to keep her because we only found her after school had been in session six weeks and we had hunted the state over and we should be in the same trouble again if we let her go.

While there is no question as to bitter opposition to the township law it would seem distinctly a step backward to repeal it so soon because it has not been tried out fairly. The welfare of the child who naturally has the poorest chance is not considered by those opposing the law. If after a few years trial under more normal conditions the law has not given such children a better chance then repealing it ought to be seriously considered. My own family pay heavy taxes outside of villages and consequently we have as much reason to feel the only serious argument against the law I have ever heard as any of the tax payers in our township. We do not consider that argument adequate without a much more thorough trial of the law.

RUTH M. JOHNSTON

Port Leyden, N. Y.

Jan. 3, 1818

Aside from the greatly increased expense of operating the schools under the new law I have found it very difficult to have minor repairs promptly and properly attended to in various schools and the furnishing of supplies and equipment has been quite a problem.

I have also observed in many rural districts an increased lack of interest in school matters. Many take the attitude that the clerk of the town board of education being a salaried officer all responsibility should rest upon him, but in most cases the salary of that official will not warrant his devoting his entire time to the work.

I am not in favor of a return to the district system, however, as it had become so that it was most difficult to get reputable and intelligent men in any community to serve as district trustees and the present members of the town boards of education in my territory are representative men in their respective communities.

I believe that better results will be secured next year in the operation of the township law as it has not yet been given a fair trial.

I do not think of any changes in the law that I would suggest.

CLARENCE E. VANBUREN

Jan. 5, 1918

Broadalbin, N. Y.

You are probably aware that the Board of Supervisors voted to petition our senator and representative to introduce a bill providing for its repeal. As nearly as I can find out, their objection to this law is due to the fact of the general tax being larger.

I would suggest the following amendments:

1. That town lines be made district lines, thereby doing away with joint districts. 2. That a salary be given the Board of Education sufficiently large to induce competent men to give it their attention. 3. That there be an additional educational requirement for members of the Board.

MYRTLE E. MACDONALD

Jan. 7, 1918

Chateaugay, N. Y.

In my opinion the operation of the Township School Law is generally satisfactory in this supervisory district. We have the machinery going very nicely. Members of Town Boards seem to be interested and are willing to do the best they can for the schools.

It has been possible for me to attend all the meetings of the Town Boards of Education thus far. The members of the Boards have expressed a desire that I feel free to make recommendations for the good of the schools. All the Boards have adopted a set of By-laws which seem to be working very satisfactorily. I find that the District Superintendent must take a leading part and must attend the Board meetings in order to have the schools get the most that is possible from the workings of the new system.

Of course, in this supervisory district we may be situated differently than in other supervisory districts. There has been no merger of common school districts with Union Free School Districts under the Township school system. In this district we have five Town Boards of Education and two Union Free School Boards of Education. Our Tax rates have not been

far from the average normal tax rates. In one or two instances it has been less. I believe the Boards have raised in most instances more money than will be expended during this school year. In appointing the clerks and treasurers the Boards have been careful and conservative. The salaries of the clerks vary from \$300 to \$350. The salary of the treasurer in each instance is \$50 per year.

If I were to recommend an amendment to the law in so far as this district is concerned, I would advocate an easier way of throwing up some of the small common school districts than by submitting it to a vote of the people of the district. Of course, superintendents and Boards may work for a time to arrange for the tutoring of pupils in some common school districts by entering into contract with Boards of another town, and also with Boards of Education of Union Free School Districts. It seems to me that this might be used as an entering wedge and that the law might stand as it is for a time.

I understand in some towns where there are two or more Union Free School Districts,—one or more coming under the jurisdiction of the Town Board of Education and one or more coming under the jurisdiction of a separate Board, that it has not been easy to arrange for the tutoring of the pupils who live near a Union Free School not under the jurisdiction of the Town Board.

W. E. PIERCE

Dec. 31, 1917

East Aurora, N. Y.

There is a strong sentiment among the taxpayers in this section against the township law because of the increase in taxes this year. The average tax rate in most towns is higher under the present system. This can be explained by the fact that in most towns the town school boards are sufficiently interested in the schools to make some much needed improvements that the former trustees thought unnecessary.

People generally in this section are opposed to consolidation of schools because of the severe winter weather and the bad roads in this section. Some in this section, I believe, objected to the township law at first because they thought it was a step toward consolidating the schools.

If it were not for the fact that taxes have been higher under the present system, I do not believe there would be any objection to the township law in this district.

MATTIE J. PRIME

Dec. 31, 1917

Upper Jay, N. Y.

I think it is working well in this district. In general, we have better business men on the boards of education and the management of the schools is more businesslike. Supplies are purchased at wholesale and are here when needed, we do not have to wait for them. The poorer schools have been very much helped in the matter of repairs and equipment.

The only suggestion that I have at present for the improvement of the statute would be to give power to the board of education in each town to maintain schools where they thought they were most needed and to close other small schools. All this year we have had great difficulty in getting enough teachers to supply the schools. I fear I can not get enough for

the spring term. If that is the case, what shall we do? May the board close a school and transport the pupils to another school without a vote of the people of the district?

Jan. 3, 1918

JANE I. SCHENCK

Greene, N. Y.

The objections raised differ in almost every community, in fact every township has its own peculiar advantage or disadvantage under this system and any general conclusion, I believe, must be based upon the number of towns or localities similarly affected. The cases are undoubtedly typical, however, and have their counterpart in scores of other towns of the State.

The most general criticism in this locality, voiced by resolutions of the Board of Supervisors, Granges, Non-partisan Leagues and others, is that rural people are compelled to support more or less expensive High Schools which, though free to them as well as to residents of the village, are not able to be utilized by them to any appreciable extent as compared with the village population. As the *Jamestown Journal* put it, "We are not saying That the Township system is wrong. We should be glad to know that it is most desirable, but so far as cursory observation goes, it does seem as though the rural schools might be conducted for less than they are being conducted at present. It is true the country districts are scattered over a wide stretch of territory and the Jamestown school districts are compact and thickly populated, but it is equally true that the expense of equipment and maintenance of the rural schools is, or should be, much less than the expense of equipment and maintenance of the Jamestown schools. As a matter of fact in some of the larger villages the buildings are as elaborate and the equipment as expensive in Jamestown, *but all the people of the country towns can not have the advantages of the large schools in the villages.* They must still use the little old red schoolhouse, and it *does not seem quite just that they should be required to pay for the educational facilities provided their neighbors more fortunately located.*" In other words equal advantages does not mean equal opportunity. A pupil living in the southern part of one of our lake-side towns may claim a seat in the Grammar or High School Department of the village school by the side of the village pupil, but on account of the expense of time, transportation, dress, and hardship incident to taking advantage of it, the opportunity does not avail and the real opportunity is not to be found.

In writing the above I am stating rather the other man's viewpoint as it comes to me, but I am glad for the opportunity of saying that thus far I can see how that a township system can be ineffective in effecting the most desired results in this State as it seemed to be in other states previous to the enactment of this law. The fact is the EDUCATIONAL ADVANTAGES OF THE STATE AND OF COMMUNITIES OF THE STATE DEMAND THAT IT SHALL HAVE UNITS OF ITS OWN FOR EDUCATIONAL ADMINISTRATION, based upon its community interest, its accessibility or inaccessibility to other localities and to its own limits, each unit (comprising a territory several times as large as the present ones) containing, by statute bearing upon State aid, at least one school of at least two teachers, one of special agricultural or vocational training,

and with adequate building and grounds and other facilities for instruction. Dividing a town or about the territorial extent generally contained in a town into two to five districts with real reasons for their existence, instead of the arbitrary and awkward township boundaries, I believe with statutory incentives for maintaining one such school in addition to such "little old red school-houses" it would soon result in the discontinuance of most of the weak ones and in the large increase in the number of rural boys and girls who would complete the elementary course if such a school were within reach of their homes. The occasional one or the few that the distant high school gets from among them is a poor recompense for the other 90% that do not get the vision and for whom the country school loses its power and interest sometime about the fifth or sixth year.

I believe it has been admitted that such a re-districting of the State has been desirable with real educational ends in view, to relieve us of the out-of-date, weak and worse-than-useless districts that have come down to us from time immemorial, but it was believed that such a task would be a stupendous one. No task worth while is too difficult to tackle and personally I would like to see our State, now that some modification of the present plan is most emphatically and universally demanded, take a real step in advance of "type legislation" and give us the re-directed school for which writers and educational leaders are clamoring. The Educational System of the State have an adequate force, state and local, to carry out such a re-districting of the counties and I believe they are willing to make the sacrifice that would have come to open the way for the ideal in education. It would not result in the isolation of outlying territory from villages even if such village district has 1500 population, nor would it link a distinctive rural community with its own peculiar interests with a remote village district five to eight miles away. Probably such a plan just proposed is more like beginning all over again rather than modifying the law and hence may seem too tardy for consideration; and yet what the rural people are clamoring for is to be relieved of the system that links them with educational interests and institutions, with the added taxation required for their support, in which they are not primarily interested except in occasional instances. Then if there is any probability that public opinion favors the repeal of the Township Law, a fact that seems almost glaring in this county, it ought to be insured that we shall not return to the weak school district of former years and the sole trustee, but large, influential, common school districts, with adequate assessed valuation, a school Board of three members, and statutory minimum requirements that shall be liberal, providing a complete liberal elementary education for every pupil in the enlarged district. Personally I see greater hope for the more liberal education of the young people of the rural communities and the dissemination of current information and extension courses through the increase in the number of strong elementary schools along the main lines of travel in rural sections, rather than in the enlarged and crowded village school inaccessible to rural pupils. And yet the latter idea seems to be the one with which the average town Board seems to be obsessed.

L. M. SWAIN

Westfield, N. Y.

Jan. 2, 1918

When the bill was pending in the legislature many of the people felt that Westchester County should be exempt from the provisions of the law the same as Nassau County; but now the law is in operation they feel that it should not be repealed.

I organized three units under the law; namely, Harrison 1—6 Districts; Rye 1—1 District; and Scarsdale 1—1 District. The Harrison unit works well and helps out the less favored districts by equalizing the school taxes. At the present time the Harrison township board is enlarging the school house in District No. 5; and in the near future East White Plains, Harrison No. 7 will have a new school building to accommodate 300 children. And the cost of all these improvements will come from the township unit and be assessed upon six districts.

The tax rate for this year for the Harrison unit is only \$3.57 per M and I have heard of no complaints.

The township law is a good law in many respects; but is not perfect. I consider it the best piece of constructive school legislation which has been passed for a number of years.

If the law could be amended to cover such cases as this: Harrison No. 6, a union free school district is exempt under the provisions of the law employing more than fifteen teachers. The district has an assessed valuation of \$2,151,625; tax rate of \$13.85 per M with 800 children to educate; while the township unit has about 400. District No. 6 would like very much to go into the township unit; but the voters of the District comprising the unit would not vote to let them in because of the higher school rate.

The township law is excellent in many respects, and I firmly believe that the people of my district would not like to see it repealed.

S. J. PRESTON

White Plains, N. Y.

Jan. 4, 1918

I think it is working successfully in most ways and will do even better next year when we have had one year's experience.

The principal opposition arises from the tax rate. It might help to remove this by postponing the date when the inside toilets may be put in and also buying of the school property by the town from the districts. I am going to ask you whether it would answer for my supervisory district to have one physical training inspector. The teachers now know a good part of this work and only need to be kept up to the mark. Of course the large schools could have their own teacher if they wanted. With these changes the tax rate would drop a good deal. After a couple of years when the system had got to running, the toilets and the purchase of the school properties could be resumed without much danger to the system. I can see objections to my idea but offer it for consideration.

There is to be an opposition meeting at Town Line on Friday. Assemblyman Zimmerman is to be present. I saw him Saturday and gave him some statistics about that locality that were interesting to him. I think he is favorably impressed with the law though he voted against it before.

HENRY A. DANN

Lancaster, N. Y.

Dec. 31, 1917

I believe that the township law has operated to the benefit of the schools and that eventually, if given an opportunity, will operate to the satisfaction of the people generally.

I also believe that the people generally are not convinced of this and that much of their objection to the law comes not from the law itself but from things which they suppose came as a result of the law. The physical training law; the sanitary toilet regulation and the township law are one and the same thing to most people and all coming about the same time has made much of the disturbance. An amendment to the law which would require all teachers to take a course in physical training (enough so that they could teach it in the rural schools) and not require a special teacher for this work in the rural schools would meet with general approval.

In a town of not more than seven districts the law works much better than in a town with twelve or fourteen districts where many of the districts have no representative and it is difficult to get little matters attended to without sending a man a long distance at considerable expense. Many suggest that each district should have a member on the board and if it were not for being cumbersome I think it would be better.

W. E. BENTLEY

Jan. 4, 1917

Springville, N. Y.

The town boards did not assume control of the schools until August 1st and the time between that date and the opening of the schools allowed them to make only the absolutely necessary repairs and improvements. In each town the school rooms were thoroughly cleaned, the floors oiled, water jars placed in those without them, blackboards painted, new stoves purchased where needed and new grates placed in many of the old stoves and the outbuildings received better attention than ever before during my term. Every school opened Sept. 4th and has been running under uniform regulations adopted by the three boards. Never before has there been as much real teaching done as this year. The teachers realize that the work must be uniformly good, that they have a responsibility which they must meet and that there is a body of men in control of the schools that will tolerate no laxity on their part. The increased efficiency of the teaching force alone repays the towns the increased cost of running the schools this year. Where school rooms were painted a uniform scheme was carried out; the ceilings were painted white, the walls a greenish gray down to within a few feet of the floor and from there down a dark brown. This gives much better light and makes the rooms look neat and attractive. School supplies were bought at wholesale and placed in the schools without delay when the teachers made their requisitions. In every school library books have been placed this year and this without the usual amount of persuasion and threats on my part.

There has been very little opposition to the law in my district. In one town the farmers have complained regarding the increased tax rate and attribute all of the increase to the fact that the union free school is joined with the rural schools. The rate in this town is 78c for one U. F. School and 14 rural schools. In an adjoining town with 21 rural schools the rate is 80c. The assessed valuation of this second town is only about \$300,000

less than the first. In my third town there are 17 rural schools and one U. F. School and the rate is 90c. In this town they spend about one half as much on the union free school as in the town with a rate of 78c. This goes to show that all of the increased cost is not due to the village schools being included. The valuation of the town with the 90c rate is about \$150,000 less than the town with the 78c rate.

The real reason for opposition to the law is the increased tax rates. They use the fear of consolidation to silence those farmers who are inclined to favor the law. I have districts in my supervisory district that had higher tax rates last year than the town rates this year. Those whose taxes are lower this year keep quiet. They are in a minority and they do not care to incur the ill will of their neighbors living in districts with lower rates last year. The average man is insulted if you try to convince him that a higher tax is justifiable though there are exceptions, of course.

I find opponents use these arguments:

1. Taxes are higher without any great increased efficiency in the schools.
2. Village schools are included with the rural schools and these village schools are not accessible to many of the pupils living in the rural districts.
3. They object to the towns buying the school property.
4. They confuse the medical inspection law, which has never been popular, with the Township Law.
5. They confuse the physical training law, which is very unpopular in both rural and village schools, with the Township Law.
6. They claim it takes away local control over the schools.
7. They claim to fear that the ultimate aim is consolidation.

Taxes are higher because the old trustees agreed to pay the teachers now in the schools higher wages and fuel and school supplies are much higher than last year.

If village schools are to be taken out of the township system the state aid for non-resident rural pupils should be withdrawn. Some even advocate the withdrawal of all state aid.

The towns should buy the school property in justice to those districts that have spent money freely in the past to build and equip good school buildings. The bonded indebtedness is assumed by the district that incurred the debt so that no injustice is done the town as a whole.

The medical inspection law has remained unpopular because the doctors are supposed to be lax in their examinations. This has not been generally true in my district.

The physical training law is not unpopular with the pupils but the majority of the parents do not consider it necessary.

Local control has not been taken away, the unit of local control has been enlarged. When they had control under the old system not over 20% of the voters attended the annual school meeting.

The fear of consolidation is largely due to ignorance. The letters appearing in the papers state that the Department plans to have children carried from three to ten miles when as a matter of fact four miles is the maximum distance. But we can hardly blame the average farmer fearing consolidation under this law when the Governor of this state in his recent message to the legislature says, "It (the law) undertook prac-

tically to force the abolition of many of the existing school districts and their union with stronger schools when such consolidation was impractical." The natural question comes, "Did Governor Whitman ever read the Township Law?" When the Governor states the case as he has stated it what can an ordinary mortal do to convince the people that the law will work out well if given a chance under normal, not war, conditions.

The noisy opposition has frightened some of the politicians and they are seeking cover instead of standing in the open. An influential farm paper, *The Rural New Yorker*, has come out in opposition to the law but I doubt if the editor ever read the law. He stated a few weeks ago that his school tax, he lives in the country in New Jersey, was $87\frac{1}{2}c$.

The boards want the power to close weak schools temporarily without loss of the public money for the districts in which schools are closed.

If village schools are exempted, justice to the balance of the state would seem to make the withdrawal of state aid only fair.

THOS. B. STOEL

The opposition to this law comes from the rank and file of the taxpayers whose taxes (not only school) have been greatly increased in the last few years by various causes. The increase in tax caused by higher teachers wages, medical inspection, physical training and the general high cost of everything affects districts which are actually benefited by the Machold Law but nevertheless pay a higher rate than formerly. It is difficult to convince residents of such districts of the benefits of this law. I believe, therefore, a few of the most prominent men, politically and otherwise, in each county should be won over to the law and to use their influence to keep it a law. That can be done easier and quicker than getting the general public as those who are opposed are *rabid*.

Again it seems to me that by a few amendments of other laws which will decrease the expenses of school administration or transfer them to other than school budgets this law may be saved with equal advantage to the schools and the taxpayers. There has been an ever increasing tendency to bring everything relating to child welfare, with the expense connected therewith, directly under the school system. The result now is that the school system is likely to suffer. Take for instance the two following items:

Medical inspection. Amend the law so that it will be a duty of the health officer to examine all children from five to eighteen years of age in every town, village or city between August 1st and October 1st and file report of the examination with the clerk of the board of education. Let the health officer be paid by the town.

Physical training. Amend the law so that instead of a physical director being employed by every town or few districts each superintendent be directed to appoint a deputy superintendent who shall be a qualified teacher of physical training and whose chief duty will be to supervise such work. Salary of deputy not to exceed \$1200; one half thereof to be paid by the State. Expenses not to exceed three hundred dollars; one half to be paid by the State. I am satisfied from observing the workings of the law that as good, if not better results would be obtained by such an arrangement at a great saving to the several towns as well as the

State as a whole. Nearly every teacher can give such instruction with a very little training and supervision and if physical training were made a required subject for teachers certificates in a few years we ought to have physical training quite well taught.

O. A. WOLCOTT

Keeseville, N. Y.

Jan. 10, 1918

So far as the township law has been carried out in my territory. I think it has been successful. I am positive that better results will be obtained under the management of a board of education than under separate trustees. Through the board meetings, I have been able to bring suggestions for the betterment of the schools before these men for discussion and they have usually followed my advice.

The principal criticism that I have heard is the fact that taxes were higher. Taxes would have been higher, this year, under the old system and in many districts would have been a genuine burden. Physical training supervision, higher wages of teachers, higher prices for supplies and fuel should be blamed for the higher tax rate rather than the Machold Bill.

We have not yet appraised the valuation of the school property to be taken over by the town and we have not yet held an election. I think that these two plans could be improved upon but am not in a position to be positive as I have not seen them worked out. I doubt if the manner of election will work out well in the large towns with the many scattered schools that they now have.

CLAUDE D. CARTER

Marathon, N. Y.

Jan. 7, 1918

The township law has worked out quite as well as I expected in my district.—perhaps even better. I didn't anticipate such a storm of criticism and such loud demands for its repeal as it has stirred up however. And yet perhaps these things are to be expected particularly from rural people (who stick so closely to the old ruts) when such sweeping changes of system are made. But the loudest cries come from the wealthy districts, I find, where under the old system the tax rates were very low. The people in the poorer districts are quite pleased at the change. They are wearing contented smiles, but are not saying much. The noise is being made by the people who are displeased.

In my humble judgment most of the criticism that is being made is not worth much. It is made by people whose taxes are raised and by people who do not appreciate the advantages that will come to the schools as a result of the new system. If properly administered the cost of running the schools should be little if any more under the new system. The burden is equalized however, and this is certainly in the interests of justice no matter how much the people who are now made to pay their just share may shout about it.

The law is being blamed for many things for which it is not responsible. I have a school nurse this year at a salary of \$1200, and a physical training director at \$1300. Many of the critics blame the township law for these useless but expensive additions as they consider them. They insist upon comparing with the conditions last year forgetting that every-

thing that enters into the running of a school costs much more than last year.

There are just two changes which I feel that should be made in the interests of justice and efficiency in the administration of the schools in my district.

In the first place I am afraid it will be increasingly difficult to get the right kind of men to serve on the town boards of education. Many of the members of the present boards insist that they must resign at the end of the year. A few have already resigned. They feel that there should be an allowance made them to cover at least their travelling expenses in attending the board meetings. And when one stops to consider the lack of travelling facilities and the magnificent size of some of my towns it would seem that their contention is justifiable. If the representation is to be distributed over the town as it should be some of the members in Croghan and Diana have to travel from 30 to 40 miles to attend meetings of the board and return to their homes. They feel they do enough when they give their time to attend, but they can not continue to pay their own expenses. Unless some allowance is made for expenses I am very sure that the control of the schools of the larger towns will eventually be in the hands of men from a very small part of its area surrounding the meeting place of the board. Other competent men will refuse to serve. I would not like to see any salary allowance made for board members, for that would at once attract the wrong sort of men, but I would like to see some sort of provision made to cover actual travelling expenses,—preferably sworn expense accounts submitted for audit to the *town board* (not town bd. of ed.).

The other change which I feel should be made is this: That all incorporated villages in which are maintained academic schools should be made separate units. In many cases that have been brought to my attention the rural people feel that they are being burdened unjustly for the maintenance of the village schools from which they derive little or no benefit. This is true particularly in the town of Diana. The rate there for the current year is .0242,—just about double that in any of my other towns. Its costs nearly twice as much to run the Harrisville school as all the rural schools of the town. The remote position of Harrisville together with the large size of the town make it impossible for any considerable number of rural school children to attend the school. It seems therefore unjust to ask the rural part of the town to be burdened for its support when they derive so little benefit from it.

In the village of Croghan more than 90% of the children attend the parochial school. The parents are forced to support this school by payment of tuition and voluntary gifts, and it is really quite a burden. The public school here is only a one teacher affair,—a typical rural school in excellent condition, but the tax rate has been low. The people here feel that it is unjust for them to have to pay their pro rata share for the support of the public schools of the town besides supporting their own parochial school.

But whether or not these changes would seem justifiable, I am convinced that there would be a great deal less hostility expressed toward

this law if it could be amended so as to make separate units for all incorporated villages in which are maintained academic schools.

GLENN G. STEELE

Jan. 1, 1918

Croghan, N. Y.

The Township Law is working out very satisfactorily in my supervisory district. There is considerable adverse criticism almost entirely on account of the increase in the taxes in some districts. No complaints come from those districts where the tax rate was lowered. I think the town as a whole should pay the expenses of running the schools as well as building roads and caring for the poor, etc., etc. In every town more money was raised for school purposes this year than was raised last year in all the districts partly because of the salaries of the clerk and treasurer, and partly because the teachers wages are from one to two dollars per week higher, and partly because everything used in running the schools is more costly. I believe when the novelty of the law wears away the criticism from increased taxes will vanish. I can see that the schools are going to be much more efficient. Better teachers are going to be employed. Under the old system it was impossible to get rid of some of the poor teachers especially when she or her friends had some influence in several towns. The boards of education as a whole are composed of men who are working for better schools. Some of the clerks are not just whom I would select but this is not a fault of the law.

JOHN R. STICKNEY

Bolton Landing, N. Y.

It appears that the opposition in Montgomery county to the Township law were determined to get in one or two of their best licks against the law at this meeting. By exercise of parliamentary practices the President of the Bureau was able to postpone attack upon the law until re-inforcements in the shape of a district superintendent could appear on the field and in the face of a blinding snow storm, I succeeded in getting there in time. The president of the Farm Bureau lives in a district where the rate is \$3.00 less per thousand than it was last year (His town is St. Johnsville where the rate is only \$5.70 this year).

The president of the Breeder's Association is the president of the Minden Town Board of Education while the election yesterday resulted in the selection of another member of the Minden Town Board as President of the Farm Bureau. The President of the Root Town Board was present at the meeting and at least one member of the Canajoharie Town Board of Education.

You will remember that this is my native county and that I spent the best 12 years of my life in the second supervisory district and know a great many of the people and farm conditions generally — perhaps financial conditions also.

I lived for 6 years in a house owned by Boyd Diefendorf's grandfather and know the family perfectly. Young Boyd inherits 1000 acres of fine land (not well cultivated, however) which appears to be assessed at \$20,000 and of course it is taxed, as it ought to be. This year their tax was \$200.00 last year only about \$70.00. Now you can not blame them for having to bid good-bye to a good thing.

My opponent (Boyd Diefendorf) in the debate which followed made a statement, which was promptly challenged by the President of the Minden Town Board, in which he said that the taxes had been increased with no corresponding decrease for any body. It appears in the town of Minden that the rate is about fifty-fifty as you will notice in the table the town now having a salaried, full-time medical inspector, I am about ready to say that the only value of the law seems to be to give some person a job. I am not yet ready to say that the medical inspection law ought to be repealed, but I feel that at present it is only what I have stated before. In our State there is entirely too many overlapping jobs, each department of government and each Division of each Department wanting to get credit for work accomplished.

The part of the Law conferring upon Town Boards of Education the power to engage agricultural experts is a good one. The law governing vocational education ought to be so amended as to give the Town Boards power to engage a homemaking expert in place of an agricultural expert.

With the exception of what I have said relative to the repeal of the physical training law, I believe that the Department of Education ought to fight against any attempt to amend the present Township Law at the coming session of the Legislature. The law cannot be fairly judged until the Town boards make out the budgets for the next year and determine just what it will cost to run the schools during the school year 1918-19. Then an opinion of the workings of the new law can be fairly made.

N. B. ALTER

Dec. 29, 1917

Fort Plain, N. Y.

I am in favor of the present law. To my way of thinking I have heard no sufficient reasons why the law should be repealed. The chief reason is the one that touches the pocketbook. The present rate of taxation in my own towns is no more than it should really be for efficient results in the schools. The Rural taxes have been too low to keep the buildings and equipments in proper condition, and furnish good teachers.

We are having a legal contest here in the town of Castile to test the validity of the entire town helping to pay the bonds of the Castile H. S. Formerly the State has paid H. S. tuition for Rural students and residents of the district have furnished the school and the people outside the district have paid nothing as in the case here. Therefore there appears to be three conditions at least that enter into the matter, which rural people do not consider when they object to the present tax rate. First they are getting equal benefit of the H. S. except for distance — second they do not consider the fact that teachers' salaries are considerably higher this year — third we had no surplus on hand with which to start the work this year. We might add the increased price of fuel supplies etc. which had to be taken into consideration when the budgets were made out.

So far as the Castile tax rate over which the contest is taking place we do not consider it excessive in view of the fact that it is but \$.006862 including the bond issue while the town of Wethersfield — in my district — which has no H. S. is \$.00786 and the town of Genesee Falls with no H. S. is \$.00658.

So far as the running of the school plant is concerned there has been a little objection in as much as the members of the Board are too far away

to look to the supplies sufficiently well. We have in a large measure overcome this objection by assigning some certain schools to the nearest member to look to the needs. In one instance as town of Castile for example—one member has the fuel to look to for the rural schools another member for the H. S.—another has charge of supplies and repairs, janitor service etc. The Clerk is authorized to use his authority in furnishing supplies subject to the advise of the member who has jurisdiction over that work.

I do not think the general law should be amended at all until we have had time to give it a fair test. It is in its infancy and I am confident many things that work for the benefit of the schools can be worked out with much greater results through the town Board than by the former method.

GEO. H. STRATTON
Castile, N. Y.

So far I must say the township bill is far from being popular. Much complaint is made on account of the high taxes. In no part of the towns were the taxes lowered as much as it was thought they would be. This will be adjusted another year unless the improvements that were set for September are enforced. Another source of trouble in my district is the kind of men that we have on the boards. While not true of every town nor of all men on the boards, schools generally were run by the very worst men in the district from a business point of view. These men have or were elect on the town board of education. They do not know how to manage a school plant since many of them were not able to merely manage a home. I trust that another year this may be adjusted as well.

The lack of power on the part of a board to close a school for a year or part of a year without a vote of the district where there are only two or three pupils is a serious mistake from my point of view.

Schools situated within the corporation of an incorporated village but under the superintendent of rural schools should have some way of being adjusted. I have in mind # 8 Whitehall. If the district have their way they will build a rural school within the corporation and within less than a mile of a well equipped town school.

Some other method of boundary lines of districts extending into other towns.

A more definite arrangement about the transportation of high school pupils who are scattered over the town. I have in mind one town where there some ten or twelve pupils who are ready for high school. Not more than three could be taken in one rig as they are so scattered. The town boards of education refuse to transport them on account of cost and pupils are not in school.

I have had no ruling from Albany on the last defect. If you have made one I trust that you will let me know.

As to the general opinion of the township bill I fear that if we as district superintendents of Washington county did not work very hard to counteract the bad feeling every grange and Pomona grange would vote to have it repealed.

AMELIA BLASDELL
Whitehall, N. Y.

January 3, 1917.

The complaint we hear about the present school system is mainly of increased taxation. People find the rate lowered in very few places and do not consider that it costs more to finance schools than ever before, but blame the new law. This general complaint naturally makes the members of Boards feel conservative as to expenditures. The conservatism is wise but, if carried too far, the school will not be conducted as well as before and complain because of that will follow.

Some members of Boards feel their responsibility a burden—Too much work without pay. The solution, I think, is a better salaried Clerk who shall take the responsibility.

As far as we have gone, the law seems to me satisfactory if applied correctly. Am anxious as to whether suitable persons will take places on the boards at the next election.

Am in doubt as to method of handling very weak schools. Do not see how a school can be closed when it is against the wishes of the district, and people are very sure to want a school.

EMILY W. DEVINE,
Hudson Falls, N. Y.

December 31, 1917.

I am pleased to advise you that I have neither seen nor heard any criticisms that, in my opinion, should be given consideration at this time. The law is not fairly on trial. The present boards are, to a large extent, simply filling out the terms of trustees elected last May. Of course, the taxes for the support of the schools are now spread over the entire township and necessarily the tax rate in the strong rural districts have been increased. In the weak rural districts (in my supervisory district) the tax rate has been reduced. I believe that the fair minded men who understand the provisions of the law would like to see it given a fair trial.

A. H. McMURRAY,
Watworth, N. Y.

January 5, 1918.

The new law has been working very successfully in my district. The schools are on a better business basis than ever before, it is much easier to obtain supplies and equipment and all the town boards are taking a great interest in the schools, doing everything possible for their improvement. The boards hold their regular meetings every month and the members are always present. More money has been expended this year for the improvement of the schools than ever before in the history of the state.

I hear very little objection to the law in my district except in a few very wealthy school districts where the taxes under the old law were very low. The great objection to this new law comes from the farmers, who as a class are not particularly progressive. They are up in arms if their school taxes are increased even if they get ten times the educational advantages. In many places up-the-state there is much opposition to the bill and all the farm papers are working for its repeal, especially the "Rural New-Yorker."

All the boards of education in my district are decidedly in favor of the new law and would pass resolutions for it to remain in force. In fact, the boards of education are organizing and making preparations to send a delegation to our senator and assemblyman in order to influence them to vote against its repeal.

I have not studied the bill as yet with a view of making suggestions as to amendments. A board should not have authority to hire teachers without the approval of the superintendent. The town boards should have authority to close any of the schools of a town and transport the pupils to a graded school.

The repeal of this bill would work a great hardship in my district as a number of the schools have already been closed and in the town of Cortlandt the town board purchased a large auto truck at an expense of over \$2000 in order to convey the 6th, 7th and 8th grade pupils from some of the larger one-room schools to the graded school at Buchanan. In one town there are but two schools and the pupils from one of these will be sent away another year. The board at Somers meet tonight and we are to discuss the advisability of closing two schools and sending the pupils to a large graded school. The boards are finding it cheaper in many cases to close some of the smaller schools, even paying the tuition of such pupils in another town than to pay \$800 or \$900 to maintain the home school.

ROBT. D. KNAPP,

January 7, 1918.

Fourth Dist., Westchester Co.

I am firmly convinced that the Township Law is better than the law it supplanted, and that as time goes on a marked improvement in the schools of the State will be shown.

My reasons for this belief are as follows:

1. It is possible for me to become intimately acquainted with the members of the Township Boards, attend most of their meetings, and advise with them concerning the problems that they are required to solve. This was impossible under the old law.

2. The Township Board has a broader view of all matters which come under its direction. I mean by this that if a question of new buildings, additional teachers or anything for the betterment of the schools is being considered, that the Township Board will think more of the added efficiency of the improvement or change, and vote for it, whereas the old local Boards would consider first of all the added tax rate, what their neighbors would say, and then usually decide that the matter could be put off for another year.

3. I believe that we shall have more uniformity in the work of our schools, better equipped and better paid teachers, and more sanitary conditions under which to carry on the work. For these reasons I favor giving the Township Law a fair trial.

Nearly all the complaints that have come to my notice, have been because of increased taxes, or because a particular district was not represented in the Township Board.

Personally, I think that all schools in a supervisory district should come under the Township Law.

CHAS. H. CHENEY,

Second Dist., Westchester Co.

I am not impressed with the idea that the Township Law should be amended in any great particular. The opinion of the men whose opinion is worth having is not in favor of any great change. The law has not been in

force long enough for even the intelligent to become well acquainted with its workings. There is a rather marked lack of knowledge of the provisions of the law. So far as the schools are concerned I think the improvement is at least twenty-five per cent. in advance of last year. The fact that the teacher realizes that she is under the employ of a responsible body that will enforce its contracts does much to encourage faithful work.

The advance is marked in so far as the condition of the buildings were concerned at the opening of the schools.

The "kicks" have come from people whose taxes have been raised in every case that I have investigated, and you must be aware that a superintendent who travels at all through his district, meets "kicks" frequently that concern this Township Law.

We have figured in this county that the normal increase in the running of the schools under any system this year would be in the region of 25%. On the average, that is about what the increase has been in the rural section.

So far as amendments are concerned I have always believed that a county unit for taxation with town unit for administration preferable, but I am not sure that it is advisable to make even that change the coming session of the legislature.

In my opinion it would be "child's play" to amend or repeal the Township Law until it is thoroughly tried.

W. J. LUMELL

January 5, 1918

Brownsville, N. Y.

I myself am heartily in favor of this new system with a few exceptions which I will explain later. I have worked very hard with the different boards in my territory in order that results might be obtained, and I believe that we have accomplished more within six months than the ordinary trustee would have done in a much longer time. Of course by so doing we have naturally increased taxes of some people and have met with some objections. For example right along this line I wish to state one instance. I was not satisfied with the conditions existing in one of the rural schools in the town of Homer, so I asked one of the Board members if he would go there with me, and so he did. Here is what we found. A small building containing 18 pupils hovering about the stove large enough, had it been in shape, to heat a space three times its size. Window casings so poorly constructed that one could see out of doors, windows loose, temperature between 58 and 60. Outside toilet doors broken, toilets had not been cleaned in some time and a neighbor had placed a four strand barb wire fence within one and one-half feet of the school building making it a hazardous place for any child to play. This is what we did. Ordered the fence removed and it was, repaired the toilets, put in new windows and a new stove. Under the old system this would not have been done in five years. These are the conditions of this community. People wealthy, farms paid for, automobiles and all the comforts rural homes could ask for, yet they were content to allow their home school to be in the condition which I have stated.

Second example. The McGraw High School Board under the old system had over \$700 to return the taxpayers of that district and yet the floors in that same building were warped and in such condition that one would wonder whether he was climbing a pair of stairs or walking on the level, unhealthy,

dangerous and cold. We placed four new hard wood floors in the building before the school opened and repaired the heating system. I might mention many more similar experiences, but I believe from these two you will see we are accomplishing things under this system which could not be done under the old system.

You ask me for my objections to the law and I am going to be frank in stating them and hope you will take it in a friendly way, as we are all working for one end. First, your method of holding school meetings is too much like our political Direct Primary Law. Too expensive for the results obtained, printed ballots, paid poll clerks are absolutely unnecessary. This is the belief of the people in my territory, not all together my personal view. I personally do not believe in the petition signed by the ten voters before a man can be voted upon for a member of the Board for I now have four very strong Boards and the men have expressed themselves that they would not put in another term this way. This means serious loss.

I see no way under the present law to collect certain taxes. For example suppose a district in Cortland Co. joins one in Onondaga Co. the principal school house being in Cortland Co. The collector for some reason is unable to collect a tax on a certain piece of property. He can not return this to the County Treasurer of Cortland Co. as was formerly done because the general tax is levied from Onondaga Co. and our Treasurer has no redress. This has been quite thoroughly discussed at the present session of the Board of Supervisors and some of the best lawyers of the County say there is no provision in the law which enables this to be collected.

W. KIRK PATRICK

Cuyler, N. Y.

January 5, 1918

The law has not been in operation long enough to determine wherein there is the greatest need for change. Very few of the town boards as yet know what their duties and what is expected of them enough to administer the law with the greatest efficiency, therefore many things are delayed and many things are not accomplished that will be later on.

A few criticisms and in fact the only ones are: First—tax rate and objections to supporting a high school. Second—paying off a bond which some district voted upon themselves in the past. As it is spoken of "a debt which they had no voice in making."

With the complications that we are going to meet it seems to me that an amendment relieving the towns from purchasing school property and relieving the town from assuming the bonds of districts now bonded.

The chairman of one of my high schools suggested this to me, that the unit assume the bonds and pay nothing to the district of what had already been paid.

The dividing of a town having two schools each maintaining an academic department into two units caused considerable dissatisfaction in this county, the towns preferring to operate as one unit.

I would suggest that nothing be done in the way of amending the law this year and let us get accustomed to living and operating the new system and then determine and amend its objectionable features.

GLENN C. MCNINCH

Conesus, N. Y.

January 1, 1918

The township law has not been in operation long enough to bring about the good results intended to be brought about by its advocates.

The criticism came from those whose taxes have been increased, very largely.

In towns having more than nine school districts it might be well to have more than five members of a board of education so that there would be a member to two or three school districts. Of course this is a theory. Even now, some of my towns have elected members of a town board of education with a view to a just distribution over the territory, while other towns have elected the members in "bunches" or groups.

It might be well for the superintendent to have a veto power on tax budgets, employment of teachers. There are boards of education who will make no distinction between a teacher holding a rural school certificate and a normal school diploma, or state certificate; one license is just as good as another.

I think that better results would have come to most of the towns in my territory if districts having a population of 1500 or more or employing 15 teachers had not been exempted by the township law.

JOHN U. GILLETTE

Port Ewen, N. Y.

December 30, 1917

As a whole, the law seems to be working out much better than I had anticipated. Like any other new law it has been subjected to more or less criticism but its good points do not receive proper credit.

I have the following suggestions to make:

1. Authority to dissolve districts, etc., should be restored to district superintendents the same as when sec. 129 prevailed. Under the present statute it is almost impossible to dissolve the smallest district.

2. Town Boards of Education, under the present law, have too much authority. Except in a few matters they could almost ignore completely, if they saw fit, the district superintendent. District superintendents should have something to say in the matter of hiring the teachers. It would perhaps be too much to have the list of teachers approved by him but something along that line should be required. When I say district superintendents should have something to say I mean something to say legally. I do not mean by way of advice or suggestion. Neither do I want you to infer that I am having any troubles in reference to the matters I have mentioned. I am very much pleased to say that my boards and myself are working in complete harmony and the hiring of the teachers is left almost entirely to me, but I can see where a board of education could make it uncomfortable for a district superintendent.

So far as I am able to see the township system with a few changes is alright. I would not care to go back to the old plan. In fact, I hear very little about it any more, which is very good evidence that it is reasonably satisfactory or I would hear it fast enough. I have heard hardly any criticism in regard to the running of the schools. The only thing I have heard lately has been in reference to higher taxes.

In this connection I want to mention, however, that in my opinion the plan to install sanitary indoor closets in rural schools is going to bring forth strong protest from country districts.

JOHN M. SCHOONMAKER

January 6, 1918

Accord, N. Y.

I find that among the rural people the township law is very much misunderstood. I judge from the scores of letters appearing in the press that this condition is very general over the state. Nine out of ten of the letters which have come to my notice betray the fact that the writers have never even read the law. It is confused with consolidation and for other things with which it has no connection. For this reason Supt. Babbitt and myself have prepared a little article for the local press, copy of which is enclosed herewith, explaining briefly what the township law is, and more especially what it isn't. We have purposely avoided much argument in its behalf. Its opponents are so bitter against it that they will not listen to argument in its favor, but we feel that there is need (even at this late date) of a campaign of enlightenment. Even our assemblyman confessed (when Supts. Johnston, Trainor and myself got his ear last Friday afternoon in conference) that he knew nothing of the law except by hearsay. He had heard nothing in its favor, but very much against it, and he had concluded that it was a very obnoxious measure—doubling the expense of maintenance of the schools without any material benefit—and of course it should be repealed. Before we left him we felt sure we made him see things in a different light. He conceded that he believed the township principle sound and that, while he felt bound to vote for a repeal of the present law, he would vote in favor of another with the township principle embodied, provided some of the objectionable features of the present law were removed. I feel sure he will be all OK, but he feels bound to vote for the repeal of the present law because of having so committed himself.

GLENN G. STEELE

February 22, 1918

Croghan, N. Y.

Every new law affecting a large number of people has its adverse critics and we should always welcome every honest and just criticism. The trouble with our present general criticism of our township school law is that it is not well understood. It has not had a fair chance. Our greatest Teacher once said, "Know the truth and the truth shall make the whole."

"Increased taxation without adequate returns" is the strong slogan against the new law. This implication is more or less just and yet one example of comparison in our own and an adjoining town may show this matter of taxation in a different light. During the last school year the net expenditures in district No. 1, Hanover, were \$700.92. This is a tax upon the assessed valuation of that district of \$3.50 per \$1,000. If No. 15, Hanover, had expended the same amount to maintain its school their tax would have been \$17.30 per \$1,000. Going a step farther, if Villanova No. 4 had used the same for its school they would have been taxed \$44.06 per thousand dollars of valuation. Why should the children of one district have the advantages that give them everything that money can buy and the neighboring children get along

with one-tenth of the support? The large unit will relieve this situation. Thirteen of our districts in this town are paying a higher tax rate than last year, while two are paying the same. These districts that are paying more than last year, two or three times as much, may claim that they are not getting adequate returns for their money. But do you not also claim that you are not getting adequate returns for the money you pay the butcher, the baker and the candle-stick maker?

So, when we consider the times, we must look for some other cause of complaint and we find one right here at home which constitutes a greater objection than does that of increased taxation. Namely, lack of local control. This is a real objection; but is one which may be eliminated on the first Tuesday of next May if the people here will get busy and do their duty. Two members are to be elected and it is up to those interested in the welfare of the Forestville school to get those two members right here in the village.

But if there is a little lack of local control, this is more than counter-balanced by the voice you have in 14 other schools of our town. Your school franchise has been vastly extended, so that you may now wield a potent influence extending from Nashville to Lake Erie and from Sheridan Hill to the Indian Reservation. What a vast field in which to make your influence felt for good.

Whatever we do or say let us have charity and sympathy for our school board. They have met often, many times at considerable sacrifice of time and convenience. Their sessions have often continued until midnight or beyond and they have conscientiously considered matters without prejudice or partiality to any school. In fact the outside school which has had the most consideration has no representative on the board from that district. All this work has been done gratis. This is asking too much and I believe the law should be amended so as to give each district at least one representative on the board, each one empowered to look after the emergency needs of his own district, while the entire board could meet two or three times a year to consider matters of general interest.

So, let us keep the large unit of taxation, make it larger if possible, remove all barb-wire entanglements, open wide the doors of all schools and colleges and extend a cordial invitation to all the children of all the people.

J. N. PALMER

February 15, 1918

Forestville, N. Y.

I outlined in a previous communication several different lines along which I was proceeding and I am continuing my policy and shall do so as long as there is a shred of a chance to retain the law.

The situation as near as I can analyze it in my supervisory district is as follows. All of the people in every one of my five towns who understand the law at all are in favor of retaining it but there is so much ignorance abroad that it is quite an undertaking to educate many of them. I find that the Boards of Education in the towns of Providence, Milton, and Charlton where there are no Union Schools to be maintained are favorable to the law if the tuition at High Schools could be arranged a little more satisfactorily. I enclose copies of letters showing the feelings in each of these

Boards which have been sent to Mr. Seelye and Mr. Whitney. Many others have been sent from my supervisory district but these I got copies of as I wished to have actual evidence of what was being written. In the towns of Galway and Ballston there are small union schools and a majority of the members of each board are residents of these union school districts. These members wish to be separated from the remainder of the town and so do not wish to express an opinion as to what shall be done with the part of the town in which they do not live. However, I have secured the promise of the Pres. of one of these Boards to attend the public hearing on the bill when it comes up and I think I can do something with the Galway Board before long. I am certainly working at it as much as possible and feel confident that while I may not be making much visible progress, I AM honeycombing the resistance with favorable opinions.

Mr. Seelye while very courteous in all his replies to me still insists that the great majority of requests that he receives are for direct repeal. If the other parts of Saratoga County are sending him as many requests to retain the law as this particular part is, we ought soon to change that majority.

I have just been in communication with the Clerk of the Galway Board and find there is a strong sentiment in that town for the Township Law, the ideas having changed somewhat recently. The Pres. of that Board has written you already that he is in favor of the law. Some strong letters will be sent to the Senator and Assemblyman within a day or two.

LOU MESSINGER

Ballston Spa

There is a strong sentiment in my territory in favor of the township law and in some districts where equalization has greatly increased the tax rate a strong sentiment against. However, it is very difficult to get the former to take positive action. Our grange meet on Wednesday and I will speak to them and expect to have them go on record in favor of the township law; at least the master is strongly in favor of it. Unfortunately all of my town boards of education meet early in March and have had no meetings since this came up. I confidently expect that they will take action in favor of the township law because they have so expressed themselves individually.

I have the proposed substitute and while in its main features are not bad I feel that in two sections there will be an injustice to some union schools as follows:

In the town of LaFayette the union school district has very little excess in its assessed valuation over each of three adjacent one room rural school districts yet the D., L. & W. R. R passes through two of these rural districts with the following results in tax rate: union school district 120 mills; rural district 24 mills. It does seem that the whole town should have the benefit of the railroad.

Again if division of these proposed Rural Districts into smaller districts is made too easy some of our poor districts will soon be back where they were two years ago.

M. E. HINMAN

Tully, N. Y.

February 25, 1918

I just had a conference with Valentine Schiedell of the Board of Education of the town of Callicoon. Mr. Schiedell has always been active politically and was for seventeen years chairman of the Board of Supervisors for this county and is a particular friend of Assemblyman Voorhies of this county. We determined upon some action relative to the Township Law. Among other things, he expressed an opinion that I think is worth forwarding to you.

He thinks that the present system of apportioning public money is somewhat responsible for the sentiment opposing the Township Law. Rural districts have made themselves believe in the past that they have been maintaining their own school when in fact the state was often paying more than one-half of the expense and often one to two hundred dollars per pupil. If these small districts would have been compelled to pay anything like a tax that should have been proper with the attendance and service the school had been giving the patrons would long for a Township System rather than opposing it.

Again, the system of apportioning public money is not planned to reward progressiveness. It rather puts a premium on the lack of it. If the method of apportioning or the basis of apportioning public money to schools was based upon a footing whereby a school or school system that evidence progress would receive a large portion than one that did not, the public money would have been, silently, working toward the improvement of the schools at all times. He says that public money for roads is apportioned upon such a basis.

He believes, too, that an introduction of a bill to change the method of paying out public money or rather the method of apportioning it, would help much in the present fight to save the Township Bill. It would, at least, bring all city members to its support. It would do this, especially, if the per pupil cost of this state in some of the various districts was made clear to them.

I believe Mr. Scheidell's views are good ones and a rewriting of the statute in that particular would result in much good. Besides, it does seem to me that it should be possible to use this as an antidote for the opposition to the Township Law. I pass the information on to you with the purpose that it may be helpful.

CHARLES S. HICK

February 16, 1918

Jeffersonville, N. Y.

I have interviewed boards of Education to obtain their thought upon the present township law. While the towns of Wappinger and Fishkill are unanimously in favor of the law as it is at present some of the other towns are somewhat divided in their views and would favor the amending of the law to the end that the smaller rural school districts could be relieved in some way of the heavy tax which they have to pay toward school expenses. I have brought the matter before the grange and it was discussed at some length with same general opinion.

I think that the present Medical inspection law together with the Physical training law, not but that they are what we need, have a tendency to accentuate the feeling against the present township law. To my mind

the present law is a good one, especially for the upbuilding of our rural school. Its effects are apparent in those towns whose school boards are in sympathy and carry out the provisions of the law as originally intended.

FRANK L. HAIGHT
Fishkill, N. Y.

Feb. 28, 1918

Resolutions have been passed by nearly every town board of education in the county in favor of the present law and petitions obtained which were forwarded to our representatives in the legislature. Many personal letters from our leading citizens have also been sent the representatives. The board of supervisors of the county will have a committee in Albany on Tuesday of this week to personally urge our representatives to oppose the repeal of the law and in all probability will employ Mr. George N. Ostrander of Albany to represent them at the hearing scheduled for the 27th.

CHAS. B. HANLEY
Wells, N. Y.

Feb. 25, 1918

In my estimation the Township Law has been in effect too short time to have had a fair trial; when it has had a fair trial, I believe those who are now most critical will become convinced that it gives better control and is the best method of managing our rural schools. The most severe criticisms in Ulster County are in regard to equalization of taxes.

In towns where there are more than ten schools, I would suggest that the number of board members be increased at the rate of one member for each two additional schools. In a town having twenty schools five members find it quite a task to look after these schools properly.

I think too the Township Law should do away with joint districts, that is that the district boundaries and township boundaries should be homologous.

EMILY S. BUNNETT
Kingston, N. Y.

Dec. 31, 1917

The only criticism against the Township Law is that it costs more money and in this connection the Physical Instruction teacher is always spoken of first.

Since the first of January I have visited all the schools in my district and have met with all of my school boards. The fact that all of my schools have been well supplied with fuel all winter shows how well the boards have done their work. Other school supplies also have been just as carefully supplied. The janitor work has been done a great deal better than ever before.

Teachers have received their checks regularly and they are well satisfied with the way they have been taken care of.

I find that a great many of the best business men and largest taxpayers are in favor of the law. The only suggestion that I have in regard to it is that schools maintaining Academic Dep't. be exempted from it.

M. B. FURMAN
East Rochester, N. Y.

Feb. 27, 1918

**Excerpts from a Discussion of the Township School Law by
District Superintendent Frank L. Tuthill, Fillmore, February
19, 1918**

We have all of late been reading and hearing very much about our present Township School System, and in far too many instances we have read or heard only of the objectionable or supposedly objectionable features. It is the purpose of this article to show the fallacies in some of the arguments against the law and also to point out and to emphasize the desirable features of the law as it now exists. It is not the intention of the writer to force opinions upon any person or to attempt to persuade anyone that the Township Law is correct and feasible in every detail but rather to urge that all interested persons become perfectly familiar with the desirable as well as the undesirable features of this law to the end that we may decide whether it is really the best policy to repeal the law or whether it would not be safer and saner to retain what is good and to remedy by amendment that which after fair trial may prove to be undesirable. You will find, I believe, that the Department of Education, the foremost educators of the present time, and many of our business organizations are of the opinion that it would be a serious mistake to repeal the law at this time. The repeal of the law will not only fail to bring the expected relief but will on the other hand work a decided harm in that it will be a step backward and will be likely to plunge our educational system into chaos at a time when its greatest efficiency is of the utmost importance to the state, the nation and the world.

May I first of all direct your attention to a pamphlet issued by the State Education Department and which can, I believe, be obtained for the asking from the University of the State of New York, Albany, N. Y. The material of this circular is an address by Dr. Thomas E. Finegan, Deputy Commissioner of Education, delivered at Albany, on January 15th, 1918, before the New York State Agricultural Society and portions of an address by the same speaker delivered at New York, on January 18th, 1918, before the New York State Association of District Superintendents of Schools. No fair minded citizen should form an opinion as to the merits or faults of the Township Education Law unless he is in possession of the facts as set forth in these addresses. Actual figures and other data from all parts of the State including our own and adjacent counties are here tabulated and presented in the clearest, and most frank and unbiased manner.

Probably the most active opposition to the law grows out of the mistaken idea that the real increase of this year's taxes over last year's is a direct result of the township system of conducting our rural schools. I say real increase because there is a real increase and an apparent increase. Figures obtained from several of the cities and from villages of the state not under the township system, show that the cost of operating the schools in these cities and villages this year averages 17% more than for last year. It is reasonable then to suppose that a similar increase in operating expenses exists in the rural schools of the State, and fact bears out this supposition.

Bruce's School Reporter issued January 2d, 1918 and acknowledged authority in the United States on the cost of operating schools says: . . . "The year 1917 opened with the one striking feature for schools of increasing prices. We predicted in our annual review last year increased prices ranging from 20% and up. These came to pass and the first quarter of 1917 was characterized by general price increases all along the line" . . . Again it must not be forgotten that many school districts have been in the habit of carrying over from year to year a balance of greater or less amount—a sinking fund, or working capital, or whatever you wish to call it—this you will recall was refunded to the taxpayers of those districts after the Township Law went into effect. This we can safely say would cause an apparent increase in this year's tax of from 3% to 10%. A third item is the added expense for instruction in physical training for which no state aid has yet been received. Such aid received this year will probably amount to from 2% to 5% of the increase in the tax of the present year. With these items disposed of there remains of the admitted 30% to 35% increase in operating expenses of the rural schools of our state for the current year, probably not to exceed 8% to 10% increase to be charged to the Township System. If we assume that the new system is responsible for this part of the increased expense it only serves to justify the reasons for the existence of the system and one of the strong claims made for it, namely that the system would "Improve education in the rural districts." Now did you ever know or hear of any improvement of whatsoever kind being made without increased expense? You decide to clear the stump lot and put it under the plow—it costs you time and money to do it. One finds that the facilities for carrying on his business are inadequate—they are increased at the expenditure of considerable thought and money. A community, village, or organization sees the necessity for making certain improvements—some inhabitants or members must give of their time and others of their time and money. It is exactly so with educational matters. Possibly repair, replacement, addition, and improvement of school grounds, buildings, and equipment have been neglected. Suddenly we decide that because of this neglect our boys and girls (in this instance in the rural communities) have not been having a square deal and that they are deserving of the best educational facilities we can possibly give them. So we decide on a new method of operating the schools which will bring about these improved conditions. Shall we expect to pay for the improvement? It is charged that the Township system of operating the schools while greatly increasing the taxes has not bettered conditions. Can you imagine any system which in less than six months time (not a sufficient period to permit of the most elementary organization) is able to eradicate the evil and make amends for the neglect that have been growing and developing for half a century under a system totally inadequate for the operation of our schools under the constantly changing conditions of this same period?

There are in all about eight objections raised against the Township System. I have attempted to outline briefly an answer to two of them. A third objection is—strange to note—"The arbitrary consolidation of

school districts." To any one who is at all familiar with the section of the new law relating to this matter the objection must seem absurd. For the provisions for consolidation, removing as they do the power from the District Superintendent and placing it in the hands of the people, is one of the strongest arguments in favor of the law and therefore against its appeal. A fourth objection—"Requiring physical training to be taught in the rural schools," is irrelative. This is a distinct measure independent of the Township Law and if eradicated at all must be handled independent of the Township Law and not by the repeal of the latter. A fifth objection is "Taking from the people the control of local appropriations." A careful reading of the powers and duties of town boards of education under the new law will convince one that there has been no radical change along this line. The remaining objections are—"Taking from women the right to vote in school meetings"; "The injection of partisanship in school affairs and the creation of political boards"; "Violation of home rule; of these three objections the first is absolutely erroneous and for a complete discussion of the other two one should read the pamphlet issued by the Department and referred to earlier in the discussion. We must frankly admit that the taxes of some persons have been very materially increased under the new system. But for every person whose taxes are thus augmented you will find somewhere a person whose taxes have been correspondingly decreased. This is exactly what was expected under the new system, for one purpose of the law was to make the property in the state pay for the education of the children of the state. That one person is now paying more taxes and another less is very conclusive evidence that the former was not previously paying what he should have paid toward the education of our children while the latter has for years been paying a heavy excess tax for the same purpose.

In conclusion let us ask ourselves whether we shall not consider these points; 1st. That our old direct system has proved itself absolutely inadequate for the proper development of our rural schools; 2d. Fully half of the states of the Union are successfully developing rural education under the township system; 3d. Not a single state which has adopted the township system has gone back to the old district system. Shall we—the Empire State—be the exception and shall we stand convicted of rejecting without trial a system which has proved and is proving itself a most efficient remedial measure for the defects in our rural education?

If after thorough investigation we are convinced that there is sufficient merit in our township system to justify its retention as a law, then let us write to our representatives in the legislature and to the speaker of the assembly and say to them that we are opposed to the repeal of the township law but that we are in favor of such amendments as may be necessary to make this law more satisfactory to all the people throughout the state, if after a fair trial of the law it is evident that such change or changes must be made. And this action should be taken before February 27th., the day set for the hearing at Albany, by individual letter or through petition, according as the number of persons interested and the sentiment existing shall determine.

**Extract from a Discussion of the Township School Law by
District Superintendent Frank O. Green, Tivoli, January 8,
1918**

Opposition to the township law

The strongest argument is based upon the increased tax rate as an actual fact. Many of the other arguments are based upon conditions that may exist.

The attached statement of tax rates for the school year of 1916-17 and for 1917-18 shows that in 48 school districts 36 had an increased rate, 11 a lower rate and 1 which does not come under the township law shows a decrease.

In the town of Rhinebeck 6 districts show a decrease in the tax rate and 5 an increase. This is due to the fact that the union free school district is not a part of the unit and the consolidation of districts equalized the rate. The rate for the town is \$2.94 on \$1000 and for the free school district is \$10.50. Had all the schools been in one unit the tax rate in the districts showing a decrease would have been changed to an increase.

In the town of Pine Plains the union free school district with a tax rate of \$12.50 on \$1000 became a part of the town unit and brought the tax rate of the rural districts up to \$10.30, making an increase of over 100 per cent in some cases.

Had the district system continued, the tax rate for 1917-18 would have been higher as a large percentage of the teachers were given an increase in salary. Fuel called for larger appropriations. Many other items had larger appropriations.

The new town boards found that they could not run the schools for the amounts paid by the towns as a whole in the past. In the single item of janitors some of the common school districts paid \$50 a year while others paid nothing. This called for a special appropriation that would equalize the amount paid each school as the sole trustees in most cases left the janitor question for the new board to settle.

Under the head of repairs many schools had passed on from year to year with necessary repairs neglected. The new board faced the proposition of general repairs to all buildings as one could not be rebuilt and others neglected. An increase in nearly every item in the budget was found necessary. It may be possible in many cases that the budgets called for too much money. That is a question that can not be settled until the end of the year.

The question of the tax rate for the maintenance of the schools will adjust itself in time and for that reason the merits of the bill can not be worked out to the satisfaction of everybody in one year.

Some objections

Maintaining high schools that can not be reached by all the districts in the town.

Taking over the property of union free school districts with a high assessed valuation.

Taking over union free school districts that must build expensive school buildings within the next five years.

No vote on the question of appropriations.

Amendments that will probably be submitted

The following pages have been marked on the copy of the township law attached: 2, 3, 4, 9, 10, 11, 12, 13, 14, 16, 18.

The election of district superintendents will probably be brought up with an amendment to have the power of selection left to the boards of education.

The following is a statement of the tax rates submitted in the annual reports of the school trustees in the towns of North East, Pine Plains, Milan, Red Hook unit 1, Red Hook unit 2, Rhinebeck, and union free school district 5 of the town of Rhinebeck, fourth supervisory district of Dutchess county, for the school year of 1916-17, with the rate for the school year of 1917-18 added:

Town of North East — 1916-17

Dist.	Rate on \$1	Dist.	Rate on \$1
2	.005	8	.004
3	.00458	10	.00579
4	.00575	11	.00360
5	.0045	12	.00483
6	.00625 high school	13	.00372
7	.00587	14	.00352

Rate on \$1 for the town unit for 1917-18, .00769

The town of North East has 12 school districts, 1 union free school district and 11 common school districts. The union free school district maintains a four-year high school course and employs seven teachers.

Districts 2, 3, 4, 6, 13, crossed by Central New England Railroad.

Districts 2, 3, 6, 7, 14, crossed by N. Y. C. & H. R. Railroad (Harlem division).

Districts 5, 12, farming property.

District 6, village of Millerton.

The general increase in the tax rate in this town causes more or less dissatisfaction among the taxpayers, but the strongest argument presented by the opponents of the township bill is based upon the expected increase in taxes that will follow the appropriations for the new high school building in Millerton (district 6).

District 13 is cut off from the high school at Millerton by mountains and poor train service. All high school pupils from this district attend the Seymour Smith Academy at Pine Plains and for that reason the taxpayers object to paying for a high school that they can not reach.

Town of Pine Plains — 1916-17

Dist.	Rate on \$1	Dist.	Rate on \$1
1	.0125 high school	4	.00483
2	.00607	5	.00659
3	.00352	6	.00444

Rate on \$1 for the town unit for 1917-18, .0103

The town of Pine Plains has 6 school districts — 1 union free school district and 5 common school districts. The union free school district maintains a four-year high school course, an agriculture course and a training class, and employs nine teachers.

Districts 1, 3, 5, 6, are crossed by the Central New England Railroad.

Districts 2, 4, farming property.

District 1, with an assessed valuation of \$577,380, shows a decrease in the tax rate, but with an indebtedness from the old district system of about \$2400 which must be raised by special tax, the general trend of public opinion is not in sympathy with new school laws.

This district reports a valuation for school property of \$22,196 with a bonded indebtedness of \$7500 payable at the rate of \$5.00 annually. The fact that this property with a clouded title is to be taken over by the town serves to add to the general dissatisfaction which followed the collection of taxes.

Town of Milan — 1916-17

Dist.	Rate on \$1	Dist.	Rate on \$1
1	.00649		\$175
2	.0083	6	.00648
3	.0036	7	.00593
4	.00434	8	.0103
5	No. 5 has no rate as contracts for pupils are under	9	.00429
		10	.00777

Rate on \$1 for the town unit for 1917-18, .00734

This town has 10 common school districts and employs nine teachers. One district contracts for its pupils. No high school. Three districts show a decrease in the tax rate

Districts 3, 9, are crossed by the Central New England Railroad.

Districts 1, 2, 4, 5, 6, 7, 8, 10, farming property.

District 5 in 1916-17 under a contract had no tax rate. Under the levy of 1917-18 the rate is .00734.

Town of Red Hook unit 1 — 1916-17

Dist.	Rate on \$1	Dist.	Rate on \$1
3	.00727 high school	9	.00199
7	.004879		

Rate on \$1 for the town unit for 1917-18, .00802

This unit has three districts—two common school districts and one union free school district with a four-year high school course. The union free school district in this unit has just completed a new high school building which called for extra appropriations for payment of bond and interest, sanitary closets, grading and other expenses that follow a new building.

Districts 3, 9, crossed by N. Y. C. & H. R. R.

District 7, farming property with some in a village.

Town of Red Hook unit 2 — 1916-17

Dist.	Rate on \$1	Dist.	Rate on \$1
1	.00374	6	.0041
4	.00637 high school	8	.0032
5	.0027		

Rate on \$1 for the town unit for 1917-18, .005407

This unit has five districts—four common school districts and one union free school district with a four-year high school course. The high school district shows a decrease in the tax rate.

Districts 4, 5, crossed by Central New England Railroad.

Districts 1, 6, farming property.

District 8, crossed by N. Y. C. & H. R. Railroad.

Within two years an addition must be made to the high school building.

Town of Rhinebeck — 1916-17

Dist.	Rate on \$1	Dist.	Rate on \$1
1	.000955	7	.0044
2	.00527	8	.0048
3	.00138	9	.0065
4	.0028	10	.005
5	high school (separate unit	11	.00242
	— over 1500 inhabitants)	12	.00261
6	.00241		

Rate on \$1 for the town unit for 1917-18, \$2.94

This town has 12 school districts—two union free school districts and 10 common school districts. One of the union free school districts has a population over 1500 inhabitants, maintains a high school course of four years and employs 11 teachers. The other union free school district forms a part of the town unit.

The town unit has 11 schools. Five show an increase in the tax rate and the other six show a decrease.

Districts 1, 2, 3, 4, 12, crossed by N. Y. C. & H. R. Railroad

Districts 2, 3, 6, 12, crossed by Central New England Railroad.

Districts 7, 8, 9, 10, 11, farming property.

Town of Rhinebeck — 1916-17

Dist.	Rate on \$1
5	.010835

Rate on \$1 for the school year of 1916-17, .0105

This district shows a decrease in the tax rate.

The following shows the tax rates for the past five years:

1916—.010835

1915—.0105

1914—.00987

1913—.01

1912—.011525

1911—.008685

For the past five years the average has been about \$10.46 on \$1000.

Letter of District Superintendent Orville Eichenberg to the Board of Education of the Town of Hamptonburg

There have been many things said by persons opposed to the township bill which are misleading. The persons uttering these things probably have not a proper understanding of the terms of the measure and do not understand the conditions under which the schools are operating this year. I desire to call your attention to the facts, as applied to your town, touching the objection that is almost the only one I hear: that the township system increases the taxes and the schools are no better. These facts will aid you in combatting the statements of these objectors.

I claim that the township law has not materially increased the cost of educating the children of the town. It may be true that the tax rate is higher this year than last but there are other reasons for the increase.

1. At the beginning of the school year of 1916-17 the school districts of your town had, according to their annual reports, the sum of \$342.94 on hand. At the beginning of the school year of 1917-18 (under the town board) they did not have one cent on hand. No town board had.

2. In the fall of 1916 no school had made provision for physical training, and in some cases districts had to borrow money because they had not made this provision. The town board has had to provide for this deficiency and in addition to raise money for physical instruction for the current year.

It is well to remember that the physical training law was passed months before the township law and has no connection with it whatever.

3. Because of war conditions the expense of running schools has increased. Teachers have had increase of salaries, and if not they ought to have.

4. Some properties will be required to pay more taxes under the law than before because they have not heretofore been paying their just proportion of the cost of educating the children of the town. I know of a few cases where valuable properties practically did not aid in supporting the public school system at all.

5. One of the many weaknesses of the old system was that the trustee was not paid for what he did for the district. The new law provides for greater efficiency and puts the details of the work upon the clerk and treasurer and allows them compensation. Let us see how burdensome this is to the Hamptonburgh taxpayer. I understand that these officers are to receive this year the sum of \$150. As the assessed valuation of the town at the time of filing the last annual reports was given as \$864,086 I find the rate to be between 17 and 18 cents upon \$1000 of assessed valuation. This does not make a material increase of taxation due to the operation of this law.

6. For your information I submit the following two tables:

District	Net cost of maintaining school	Average attendance	Cost per pupil
1.....	\$674 07.....	13	\$37 44
2.....	671 87.....	20	33 59
3.....	731 34.....	24	32 55
4.....	1327 65.....	33	48 09
5.....	521 11.....	9	57 90
6.....	412 42.....	3	51 55

7. Tax Rates for 1916-17.

District	Amount raised for school purposes by taxation	Assessment	Rate per \$1000
1.....	\$566 00.....	\$128, 788	\$4 39
2.....	470 00.....	189, 167	2 48
3.....	800 00.....	107, 237	7 46
4.....	1498 52.....	253, 656	5 90
5.....	350 00.....	75, 418	4 64
6.....	263 56.....	109, 320	8 40

The township law will equalize the taxation in the town for school purposes and that is just.

8. In regard to the statement that the schools are no better under the administration of the town board, I will say that it is necessary for the board to study the conditions existing in the several districts and to formulate plans for a better administration of educational affairs, and opportunity has not yet been given for this matter.

Extract from Letter of W. S. Hanlon, member of town board of education of town of Montgomery

First, in regard to the taxes being higher, seven districts now have higher taxes, from 40 to 100 per cent., why? Because almost without exception they did not vote enough money to pay the difference in the higher cost of teachers' wages of \$1.50 to \$2 a week, also not enough for coal,—some nothing. Some had not paid their old insurance and a lot of them did not have anything in the way of water fountains or even pails, and really some of the stoves were not good for anything. The people had complained to me; they seem to be afraid of the trustees in charge. Blackboards were in a fearful condition and not near enough of them. Locks on doors would not lock; had to put a chair against the door and get out of the window. In one case the teacher had to dismiss school—fire would not burn. The clerk and myself went on Sunday and cleaned out chimney and pipe. It was chuck full, had to dig it out; it had not been cleaned out in years.

Most of the people in these districts are pleased with the law. What kicking is done, is done by about one . . . man on account of cost and some of the rest follow like sheep even when they really think it will be a good thing after it is worked out. There are people in all of the districts for it . . .

There should be more power given to the board in regard to closing the schools. We have one with only one scholar. The district superintendent said I could let the teacher go to the child's home and teach so as to save coal.

I could write you 10 full pages about the careless and indifferent interest which has been taken in the schools.

Extract from Letter from Board of Education, Bangor, Dated January 9, 1918

Fundamentally we think the law is an excellent one although there may exist some minor defects.

This first year of its operation, however, does not afford it a fair test and has placed the boards at a disadvantage because they have been bound more or less by the actions of the old trustees which has rendered the conduct of the schools very much the same as before.

The oft repeated statement that this law has raised the taxes materially, IS NOT TRUE. Because of the Physical Culture work, increased wages to teachers, high cost of fuel, etc.; taxes would have been higher under the old plan and the new law is not responsible for the increase.

Tax rates under the old law were very different in the various districts, and the equalization of these rates has caused a considerable increase in

some districts and a corresponding decrease in other districts but the average rate is no larger than before. A man who pays taxes in three districts was in my office recently and made the statement that his tax was less in all three of these districts.

As clerk of the board, I would like to suggest just one change and this is in regard to the levying of taxes in joint districts. It would save a great deal of time, remove the possibility of many errors, and eliminate considerable dissatisfaction if each board could levy on the entire assessed valuation of the town and each taxpayer could pay his school tax in the town where he pays his other taxes regardless of district lines.

As a whole we are well suited with the Township Law and sincerely hope that the effort that is being put forth to repeal the same may not succeed.

Extract from Letter from Board of Education, Arcade, Dated January 3, 1918

Generally speaking, the local Board of Education and the patrons of this Supervisory District, are not favorably disposed toward the new Township school law. I am inclined to believe that the great objection is because of increased tax rate: In this district the increased rate is principally because:

First: Provision was made in the school budget for \$800 to provide funds to meet teachers' wages for the first two months of school in the Fall of 1918 (before funds would be available from collection of taxes in 1918).

Second: About \$350 had to be provided for physical training which is generally considered entirely unnecessary in rural districts.

Third: About \$500 had to be provided for installation of "Sanitary Toilets" in two schools and at least \$1500 will have to be provided next year if the mandate of the Department of Education is observed before September 1st next.

Fourth: Provision was made for expenditure of \$225 for Clerk and Treasurer of the District, and an allowance of \$100 was provided for expenses of the Board.

Fifth: Provision had to be made for Truant Officer, amounting to \$50, and this expense has heretofore been a "Town" charge and not against the several Districts.

Sixth: \$100 was provided for Health Inspection while heretofore there has been no provision made for such—or at least not more than a few dollars has been expended for this purpose.

With a total taxable valuation of about \$500,000 this means about 4 mills tax to meet the above "extras" and when the total rate has been running from .0045 to .007 (according to varying valuations in the several Districts) and takes a jump to .009175 there is, naturally, a very decided objection made to the "new order of affairs."

In the judgment of the writer the "district schools" of each town should be included in one supervisory district and have a uniform rate of taxation—no variations of rate in the several "districts" of the same

town. Only "district" schools should be included within the same supervisory district—no union free or high schools. Taxes for support of "district" schools should be spread entirely within the town in which the schools are located—no overlapping district requiring "adjustment" and apportionment between adjoining towns. No compulsory requirement for employment of a special teacher for physical training in "district" schools, but a rigid requirement of the local teachers that each give instruction in the elementary physical exercises. That the compulsory introduction of sanitary toilets be left to the direction of the District Superintendent. That a member of the district school board (supervisory district) be elected from each of the several "districts" in the town. That a single Clerk and Treasurer and Collector, with duties as now provided, be chosen as at present: This would insure a decidedly better and more accurate system of accounting and records than has heretofore been possible. That the time for collection of the "school" taxes be the same as for the collection of the "town" taxes: If the taxes were spread entirely within the town in which the schools are located, the valuations taken from the "town roll," and collections made by the "town collector" at the same time the "town" taxes are collected, there would be less confusion than at present and the "school" roll could be more easily collected: The only objection that I can see would be in the fact that for the *first* year the school tax would have to be spread in an amount that would provide funds for about four months for the ensuing year, after the first year this extra provision would not have to be made and there would be funds available at all times.

Extract from Letter from Board of Education, Town of Villenova, South Dayton, Dated January 22, 1918

The writer has one son through college and now teaching, two daughters through high school, one in Normal and one in business college, two children in high school and one in district school so that you can readily imagine that I am more than ordinarily interested in the school system.

Some years ago I made an investigation into the systems of Ohio and Pennsylvania and since that time have been an advocate of a township system. First because it equalizes taxation and makes those in the outside districts pay their share of the expenses of the high school where their children have been educated at less than cost; Also, we have plenty of instances all around us where railroads, trolley lines, telephone and telegraph lines, gas lines run through, say one side of a town and pay most of the school taxes in the districts through which they run under the old system while under the township system the other districts of the town would get the taxation benefit of these outside corporations the same as they do in the other taxes. Another reason is that under the township system, all the schools in the town would be brought up to the same standard. In this town we found some districts where the people had taken a keen interest in the schools and were in nice condition while in the adjoining district there was every evidence of neglect, I think in four districts there was not even seats in the boys closet. Our Board have endeavored to make a start towards bettering these conditions and make all districts on an equal basis both in equipment and competency of the teachers.

The law is working all right although its being an untrodden road it has taken more time and trouble to get things working in a smooth channel than it would next year. There is some demand for its repeal although that comes mostly from agitation on the part of two or three persons. I personally believe that there should be little if any change this year but allow the people to adjust themselves to the new conditions.

Our Board considered this matter at its last meeting and the following amendments were suggested: That the members of the Board should receive pay for their time the same as the members of the town boards do; that only one member of a board could be elected from a district. We think this important to prevent the voters in the district where the election is held, from electing a majority of the Board. Perhaps an amendment that would compel the districts that were bonded to pay for new schoolhouses to pay those bonds, exempting the balance of the unit would also be advisable.

Whatever dissatisfaction with the law comes from what is called the increase in cost. The facts are that the increase comes from increase in teachers wages and higher cost of supplies, etc., all of which is not chargeable to the township law. In this town the only increases chargeable to the law is salary of clerk \$100; salary of Treasurer, \$30; cost of books of record, etc., about \$21. or \$151. Our tax budget was \$7500, so these items cut no figure whatever.

Extract from Letter from Myron S. Hatch, Albion, Dated January 8, 1918

In regard to your letter of December 28th will say, that the town board of education had a meeting and requested me to send you the following suggestions which in their minds would help to cut expenses, and be more satisfactory to the people of the rural districts, as the farmers in general are opposed to the township law as it stands.

First: That the teacher be instructed in physical training culture so they can instruct the children, without expense of a special physical training teacher for each three towns.

Second: That the uniform tax rate be maintained.

Third: That the boundary lines of a town be the dividing line for the spread of the school taxes.

Fourth: That it would greatly reduce the expenses of election, if each district were to elect a member of the board at a school meeting to be held in their own district. Each district having a member on the board of education.

Fifth: That the Town School directors be done away with and the town board of education have the power to employ the District Superintendent.

Sixth: That the board of education have the power to close a school temporary, where the membership is small, and to contract with an adjoining school or schools for scholars of the closed school.

Extract from Letter from Fred Sanders, Chairman, Town Board of Education, Georgetown, Dated January 11, 1918

The Town Board of Education of the town of Georgetown, N. Y., has no suggestions to offer in regard to the new Township School Law only that it be kept in force as it is at the present time.

Our entire Board are in favor of this law and do not wish to have it changed.

We have one district that is against this law and would like to see it repealed, but this district was consolidated with another district a few years ago and the money they draw from the State paid all of their expense and they did not have to raise any tax; and one of the farmers in the district is worth about forty thousand dollars and when he had to pay a ratio of \$1.10 per hundred dollars. "Something is radically wrong with the Township School Law and we're going to do ALL we can to knock it out." That is all the reason ANY of them have for wanting this law repealed.

I ASSURE you our Board is UNANIMOUS FOR IT.

**Extract from Letter from Board of Education, Town of Jeru-
salem, Dated January 14, 1918**

It is working out as good as can be expected, the directors have been very faithful in attending the meetings of the Board, and have done all that they could do to make the schools a success. This is no small matter when you consider that a Board meeting means a twenty-mile drive over muddy roads this Fall and over snow banks this Winter, at night after a hard day's work on the farm for two of the members, all with no pay for their services. The school buildings and outhouses have all been cleaned and put in sanitary condition: necessary repairs have been made, all of which has been accomplished equally well with less effort and expense under the old system where there was someone close by each school to look after these matters.

Now as to the matter of expense it certainly is a more expensive way than as you will see by the following facts. Take the matter of repairs; under this plan there had to be an inspection to see what the conditions were, then a mechanic was sent to do the work. Under the old system the house was inspected at the school meeting and someone close by who was interested was employed to make the repairs. Of course these men are still in the districts but the directors do not always know where to find them. In several cases where they were located they felt that the schools had been taken out of their hands and the interest and pride that they had taken in the past was gone and they would not be bothered with the work. The printing of the ballots, the pay of the inspectors, and other expenses of the election will add considerable to the cost of the plan. The preparation of the poll list requires a house to house canvass. In this town we have one hundred and fifty miles of roads, and in making this list the clerk will have to travel at least one hundred and seventy-five miles for which he of course will receive pay. The employment of the physical trainer receives very severe criticism. We have twenty-four schools that our trainer looks after for one hundred dollars per month. She visits the schools once in two weeks and outlines the work to the teacher, now whether there is any benefit derived rests with the teacher. There is nothing about these drills or exercises that could not be printed in the form of a syllabus and the teacher could work from this just as well as to pay someone to come and show her.

If these exercises were suited to the individual need of the pupil, to correct some special defect or weakness, then the trainer would be of some value, but they are not, each one takes the same exercises whether weak or strong and in many cases the weak ones are worse off as the result. These things may be practical in the cities, but in the country where the boys and girls help with the work in the homes mornings and nights besides walking to and from the school and are taught exercises that imitate the motions of sawing wood when perhaps the boy has done a turn as the real thing before leaving home is ridiculous.

We have yet to find anyone who approves of this feature of the law, even physicians question its value and in some cases condemn it.

The public is very much dissatisfied with the Township law even where the taxes have been made lower as a result, there has been an offer made to circulate a petition for its repeal to show their sentiment against it.

Extract from Letter from Richard B. Wilson, Town of Lockport Board of Education, R.F.D. 7, Lockport, Dated January 12, 1918

We don't experience the opposition that is heard in adjoining towns, we have no High School to support and while in some districts the taxes are higher than usual it is usually the case that the assessment has been raised on that particular piece of property. I have talked to some of the teachers and they are in favor of it as it avoids numerous difficulties that formerly arose between teachers and people in the neighborhood that were always finding fault with things.

There needs to be more time in getting out the tax list as by September to the assessors in the towns have not completed their work and the tax roll are not available for us to work on.

We have seven joint districts and we experienced much difficulty in finding those that lived in the adjoining towns if there was some way that each town could raise its own tax for schools it would simplify matters to a great extent.

The greatest opposition we find is the installation of the chemical toilets as the general opinion is that they will not give good satisfaction after they are installed and the cost is so very high at the present time of plant labor and materials.

This letter may not be very satisfactory to you but as I will repeat, we do not hear the loud opposition that we hear in other towns. No meetings of protest being held that I am aware of.

Extract from Letter from A. L. Benedict, Chairman of School Board, Fairport, Dated January 15, 1918

In relation to the township school law I would amend it to discard the school boards and there is no use of having physical culture taught in country schools for they cannot get to the schools in the winter and the teacher should know enough to teach all that is necessary for farmers' children. In relation to the toilets that should be left to the town or

district, the taxpayers cannot stand so much unnecessary expense in war times. I think if the law is not changed a great many of the boards will resign. We pay our clerk \$400 and it will cost more another year if the law is not changed.

Extract from Letter from F. C. Snow, Chairman of Town Board of Education, Camden, Dated January 7, 1918

In regard to the new school law, I think it should be *repealed*, as it is more expensive and can see no improvement in the schools, it removes local government in the districts all persons I have spoken with in regard to it are in favor of repeal with one exception.

Extract from Letter from Town Board of Education, Town of Amherst, Eggertsville, Dated January 6, 1918

Our clerk, Mr. Haffner, has shown me the letter he wrote you about the working of the new school system. I say amen to all he wrote, if people would only wait and give this system a fair trial they would find out that after the old shacks have been repaired, or rebuilt, the expense then would not be so great, and all the children in the whole town will have the same chance, if people only knew enough to grasp it, in regard to the election of members.

I can not see the benefit of a separate election for school unless it is for the vote to raise the necessary funds to pay the school expenses. We will let some one who has more experience figure that out.

Extract from Letter from Town Board of Education, Westville, Dated January 17, 1918

Everyone in our town is against this law. It has added on a lot of expense and we do not get any different school than we got before. We have nine districts in our town and have nine teachers just the same, and nine schoolhouses to keep in repair and heat the same. So the new law adds on a lot of expense but does not lessen the expense in any way. The whole town rather have the old law with a trustee in each district and each district manage their own affairs. It is very expensive and unhandy for a clerk of the board of education, who has to have a rig, to visit every district in the town, to carry the supplies and to see a trustee near each school and it was not much expense to see to these things. The laws we get the last few years are adding to our taxes all the time until the school taxes now are double, or more, than they were several years ago. Our town and Fort Covington are are paying a physical training teacher \$1000 for the school year. She visits the districts once in two weeks for about one-half hour; the teacher has the rest to do, and the people think the teacher might as well do it and save the expense of \$1000 which is a large item to add to our taxes. The people are all against this law, for they don't think it is needed in our rural districts, where the children have work to do before and after school each day and walk to school and return from one-quarter to two miles, with the exercise they

get at recess in the forenoon and also in the afternoon, with one hour at noon to run and play. You see they have about all the exercise they need. Now these laws may be all right for the cities and thickly populated centers, but the people of rural towns to a man think they ought to be exempted from us through the legislature. To have these laws repealed, as to the rural towns, we would be a thankful people.

**Extract from Letter from Board of Education, Shortsville,
Dated January 15, 1918**

Situate as we are, in one of the storm centers of the State, brick-bats directed against the same are used instead of bouquets.

In relation to this unit, the rural districts, with the exception of District No. 12, are strongly opposed thereto, the principal opposition being based upon the increased tax rate.

District No. 12, which in 1916 had a tax rate of \$9.99 per thousand has been increased to \$11.98, in other words, \$1.99 per thousand increase.

District No. 7, which includes the High School and comprises the village of Shortsville, has been reduced about \$11 per thousand, in other words, from \$21.40 to \$11.98 and pays about one-half of the tax in the entire unit.

The Board of Education has installed in all rural schools inside toilets and has expended considerable sums of money in the repair and improvement of the same. Such improvements and repairs being absolutely necessary for the comfort, convenience and welfare of the pupils attending same.

Briefly summarized, the inside toilets would have made an increase in the tax of each rural district of from 50 to 75 per cent above the normal tax of 1916 in the extent the local officers of each district had made the same independent of the Township Law. In addition thereto, the expense in fuel has been increased about 25 per cent above that of the year 1916.

Another element which has been overlooked is the fact that the assessed valuation of rural property, consisting of farm lands, has been increased by the local Board of Assessors in the three towns of which this unit forms a part, about 10 per cent, while that of the village remains about the same, being far in excess of the assessed valuation of farm property.

I might also add that the work of the Board of Education has been retarded by the antagonistic attitude of those residing in the rural districts, who have refused to give us any aid, advice or recommendation as to their wishes.

I have endeavored to ascertain the sentiment in towns in this county where there are no high school maintaining academic departments. From conversations with members of the local boards, tax collectors and supervisors and others, I find the following results:

Mr. D. C. Spangle, tax collector of the town of Hopewell, informs me that he found very little sentiment opposed to the township system in the town of Hopewell, the opposition in that town being restricted to those residing in Joint District No. 3 of the towns of Manchester and Hopewell.

In the town of Farmington, the people are generally satisfied with the condition, except in one or two of the railroad districts where the tax has been increased.

In the town of Canandaigua, the people are generally satisfied with the workings of the law except in railroad district where there has been a slight increase in the tax, and I am also informed that there is very little opposition in the town of Victor, except as above stated.

The Granges, which represent the farmer element, have been spurred into action by one A. B. Katkamier, a lecturer in said Granges, residing in the town of Farmington, who I understand is largely responsible for the many resolutions that have been adopted condemning the same.

The experience of the Board of Education of this unit has been that in the districts having the greatest valuation and paying the smallest tax, we have found the most deplorable condition so far as the school buildings are concerned, to wit: In District No. 2, where the tax rate has been less than \$2 per thousand, we found the outhouses absolutely unfit for use, filthy, boards knocked loose and foundations out from under them, the roof of the school building was in a leaky condition, interior of the school building was in a smoky and dirty condition and the plastering off, the same was true so far as District No. 3 of the towns of Manchester and Hopewell, but not quite as bad.

In District No. 12, where the highest tax rate existed, we found the best state of repairs and buildings in the best condition, which was also true with Joint District No. 5 of the towns of Manchester and Phelps, which had an average tax rate of a little better than \$6 per thousand in 1916.

The situation, briefly summarized, is this: If taxation is the only criterion, repeal the act. If education for the masses is the aim, retain the Township Law with such amendments as would permit the attendance of any pupil to any high school maintaining an academic department most conveniently situated to the pupil, eliminating from the law the provision exempting districts having a population of 1500 or more therefrom, which could, no doubt, be brought about by spreading the tax over the county, retaining the local Boards of Education, who are to prepare each year, as provided in the present act, their respective budgets to be approved by the District Superintendents filed with the clerk of the Board of Supervisors or the County Treasurer.

Thus far there has been no concerted action on the part of the village or localities maintaining academic schools and in the event of the repeal of the act, the result will be an increased rate of tuition for non-resident academic pupils in attending same, based upon the actual cost of education, taking into consideration the amount invested in its plant, and in this respect my attention has been called to two instances in the last two days one of which is the city of Geneva, where heretofore the Board of Education has permitted academic pupils outside of the city to attend the same without payment of tuition, excepting the \$20 allowed by the State, which has been raised to \$75 per year, requiring the pupil to pay the sum of \$55 in addition to the \$20 heretofore received.

In the village of Perry, the tuition has been increased to \$40 per year. What other districts have done I have not, as yet, been able to learn.

The effect of this is simply to establish a barrier around higher educational advantages for worthy rural pupils who are unable to pay the increased tuition.

Extract from Letter from Board of Education, Town of Fine, Oswegatchie, Dated January 28, 1918

Answer to your letter some time ago I think there is a big mistake in running schools 36 weeks in the country school district; 32 was long enough and if you look it up in the last reports you will see there are a whole lot of little tots that can not get their course. It is a great benefit to the school teachers but not to the scholars or fuel. Look it up and see if this is not right. I think in this town 95 per cent are dissatisfied with the new law and if the people could have a vote on it, it would get shattered. I do know this much, that school boards will not do their duties that they had ought to do for nothing. The old way was the best all together. Let all of the districts run their own business.

Extracts from Resolutions and Recommendations of the Board of Education of Town of Parma

We, the undersigned taxpayers of District No. 7 of the town of Parma, Monroe county, N. Y., who in 1916 under the old school law had a school tax decimal of .0022 and under the township law in 1917 had a school tax decimal of .0054, do not consider the increased tax sufficient reason for the repeal of the township school law, but feel the establishment of the township as a school unit is a step in the right direction, and that this attempt at the revision of our rural school policy ought not to be abandoned on so short trial. We believe further that if injustice exists under the operation of the present law, amendment of the law will correct it.

Extract from Letter from Town Board of Education, Town of Amherst, Eggertsville, Dated January 4, 1918

Our schools are 16 in number. We found the larger schools in good condition, but most of the smaller schools were in very bad shape.

The old district law was certainly out of date. We were without funds to do anything until the middle of September, we only hear of a few complaints, but of course like everything new there is bound to be some criticism. We found taxes were not uniform even in adjoining districts,

only about two miles apart and same class school. Our largest district No. 13, was \$3.10 per 1000 last year, while this year \$3.20 per \$1000 which prevailed in our town. Our additional expenses were as follows:

Bonded indebtedness	\$1500
Physical director	1000
Salary clerk	800
Indoor toilets, \$775; installing depts, \$725.....	1500
<hr/>	
Total	\$4800

We will have 8 more toilets to install this year, but we will have no bonded indebtedness which will bring our expenses lower. While the law may need amendments from time to time, it has not had the opportunity to adjust itself to the new conditions.

In the old days they would elect a trustee not for his fitness or ability, but just because he would fake at and the chances were he would visit the school once or twice a year.

In the new law it is run on a business principle and we have made many repairs and put in needed improvements and if let alone will have every school in good sanitary and comfortable condition.

1. My suggestion which I think would improve the working of the new law would be as follows:

Have the old board have office until Jan. 1, 1919 instead of August 1, 1918 and the two members which who were elected at the regular November election this will save the expense for an election in May and will also save the expense of preparing voting lists as the regular registration will take care of that, now that there is equal suffrage, divide the town where there are 5 members into 5 districts allowing only one member from each district to be elected this will allow 2 districts in the town Nov. 18 (2 members).

Two districts in the town Nov. 19 (2 members).

One district in the town Nov. 20 (1 member).

The town will then be fairly represented.

2. Regarding the appraising of school property and returning the amount to the taxpayer in district, would suggest the town issue 10-year school bonds for the amount paying off one-tenth each year and interest paying over the amount to the taxpayer in one payment instead of three this will spread the payment of the school bonds over 10 years and will not be a hardship on any taxpayer.

3. In the collection of school taxes I think they should be collected with the regular county tax instead of a special collection.

The first year might be determined and might make it necessary for school boards to borrow money until such collections were made, but it seems unnecessary to make two collections when one would do the work.

Extract from Letter from Board of Education, Sandy Creek, Dated February 20, 1918

The first action of the Board last August was to make a personal inspection of all the school property of the town. This was done on an appointed day by the members, as a body, accompanied by the Secretary and the Dis-

trict Superintendent of Schools. A detailed memorandum was made of the condition of every school building, and while still on the ground the members of the Board discussed and decided upon such repairs, equipment and improvements as appeared to be needed to put the school property in good working order. This tour of inspection revealed various needs, among which may be mentioned—

Remortaring of foundation walls; extensive floor repairs; laying new floors; replacing broken window-lights; stove and chimney repairs; repainting exteriors and interiors; roof repairs; replastering; repairing out-buildings; constructing annexes for storing wood, and to provide approaches to out-buildings; new equipment, including maps, drinking-fountains, towel-holders, flags, poles ropes, etc. It was decided that all floors should be oiled, and that every school-house should be cleaned before the opening of school.

It was decided that eventually annexes should be built on to all the school-houses not already thus equipped, for the purpose of providing indoor approaches to the toilets and also to provide storage for fuel; but in order to avoid a heavy burden of taxation in any one year, it was agreed that such extensive improvements should be spread out over a period of two or three years. The location and arrangements of an annex for this purpose is regarded as a matter of considerable importance, and is one that with the assistance of our efficient Superintendent of Schools Mrs. Mildred G. Pratt, has been worked out very satisfactorily in the building operations of this kind thus far attempted. In accordance with the recommendations of the State Department of Education in respect to lighting, the annex, wherever practicable, is built on the right-hand side, which leaves the windows at the left and rear of the pupils, unobstructed for the admission of light.

The Board directed that all the schools of the town should open on the same day; and with slight exceptions (due to the illness of teachers) a uniform schedule has been maintained throughout the town. The Board decided early in the winter that instead of taking a midwinter vacation, the rural schools should continue through to the end of the spring term with only one week out at Easter, thus releasing as early as possible in the spring, the children of the schools for work on the farms.

The Board took early action to provide for an adequate supply of wood for the rural schools so that in no case has it been necessary to close a school for lack of fuel.

In order best to fulfill the requirements of some of the schools it has been necessary in certain instances to transfer a teacher from one rural school to another. Such a shift, involving three districts, enabled the Board to fill an unexpected vacancy and the arrangement worked out to the entire satisfaction of all concerned. This, of course, would have been impossible under the former school law.

Monthly meetings of the Board have been regularly held, in all of which, with one or two exceptions, every member of the Board has been present. In these meetings personal reports are submitted by the District Superintendent of Schools and the Principal of the Union Free School, one or both of whom are also called for consultation in special meetings of the Board that are held as occasioned demands. Thus in frequent conferences the needs of all the schools, both village and rural, are canvassed, and the Board is

enabled to keep informed regarding the work of every teacher. The Board is endeavoring to accord equal consideration to the Union Free School and the schools of the rural districts. Sandy Creek High School for the past forty years has been an important factor in the educational life of Northern Oswego County. Of its hundreds of graduates a large proportion have come from the country districts, and for more than a quarter of a century the rural schools of the surrounding country have been largely taught by graduates of its Teachers' Training Classes. Accordingly the Board is proceeding on the theory that the interests of the rural schools and the Union Free Schools of the town are closely related.

Except for the repairs and improvements mentioned (some of which might not have been attended to by the individual districts) and the salary of the Secretary of the Board (approximating \$300 for the year), there is no good reason why the school expenses should be greater than would have been the case under the old law. Altogether, the Township Law, as applied in Sandy Creek, is regarded as having produced very satisfactory results during the brief time it has been in force.

Extract from Letter from Clarence E. Taylor, Earlville, Dated January 8, 1918

In reply to your letter sent to Town Boards of Education, say that feel sure that this law is no exception to all laws, in that there are always isolated cases of apparent injustice in the working of any law or ruling. We feel here that this law would in time work for a better educational system throughout the country districts and have already seen instances of this in our town. There are some who object to this new system, but only do so on account of increased taxes, and the objectors in nearly every case have no children. This law made my own personal taxes over four times as large as they were before it was adopted, yet feel that before was not paying my share of the school expense as my farm was within one mile of village school yet in district outside, where we could maintain a school for very small assessment, and nearly all the children of the district got the benefits of the Earlville school at very much less cost than residents of the school district therein. Have thought that a county unit might be a better system. It is hard work to get men interested enough in the town unit to give of their time to do the needed work of the town boards. We try to meet monthly, but there are so many things to see to in our large districts that we are busy about half our time with something or other connected with the work. I am firmly convinced that gradually the state will take more and more control of the schools until they will have complete supervision of the school system entirely, which day will be glad to see. We would be glad to see the law given a longer trial.

Extract from Letter from William M. Fort, Superintendent of Schools, Newark, Dated January 11, 1918

In connection with the township law, I feel I ought to say this to you. I have made quite a careful survey of the objections entered to the law and find every one of them reducible to the proposition — namely increased taxes.

I have talked with the president of our township Board of Education and he tells me that in his judgment that this year for the first time the district schools of our township have clean schoolhouses, proper equipment with which to work and a fairly good grade of teachers who are fairly well paid. Of course the taxes would be increased, but every school is getting the worth of its money. Under the old regime what taxes were paid in, never were used in a way that brought about a fair return for the money expended. And this is so because trustees provided only a school building, a teacher, and some pupils. How could you make bricks without more material than this.

Permit me to suggest that everybody stand by their guns and give this law a fair test before anything is done with it.

**Extract from Letter from Wheaton M. Coward, President,
Board of Education, South Byron, Dated January 11, 1918**

As far as this section is concerned, there is no objection to the new law. It seems to be working out very nicely here and we hear of no complaints in regard to same.

**Letter from Ira T. Stradling, Clerk of Board of Education,
North Norwich**

This township of N. Norwich is fairly well pleased with the school laws as they are at present.

**Letter from Frank A. Hill, President, Board of Education, Town
of Salem**

Repeal of law entirely.

**Extract from Letter from Board of Education, Colchester,
Dated January 9, 1918**

In this town the law is working out well. When this board began their duties last summer we found a number of schoolhouses and buildings in the back districts in poor condition from neglect. The school district having a low valuation and the tax rate being correspondingly high, in some cases as high as \$60 tax on a thousand assessment, the district had been getting along as cheaply as possible. We did not have time before the opening of the schools to remedy all of these conditions, but we made such improvements as were possible and will complete them during next summer.

I think that all members of our board view the law with favor, particularly the principle of making the town the unit of taxation. The only objection to the law that I have heard has come from those whose taxes have been raised; those who live in districts having high valuations, in which are factories', railroad or corporation assessments. They do not like the idea of sharing those taxable values with the small weak districts. But of course their complaint is unjust. It is not all, by any means, whose taxes have thus been raised, who complain. I have heard a number of those

say that notwithstanding their taxes were much higher they believed the law to be just, and they were willing to pay their additional tax, recognizing that it was only just that all in the town should be taxed for school purposes at the same rate.

While we have had no meeting of the board since receiving your letter, and therefore what I say with reference to the amendment of the law represents only my own personal views, I believe that the weak point in the law is the method of electing the members of the board of education. No matter how good a law may be, it will never work very well if those charged with its administration are opposed to it and seek to discredit it. Those opposed to the law will be more likely to come out to the election and elect one in sympathy with their views, than those who favor it, and this for several reasons. Those having a grievance will be more likely to attend election than those who are satisfied with conditions and feel satisfied and that everything is working just and right. Further those who oppose the law are to be found near the centers of population where valuations are comparatively high, hence near to places where elections are held.

The State furnishes practically two-fifths of the money for the support of the common district schools, and the State Department of Education ought to be represented on each board of education. I think the boards of education would be materially strengthened if the district superintendent was permitted to appoint two members of the board and the votes of the town to elect three. The district superintendent is very nearly a representative of the Education Department, and the qualifications for that office are so high that none but good men can hold that office, and must be in sympathy with the Education Department, so that an appointment of a member of the board of education by the district superintendent would virtually be an appointment by the Education Department, while not being so in name, and probably no great objection would be made to that arrangement by the people, while they would object if the appointment were made directly by the Education Department. This would insure at least two on the board who would work in harmony with the district superintendent, and the successful operation of the law depends very largely on the district superintendent. He visits the schools, knows the teachers, and the needs of each particular school, and the ability of practically all the teachers, and his advice is invaluable to the board in the selection of teachers as well as in many other matters. Under the arrangement suggested, while the two appointed by the district superintendent would be numerically in a minority on the board, they would usually be the strongest men on the board, and would really shape the policy of the board, although the others might not know it.

The best system, in my judgment, would be to have the district superintendent appointed by the Commissioner of Education, and all members of the town board appointed by the district superintendent, but I recognize that the dear pee-pul would not stand for that. They will strenuously insist on taking a hand in the running of the schools, a matter they are incompetent to do with the greatest success. But they are very jealous of surrendering their rights. So the above plan of so amending the law that the district superintendent would appoint two members of the board and the

people of the town elect the other three, would probably be as far towards making the town boards really efficient as it would be safe to go at the present stage of our earthly existence.

As to the first objection urged by Governor Whitman in his message against the law in respect to the consolidation of weak districts to form a union school, and the consequent abolition of many of the existing districts we know nothing of, as that plan has not been attempted in Delaware county.

As to his other objection that the board of education is given power to raise by taxation the necessary expenses of running the schools, and thus depriving the people of the right to vote on the amount to be expended "within the school district." If he means what he says, that the voters in the school districts shall have the right to say how much money shall be expended in their respective districts, and leave the town the unit of taxation, such a suggestion is obviously unsound. To raise a general fund by taxation on the whole town, and then allow each district to take out what the voters of that district desire, would soon bankrupt the town. But I assume that what he means is that the voters of the town should be permitted to vote upon the question of adopting the budget prepared by the town board. There is no great objection to that, provided, however, that the law shall provide that notwithstanding the failure of the voters to adopt the budget or vote the amount asked for, the board of education shall proceed to levy and collect the amounts necessary for the ordinary and necessary expenses of properly maintaining the schools in the town, as now provided where the inhabitants of a union free school district refuse to vote the required sums, by sections 323-325 of the Education Law. If such a safeguard was not placed in the law ignorant and penurious voters might wreck the whole system in a town by refusing to vote the reasonable and necessary moneys to maintain the schools. Such a provision would be only a sort of camouflage thrown up to deceive the voters and make them think they had something to say about raising moneys for school purposes while in fact they did not really have any, except as to the extraordinary expenditures.

Extract from Letter from Board of Education, Colchester, Dated January 2, 1918

I understand that there is to be a great effort made this winter to repeal the Township School Law. I note that the farmers of this county at their county grange meeting recently adopted a resolution favoring the repeal of the law. From reports published in newspapers and from other sources I learn that there are strong objections to the law among influential farmers and small business men throughout the State, leaders, so called, of thought in their respective localities. I think that the objections to the law rest upon, first, ignorance of the provisions of the law, second, selfishness. I have noticed various articles and statements in local newspapers, the same statements copied into different papers, with reference to the law, many of which contain the largest amount of misinformation and misstatement of fact that was possible in so short a space. Then many object to the law because their school taxes are higher than under the old system. They care nothing

about the other fellow whose taxes have been reduced. Principles of equity and justice have no weight with them. They pay more taxes than they did before, and that is enough. They, therefore, proceed to condemn the law and demand that it be repealed.

The leading citizens in a town are usually those who have accumulated some property and live at or near villages or centers of population where valuations are high as compared with more remote farms and properties, and hence under the old system their school taxes were usually low. These are the men who attend farmers' institutes, grange meetings, and meetings of organizations designed to promote their interests. Their voices are heard in the land; they pass resolutions and get their statements in print and published in the newspapers. But it must be remembered that their numbers are not to be determined by the amount of noise they make. The submerged half, as it were, live in the more remote sections of the town; they are not "leaders;" their voices are seldom heard; they keep the even tenor of their way. The valuations of property in those neighborhoods being low their taxes under the old system were very high. Under the present law their school taxes have been much reduced, and they are pleased with the law, but not being "leaders" and used to talking they do not proclaim their joy from the housetop. We do not hear from those whose taxes have been reduced, but only from those whose taxes have been raised.

Having been connected with schools and school matters, more or less, for many years, I know something of the history of efforts which have finally been successful in placing upon the statute book of this State the Township School Law, and it must not now be repealed. Those who oppose it through ignorance of its provisions should be enlightened; those who seek its repeal because their school taxes are higher than under the old law should be informed that the total expense for the whole town is no more than formerly; that for every dollar they are required to pay more than formerly, somebody else in the town will pay that much less than formerly. That the law does not increase the school taxes in the town; it only equalizes them. When they have been thus informed, if they need the information they should then be squelched. A man who has the advantages of near markets and easy access to villages, and then kicks because he is required to pay precisely the same rate of taxes for the schools in the town as does his fellow townsmen who live in more remote sections at greater distance from village and markets, with all other disadvantages which are endured by those who live remote from centers of population, is not entitled to very much respect or consideration.

I trust that the Department of Education will be able to prevent the repeal of this law at the present session of the Legislature. If it is not repealed this year it never will be. The opposition will cease after the law has been in force long enough to have a fair trial.

**Extract from Letter from Board of Education, Lewiston,
Dated January 10, 1918**

This question was discussed at a meeting of the Board, at which all members but one were present, and it was the opinion of all members that it was a great improvement over the old method of operating the schools,

and if allowed sufficient time, with a few amendments, would prove a great advance in Rural School government. We would respectfully offer the following suggestions:

First. That all school districts including an incorporated village be excluded. This would lower the taxes by excluding the large bonded Union schools located in most of these villages. These schools require more than the smaller rural schools, and those needs could better be supplied by a separate board.

Second. Instead of the town buying all the schools as proposed, thereby increasing the taxes still more, the schools should all be turned over to the town, and no charge of any kind made against the several districts. This, providing suggestion one is adopted.

Third. The question of installing sanitary indoor toilets should not be pressed for a few years. We realize this is in no way connected with the township law, but the root of the whole trouble seems to be increased taxes, and sanitary toilets and township law have come to spell the same thing to most people.

Fourth. The physical training law, although a good thing for the cities and larger towns, no doubt, does not seem to be desired by the farmers. It means quite an added expense, not commensurable with the benefits gained.

In conclusion, I wish to say that this Board would like to see the law continued, with the above alterations, until such a time, that it can be shown that it is not a great improvement over the old method.

Extract from Letter from C. C. Swart, Board of Education, Busti, Dated January 9, 1918

We are holding our Board meetings regularly on the last Thursday of each month and always have with us the Principal of our high school and our District Superintendent.

Local problems have arisen but we have always been able to meet and handle them, as it seems to us, in a satisfactory manner.

In matter of equipment, better school buildings, better teachers, and a fairer equalization of taxes the new law seems to be working very much to the advantage of the schools.

We desire to see this law have a good fair trial and giving it our hearty support to that end.

Extract from Letter from S. E. Bryner, Clerk R. F. D. 4, Troy, Dated January 1, 1918

The most common complaint is that regarding an inevitable increase in tax rate. This increase is not due so much to the advent of the new township law as to the circumstances attending its advent, i. e., war conditions, advanced cost of material and labor, and practically everything that is a necessary part of the school equipment. The law itself does not entail a greatly increased cost of school operation, as it merely adds to those items which were already necessary, a salaried clerk and treasurer and the method of holding school elections, as prescribed, is more expensive than the old method, which really entailed no expense. Likewise the law made

necessary the purchase of considerable stationery, filing cases, record files and such business furniture as would be called for in order to keep the records in a proper business manner. This item will naturally be less in the forthcoming years, as much of the furniture is of a permanent nature. The management of the rural schools is now and for the first time, I presume, approaching a correct business form.

Like perhaps most boards, the school board of this town upon assuming its duties made a round of the schools and found many necessary and vitally important repairs required, a legacy from the old trustee system, who, with all due respect to their good intentions were usually thwarted by lack of funds in doing more than would just let the district get by. The item of immediate repairs for our schools was quite large, and is, as yet, not complete. This, together with the added cost of administering the new law, has caused an increased tax rate in this town of about \$1.61 per \$1000 valuation. The rate will probably be somewhat larger this year, due to the cost of installing four sanitary chemical closets. We have also replaced two old-fashioned stoves with interior circulating heaters and the results in this cold weather is proving the good judgment of the change. Not only uniformly warmer school rooms but less fuel is consumed.

Equalization of taxes: The massing of the town's ratable property for the purpose of school taxation has resulted in an increased local cost to some districts and a reduced cost to others, as compared with the old method. Some complaints have been heard from the former but none from the latter. As time goes on these variations will be forgotten. Just now, with a rising market on everything the subject is uppermost in the minds of about everybody.

It is too early to speak of the benefits to accrue from the consolidation of schools, and the closing of those having an abnormally small enrollment. The idea is a good one but will require the exercise of careful forethought to work it out to the best advantage in actual practice. Virtually all to whom I have spoken on this point are heartily in favor of abolishing the small school wherever the conditions will allow, and by bringing together a larger enrollment of children to have the grade work separated. Rural parents, as rule, are most emphatic in their demand for the graded school.

Briefly stated, the benefits that are now apparent from the operation of the new law, are a better and more business-like management of the school finances, more prompt response to calls for supplies, etc., required by teachers and janitors, a uniform system of text books throughout the town—impossible under the old district plan—a more hearty co-operation on the part of the teachers with better team work, closer touch with the district superintendent in all matters appertaining to the schools, as also with the state department, absence of petty quarrels and bickerings and workings at cross purposes on the part of trustees, better service on the part of the janitors, as all now receive the same wage in schools of equal size. Herefore, some janitors received \$50.00 per year, others \$5.00 for the same work. An inner circulating library system between the schools, with one teacher acting librarian for the town.

Suggestions: That the school taxes be collected simultaneously with the state, county and town taxes. Each school clerk must obtain from the town clerk, or from the supervisor, after approval by the board of assessors,

the tax enrollment book, which he requires to have in his possession a matter of several days in order to copy the names, valuations, etc. If a suitable column were provided he could in the same time set the rate for the school levy, make out his rate card and extend the net amounts as applied to each property owner in the proper column. The book would be returned and when the state, county and town taxes were extended, the school column would be added to the total, and the book when delivered to the collector would be ready for the collection of all taxes. For the first year of this operation it would be necessary to authorize the school boards to borrow sufficient money to pay their running expenses until say, Jan. 1st. This plan would provide much greater convenience to the taxpayers, especially in the saving of time, and the school taxes would thereby be swallowed up in the grand total and not be such a prominent eyesore as they are at present.

A less expensive method of holding school elections. As the law stands at present, the matter of school elections will be quite expensive, calling, as it does, for inspectors at \$3.00 per day, printed ballots, forms, etc. If no more persons turn out to the school elections than has been customary during the five years that the writer has been interested in school work, the most of the equipment will be waste paper. Why not permit the ballots to be printed blank, and have the elector fill in the name of the person he votes for—other propositions, if any to be on separate ballots. This would enable the supply of ballots to be used for successive elections. The names of the candidates nominated as called for by the law to be posted in the voting place on election day.

I understand there is a reactionary element that is calling for the repeal of the township law. This movement is apparently being featured by some newspapers who just at this time find it profitable to cater to the rural community by inciting a sort of rebellion. No more backward step could be taken by the people of the Empire state than to return to the old district school system, which long ago outlived its usefulness, and while the new law is perhaps not as perfect as it might be, it is a long step in the direction of progress, the results of which will be more and more apparent as the years roll on.

**Extract from Letter from Board of Education, Town of Webb,
District 1, Stating Resolutions and Recommendations,
Dated February 22, 1918**

We, the undersigned, will say that we have had this system.—The Township System,—in force in the town of Webb, Herkimer county, for several years and found it to *exactly* meet the needs of this Town and we hope and *expect* to keep this system in force in the future.

**Extract from Letter from Poland Town Board of Education,
Kennedy, Dated January 5, 1918**

I would suggest that the Physical Instructor be abolished or made optional in rural districts and the work given to the local teacher.

Second, that town lines be taken for boundary lines, instead of district lines.

Third, town school boards and teachers shall meet together at least twice in a school year.

Fourth, Trustees shall visit all schools in the town at least twice a year.

Fifth, Trustees shall receive an annual salary of \$50.

Extract from Letter from Board of Education, Mendon, Dated January 11, 1918

I believe the objections offered to the law are not so much against the system, or by the inhabitants of the union school districts, affected, as by the taxpayers in the rural districts because of the increase in school taxes caused by their being obliged to assist in paying the expense of maintaining the Union School in the town-school unit.

My suggestion would be to exempt all union districts from the operation of the law, the same as the law now exempts those of fifteen hundred population, and make the town school unit to include the district schools of the town only, or possibly in towns where the schools are widely separated, or have more than a certain number of schools to divide the town districts into school units, the union school district remaining a unit by itself. This would probably take care of the cry against the increase of tax on farm property.

However, I would give the union schools the right to charge tuition in all departments enough to cover the cost of educating the pupil and make this a charge against the district from which the pupil comes and not against the individual or parent.

I also believe school districts lines should be made to conform to the town lines as this would expedite the collection of taxes and be more satisfactory both to the property owner and the Board of Education.

School trustees should also be allowed compensation the same as members of town boards.

Extract from Letter from J. A. Copeland, Clerk, Board of Education, York, Dated January 11, 1918

In replying to yours of recent date in regard to the operation of the Township School Law will say that our Board passed a motion in favor of going back to the old system.

Personally I do not agree with the Board in this matter and believe with a few changes the township law is right.

I do not believe that the Physical Training teacher is needed in the country districts and believe it is money thrown away as the children get all the exercise needed on their trip to school each morning besides other work they have to do at home.

I think the new law will be just like the Highway Law was when the pay system became a law. The farmers all put up a kick about their taxes being so high but you could not get them to go back to the old way now. I was tax collector for six years in this town and know how the farmer feels on this matter.

In our unit where we have a two room school the taxes are lower than last year in other districts they are some higher but I believe when we get our school buildings up in shape that the taxes will not be very much higher in any of the districts.

Extract from Letter from H. L. Oldham, Clerk, Board of Education, Versailles, Dated January 19, 1918

Replying to your letter in regard to the township law, will say; that it is too expensive. A saving could be made by having the school election in November with the general election.

The Physical Culture teacher could be done away with especially in the country, the teacher giving that instruction themselves.

I think that there should be as many members on the Board as there are school districts, and a member chosen from each district.

Taxes could be levied and raised the same as our land and county taxes, and thereby save expense.

Extract from Letter from Board of Education, Colesville, Dated January 12, 1918

The Board of Education has requested me to answer your letter of December 28 saying that it is confident the new school law is a step in the right direction, and will place the schools in a systematic and better working condition than under the old method.

Everything is now systemized and done in a business-like manner, while heretofore it was more of guess work and no real business or head to it. Of course the law is new and the boards have many things to contend with, which will be soon overcome and by another year everything will be running smoothly.

Like all new laws, there are few things that might be changed to better conditions. One suggested by the board, is to have the districts divided at the Town lines, and if the children attend school in another town, to pay that town for the tuition. A second suggestion was that the members of the Board be paid a small fee for their time and then they would be more apt to look after matters more promptly, and attend board meetings more regularly.

Extract from Letter from Board of Education, Cameron, Dated January 3, 1918

At the last meeting of the Board of Education the following resolution was adopted:

That it is the unanimous opinion of this board that the present Township School System is a much needed improvement over the old District System.

1. That it makes equal taxation for the support of schools.
2. Gives Board power and makes them responsible for the education of the children.
3. Makes possible for a more economical and efficient maintenance of the schools throughout the town.

**Extract from Letter from Board of Education, Wilson, Dated
January 29, 1918**

We, the undersigned, members of the Town Board of Education of the town of Wilson, Niagara county, N. Y., do hereby endorse the School Township Law and ask that it be given a fair trial as we believe that it will work out ultimately for the best educational interests of the State.

In connection we would suggest that the taxing feature be so changed so that all property assessable in the Town for school purposes be the same as found upon the Town Assessment Roll thus eliminating the present tax confusion.

As special recommendations we would ask that the present physical Training Law be so changed as to make it possible for the Teachers to do this work.

Also that the Medical Inspection be no longer required and finally that the installation of sanitary closets in rural schools at least for the present be not made obligatory.

These changes would not effect the efficiency of the schools and would produce real economy.

**Extract from Letter from Board of Education, Unit 1, Town
of Camillus, Warner, Dated January 9, 1918**

Our main difficulty in reference to the Township Law is that the taxpayers in the small districts feel that they should have as good equipment of every kind for a few pupils as we have in the high school with 225 pupils. We believe, however, that in the course of time this objection will lose its force as their children are gradually brought into the central district at Warner.

We have no doubt that under such an arrangement we can build up an educational plant at Warner that will give the best and most practical training possible, and that the children now attending the small schools will not be the only ones profited, for the larger number will give a new spirit and make possible departments of Agriculture and Home Economics.

For these reasons we believe that in the main the law is all right and should be tried out before it is meddled with. Continuous change is what makes the expense.

**Extract from Letter from Board of Education, Unit 1, Town
of Chazy, Dated January 12, 1918**

Your letter of December 28 regarding the working of the township school law, was brought before the town board of education and the law was thought to be working well, no amendments were suggested.

The board at the same time adopted a resolution in favor of the law and against a repeal.

**Extract from Letter from E. A. Taber, President, Town Board
of Education, Davenport, Dated January 8, 1918**

There is very little objection in this town to the working of the law. I think after the law has had a fair trial the vast majority of the people will

be pleased with the new arrangement. Like any new law bringing about such a marked change there is bound to be some complaint on the part of a few during the first year of its operation.

It seems to me that the town should be the unit of taxation for the support of the schools of the town. It is much more just than the method of raising the taxes by districts. The new law means great things for the rural schools. I earnestly hope that the present law is retained in all of its essential features.

Extract from Letter from B. E. Brophel, Chairman, Board of Education, Moscow, Dated January 7, 1918

I wish to say that we have no fault to find with the township law, and believe that a general good in town schools will be derived. I do not believe that this system has yet been sufficiently tried out so that anyone could suggest any amendments that would be for the betterment of same. Would it not be practical and advisable to wait for a sufficient time so that the present system can be well tried out before making any changes?

Extract from Letter from Whitestaun Board of Education, Oriskany, Dated January 8, 1918

The law has not been a success in this town and has caused much dissatisfaction among people who have the best interests of the schools at heart. Local interest seems to be paralyzed and the schools are an easy prey to politicians under this system. The trouble seems to be that the unit is too large for efficient, democratic school government. The unit should be made smaller and the school government placed directly in the hands of the people again.

I respectfully suggest that all the benefits of consolidation without the evils of the township system can be obtained by abolishing both the town unit and the old common school district and making the Union Free School District the basis of local school government.

Extract from Letter from President, Board of Education, East Hampton Union School, Dated December 31, 1917

In the judgment of this Board, it would be wise to have the township law repealed as soon as Providence will permit.

Extract from Letter from Town Board of Education, Cornwall, Dated January 1, 1918

Replying to your favor of the 28th ulto., in re operation of Township Law, would say: We have three districts, two of which have outstanding bonds and interest charges; the actual result is that these two find school taxes little if any higher under the new law; the third district however, is where the principle kicking is done, for there the tax is three times higher, owing not only to aforesated cause, but to the fact that we adopted a most liberal budget — allowing \$1167.36 more than last year for school expenses.

The principal objection seems to be that the new law gives no visible improvement in methods or results; also that it is more or less of an infringement of Home Rule.

Taken as a whole the consensus of opinion — among the farmers — seems to be strongly for a repeal of the law; the Chairman of our Board so expresses himself, and so would I were it not for the fact that I am getting a salary out of it.

Our great trouble is to get the members of the Board to do anything; having three members, two insist on having the chairman and clerk do the actual work; therefore, if you want to put life into local school matters, also induce the best men to take Board positions, then pay them some small sum.

In the matter of possible amendments I would suggest:

That members of a Board be paid some small sum for each meeting attended.

Now that we are to have universal suffrage, I would make it such in fact as well in name, by making eligibility for voters at a school meeting just the same as at any general election.

Extract from Letter from W. R. Christi, Clerk, Kirkwood Board of Education, Dated January 8, 1918

People on back districts seem satisfied their taxes being lower on unit systems getting benefit of railroad and State property. Those on front districts are not satisfied as their taxes are from \$1 to 2 per \$1000 higher.

What they feel is an imposition in having to pay for physical training teacher as they don't get any benefit from it. They feel it's like throwing their money away. Children in rural districts get plenty of exercise walking to and from school and working at home nights and mornings.

It costs \$1800 per year for two physical training teachers in the eastern district. Taxpayers are up in arms against it, claim they won't stand for physical training teachers.

It being war times, if you could abolish physical training in rural districts I think people would soon see that unit system is a good thing same as they do in State of Pennsylvania.

Part of Board has to drive seven miles in order to meet in central location regardless of roads and weather, they felt it was asking too much without a compensation.

Extract from Letter from C. R. Stephenson, Board of Education, Schuyler Lake, Dated January 14, 1918

Being chairman of the Board of Education of this town I have failed, as yet, to see where there has been any marked improvement in this system and it has created a considerable dissatisfaction on the part of the taxpayers in the rural districts. The only suggestion I can think of at this time, would be to abolish the township law and re-establish the old system or one somewhat like it. In making the above statement I believe it is the voice of the rest of the Board as I have talked with all except one.

Extract from Letter from Board of Education, Truxton, Dated January 17, 1918

The Township Law has so far worked favorably in this town, the only criticism we have heard is from the three districts of the town who in prior years have made contracts with the High School here and who have paid no taxes for some years, they complain of the high school taxes this year.

We would suggest a change in the election of the Board of Education to save expense and inconvenience to voters in voting at a general election. Let each district hold their meeting on the first Tuesday in May as heretofore and elect their trustees and vote the amount of their tax budget. They will also instruct their trustees who to vote for at the annual election of Board of Education.

The trustee of the district to have general supervision of his district during the school year and report monthly to the Board of Education of matters affecting the school, notify the clerk of the Board of all supplies needed and repairs to be done.

The trustees of each district to meet at a place designated on the second Tuesday in May and elect members of the Board of Education by ballot and hand to the clerk of the Board their budget for the district.

The Board of Education to employ teachers and fix their salaries as in present law, also arrange for transportation of pupils.

We think taxation as a town is just to all taxpayers.

Reduce the Board of Education to three members.

Extract from Letter from William W. Kinfield, Franklinville Town School Board, Dated January 7, 1918

Regarding the township school law, I believe it is working well in our town of Franklinville although I deem it rather early to pass judgment on it.

First—Regarding taxes—Under the old system some districts with a valuation of 18,000 had a tax-rate of .013 on which to maintain a school. Other districts with over 100,000 valuation had a tax-rate of .0028 to do the same. The district which we found in poorest shape had one of the highest valuations and the taxpayers in this district are doing most of the kicking against the new law.

Second—Regarding teachers contracts: The present teachers made their contracts with the several trustees—These contracts were taken over by the board. We fired some teachers having 17 to 18 pupils receiving \$13.50 per week, while others having 25 or 26 pupils are getting \$11.00. I think a board could grade the salaries according to labor involved.

Third—This is a serious disadvantage of the old system—we find that the school-meetings in nearly every district have been run by a clique, who afterwards control the affairs of the district—many times to the disadvantage of others—or in other words “feather their own nest.” Government by a board should overcome this.

Fourth—The school board is in position to get acquainted with the needs of the several schools and the metal of the teachers—They can in future place them where they can do the most efficient work.

Fifth—Regarding the levying of a tax of the school board as mentioned in the governor's message, Is it any more unjust than the town board laying a tax for town expenses? Our district superintendent says there was more repair work done in his district during the last three weeks in August than had been done before during the five years he had lived in the district.

Since our high school is a separate unit we fail to see why taxes should aggregate any more than if assessed by the several districts—providing the same standards of efficiency were maintained. People fail to appreciate the fact that it is the increased cost of labor and material which is sending taxes up. Most of the kick is coming from those who are loath to divide up the benefits they have been receiving from the corporations in their districts.

So far as our town is concerned, if the people elect good conscientious men on the school board we see no reason why the township law should not be a success.

Extract from Letter from Board of Education, Town of Pinckney

I speak from what experience I have had. The law as it is now is a vast improvement over the old District System as I have come in contact with the work. I found things very irregular about the different School Property for instance on District on the far north road of the town. I found that the school house had the wall under it all tumbled down and had been that way for many years. Never had been repaired it was banked with manure drawn for some one's horse stable the winter before and it had lain there all summer. I had it repaired and leveled the floor and put a new hard wood floor over the old worn out floor and oiled it and fixed the house up generally now. That is running it cheap for the District so you will readily see that children under such conditions do not receive equal treatment there being no uniformity. The best and newest school house in the Town had a nice cellar and wall under it with two departments, but the bottom was a mudpuddle, (so to speak) with a furnace in the middle of it having been that way since it was built—15 years since. I had it cemented and put in sanitary toilets up to date. My intentions if I remain clerk to equip all of them on an equality which to my mind is right as it should be.

The main cause for complaint being for and in relations to taxes. You will see that some of the districts have a larger valuation then others take a district with one teacher existing the same and other expenses the same with half the valuation of another and the small valuation would have to pay twice in their tax and the small notice it is less. So the majority are raised mostly because it equalizes tax alone to some extent. If I was going to make any changes it would be to make the unit of taxation by counties at least and I have been thinking it should by direct tax on the entire state under some method for the reason that it would be most equal. I know of a number of towns now who are highly favored under this township law. There is one town in our county (viz.) West Turn which GHP Gould's paper co. and mills in it with a valuation of an equal to the rest of the entire town with the village of Lyons falls included so that exists all along Black River to the Lake through Jefferson Co. just so with other corporate property all over the state of N. Y. so you see if it was by the state same as the public money side of it it should be equalized.

Extract from Letter from Willis M. Burnet, Milan, Dated January 15, 1918

I am expressing the opinion of the Board of Education of the town of Milan when I say that the objection to said law is the cost of maintenance.

From my personal observations as clerk I believe the system is working well and I am satisfied that if an amendment can be added to equalize taxes the greatest objections will be removed—this could be a county or a state affair instead of a town affair, either of which would be preferable to our present form.

All taxpayers about here are objecting to the physical training law and would like to see said law repealed. Many, however, do not understand that Dr. Finley has already done the State a great service regarding his law. He may be able to help us again, in having the law modified or repealed.

By all means lets have an amendment to equalize taxes affixed to the township law, and possibly some uniformity regarding the salary of the clerk.

Extract from Letter from Board of Education, Boston, Dated January 10, 1918

We find the expense of running and operating the Township law, the installing of toilets and raising money for new school buildings and alteration of old ones, increases our rate of tax on one thousand of valuation from 2.50 to 7.00 and surrounding towns are hit harder than Boston, we cannot see the benefit of any amendment to this bill. 75% or more of taxpayers in our town favor the repeal of this law, and return to former systems of district election and control of schools, we consider the law requiring a physical nurse in rural district school a farce and an imposition on taxpayers of district. If considered necessary in district school, we suggest that teachers qualify for these duties.

Extract from Letter from Harry G. Chapin, Chairman, Town Board of Education, Town of East Bloomfield, Dated July 11, 1918

When the law was before the legislature Assemblyman Wheeler sent me a copy and asked for my opinion of it. It seemed to me that such a law should be a great improvement by making the town the school unit instead of the school district. It would result in a more uniform school management, better schools and a more just apportionment of the tax. I wrote to him urging the passage of the law and have no reason to change my opinion since.

In this town (East Bloomfield) Dist. No. 8 maintained for years, a high school with a school plant worth \$50,000, while the other 8 districts in the town sent many of their children to it at a merely nominal charge for tuition in the lower grades and none at all in the high school. Thus the whole town received the benefit and one district paid the bill. The school tax in district No. 8 was three times as high as in the others. The objections to the law are those whose attention is arrested by the increased school tax which they are called upon to pay. The same class, 50 years ago, grudgingly paid their tax in the Fore School law. They objected to the change

from the labor system to the money system of highway tax, and they raised almost as much clamor as now when it was proposed to build State roads 20 years ago. Fortunately the cities carried that measure through the legislature and state roads were built through rural communities, when the grangers saw that they were getting the main benefit while the cities were paying nearly all the cost they changed their attitude and now they cannot get enough state roads. They seem to think any law is bad that adds a dollar to their tax, but all laws good that heap the taxes on the cities especially the city of New York. An absolute repeal of the fore school law would lower taxes and therefore please many of the grangers.

I am a farmer (not a granger) myself, my school tax was \$60 last year and \$112 under this new law, but I would not for that reason, condemn the law, perhaps I was not paying enough tax before.

The city members of the legislature ought to retain the township school law, at least until it has had a fair trial. The money which the cities are giving (through the medium of state tax) to every school district in the state should not be wasted as it is in many instances by local mismanagement of rural schools.

The theory of the law is all right, it may need minor amendments, but not in the first year of its trial.

Extract from Letter from R. A. Gingott, Clerk, Board of Education, Russell, Dated February 8, 1918

We have a school district in our town in which there are no children attending school as there is none of school age in the district and there will not be the balance of this school year. The teacher goes to the school house each day and stays the required number of hours and has to keep fire to keep warm. Now is it absolutely necessary that she do this as it is a waste of fuel which is so hard to obtain at this time especially.

Extract from Letter from C. S. Northup, Clerk, Town Board of Education, Milton, Dated January 11, 1918

The opposition to it comes from largely assessed districts where the schools have been run previously on the *cheap* or *deficiency* system. One district where the tax is double levied an extra tax last fall and still I find unpaid bills against the district. Now they compare the old tax with the new.

Then again three of the districts have paid back to the taxpayers \$930 which in the appropriations made last May was reckoned in in making the budget for the present year. One district voted a tax of \$650, which with the public moneys received would make about \$750 to run the school. The district engaged a teacher for 35 weeks for \$650. The coal etc. purchased by the new board will cost some \$75, janitor \$60, repairs etc. say \$50, and there is still a debt from last year of \$20. The taxpayers of this district are all against the new law and no one should wonder.

The only increase in taxation in this town is the clerk's salary \$175, treasurer's fees \$50 and the election expenses of \$100—\$325. This on an assessment of \$766,186 is but a trifle. All the other amounts levied are what would be necessary to run the schools under the old law.

The principle of the new law "that all property in the different districts should pay the same rate" is *correct*. Those districts with a large assessment that have been running a very cheap school now have to help pay the expenses of the districts with a small assessment and a large tax rate.

One taxpayer said to me "I am paying \$40 to educate a lot of ginks" (Italians). The higher cost of everything is not considered.

The fault finding taxpayers only consider the increased cost regardless of the fact that the new board commenced without a cent; in fact we find outstanding bills to be provided for and while the board made the budget to cover the expenses as nearly as could be estimated, there will be a surplus in some of the funds, probably amounting at end of year to from \$500 to \$1,000. This will reduce tax another year.

Extract from Letter from Albert B. Merriam, President, Town Board of Education, McDonough, Dated January 9, 1918

In reply to your circular letter of inquiry of December 28, 1917 in regard to operation of the township law, will say that in our town opposition to the law comes principally from two classes of citizens. The *first class* consists of those in the districts in which the schoolhouses were condemned, which fact shows that those people have taken so little interest in school matters that they would not even provide a suitable place for their children to go to school and now want to put the blame on to some other party. The *second class* are people in other districts who have taken little or no interest in schools except to keep taxes just as low as possible not even caring whether the children received any good from the school or whether the money paid out brought good returns, but only that the amount paid should be just as little as possible.

Extract from Letter from George W. Abbott, Trustee, Township of Wappingers, Dated January 15, 1918

This new school system is a grand good thing in my estimation. I have served under the old system as well as being a trustee at present.

The childless taxpayer, especially, thinks it no good—"taxes too high." The welfare of the child is little thought of by him.

Under the old system, it was hard work for the trustee to get through an appropriation for necessary repairs, to say nothing of sanitation.

When the new board first visited the various school buildings in our township, we found them, or most of them, in a dilapidated and filthy condition. If you were to visit them today, you would find the buildings, including outbuildings in a respectable and sanitary condition. Who would begrudge an extra dollar so spent?

If the different districts had placed the schools as they are now, their taxes would have been as high as they are now, and I assure you nothing was foolishly spent. Under the new system, the rural scholar has the same chance as the one in the larger schools—a chance to get a high school education. I wish it was included in the law they were compelled to have a high school education.

The unlearned taxpayer can tell the educated in office at Albany how to run the education department. Mr. Finley would be a fine man, to them, if he ran the schools "*cheap*".

Extracts from Resolutions and Recommendations of the Town School Board of Unit 2, Town of Eaton

Whereas, the principal reason assigned by the opposition is that the township law is the cause for increased taxation and that it will close up permanently all the rural schools; it is evident that its opponents either have not in the past borne their share of taxes, or do not understand that consolidation rests entirely with the people of every school district to decide, or else they do not appreciate that under the old system, if the high schools had received a just compensation per academic pupil, the cost of tuition to the non-resident pupil would have been prohibitory to poor boys and girls and those of moderate means, and

Whereas, This town school board, after due consideration, is of the firm belief and conviction that the principle of a free elementary and free high school education should be maintained and supported in a democratic form of government by an equal tax upon property in the unit as defined in the township law, that full compensation for high school tuition by the individual debars the poor boys and girls from such educational advantages and serves only the sons and daughters of the wealthy, and that the increase in taxes per unit is not due to the township school law, but to the following causes:

1. There was no money in the hands of the school board.
2. To a slight increase in teacher's wages made by the rural trustees and the boards of education before August 1st.
3. To the increase in the cost of fuel and necessary supplies.
4. To some additional repairs which should have been made years before for the comfort and convenience of pupils and teachers.
5. To raising the full amount of the salary of the physical instructor.
6. To increasing the length of the school year from 36 to 38 weeks in the rural schools in order to give the rural boys and girls opportunities equal to those in the villages—to give a square deal to the children in the very communities making the biggest protest, and furthermore

That the township school law has not been in operation long enough to show its real merits, only its defects are apparently seen by its opponents, but

It has established a closer relationship between the rural school and the high school by making the corps of teachers responsible to one board; it unified the subject matter given the group of school, produced uniform methods of instruction and text books used, and yields to better supervision.

Extract from Letter from Mrs. H. S. Sweetland, Clerk, Villanova Town Board of Education, Dated January 23, 1918

Some years ago I made an investigation into the systems of Ohio and Pennsylvania and since that time have been an advocate of a township system. First because it equalizes taxation and makes those in the outside districts pay their share of the expense of the high school where their children have been educated at less than cost; also we have plenty of instances all around us where railroads, trolley lines, telephone and telegraph lines, gas lines run through say one side of a town and pay most of the school taxes in the

districts through which they run under the the old system while under the township system the other districts of the town would get the taxation benefit of these outside corporations the same as they do in the other taxes.

Another reason is that under the township system all the schools in the town would be brought up to the same standard. In this town we found some districts where the people had taken a keen interest in the schools and were in nice condition while in the adjoining district there was every evidence of neglect. I think in four districts there was not even seats in the boys closet. Our board have endeavored to make a start towards bettering these conditions and make all the districts on an equal basis both in equipment and competency of the teachers.

The law is working all right although its being an untrodden road it has taken more time and trouble to get things working in a smooth channel than it would next year.

Extract from Letter from A. K. Johnson, Chairman, Board of Education, Fort Edward, Dated January 10, 1918

You ask a statement concerning the township law. There has been general dissatisfaction in the town of Fort Edward, N. Y., ever since the law went into effect, and instead of making any amendments, we strongly urge the repeal of the bill.

Extract from Letter from Louis C. Anderson, Clyde, Dated January 8, 1918

Will say that the majority of taxpayers in our town are very much opposed to the township system, on account of higher taxes, also of taking away of what few rights they had of expressing their views along school matters.

The Grange in our town and county are unanimously opposed to the system and are going to ask that the law be repealed.

Extract from Letter from John Gagnill, Clerk of Board of Education, Town of Clinton, Dated January 11, 1918

I have your letter of Dec. 28 in regard to the operation of the township law. It has been very unsatisfactory in this town.

I would suggest that each town pay their own taxes and abolish all joint districts. This has been the cause of considerable trouble. A repeal of this law would meet the approval of all the taxpayers in this locality.

Extract from Letter from C. J. Peters, Bleecker, Dated January 4, 1918

Answering your circular letter asking for suggestions for amending the township law; will say that we do not like it here at all. The really competent men do not have time to devote to the work as it deserves, and within a very few years I am afraid there will be a lot of very

ignorant men wholly unfit to serve on the Board trying to run the schools.

I cannot think of any improvements in the law itself, I should suggest it be repealed.

**Extract from the Recommendations and Resolutions of the Niles
Town Board of Education, Moravia, Dated January
14, 1918**

At a meeting of the Board of Education of Niles, Cayuga Co., N. Y., held Jan. 12, 1918, the following resolution was passed.

Resolved, That we the undersigned constituting the Board of Education of Niles, N. Y., recommend to the commissioner of Education that the Machold school act be repealed on the grounds that it is more costly and not as efficient as the old way.

**Extract from Letter from Levoy Youngs, Clerk, Board of
Education, Knox, Dated January 2, 1918**

The town Board of Education of the Town of Knox had a meeting on Dec. 31, 1917 they requested to answer your letter in regard to the township school law. The Board thinks that it would be better for the rural districts if they could return to the old method of running the schools as it will be less expense to do so.

**Extract from Letter from May Corcoran, Marilla, Dated
February 7, 1918, Stating Following Recommendations
and Resolution:**

Resolved, That it is the opinion of the members of the "Board of Education" of the town of Marilla that the "Township System" is a decided improvement over the "District System" in the matter of school administration, and that the Board is in favor of the continuance of the "Township" system but would recommend an amendment to the law, that town lines be fixed as boundaries between town units.

**Extract from Resolutions and Recommendations from Letter
from Arthur E. Selden, Clerk, Board of Education, Le Roy,
Dated January 14, 1918**

At a meeting of the LeRoy Township Board of Education, held Jan. 8, 1918, the following resolutions were adopted.

That so far as this board may judge by its experience the new township school law presents no material advantage over the old system.

That in neighboring townships, where bonded districts were brought under the new township system, the rate of taxation seems oppressive.

**Extract from Letter from Elizabeth M. McCarty, Clerk, Throon
School Board, Auburn, Dated January 1, 1918**

I have not been able to get any suggestions from our Board concerning the amending of the township law. While every one seems opposed to it

because of inconvenience and increased taxation without any improvement. No one seems to have a definite remedy, this was the case in Pomona Grange when a resolution was asked for concerning the law before it was passed.

It was hard to get the board together they were all farmers and busy tired men, they come up to the meetings without any thought of what must be done in haste to get away, if it hadn't been for one woman Mrs. Fred Robinson, trustee in our own district I should have given up after the first month. I can see that it has a broadening effect on the trustees to have their small affairs discussed for instance, I know by the manner of one when the question of chalk buying came up that his school had used very little before. Also when one bright young teacher said to Mrs. Robinson I am so glad the Board will allow us time to attend rural school week at Cornell, our trustee has never known anything about it. I feel that much rests with the superintendent, some of them are only figure heads, a body requiring reports, the school question being a side business. If we could have more superintendents like Mrs. Anna Kent in south end of Cayuga Co. she knows her teachers, the pupils the families and the problems for twelve years and I know it is very hard to get people to take an interest in their own children's school. In our district we organized a mothers club ten years ago, that has done wonders but it is very hard to keep it going. Parents find out a great many things in a very short time when they go and sit in a school room an hour. I know the department realizes this because it has suggested the use of school buildings as social centers. These rural teachers, most of them young, need a very definite backing by the trustee, in fact by the community but they don't all get it. We have some very unsuitable trustees, anyone interested in the children ought to be ashamed to put such men in office. I am secretly delighted with the "Row" this law has raised. If it should have to be repealed it has done one grand thing set people talking about rural schools, wheeled them up in the foreground.

Extract from Letter from Board of Education, Town of New Albion, Cattaraugus, Dated January 9, 1918

The judgment of the town Board of Education and the people in general is that some changes should be made regarding the assuming the bonded indebtedness of the village school buildings by the rural community, the rural taxpayer thinks the benefits to be derived by him do not justify his pay for the village property. Also regarding the assessment of property, while there is some provision made along this line, we think that where a school unit is composed of parts of several townships, all the property in the school unit the same or uniform basis for school purposes so that all, pay a uniform school tax.

And *above all* the Board and people demand that the *Physical training teacher* be dispensed with entirely in rural schools at least, the belief is that a large number of teachers have had Normal training and are capable to give all the extra Physical training necessary without incurring the extra expenses of the Physical training teacher. In the number of instances

we find this training works an actual hardship on the pupil, ex. a boy of 11 years had to walk about four and one-half miles to and from school making nine miles a day, and then have the training teacher make them run two miles before letting them go home, the people think such training is worse than useless.

With these conditions relieved, especially the Physical training, I believe the system will work out quite well for the people will become acquainted with some of the benefits they do not see at present.

**Extract from Letter from Board of Education, Town of Osceola,
Dated January 7, 1918**

It is my opinion and the opinion of practically everyone with whom I have talked about it that the Medical Inspection law is an absolute fizzle. There is no follow up work even done and this year the doctor whom we appointed is trying to hold us up for an exorbitant price.

While the Physical training has met with much criticism I think it is gradually getting the sympathy of the people and should come to stay. However, I do not think it needs any longer to be supervised in rural schools. The rural teacher does the work and the departments are capable to see that teachers are drilled thoroughly in this work at Normal schools and Training schools there is no more need for a supervisor of physical training than for a supervisor of Arithmetic. Do you realize that a supervisor of rural schools spends two hours out of every three, traveling from school to school.

It might be well to have the voters at the annual school meeting vote on the school budget. I think it would lessen criticism in regard to the amount of money raised.

It has been very difficult, in my experience to get the members of the school board to report at meetings, I would suggest that some compensation be allowed members for attending board meetings.

**Extract from Letter from E. A. Kent, Clerk, Board of Education,
Vienna, Dated January 11, 1918**

We have had very few complaints from this law and they have been from people living in the richer districts which complaints have been higher taxes, these complaints have not been very serious, one thing we believe that would make the law better is to have school taxes assessed and collected with other Town taxes, would say at this time that there is considerable bitter feelings in this town against the inside toilet and Phy. Training Teachers laws, and the members of the Board of Education agree that Inside Toilets are an expensive luxury not necessary in any of our schools and believe that with taxation higher than ever before and with calls most every day for contributing for Red Cross and Y.M.C.A. work which we all agree are good and great work and are worthy of all we can possibly do for them that it would be wise and proper to have these laws modified or appealed for the present time.

**Extract from Letter from Board of Education, Busti, Dated
January 9, 1918**

We are holding our Board meetings regularly on the last Thursday of each month and always have with us the Principal of our high school and our District Superintendent.

Local problems have arisen but we have always been able to meet and handle them, as it seems to us, in a satisfactory manner.

In matter of equipment, better school buildings, better teachers, and a fairer equalization of the taxes the new law seems to be working very much to the advantage of our schools.

We desire to see this law have a good fair trial and are giving it our hearty support to that end.

**Extract from Letter from Board of Education, Unit 2, Town of
Carmel, Dated January 14, 1918**

We feel that the new school law has not yet had a sufficient try-out to discover exactly where its weakness lies. We feel that the condemnation of the law, which is so universal through the rural communities, is due to the fact, in most cases, that the superintendents in most communities submitted tentative budgets to the boards elected under the new law and said boards, not being willing or able to take the matter up properly, took these budgets as correct ones and assessed the community to that amount. It was our idea, upon receiving the tentative budget from Mr. Williams, our superintendent, that he sent this budget merely that we might have a model on which to work and we did spend a great deal of time on the budget submitted by him and reduced it from \$16,000 to \$11,000 for our unit. The result of this reduction was that our tax rate was a very fair average of the rates previously collected in the five school districts which make up our unit. It is in fact .004. In the other units in the county the tax rates rose in some cases as much as 70 per cent. We feel sure that the result of this will be that next year our rate will vary but very slightly, while the rates in the other units will be very low, barring waste of money. They will undoubtedly hold over a large surplus. When this condition appears the taxpayers will no longer feel the irritation they now feel and I believe that if this were made clear in an open letter, published widely in the rural papers, that a great deal of the present activity toward the repeal of the law would cease. I believe that should you take this matter up with your various superintendents in the various counties you will find that the same conditions exist in at least eight out of ten of the school districts. The same being due to a lack of appreciation of the new law and therefore a dread of it on the part of the new trustees, who are facing conditions absolutely new to them.

In so far as any suggestions can be made by us in regard to amendments which might improve the law, we feel that the most important thing that can be done is to make a strenuous effort to simplify the law so that it will be understood by the boards more readily. To cite an instance of cumbersomeness,—in order that any bills may be paid the bills must come before a meeting of the board, be passed upon by them, the clerk must

issue an order to the treasurer to pay same, and the treasurer will then draw a check to the person to whom the money is due. Full board meetings are very inconvenient in many districts when the traveling is bad and to call them more frequently than once a month is a burden upon the trustees, whose services are rendered gratis. It seems to me that the clerk might be given power to pay all bills upon the O. K.ing of said bills by the teachers, who had been empowered to order the goods, up to \$100. This would at least keep small tradesmen who supply the schools from waiting a long while for their money. The Clerk could be empowered to pay regularly to the teachers every month their salary checks upon receipt of the attendance blanks without any further authorization from the board, other than a single action taken at a meeting early in the Fall when all the contracts of the various teachers were turned over to the clerk. These services are a charge against the districts and it seems unnecessary that the teachers should be kept waiting every month for their salary. In District No. 4, which is the district with which I was connected before the township law went into effect, it was the custom to pay the teachers in ten payments, one every four weeks during the school terms, without waiting for the attendance sheet to be turned in. This is contrary to the present law, but it seemed to us that if the teacher was not to be trusted it was time to dismiss the teacher and we did so in any case when the report was not turned in properly and promptly. In this way the first payment was made four weeks after the opening of school and between that payment and the second payment the first attendance report would be in our hands, no other payment being made till it was, and so on throughout the year there would be one payment in advance of the attendance reports. This simplified the work of the secretary because we also withheld the retirement quota for each teacher from the last check of the school year, making all checks for even amounts save the last which was not paid until all work connected with the school was completed to the satisfaction of the principal and the board. This seems to us to be a very much simpler method of bookkeeping and payment in regard to the teachers wages. We find that in our community we have had the good fortune to obtain the services of Mr. P. A. Anderson, as clerk of the board for a nominal salary he is a practising lawyer and an able man whose time is valuable. He has just sent in to me his resignation, saying it was impossible for him to do all the work connected with the board, much to his regret. It seems to us that the salary of the clerk should be based definitely by your department upon the amount of the assessed valuation or upon the amount of the taxes collected, so that the onus of paying a reasonable salary to a good man will not be upon the various boards in the counties. In this way we feel that the services of a good man could be obtained and retained. As it is now should we attempt to pay a salary commensurate with the work the clerk has to do we should be very seriously criticised in the various districts and the new law would be attacked still more viciously.

**Extract from Letter from W. S. Titus, Chairman, Irondequoit
Town Board of Education, Dated February 10, 1918**

The township school law is a step in the right direction. It would be a colossal mistake to repeal it. Some changes should be made by amendment.

You know what they are. The farmer's opposition to this law is inconsistent. He buys automobiles, improved and up to date farm machinery. Adopts modern methods to improve his soil, cultivate his crops and prune his trees. He joins agricultural societies and his local grange but when it comes to improving the inefficient rural schools, he balks. I wish you success in your efforts to induce the Legislature to act wisely in this important matter.

**Extract from Letter from Board of Education, Town of Ogden,
Dated January 23, 1918**

The law when carried out will do much toward raising the standard of Education (particular in the Rural Schools).

While we would hardly suggest amendments, would just like to say modestly that we would like to see the Principal of our High School over the whole town.

District no. 9 is near to Churchville the district voted at the last minute to continue the school we immediately hired a teacher, she had 2 pupils for the first 2 or 3 months now she has 5 the rest (2 or 3) are going to Churchville we think it would be far better to discontinue this school and take them to the Churchville school.

Now we are up against another proposition, the rural school teachers contracts call for 36 weeks Dist. no. 1 in which our High School is located calls for 40 weeks, our tax rate was fixed for the whole town, and our rural tax payers may say that their schools are not getting the amt. of schooling that the high school is, how will we straighten this out?

GOVERNOR'S MESSAGE FOR AMENDMENT

Governor Whitman in his annual message to the Legislature of the State of New York on January 2, 1918, calls the attention of the Legislature to the need of amendment to the law as it now stands in the following words:

I call your attention to the widespread discontent among the rural communities due to the passage of the so-called township school law.

This law was introduced and passed at the instance of the Regents of The University of the State of New York in the belief that it would better rural school conditions. I was also informed that the measure had the approval of the officers of the State Grange, who took the same view.

While it was designed to promote the consolidation of weak and inefficient schools with the stronger and better equipped, its framers apparently overlooked the existing conditions in some of the rural districts and, therefore, undertook practically to force the abolition of many of the existing school districts and their union with the stronger schools when such consolidation was impractical.

The result seems to be a very large increase of taxes among the rural districts without a corresponding increase in equipment, in teaching, or in efficiency.

It has thrown upon some of the rural districts the burden of supporting, in large measure, union free schools located in the larger villages of town-

ships, and investigation has shown that the consolidation of eight or nine rural districts, some of which are five, six or seven miles from the central high school, can not be accomplished advantageously at the present time.

Another feature of the bill which is objectionable is the fact that the town board of education is given power to raise by taxation the necessary expenses of running the schools, thus depriving the people of the right to vote on the amount of money to be expended for school purposes within the school district.

As a general principle the continuance of local self-government for the purpose of raising funds for local public expenditure should still be regarded as one of the fundamental safeguards of our State.

Taking into consideration these and other objections to the law and bearing in mind the practical demonstration afforded by the experience of the past year and the failure of the law properly to accomplish the purpose for which it was enacted, it is my belief that the best interests of the State require its amendment.

LETTERS FROM STATE SUPERINTENDENTS

The following letters express the attitude of the various State Superintendents in regard to the repeal of the township system:

In a letter of February 12, 1918, Commissioner of Education Payson Smith of Massachusetts wrote as follows:

The Township School Law enacted in New York last year has commanded the respect and approval of the school administrators of this section. There can be no question that popular education in America can realize in practice its highest ideals only when it has behind it the strong and positive support of the state in some such manner as has been provided in New York by this law. Education in a democracy will certainly in some measure fail to produce what the people expect of it if its administration and support are left upon a parochial or neighborhood basis. It would be hardly less than a calamity if New York should recede from the position which it has taken.

We quote the following from the letter of Mary C. C. Bradford, State Superintendent of Public Instruction of Colorado, and President of the National Education Association, under date of February 13, 1918:

I am surprised to learn that an effort is being made to repeal the law of the State of New York providing for the township unit of administration.

I have been very proud of the fact that the Empire State had taken the forward step of enacting a law designating the township as the administrative and taxing unit, and it is a matter of deep regret to me to learn of the present efforts being made before your legislature to undo that splendid piece of work.

The forward looking states are rapidly discarding the district system. Surely New York, with its magnificent achievements in the educational world, cannot afford to retrograde. The district system is outworn in

HONORABLE CHAS. S. WHITMAN
Governor

practice and valueless in principle, and the larger unit of administration and taxation has already won the universal commendation of thinking people.

Trusting that New York will be true to her best self and refuse to repeal a statute that adds so much to its educational reputation,

Commissioner C. N. Kendall of New Jersey outlines as follows the operation of the township law in the State of New Jersey in his letter of February 11, 1918:

The township school law is working so well that nobody in New Jersey to-day thinks that there ever was any other system of school district organization in existence. It was only during the first two years after the passage of the township law in 1894 that there was any opposition.

In the report of one of the superintendents of a county mainly composed of rural districts and having therein sixteen townships, and previous to the passage of the township law there were in these sixteen townships one hundred and thirteen small school districts, is found the following:

As the year closes the subject of discussion is the new township law. Opinions differ largely as to its merits. As a rule, there is much unfavorable criticism from the unthinking. But those whose fairness permits them to look on all sides are willing to admit that there are many advantages in the new law. The sensational newspaper articles in regard to the Narcotic and Free Text-book laws prejudiced many, and led them to confound these and the Township act. This led in many instances to the condemnation of the whole Township law. Like a new garment it was severely searched for flaws, and they were of course found. In the first flush of so radical a change the good points in the law were lost sight of, but as the clouds rolled by these appeared, and are beginning to be acknowledged. I have no doubt that when the advantages are seen in the practical workings of the law that there will be a general and hearty acquiescence.

The prediction in the above paragraph came true sooner than was anticipated.

In the following year the same superintendent wrote of conditions in the same county, as follows:

The enactment of the Township and Free Textbook laws at one time served to concentrate thought upon the schools. People, who had never before been interested in the schools one way or the other, now changed from an attitude of indifference to not only one of interest, but, in many cases to active participation in the work of managing the schools. At the elections for members of the boards of education held in July, many prominent citizens permitted themselves to be elected, and the honor of being president of the board of education came to be regarded as a prize.

The following or third year after the enactment of the township law we have the following from the same county superintendent:

The Matawan school is to take the place of three old schools, and under the old system three separate school districts. There is but one other school now left in the township. This will be kept as a primary. It will be seen that we have by the above consolidation an excellent working of the Township act. It has made possible what was long talked of in Matawan—a graded school.

The school laws were revised in 1903 but there was no thought of repealing the township law. No one of the present day thinks of going back to the old, small school district system. The inequalities of taxation that some people saw in the matter were more apparent than real, and entirely

faded out after the first two years. There was nothing at any time at which the taxpayer could become justly alarmed. The inequalities in the matter of local taxation were easily adjusted by wise administration of the boards of education. At any rate, it can be said that there is nobody to-day in New Jersey that desires to go back to the old system of small districts whose boundary lines were constantly changing.

All school districts to-day in New Jersey are either townships, boroughs, towns or cities, with the provision that two or more of these municipalities may unite into a consolidated school district consisting of more than one municipality.

The opinion of State Superintendent Nathan C. Schaeffer in regard to the operation of the township law in Pennsylvania is expressed in his letter of February 12, 1918, as follows:

In my opinion the old district system of school administration has been the greatest hindrance to school progress against which the School System of New York has had to contend. The school districts into which a township is divided, cannot be changed as the population in rural districts changes. Under the township system schools which are no longer needed, can be closed and the pupils can be transported to a central or consolidated school where better grading and better teaching become possible. The States which have tried a larger unit of administration, say the township or the County, would no longer go back to the old district system. "The school district," says Prof. Moore, "is the minutest subdivision into which governmental authority has ever been broken, and under its control of instruction public education declined to its nadir. The process by which the school districts thus unhappily opposed the general welfare and obtained a destructive measure of local control was at least a century long."

In the state of Illinois in 1867 only about 5 per cent of its schools were graded. The small proportion of graded schools furnishes an impressive practical argument in favor of the abolition of the independent local school districts. I found in Illinois a school with two pupils who were educated(?) at an expense of \$242.50 per year for each. If these pupils had been permitted to go across the boundary line of the district into the schools of the adjacent city, the annual cost per pupil would have been reduced to forty dollars and the instruction would have been much better. An attendance of two pupils will kill the enthusiasm of the most gifted teacher.

In Pennsylvania we have always had the township system. The few independent districts which were created in the early days, are still a hindrance to the progress of secondary education and sometimes to the school progress of the entire township from which these districts were carved.

In a letter dated February 15, 1918, State Superintendent Pearson of Ohio in speaking of the Township Law in that state says:

It has given us supervision and a school organization that has resulted in marked improvement in the rural schools of this state. Buildings have been repaired, grounds have been improved, equipment and libraries have been purchased and installed, uniform courses of study have been

established, uniform text-books have been adopted, the enrollment and attendance has increased, this being especially true in the high schools. Community interest has been awakened, a closer relation has been established between the schools and the people of the community, outside activities have been planned and developed, resulting in a greater interest in school work, both on the part of pupils and patrons. Districts have been equalized and schools have been consolidated and centralized, which has resulted in giving the boys and girls of the rural districts equal educational opportunities with those of the city. Where these schools have been established the drift of young men and women from the farms to the city has stopped almost absolutely.

Practically every one realizes the value of the present system. Much has been accomplished even in the poorest counties in the state and where the administration of the new code has been the least effective.

The politicians in your state will, no doubt, seek to have the law repealed as they sought to do here, but they failed in their purpose. If you had our governor in your state you would need not fear the repeal of your school code because he would veto any measure that would have a tendency to revert to the inefficiency of the old system. He did much to secure the enactment of the code in this state and has protected it ever since to the fullest extent of his influence and power, which has had much to do in placing it on a sure foundation until sentiment could develop in favor of it, which in itself has rendered its repeal impossible.

PRINCIPLES OF SCHOOL ADMINISTRATION AND SUPERVISION DISCUSSED AT THE CONFERENCE OF MASTERS OF SUFFOLK COUNTY GRANGES

ORGANIZATION

The administrative units should be organized (in terms of geographical area or extent of population) as large as is practicable, consisting with securing in proper form:

- 1 The development of expert service, with ample previous professional training and an adequate compensation, secure tenure, freedom from undue restrictions and with direct responsibility to competent, expert or lay authority.

- 2 The conservation of local and popular interest in, a sense of responsibility for, all that pertains to successful school administration and teaching.

To produce these results requires that the powers and duties of local and central, or community and state agencies shall be clearly defined so as to avoid duplication of responsibility or uncertainty as to where final responsibility lies.

In working on the details of administration under this principle, emphasis should be placed on preserving in largest measure, local interest and initiative in all matters which the local authorities can handle to best advantage, presupposing the cooperation, advisory and in some instances supervisory service, of specialists employed by the state.

SUPPORT OF SCHOOLS

The present system of school support in New York State is excessively burdensome to poorer communities, that is, communities having a relatively large public school attendance in proportion to taxable property.

There is no guaranty that poorer communities can or will reach the minimum educational standards in buildings, equipment, supervision or instruction which the state has a right to expect shall be reached by cities, towns and districts.

The unit of taxation therefore, should be sufficiently large to assure minimum educational opportunities to the residents of all communities without excessive local cost.

To this end, consideration should be given to the county or the state as the possible unit of taxation rather than to towns or parts of towns.

SUPERVISION

The unit of supervision should be such as to admit of frequent inspections of schools by the supervising officer. The supervising officer should be a man or woman with professional training and experience possessed with a large degree of executive ability and should be directly responsible to the local school authorities whom he should serve as advisory and executive officer. At the same time he should have an indirect responsibility to the state and should be certified by the state for such service. The superintendent should perform the following duties:

1 He shall attend all meetings of the Board of Education.

2 He shall visit each of the schools of the town as often as is practicable, and give careful attention to matters of organization, instruction and discipline.

3 He shall call such meetings of supervisors, principals or teachers, general or special, as he may deem necessary for the purpose of giving instruction or direction to said supervisors, principals or teachers in the discharge of their duties, for the discussion of methods of teaching and of school government, and for securing uniformity in the instruction and discipline of the schools.

4 He shall recommend to the board for appointment of supervisors, principals, teachers, playground directors, and teachers, medical inspectors and nurses and other employees required by the school system.

5 He shall report to the committee the failure of any teacher or other employee to do satisfactory work, to comply with the rules of the board.

6 He shall have general supervision of the work of the janitors of the several schools.

7 He shall supervise and examine the payrolls of principals, teachers and other employees, and all other bills and accounts referred to him for examination, and submit a statement as to their correctness to the committee. And such other duties as the Board of Education may require.

RURAL SCHOOL IMPROVEMENT

It is suggested that classification of rural schools on the basis of standards determined by the state educational authorities as to (1) lighting, heating, ventilation and sanitation of buildings, (2) equipment, (3) instruction, (4) grounds; giving publicity to the work of schools in higher classes, would stimulate pride in the improvements of rural schools.

ADDRESS BEFORE STATE AGRICULTURAL SOCIETY

BY DR THOMAS E. FINEGAN

Deputy Commissioner of Education

I was invited to take part in a discussion of the merits of the township system to take place in the Assembly parlors at the Capitol before the New York State Agricultural Society on January 15, 1918. The following includes the address given at this particular time and those portions of an address delivered to the New York State Association of District Superintendents of Schools in the auditorium of the Hotel McAlpin in New York City on January 17, 1918, which pertained to this particular question.

The Township Education Law

Two years ago I had the honor of addressing the annual meeting of this society upon "The Township School System." At that meeting your organization passed a resolution favoring legislation which would change the administration of rural schools in this State from the school district system to the township system. You did not, of course, indorse a particular township bill. The Legislature of 1917 enacted a township school law and that law is now in operation. We have all been hearing very much about this law during the past few months. It has been one of the subjects of popular discussion and I am sure that this discussion will prove of real benefit to the schools and to the people of the State. My knowledge of rural conditions leads me to say that the conditions prevailing in the agricultural sections of the State today are not much different from what they were two years ago today, when this body adopted a resolution favoring a change in the administration of the school system from the old district system to the modern township system. I assume, therefore, that before this organization reverses its judgment upon this question it will insist upon having substantial reasons assigned to show that the judgment expressed two years ago was not based upon a proper understanding of rural conditions and was not an expression of sound judgment.

Why did this honorable body adopt a resolution favoring the township system? What condition of affairs induced your society to take such action? Let us examine the conditions of rural life to ascertain if you were not justified in your action two years ago and should not affirm such action today.

We are maintaining in this State at the present time 15 schools in each of which there is just one pupil; we are maintaining 86 other schools in each of which there are just two pupils. We are maintaining 166 other schools in each of which there are three pupils. We are maintaining 258 other schools in each of which there are four pupils only. We are maintaining 357 other schools in each of which there are but five pupils. In other words, there are in operation today in the rural regions of this State nearly 900 schools in each of which there are not more than five pupils. But in addition

to these 900 schools, there are 600 other districts in the State in each of which there are less than seven children in attendance upon school. There are 3800 rural schools in this State today in each of which there are less than ten children in attendance. And what is even worse than this, the assessed valuation of each one of these 3800 districts is less than \$40,000. In one-half of such districts — 2000 of them — the assessed valuation of each district is less than \$20,000. In other words, under the district system four farms of an average value of \$5000 were required to support a school in 2000 of the districts of the State, and in nearly 2000 additional districts, eight farms of an average value of \$5000, or ten farms of an average value of \$4000, were compelled to support a school. This placed a burden upon these communities which they were not able to meet. There is not a man or woman within the sound of my voice who does not know that it is absolutely impossible to maintain in one of these districts a school which comes anywhere near approaching an institution worthy of the name *school*. These schools are maintained not only in the interest of the local community but in the interest of the State as well. The State has an interest not only in each of these 900 schools that has an attendance of less than five, but it also has an interest in each of these 3800 schools that has less than ten children in attendance.

The interest of the State from a financial standpoint is nearly equal to that of the taxpayers in each of these 3800 districts. The taxpayers are, of course, taking their money in each one of these districts and supporting these schools. The State is doing likewise. The State is taking from its treasury \$200 and putting that amount of money in each of 2000 of these schools and from \$150 to \$175 in each of the remaining 1800 schools.

The cities of the State have nearly as great interest in the schools maintained in the agricultural sections as they have in the schools maintained in the cities. There has been a great change in this State in the last forty years. Thirty-five or forty years ago there were more people living in the agricultural regions than were living in the cities and large villages. There were one hundred thousand more children in attendance upon the schools maintained outside of the cities and villages than were in attendance upon the schools maintained in the cities and villages. With an approximate population of ten million people today, eight million of these people are living in the cities and large villages of the State and only two million in the rural sections of the State. In the schools maintained in the cities and villages of the State there are six hundred thousand more children than there are in the schools maintained in the agricultural sections of the State. There are one hundred thousand less children in attendance upon the schools maintained in the agricultural regions than there were in attendance upon such schools thirty-five years ago.

The cities have not only increased in number but they have rapidly increased in population. When the country assumes normal conditions the growth of our cities is bound to continue. These millions of people in our cities must be furnished with food products and raw materials which must be supplied by the people living in the agricultural communities. If the farmers of the State are to avail themselves of this great opportunity and are to meet this demand, the farms must be made more productive. Agriculture

must be pursued on a basis of more exact science and sounder business principles. Rural life must be made more comfortable and attractive so that it will hold the best young men and young women on the farms and induce the best types of citizens to locate in agricultural sections. The schools are the great agencies which must achieve this result.

The conditions described, therefore, make this problem of rural education one of the great problems of the State. It is not simply a *rural* question but it is one of the great *state* questions demanding rational, deliberate consideration and courageous treatment. The ineffective, incoherent school district organization, devised a century ago to meet primitive conditions, is not able to meet the great rural problem of the twentieth century. Every state in New England has recognized this fact. So have New Jersey and Pennsylvania. Every state bordering upon the State of New York has discontinued the old school district system and adopted the modern, effective plan of the administration of its schools under the township system. The great leading agricultural states of the West have also adopted the township system.

Before discussing how the township system may achieve these results, I desire to consider the principal objections which have been urged in opposition to the township law. Let us examine the provisions of that law and consider fairly and deliberately the objections which have been raised. By pursuing this course we should be able to determine whether or not the provisions of the law operate unfairly and unjustly, whether or not there are provisions of the law which discriminate against certain sections of a town or impose hardships upon the children or the people, and whether or not the law will achieve the results contemplated by those who have favored its enactment.

I know, of course, that there is widespread opposition to the operation of this law in the form in which it now stands. I am well informed as to what the objections are. Correspondence with district superintendents, with members of town boards of education, and with leading citizens interested in education in all parts of the State, together with newspaper articles which have constantly appeared in the local papers as well as in the city press, have given me full information relative to the objections urged against this law. The principal points of opposition may be briefly stated, as follows:

- 1 The arbitrary consolidation of school districts.
- 2 Injection of partisanship in school affairs and the creation of political boards.
- 3 Taking from women the right to vote in school meetings.
- 4 Requiring physical training to be taught in the rural schools.
- 5 Taking from the people the control of local appropriations.
- 6 Violation of home rule.
- 7 Increased taxation.
- 8 No improvement in school facilities.

It must be recognized, of course, that it is difficult to frame a measure affecting every home in the rural parts of the State without bringing forth much criticism, and particularly upon a subject in which the people have such an abiding interest as the education of their children. Much

of the criticism of this measure has been based upon what some person has said of the law instead of what the law itself is. It is generally charged that there are many provisions in the law which the law does not contain. Many provisions of this measure have also been improperly interpreted.

One of the most frequent objections raised to this statute is that it contemplates the consolidation of rural schools and that there is to be generally in the towns one central school. There is no such provision in the law and no such action is contemplated. Under the statutes in existence previous to the enactment of the township law, a district superintendent could arbitrarily make an order consolidating as many districts as, in his judgment, seemed advisable. Under a provision of the township law, this power to consolidate districts has been taken from the district superintendent. Now what is the real provision of this statute in this respect? The district superintendent is required to take the initiative in the consolidation of districts. If he deems it necessary to consolidate one district with another he makes the required order. The next procedure is to submit such order to the town board of education. The town board may affirm or decline to affirm such order. If the town board declines to affirm such order, no further action may be taken in the matter and the consolidation is not made. If the town board approves the order, such action on the part of the board does not make the order effective. It must thereafter be submitted to the voters of each of the districts affected by such order. If a majority of the votes in either district is against consolidation, the order of the district superintendent becomes ineffective. Suppose a district superintendent makes an order consolidating four districts and the order is approved by the town board of education. The question as to whether or not such districts shall form a consolidated district is then submitted to the voters of the several districts. If a majority of the voters of each of these districts should favor consolidation, such districts would be consolidated into one district. But if a majority of the voters of the fourth district should vote against the consolidation, such district does not become a part of the consolidated district. If the voters of each of the four districts should vote in opposition to consolidation, none of such districts would become consolidated. In such case, the order of the district superintendent would be ineffective. In other words, under the provisions of the township law as it stands today, it is impossible to consolidate a single school district with another district unless a majority of the voters of such district vote in favor of consolidation. Is there a fairer method of permitting the people to express their desires upon this question than through the very method contained in the township law?

I desire to be absolutely fair and open on this question of consolidation. There is nothing desired by the Department which I have the honor to represent which is not for the interest of your schools. I know that your desire is to maintain schools which shall serve in the most efficient manner possible the great agricultural interests of our State. The Education Department has strongly advocated the consolidation of weak school districts. The Board of Regents, which is responsible for the broad general policy of the Education Department, has believed in the consolidation of rural schools. From the conditions which I have already outlined it must

be apparent to you all that there are now many rural schools maintained in this State which should not be in operation. Wherever it is possible, without hardship to the children, to close these schools and take the children to other schools where they will receive a better education, it is believed that such action should be taken. It is believed by the Department that through such action the rural schools of the State would be more economically administered, they would be able to maintain more efficient courses and would be offering to the children the opportunity for a broader and more practical education than such children are able to get in these weak schools which are now being maintained. The Department will undoubtedly continue to advocate the consolidation of these weak schools, but this consolidation must be effected in accordance with the provisions of the statutes written in the township law. This places the consolidation of school districts absolutely within the power of the people of each district.

Just how partisanship is to be injected in the township system has not been stated. The charge is a general one and without specification. It is generally claimed that the town boards of education are to become political boards and that they are to be used for political purposes. You know that the trustees of school districts in each town, chosen at the annual meeting in May last, selected the members of the town board of education. In many towns the majority of the members of the town board were former trustees, and in many cases the entire membership of the town board is made up of the former trustees of the several districts of the town. If the old district system, under the management of trustees, was not a political system, how does it happen that the new town board of education becomes a political board when such board is composed of men who were former trustees and of men chosen by the votes of the trustees of the several districts of the town? As the law now stands, in the future, members of town boards of education are to be chosen at a special town school meeting. The law requires that on the second Tuesday in May of each year, the voters in each of the several towns of the State shall come together and elect members of the town boards of education. Is there a fairer or more democratic method for the selection of the men and women of the very highest type, those who are most interested in the education of the children of the town, than through a method which affords the fathers and mothers of boys and girls of that town the opportunity to come together in the good old-fashioned New England town meeting and even the form of giving expression to ideas of local interest by our Dutch ancestors, and there select the men and women who are to be charged with the obligation of administering the affairs of the schools of that town? If under such a system, ladies and gentlemen, you can not prevent politics from creeping into the administration of the schools, by what system can you devise a method which will keep politics out of the schools? No other questions may be considered at this town meeting than those pertaining to the administration of the schools. For this very purpose, a date separate from the date of the town municipal meeting was selected. If political considerations are the controlling factors in any town board of education, then the people of that town bear the responsibility. If boards

of education or other school officials have been governed by political considerations in the determination of school questions, that fact should be made known. If any official or other person has used, or attempted to use, the school organization in any town for improper, selfish or political purposes, that fact should be stated with full specifications. A general charge implying that such is the case is insufficient. If such a condition exists anywhere in the State, the public should be given the facts.

The charge is frequently made that under the township system women are to be deprived of the privilege of voting for town school officers and on educational propositions which come before town school meetings for consideration. It is surprising to know of the number of articles which have appeared in the press stating that women are to be deprived of voting on school matters under the terms of this law. New York was one of the first states in the Union to recognize the right and the duty of a woman—a mother or taxpayer—to attend school meetings and to express her judgment as to what men and women shall be chosen to administer the affairs of the schools and also to express her views upon the determination of other questions coming before school meetings for consideration. There has been no discrimination under the laws of this State between men and women in relation to their right to vote on questions coming before school meetings. The identical qualifications which have been in existence for years are still in existence, and women still have the same right to vote under the terms of the township law in all town school meetings which they possessed under former statutes in the school district meetings.

There is much opposition throughout the rural parts of the State to the enforcement of the provisions of the law requiring physical education to be taught in all the schools of the State and to all children in the schools above the age of eight years. It is generally charged that the township law contains the provisions relating to the teaching of physical training. This objection to the law is stated about as frequently as the objection to the consolidation of school districts. The law requiring physical training to be taught to all children in attendance upon the schools was enacted by the Legislature of 1916. That law is an entirely separate act. It has no connection in any way whatever with the township law. If the township law had not been enacted, there would have been mandatory provisions in the laws of the State requiring the rural schools, as well as other schools, to employ a director of physical education. Repealing the township law will in no way affect the law which requires the employment of a director of physical education in the rural schools. If it is your judgment that the children of the State should not receive instruction in physical training and if you believe that public opinion supports your judgment would not the proper course of procedure appear to be to deal with the statute which requires physical training and not to hold the township law responsible for the law requiring physical education. If physical training is to be taught in the rural schools of the State, the proper administration of that law must be based upon some organization different from the old school district system. The township system affords an ideal organization for the proper administration of physical education in the rural schools.

It is also claimed that boards of education are given too much power in determining the appropriations for school purposes and that the people should be given greater authority in determining such appropriations. What changes does this law make in the method of determining appropriations for school purposes? Let us compare the method under this law with the methods of making appropriations under former statutes. Ever since schools were made free, fifty years ago the trustee of the little school district has had the right to include in his budget the amount necessary to pay the salary of the teacher and the incidental expenses of maintaining the school. The voters of the district could not even determine the amount which the trustee should pay the teacher. The power to determine the salary of a teacher was absolutely the prerogative of the trustee. It was upon extraordinary matters solely that the voters of the district determined the amount of the appropriation. Since 1853 the boards of education in union free school districts have prepared their budgets and submitted them to the voters of their respective districts. The law has expressly provided that the voters of a district could not reduce the amount included in a budget for the salaries of teachers or contingent expenses. For a half century this method has been the plan of making appropriations for public school purposes. If school officials had abused this power, if unnecessary appropriations had been made, and if the money of the people had been wasted under this plan, remedial legislation would have been enacted. The general plan which has been followed for fifty years is followed under the provisions of the township law. The board of education prepares its budget and is required to publish the same so that every taxpayer of the town may know the amount included in the budget and the purposes for which the money is to be collected. The modern method of preparing budgets for all municipal purposes is required under the provisions of the township law. The board of education may include in its budget such sum as may be necessary to pay the salaries of the teachers, to provide fuel and other supplies. This law very properly contains a limitation as to the amount of funds which a board may include in the budget for improvement to school property. A board of education may include an amount not in excess of one-half of one per cent of the total assessed valuation of the town. Any amount greater than this must be determined by a vote of the people. In no case may a board of education include more than \$5000 for the erection of new buildings or the improvement of school property in the entire town. This, however, is the identical method which is followed in making appropriations for other municipal purposes. What is the method of making appropriations in incorporated villages? Does not the board of trustees of the village prepare its budget and include therein the necessary expenses for conducting the affairs of the village? The board of trustees of a village may include in its budget one-half of one per cent of the assessed valuation of the property of the village for improving the streets. Such board of trustees may also include an additional sum equal to one-half of one per cent of the assessed valuation of the property of the village for such other purpose as in the judgment of the board is necessary. It is only for extraordinary purposes in the village

that the people vote upon appropriations. Since when did you men have the privilege of voting in the towns in which you reside upon appropriations for town purposes? Does not the town board of your town include in its budget the items to meet the expense of operating the affairs of the town? Does not your town board include, on the recommendation of the superintendent of highways, such amount as it deems necessary for the proper maintenance of the highways of the town? Do the voters of the town vote upon these questions? May not your town board include in its budget an item of at least \$3000 for the repair or construction of bridges? If this power is to be given the boards in control of the affairs of villages and of towns, are you to give less power in this respect to the board charged with the administration of schools? Is it of more importance that the board of a village or the board of a town should have the authority to include in its budget funds sufficient to repair streets and build bridges, than that the board of education of the town should have the authority to include in its budget an amount sufficient to repair and improve school buildings so that such buildings shall be comfortable and sanitary for the children who are compelled to occupy them? Is not the procedure authorized in making appropriations for improvements to school property by town boards of education the identical method which is authorized by law for the improvement of municipal property in villages, in towns, in counties and in cities? Shall the State reverse its sound policy of a half century in determining how appropriations shall be made to improve school property?

It is charged that the discontinuance of the school district system and the adoption of the township system is an infraction of the spirit of home rule. The unit of administration in governmental and political control has always been the town. The township system does not take from the unit of control any of the powers possessed by a smaller unit of control. It gives the town, which is made the unit of control and administration, larger powers and confers upon the town powers which had formerly been exercised by the State. Instead of taking local control from the people under this system, a much larger degree of local control is conferred upon the people in connection with the schools than the localities formerly possessed. This law does not confer an additional power upon any state officer or department which such officer or department did not formerly exercise in the administration of the schools under the school district system. On the other hand, matters connected with school affairs have been transferred from the State to the local school authorities of the town.

Previous to 1898 the highways of the several towns were operated under a district system similar to that under which the rural schools have been operated. A certain piece of highway in the State was called a "road district" and was under the control of an overseer of highways. You all know what the condition of the highways was under that system. In 1898 the road districts were discontinued and the office of overseer of highways was abolished. In the place of this form of management, a system of town control was organized, and the office of town superintendent of highways was created. The highways have since been maintained by the town. You all know what improvements have been made in the highways of the State since this system of operation went into effect. We do not

now hear it charged that the discontinuance of the old district system of highways and of the office of overseer of highways, and the substitution therefor of a town system of highways under the management of a town superintendent of highways is an infraction of the spirit of home rule. There must be a unit of local administration of schools as well as of other governmental functions. Since the town is accepted as the unit in all these other matters, why should it not be accepted for the schools as well? Are not the schools of as much importance as the highways? Should not the education of the children be regarded as important as the improvement and maintenance of highways? Are roads of more importance to the farm than schools? Is the marketing of produce grown upon the farm of more importance to the farm and to the State than educating the children living upon the farm?

The people of the town elect their officers and determine all extraordinary appropriations for the support and maintenance of schools under the township system as they do for the support and maintenance of other town or local affairs under the town municipal government. It is the ideal system of local government and not an infraction of the home rule principle.

We now come, I think, to what we may regard as the real vital objection to this law. That objection is that taxes have been increased. Let us go into this whole question of school taxes with an open mind and with a determination to be just and fair with each other. We should also have in mind the distinction between *increased* taxes and the *equalization* of taxes.

I assume that every man who owns property is willing to pay his proportionate share of taxes for the maintenance of schools. Every property owner should do this. No property owner, however, should be compelled to pay more than his proportionate share of school taxation. To ascertain what the exact situation is, let us consider what the facts have been for the last fifty years in relation to taxes for the support of rural schools. I will show you what the taxes have been in one of the towns in each of three different counties in the State. I have had no purpose in mind in selecting the three towns in question. I could have selected a town in any county of the State. I should be glad to have a committee appointed by this society meet with me to go over the official records to ascertain what the facts are in every county in the State. I invite any individual who is here today to come to the offices of the Department and go over this matter with me. The towns for which I have the data on this question are Rome, Oneida county; Philipstown, Putnam county, and Canaan, Columbia county.

Rome, Oneida county, 1916-1917

DISTRICT	ASSESSED VALUATION	AMOUNT OF TAX	RATE
2	\$154 148	\$334 97	\$.00217
3	29 150	249 40	.00855
4	48 297	331 80	.00686
5	59 698	417 18	.00698
6	59 550	315 64	.00530
7	238 815	310 55	.00130
8	186 159	500	.00268
9	32 348	500	.00927
10	339 155	365 95	.00107
11	89 135	405 22	.00454
12	60 200	301	.00500
13	79 750	548 15	.00687
14	123 550	494 20	.00400
15	160 756	350 14	.00217
16	17 929	179 30	.01000
17	22 650	236 31	.01043
18	23 350	195	.00835
19	162 834	1 194 46	.00733
20	139 830	204 30	.00146
Total	\$2 027 304	\$7 233 57	\$.003568

It will be observed that the several districts in this town have assessed valuations ranging from a little less than \$18,000 to nearly \$340,000. Districts 16, 17 and 18, having valuations from about \$18,000 to \$23,000 respectively, are compelled to raise about the same amount of funds for school purposes as district 20 which has an assessed valuation of nearly \$140,000. It will be observed that the tax rate in district 16 is ten mills; in district 17 ten mills and in district 18 eight mills, while in district 20 the tax rate is less than one and one-half mills. If the tax for school purposes had been spread upon this town, there would have been a uniform tax rate of three and one-half mills. It will be observed that thirteen of the nineteen districts had a tax rate last year in excess of the average rate for the town. If a tax had been spread uniformly upon the town, the taxpayers in each of these thirteen districts would have paid less taxes and the taxpayers of the six remaining districts, which had a tax rate ranging from one and four-tenths mills to three and one-half mills, would have had their taxes increased. The tax rate for the current year in this town, under the township system, is five mills plus. Under this rate nine of the nineteen districts have a lower tax rate than each of such districts had last year. The taxes have been *equalized* for school purposes. Every taxpayer in the several districts of the town is paying the same rate of tax for the support of schools. Some, of course, are paying more than they paid last year and others are paying less than they paid last year.

Philipstown, Putnam county, 1916-1917

DISTRICT	ASSESSED VALUATION	AMOUNT OF TAX	RATE
1	\$21 063	\$310 63	\$.01474
2	193 890	484 76	.00250
3	43 975	502 50	.01142
4	989 654	4 913 49	.00496
5	64 300	501 54	.00780
6	108 500	500	.00461
7	109 550	536 82	.00490
8	109 960	307 88	.00280
9	13 340	201 73	.01512
10	219 450	2 589 97	.01180
12	45 660	530	.01160
13	766 593	2 653 69	.00346
14	587 327	1 236 15	.00210
Total	\$3 273 172	\$15 269 16	\$.00466

In the case of the town of Philipstown, Putnam county, it will be observed from the above table that the valuations of the several districts in this town range from a little over \$21,000 to nearly \$1,000,000. It will be observed that district 9 having an assessed valuation of a little over \$13,000 raised over \$200 in taxes, while adjoining district 8, having an assessed valuation of nearly \$110,000, raised only \$307. It will be observed that district 14 had a tax rate last year of two mills plus, while district 9 had a rate of fifteen mills plus. The tax rate of last year, if the taxes for school purposes had been spread over the entire township, would have been four mills plus. The taxpayers of eight of the thirteen districts would have paid a smaller amount of taxes last year and the taxpayers in five of the thirteen districts would have paid a larger amount for taxes. Five of the districts in this town are paying a smaller tax for school purposes this year by reason of the tax being spread over the town, while eight are paying a larger tax because of this method of assessing property for school purposes.

Canaan, Columbia county, 1916-1917

DISTRICT	ASSESSED VALUATION	AMOUNT OF TAX	RATE
1	\$289 489	\$2 325	\$.00803
2	51 748	313 01	.00604
3	117 672	149 84	.00127
4	50 082	270 45	.00540
5	133 085	399 27	.00300
6	256 468	900	.00350
7	34 724	342 80	.00987
8	20 000		
9	418 350	2 805	.00670
Total	\$1 371 619	\$7 505 37	\$.0054

It will be observed from the above table for the town of Canaan that the assessed valuations in the several districts of this town vary from \$20,000 to \$418,000, and the tax rate in these several districts ranges from one and two-tenths mills to nine and eight-tenths mills. Had the taxes for

school purposes been spread over the entire town, the uniform tax rate would have been five and four-tenths mills.

Five hundred districts of the State are taking their children to adjoining schools instead of maintaining a home school. The funds apportioned to these districts by the State is sufficient, in most cases, to pay the tuition for the education of their children. During these years the property owners in these 500 districts have not contributed one dollar in tax for the support of schools. The State has provided for the education of their children. They are now paying their proportionate share in common with all other property owners in the town.

Now I ask you in all fairness if you regard it as a fair, square, honest procedure in the assessment of taxes for school purposes to compel the property owner in one district to pay a tax of fifteen mills for the maintenance of the same type of school which is provided in the adjoining district and for which his neighbor pays a tax of only two and one-half mills? This is not my idea of fairness, justice or common honesty. It was a knowledge of this intolerable condition of affairs and of this antiquated and inequitable system of taxation which induced this society to adopt a resolution two years ago declaring itself in favor of the reorganization of the rural school system upon the basis of the township.

Many of these districts having large valuations have had the privilege of taxing valuable corporate property and this has been the means of keeping the taxation for school purposes in such districts at a low rate. Is there any reason why the railroads and other corporate property should not pay their proportionate share of taxes for school purposes throughout the entire town? Is not the town the basis upon which taxes are levied for all governmental functions? Are the districts which have had the benefit of the taxation of this property for a half century to continue to enjoy that privilege in violation of the rights of the taxpayers in the other school districts in the town through which the railroad does not extend? Do not the farmers living upon the farms in the districts through which the railroad does not extend bring their supplies over the railroads and do they not ship the produce of their farms to market over the railroads? Are they not, therefore, supporting the railroads to as great an extent relatively as are the property owners residing in the districts through which the railroads fortunately happen to extend? More than this, you all remember that years ago, when we were building our great system of railways in this State, in nearly every town through which the railroad extends and even some towns through which the railroad did not extend, bonds were issued to help construct these railroads. The people of the entire town paid these bonds and yet more than half of the school districts of the State have not received one dollar in return in the form of taxes for the support of schools in such districts. This injustice should not be tolerated longer, and these flagrant inequalities in taxation for school purposes should be corrected.

It is true that many people have paid more taxes this year for school purposes than in former years. It is true that in some instances individuals have been compelled to pay three and four times as much for school purposes this year as they paid in former years. It appears, Mr President, from an examination of the tax rate in the town in which your farm is located,

that you were compelled to pay this year about four times more taxes for school purposes than you paid upon your farm last year. From the reports received you did not regard this fact as an injustice to you or as unfair dealing on the part of the town toward you in the collection of school taxes. I am informed that you recognized it as a fair, honest method of assessing taxes upon your farm. You recognized that your neighbor was being accorded fair dealing and substantial justice. When the statement is made that a man has paid this year three or four times as much for the support of schools as he paid last year you may put it down, as a general proposition, that such person did not pay his proportionate share of taxes last year.

It is not costing twice as much to maintain the rural school this year as it did last year. I have gone over the budgets of 174 town units. These budgets reveal the true story of these alleged increased taxes. They show the increased amount of funds which have been *collected*—mind you, I say *collected*—but not *expended*. The average increase in these budgets is about one-third. The fact that the budget has been increased is not proof that it is going to cost more to operate the schools under the township system than it cost under the district system. This tax was collected by the town board of education and many of the members of such board were formerly trustees in the separate school districts. These boards must render an account of their expenditures at the end of the year. It is entirely proper to inquire why it was necessary to levy a third more for the support of the schools this year than was expended last year for that purpose. Did the conditions of business affairs and of school administration justify this action on the part of town boards of education? Of course, you all expect that it is going to cost more to operate schools this year than it did last year. It has cost every one of you more to live this year than it did last year. You do not buy supplies of any character for your farm or home for which you do not pay more than you paid last year. There is no line of business in which a man is engaged in which he does not pay more for the supplies used in that business this year than he did last year. It must be expected that the increased price for service, for fuel and for all kinds of supplies must be paid by the school authorities as well as by business concerns or individuals. Is it costing more generally throughout the State to operate the schools this year than it did last year? This increased cost, however, is not due to the operation of the township system. Members of the board of education receive no compensation for their services. The only additional expense required under this system is the salary of the clerk, which averages from two hundred to three hundred dollars, and the expense involved in conducting the annual school election. This latter expense is the fee of the inspectors and the cost of printing the tickets, which can not under any conditions be a large amount. There are economies which offset some of this expense. The boards of supervisors no longer receive one per cent on the three million dollars of public school money paid out by them to the several towns. Of course, where buildings have been shamefully neglected and outbuildings have been an offense not only to health but to common decency it has required additional money to make needed improvements. Where money has been

expended for this purpose it is to the credit of the system and not to its discredit. The other day I sent a note to each city superintendent in the State, to the superintendent of each village having a population of 5000 or more, and to boards of education of small union free school districts, making inquiry as to whether or not it is costing more to operate the schools in their respective cities, villages and districts this year than it did last year.

Replies have been received from the following cities and the increase is shown to be

	PER CENT		PER CENT
Amsterdam	10	Mount Vernon	20
Auburn	20	New Rochelle	14 $\frac{8}{10}$
Buffalo	25	Niagara Falls	23
Corning	15	Ogdensburg	16
Elmira	15	Olean	15
Fulton	10	Oneida	12 $\frac{1}{2}$
Geneva	20 $\frac{1}{4}$	Oneonta	18
Gloversville	20	Rensselaer	15
Hudson	20	Salamanca	12
Jamestown	15	Tonawanda	12 $\frac{1}{2}$
Lackawanna	10 $\frac{1}{2}$	Utica	23
Little Falls	15	Watervliet	11
Middletown	13	Yonkers	12

Replies from the superintendents of villages having a population of 5000 or more show that the expense of operating the schools has increased this year as follows:

	PER CENT		PER CENT
Albion	25	North Tarrytown	15
Endicott	20	Ossining	18
Fredonia	21	Peekskill (8).....	18
Hastings	12	Port Chester	25
Hudson Falls	23	Port Washington	15
Huntington	11	Tarrytown	15
Malone	20	Waterford	10
Massena	19	Wellsville	30
Medina	20	Walden	16

Replies received from the small, independent union free school districts not under the township law show that the increased expense of operating the schools in such districts is as follows:

	PER CENT		PER CENT
Akron	18	Lowville	10
Baldwinsville	11	Lyons	9
Bath	15	Roslyn	10
Castleton	15	Scotia	12
Fairport	10	Sidney	15
Friendship	16 $\frac{8}{10}$	Ticonderoga	12

If it costs more to operate the schools in the cities of the State, in the villages having a population of 5000 or more, and in the small union free school districts, will it not also cost more to operate the schools in the remaining portions of the State? Bruce's School Reporter issued January 2, 1918—the best authority in the United States on the cost of operating schools—contains the following statement:

The year 1917 opened with the one striking feature for schools of increasing prices. We predicted in our Annual Review last year increased prices ranging from 20 per cent and up. These came to pass and the first quarter of 1917 was characterized by general price increases all along the line.

School boards were slow to appreciate the full significance of these increases. Budgets were made up with some margins allowed for increased prices. On the whole, however, school boards did not, as they usually do, allow for the possibilities of the year with a very peculiar and unsatisfactory result. It takes money to run the schools of any community and a short-sighted school board is very apt to underestimate needs even under ordinary circumstances, let alone sharp advances in all prices of school goods.

Of course, this natural increase under existing conditions in the cost of the operation of schools does not equal the one-third increase in the budgets in general. It does, however, account for an increase of from 12 to 20 per cent, as indicated by the above reports. School districts have very generally carried a balance at the end of the year. This balance has been the working capital of the district. It is not possible to operate a school system without a working capital. The State government is required to have a working capital of at least five million dollars to transact the business of the State property. Every county, every city, every town and every incorporated village must have a certain amount of money in its treasury as a working capital. Every business man must have a working capital if he is to maintain his credit and keep out of bankruptcy. The farmer must have his working capital. Is it not necessary therefore, for the town board of education charged with the operation of the schools of a town to have a working capital? Last year, the amount raised by tax for the maintenance of schools now under the operation of the township system was approximately \$6,662,824. In previous years the districts which are now operating under the township system carried a balance of from one and one-half to two million dollars, and in each of the thirty-nine villages of the State having a population of 5000 or more the board of education has carried a balance equal to 13 per cent of the taxes raised.

Town boards of education assumed their duties on August 1st last, and there was not a dollar in the town treasury as a working capital for the operation of the schools. The men on these boards recognized the necessity of having available funds to meet the expenses incurred in the maintenance of schools and they very properly included in the budget for the first year sufficient funds to give them this working capital. Then too, these boards did not have correct knowledge as to the amount of funds which would be necessary to meet the expenses of the operation of the schools of the town. The administration of the schools for one year will afford that knowledge. Undoubtedly, in many towns a larger amount of money was collected this year than is necessary to meet the expenses incurred in the operation of the schools. There is no reason to believe that these men, who are taxpayers themselves, will not properly protect the interests of the town. It would, in my judgment, be most unreasonable to assume that town boards, possessing the interest which they do in educational matters and being tax-

payers themselves, would generally make improper or unnecessary expenditures of these funds. In cases where more money has been collected than is necessary for the operation of the schools, there will be a balance at the end of the year which may be applied toward the expenses for next year and which will reduce the budgets accordingly. Whatever amount, therefore, which was included as a working capital, plus such additional sum as was estimated beyond the actual needs of the year, will remain as a surplus or working capital for the ensuing year.

Under the old district system school was maintained for only nine months in the rural regions. The cities and villages maintain school for ten months. Town boards of education have very generally provided for the maintenance of schools in the country districts for the same period of time as schools are maintained in the village districts. You should bear in mind, therefore, that this year is the first time in the history of the State when the schools of the rural regions are affording the boys and girls on the farms the opportunity to attend school the same period of time as the children in the villages and cities have been permitted to attend school for many years. Of course, you know that it is not possible to afford the boys and girls of the country districts the advantages of an education equal to that which is afforded the boys and girls in the cities and villages unless the schools in the rural regions are maintained for the same period of time during the year that schools are maintained in the cities and villages.

It is frequently stated that the operation of the schools under the township system incurs a larger expenditure of funds without a corresponding increase in the efficiency of the schools. You must remember that the schools have been in operation under the township system only a little over four months. Town boards of education were given no power to organize a plan for the current year. In most districts teachers had already been employed by the former trustees of districts, and the compensation of these teachers had been fixed by the former trustees. Town boards had no opportunity to formulate a general plan which could be put in operation for the current year in economizing in the administration of schools. They had no opportunity to establish any definite plan in relation to the qualifications of teachers to be employed. Town boards of education were compelled to assume charge of the administration of the schools at the time these schools were about to open and to operate the schools with such teachers, supplies and under such arrangements as had been provided by the former trustees of school districts. Town boards of education now see very generally wherein the schools may be improved, how teachers of better qualifications may be employed and how economies may be practised. In many towns action has already been taken along this line for the administration of schools for the ensuing year. But notwithstanding the embarrassments under which town boards of education assumed the general direction of the schools for the current year, improvements have been made in the administration of schools in many of the towns of the State. It is also true that the schools in many of the towns are administered on a more efficient and economical basis than ever before. Time will not permit an enumeration of the various plans which have been adopted in many of the towns of the State for the purpose of improving the rural schools, of affording

the boys and girls attending these schools an opportunity for an education as nearly equal as it may possibly be to the opportunity afforded the boys and girls in the populous centers of the State. Many reports are on file in the Education Department from town boards of education indicating what these boards have done in this respect. Any individual desiring to know what these plans are will be accorded the privilege of examining the records filed in the Department if they so desire.

Various interests in the State concerned with the proper administration of the rural schools were consulted in the preparation of the township bill. You understand, of course, that in framing a measure as important as this, it was not possible to include in the bill all the features which the various interests desired. On the other hand, it was necessary for all those interested in the measure to yield some points which were regarded as important.

One of the questions under consideration at the time this bill was framed was, Shall the districts containing the village high schools be included under the township system? There were those who desired to include all villages there were others who desired to exempt the villages from the plan. A compromise was reached by providing that all union free school districts having a population of 1500 or more, or employing fifteen teachers or more, should not come within the terms of the law, and that all union free school districts having a population of less than 1500, or employing less than fifteen teachers should become a part of the township system. The administration of this law for four months has shown that the arbitrary inclusion under this system of districts maintaining a high school and having a population of fifteen hundred or more has been one of the chief causes for the opposition which has arisen to this law. There are many cases in which a union free school district is located in one corner of the town and often in two or three towns. There are people living in remote sections who are not accessible to the school of such village. Under this plan these taxpayers are compelled to pay the same amount of taxes for the support of this school as people who live near and have the full advantages of such school. That feature of the law has contributed very largely to the dissatisfaction which has arisen throughout the State. There are reasons why the union free school districts should not be included in the township system. The people living in the villages who have established their high schools very naturally desire to control such schools. The people living out of the villages are somewhat sensitive about the people living in the villages controlling the schools not in the village. Their fear is that the people of the village high school district will give strong support to the village school and neglect the rural school. If the union free school districts were separate units, this concern on the part of each element would be avoided. Distributing the taxes for the support of the village high school over the entire town has resulted in increasing the taxes upon the farm property and in many cases the imposition of such taxes has resulted in injustice. There can be no objection to the spreading of the tax for school purposes over that portion of the town outside of the high school district because the schools maintained therein are of the same general type.

If the union free school districts were taken out of the township system, the trouble caused through the assumption of outstanding school district

bonds by the town would be avoided. These districts have very generally, within recent years, constructed school buildings and otherwise improved school property for which bonds are still outstanding. A constitutional question was raised as to whether or not this property of the district could be taken by the town without the town reimbursing the district for the value of this property. On the plan followed the town assumed the outstanding bonds and paid to the taxpayers of the district the difference between such bonds and the value of the school property. The same course was pursued with each other school district and for the same reason. The course pursued in this State under the township law is the same course which was pursued in Massachusetts and New Jersey and other states.

When the bill was framed there were many who desired to have the tax for school purposes spread upon the property within the boundaries of the town. It is not possible to pursue this course if union free school districts are continued in the system. In some cases property valued in excess of one million dollars would be transferred to an adjoining town under such plan. Hundreds of children living in such a district would be compelled to attend school in the town in which such property paid no taxes. Very much dissatisfaction has arisen in the small joint districts. In such districts the property is taxed in the town in which the school-house is located. The rate of taxation in that town may be ten mills while the rate of taxation in the adjoining town in which a portion of the property is located may be five mills. The people living in such portion of the district observe that their neighbors are paying a tax of but five mills for school purposes in the town in which they reside, while these taxpayers are compelled to pay ten mills in the town in which their children attend school. These are mere details involved in the plan of taxation but if the tax were spread in accordance with town boundaries, all these troublesome questions would be eliminated.

In a discussion of this question, however, we must not fail to consider the influence which the high school in the hundreds of small villages of the State has exercised in the development of our progress during the last fifty years. This little high school has been one of the great social institutions of the State. It has served many more people than those living within the boundaries of the district who have given it financial support. Every property owner in the district and every renter of a home has contributed his proportionate share in taxes or in rent for the maintenance of this high school. It is a common occurrence to find in the graduating classes of these high schools, more pupils who come from the districts outside than there are pupils who live in the high school district. Pupils have been received into these high school districts generously and, until very recently, in most cases upon tuition paid by the State for nonresident pupils. Usually this amount has not equaled one-half of the actual cost per capita of the maintenance of the high schools.

These schools have been an asset to every farm which is accessible to them. If these schools were discontinued or removed, the value of farm property within the influence of such schools would depreciate. The widow of limited means who owns her little home, the common laborer who may

own his home or who may rent one, and the clerk receiving a small salary and employed in various capacities in community life have been paying their proportionate share for the maintenance of this high school which has rendered as much service to the young people who have been educated in such high school and who live outside the district as it has to those living within the district. These high schools have not received fair treatment. If they are to be eliminated from the township system provision should be made which will guarantee to them compensation for the attendance of nonresident pupils which shall be at least equal to the per capita cost of instruction. Provision should also be made by which all children who have completed the elementary course shall, as a matter of right, be guaranteed the privilege of completing a high school course.

Five years ago when the State Department of Education renewed the campaign for the adoption of the township system, it was distinctly stated that the matter would not be pressed before the Legislature by the Education Department until the state organizations identified with our agricultural interests should feel disposed to cooperate in the movement. It has been the purpose of the Education Department to work in cooperation with these organizations. The State Agricultural Society and the State Association of Tax Officers have indorsed the township system, and the State Grange has twice adopted resolutions favoring the township system. The State Grange at its annual session in 1915 adopted the following resolutions:

Resolved, That the New York State Grange is in favor of making the town the unit of taxation for school purposes, provided that all incorporated villages are excluded from said unit. That we are in favor of a town school board of from three to seven members, to be elected by the voters at an annual school meeting. This board shall serve without salary, and shall have the same powers and duties as the present trustee or board now have in their respective districts, but this law shall not wipe out existing school districts nor change their boundaries.

At the annual meeting of the State Grange in February 1917 the following recommendations in relation to the township system was adopted:

Your committee has made a careful study of the report of the standing committee on education and common schools of the State Grange, and has made full use of the excellent work done by that committee during the past year. It has held lengthy hearings, at which all interested were permitted to be heard; 30 persons appeared and spoke, either as individuals or as representatives of their granges. It has examined with care all the resolutions submitted to this Grange on the subject of rural schools, by pomona and subordinate granges of the State, and has given due consideration to the same, and offers this report as a substitute for such resolutions.

As a result this committee is unanimous in its belief that the welfare of the rural schools of this State demands a change in the methods of administration, to the end that the burden of the same may be more equitably distributed and the authority for the administration of the schools may be lodged in the hands of the people who support them and patronize them.

It found, it is true, a considerable diversity of opinion on many matters, and that it would be impossible for any individual or set of individuals to secure all those things which they would desire to see incorporated in new

school legislation. In fact every member of this committee has found it necessary to surrender some of his personal views in order that a working compromise might be reached. But this has been cheerfully done because we realize that some legislation is desirable and necessary; that the State Grange should have a voice in such legislation, and that to further delay action would not only be neglecting an obvious duty, but would undoubtedly lessen the future influence of the Grange in this and other matters.

Therefore we recommend that legislation be passed making the town the unit of school organization and taxation. In the formation of such legislation we regard the following principles as fundamental:

1 We believe that the power of consolidating schools should rest entirely in the hands of the people. Therefore we recommend that such power shall be taken entirely from the district superintendent and the State Department of Education, and that no consolidation order shall hereafter be effective until confirmed by the board of education of the town or towns in which these districts are located.

2 We recommend that in towns having four or more districts, or school units, not more than two members of the board of education shall be chosen from any one district. And in those towns having only three districts, a majority of the board shall not be chosen from any one district.

3 We recommend that any bill passed shall contain a provision whereby local school authorities may establish in the rural communities schools adapted to the needs of such communities, with adequate provision for instruction in agriculture and homemaking; these schools to receive such state aid as will make possible their development without a tuition charge or an excessive tax rate on the town.

4 Whereas, the use of many different kinds of textbooks is now a matter of inconvenience and unnecessary expense, we recommend that any bill passed shall contain a provision for uniform textbooks throughout each town, to be adopted by the board of education.

5 We recommend that the board of education shall not expend in any one year for the construction of new buildings or the remodeling, improvement or enlargement of existing school buildings, an amount in excess of one-half of 1 per cent of the assessed valuation of the town, and in no case in excess of \$5000, without a vote of the qualified school electors of the town.

6 Whereas, experience has shown the present method of electing district superintendents of schools to be unsatisfactory, we recommend that such officials be elected at a joint meeting of the members of the town boards of education in each supervisory district.

7 We recommend that the town board of education shall consist of the trustees elected by the several districts in the same manner as at present, the board to choose its own chairman and appoint its own working committees, and that in submitting to the school electors the names of persons to be voted for as members of the board of education the connection of any political party designation with such name shall be absolutely prohibited.

It will be observed that the State Grange specifically recommended in 1917 that the *town* should be made the unit of *school organization and taxation*. The Grange further recommended that seven features which that organiza-

tion regarded as fundamental principles in the township system should be incorporated in the law. The first, third, fourth and fifth of these recommendations were incorporated into the law. The sixth recommendation related to the method of electing district superintendents. Members in the Legislature did not regard this recommendation with favor. The recommendation, even if incorporated into the law, could not have become effective until 1920 when the term of the present incumbents of the office of district superintendent expires. The second and seventh recommendations related to one principle, and that is the election of the board of education. Members of the Legislature did not believe in the plan recommended. The Legislature, however, was willing to favor the method recommended by the Grange for the first year and thereafter to permit the people to elect the members of the town board of education at a special town school election. The Legislature did not accept the recommendation of the Grange to the effect that not more than two members on the board of education should be chosen from one district. This feature was changed so that not more than three members of the board should be chosen from one district. There was a recommendation by the Grange to the effect that in towns having three districts a majority of the board should not be chosen from any one district. When the matter was under consideration by the Legislature it was discovered that there were already several towns in the State in which there was but one school district.

It will be observed, however, that the principal recommendations of the State Grange were accepted and that the only recommendation which was incorporated in the law in modified form was the one relating to the election of boards of education.

Every organization interested in rural affairs which has given consideration to the subject of rural schools has taken action favoring the adoption of the township system. Your society has taken action favoring such system; the State Grange has twice taken such action; the State Association of Tax Officers has taken such action; the Conference for Better County Government has favored the system, and every person of experience in public school administration favors the township system in preference to the district system. The fact that some features of this law are unsatisfactory is not in itself sufficient ground for the repeal of the act; the fact that it is costing more to operate the rural schools this year than in former years is not sufficient ground to warrant the repeal of the law. The correct procedure to follow in this case is to make such modifications to the statute as will eliminate the features which have proved unsatisfactory. It will be a distinct step backward in the educational development of the State to repeal the township law.

In this whole discussion, what has been said about the interests of the children in the rural regions? What consideration has been given to the necessity of providing for these children the type of education best adapted to their needs? Shall we provide the boys and girls living upon the farms of the State an opportunity for obtaining an education which is equal to the opportunity now afforded the boys and girls living in the industrial centers of the State? Are the boys and girls living in the agricultural regions entitled to receive an education which will enable them to meet the problems that confront the men and women who are to bear the responsibility of the great burdens involved in the proper solution of the problems of our rural

life? Are we to establish a system of education in the agricultural centers of the State which shall be equipped to deal in a comprehensive manner with the great social, economic and political questions which confront the people living in the rural sections of this country? In the solution of these great problems should we not profit by the experience of other states? Should we not take into consideration the fact that, with a single exception, not a state which has adopted the township system has gone back to the old district system? And should not this be regarded as evidence in favor of a fair trial for the township system? Does not the experience of this State for the last half century under the district system show conclusively that the great educational necessities of the agricultural communities of the State can not be adequately supplied under the old district system? Shall not this State, after having adopted the township system which has adequately met the needs of the rural communities in half of the states of the Nation, give that system a fair trial instead of plunging the State into educational chaos by the repeal of such law?

FROM THE PROCEEDINGS OF THE EIGHTY-SIXTH
ANNUAL MEETING OF THE NEW YORK STATE AGRICULTURAL SOCIETY HELD IN THE ASSEMBLY
PARLOR, STATE CAPITOL, ALBANY, NEW YORK,
JANUARY 15, 1918

Meeting called to order by President. Session at 2 o'clock, Tuesday, January 15, 1918.

THE PRESIDENT: I take great pleasure in announcing to you that our good friend Mr Tucker will preside at our afternoon meeting. He does not need any introduction.

MR TUCKER (presiding): Dr Finegan of the State Department of Education will address us on the subject "The Township Education Law."

[Doctor Finegan's address printed elsewhere.]

PRESIDENT TUCKER: We are now to have the pleasure of listening to an address by Dr Eugene H. Porter, State Commissioner of Foods and Markets.

Address of Dr Eugene H. Porter

I deem it most fortunate that I did not precede the flow of oratory which you have enjoyed. Had I been in front of it, I would have been submerged, but being in the rear I arrive before you a little out of breath but otherwise in fair physical condition.

I have been reflecting not only this afternoon but at other times on the tyranny of words and that is a tyranny to which we as a people, it seems to me, are peculiarly liable. In this militaristic age of ours such advancement has been made in our civilization, in our environment, in our living, that we have come to regard the word progress as indicating something to be desired. Anything labelled progressive is followed by a multitude too eager in the race to ask themselves whether the race is the race of progress or of something else. We are much given to speaking of science and scientific, forgetting that the science of today is the ignorance of tomorrow. "Science"

and "Scientific" in themselves have no value except as we understand the conditions of their use and the personal views of their user. Peace, retrenchment and reform are things we hear much about. Peace with a red-handed tyrant would be the surrender of our liberties. Retrenchment in time of war is a crime. Reform, too, often means but the fresh forging of chains for an enslaved people.

It was said a little time ago that the tyranny of the church need no longer be feared, but the tyranny of slogans, the tyranny of catchwords, the tyranny of small minorities turning themselves so as to represent the will of the majority attempting to drive an entire people along in a narrow line of habit, of business, of morals, is one of the dangers which we are confronting.

So, to come back to the word "progress." Hardly, yet, it seems to me, have the echoes ceased réverbérating of the persistent advocate of the township school law. He spoke about the objections to this law, and if I speak on this topic it is because I am as deeply interested as an individual in the training of our children in this state as Doctor Finegan, because I am today a professional teacher, by virtue of my life certificate, in the State of New York, because I was once a principal of a school in New York State, and last but not least, because at the present moment I am the proud owner of the title of president of a township board under this iniquitous township act.

Doctor Finegan brought up the objection to the bill which he states had been advanced throughout the country districts, the objection to consolidation. There never has been any objections to this particular act because of any attempt at consolidation under it and Doctor Finegan knows that as well as I do. The objection to consolidation occurred some three, four five or six years ago when the Education Department, reaching out in its grasp for power, determined that the will of the people of the district should be disregarded. They gave it up not with any pleasure but, reluctantly, because it was deemed expedient to put one good thing in this bill to leaven the rest of an unpractical measure. Previous to the enactment of this law any district superintendent could consolidate school districts in this State and I was glad that Doctor Finegan referred to Columbia county. Columbia county is my home county: I was born in the town of Ghent and brought up on a farm. I happen to know of a case of enforced consolidation there under that act, where two districts were forced to consolidate with a third. The district that was central in the consolidation contained a school with two departments. These teachers were nothing but ordinary district school teachers. No attempt was made to supplement them with other teachers nor did they receive any higher salaries, and the people of those districts whose population had been somewhat reduced, protested unanimously against the decision of the Department. It was of no avail, the edict had gone forth, consolidation was the policy and it must be had and the great Department of Education must not be thwarted by a few ignorant farmers. So these districts, my friends, today are consolidated. Taxes have been doubled in these two districts that were driven in and they have today a consolidated school with three ordinary district teachers without a single advance in their education or in any other way. There is no objection to the law as to its consolidating force. I want to say right here that I believe that if the underlying principle of this bill is that

of consolidation as a foundation upon which to build a proper school act, then I am in thorough sympathy with Doctor Finegan so far as that goes, but the point in question is that the progress he is speaking of and the progression attributed to his Department, illustrated in this act under discussion, rests on whether it is a practical law and how it affects the majority of the people of the State of New York.

In regard to the election, speaking of democracy, our advocate of this law states almost with tears in his eyes, and with an eloquence most touching that he advocates the presence of the mother, that the old-fashioned democracy of Jefferson and Jackson must and shall be preserved in the schoolhouses in this State. Of course it must and it will be, but without this new law. Now, what were the facts? The facts were that under the old district system a school meeting was held and money was raised, every voter had a voice and when the meeting adjourned everyone was satisfied, because everyone was represented. What is the condition now? The condition now is, and I speak with full knowledge of the circumstances and conditions because as I have stated I am president of a local town board, we make up a budget in private session. It can be thrown open to the public, but I have yet to learn of a single board that has done this. That budget is printed in a newspaper for a certain length of time and then it becomes law absolutely. A further point to be raised—other boards have certain powers. Suppose they have, we are not talking about other conditions but about the school board. The school board has a power never before granted to any authority in school work, to raise \$5000 without consulting the taxpayers of that town. Do you like that? I do not. I don't care how honest they may be, I want no man in my town who has authority to raise so great a sum as \$5000 without my knowledge and consent.

As to the question of transportation, the underlying purpose of this bill—I don't think Doctor Finegan stated it and he will pardon me if I state it for him—the underlying purpose of this bill is the consolidating of school districts in this State. The purpose may be most admirable but the system devised to carry out the purpose may be most wretchedly inadequate. Take the town of Triangle in Broome county where I live and where my farm is, a typical rural township district. After this bill became a law and matters came into the hand of the town board it was plain to all of us that the only escape from excessive taxation from this act was to consolidate the schools. When we considered the situation we found that only with one or two exceptions where we might join two schools together, it was practically impossible to consolidate any more of the schools in that town. The taxes in the town of Triangle went up two and one-half times what they were before with exactly the same teachers, schoolhouses, equipment, training and nothing more and that was all there was about it. We paid the bill.

I will say to you now to be absolutely fair, one reason why this particular township of Triangle suffered so greatly—and we did not suffer so much as other towns—was because we had a high school in it. What was the result of this act in so far as the high school was concerned in the village of Whitney Point? The Whitney Point people were not pleased, for they found that we had taken their high school away from them. In

came a new board of trustees and their school was gone, and upon reflection, although their taxes were somewhat lessened, they did not like it.

In regard to transportation, it is true that the board of education may direct a district to furnish transportation, but I do not know of any district in this State where they have undertaken to compel them to do it. I do know of a number of consolidated districts where the children live six or seven miles away where nothing has been done about transportation and the Department of Education has likewise done nothing about it. The chief difficulty in the way of consolidating districts is this transportation question. We all know that if you can bring the children together and have a dozen teachers you can have better education facilities. The question is, Can you do it under this act? I say most emphatically, no, it can not be done under this act as it at present stands.

One other thing the doctor touched upon, very lightly indeed, the question of bonded indebtedness of high schools. How did the Department of Education undertake to solve that question which has seemed so vexatious to them? It did not seem so vexatious when they were framing the bill. Under the provision of this act the supervisor and the district superintendent and myself are made a committee, and it is to be our duty to appraise all the school property in the town of Triangle. Then we are to add it together and assess it upon the assessed valuation of the town. What do you suppose will be the effect upon the people of the town of Triangle when that happens? Then after that does happen, what do you suppose we are ordered to do with the money? Divide it up pro rata among the taxpayers of the various districts. Many of these taxpayers died two or three years ago and there will be a great many others morally entitled to this money who will never receive it. And after you have gone through with all that procedure what have you done? Taken out of one hand and put into another. The schoolhouses in the town of Triangle belong to the people of the town of Triangle.

Then the old town meeting he referred to but we have never attended any such town meeting as he spoke of. What is this open, free New England town meeting. I want to tell you, gentlemen, if I had this law here I would like to read it to you. It is the most impractical and complicated system for a little election for a town board that the wit of man or the ingenuity of the devil himself could devise. I have not the courage, my friends, to regard that as a New England town meeting. Of course, we do not look through the same spectacles.

One other thing he has spoken to you about at some length, the inequality of taxation in the various school districts. That is all true for years and years and for generations. Nobody ever complained about it for this reason, the people paid for what they ordered and what they got. They were not paying for something somebody else got and they did not.

I know Doctor Finegan has the welfare of the schools at heart and he and I can meet in any argument and remain friends. I know the doctor has the utmost concern for the advancement of education in our State, but I could not help but feel—and I do not hold the doctor responsible—I could not help but think how far away the teaching today in our rural schools is from teaching our rural children to make them satisfied, con-

tented and useful citizens of the country to which they belong. There is no agriculture, gentlemen, in our country schools today worthy of the name. I sat down to devise some means of getting agriculture in our schools today but the curriculum is so crowded that there is no room to get anything else in without ruining the curriculum and driving the children insane. . . .

PRESIDENT TUCKER: We will now have the discussion on Doctor Finegan's paper.

MR SMITH: I don't agree with our last speaker regarding the schools but it is certainly heartening to find any discussion within these walls. I want to say this, that for five years, and until recently, I was a clerk of a little white schoolhouse in Columbia county, six miles from Ghent. We had one teacher with thirty pupils and about twenty classes. What do you think one teacher, however good she may be, can do with twenty classes? I was five years clerk, and sent my children into the village school. I assure you that from my experience with the country school I believe that a child who leaves the country school and goes to the village school will save at least one or two years in his education. I want to give that testimony in favor of the township law. There are some defects that should be corrected, but on the whole, I am in favor of it.

MR BOYCE, of Delhi: For several years I have been working through the department of rural education at the State College and the State School of Agriculture at Alfred in attempting to bring about better conditions in our rural schools. When the township system came into existence I could see whereby there might be some way in which we could bring closer together the school and the home; and I felt that a large improvement had been made in our school system. Doctor Finegan, I think we will all agree, has given this more serious attention than any other man in the State, and he frankly admitted that there were faults in the law, but I would very much dislike to see this law repealed until we have given it a fair show. No law in a year has ever had a fair opportunity. Let us remedy its greatest defects that there may come out of it the best of the serious judgment and experience of men. I plead that we don't go back but that rather we recommend that certain changes shall be made that will make what seems to me a law that has great efficiency in it.

MR HERRICK: I live on the outskirts of the city of Albany on a farm of 130 acres. I have two children whom I send to our little rural school. I am interested as a taxpayer in the amount of money paid for the maintenance of our school. I am also interested as a father in the ability of my children to get a good education in our neighborhood. I have served on the board as one of the trustees under the former system. From that experience I know something about the manner in which it operates. It requires a good deal of time to look after schools in any of our country districts. You know from your own experience that comparatively few people wish to take the office. It is not sought after. The experience in our district some time ago was that when the school meeting was held no one present would take office of trustee and so more as a joke on some absent member than anything else, they elected some member who was not there. When he wanted to get out of the job, he discovered that he would be fined unless he held the

position. There is a reason for this unwillingness to serve. If he attempted to manage the school the way it should be managed, the trustee met with criticism. If he spent the amount of money that should be spent, if he employed the kind of a teacher and paid her the salary she was entitled to, he was criticised. The reason for this was that the vast majority of the taxpayers did not have children in that school; the parents of the school children were completely outnumbered and so the incentive of the majority was to cut down expenses. Now, what change has been effected by this new law? You know that there is no incentive to take the positions on the new board of education. I was asked whether I would go on. I said I would not, I could not give the time to it, it was a thankless job. As we understood the law it was necessary for the members of the board to be old trustees, and consequently I had to go on the new board and eventually was made chairman of that board. While I think conditions in our town were very much better than in many towns of the State, the school buildings are badly run down. We put a roof on one building in a district where two years ago the appropriated \$200 for that very purpose and the roof was never put on. We have installed sanitary toilets and we have put a modern heating apparatus in one school.

The whole truth of the matter is that if this new system is to be a success, if our schools are to be raised to the standard they should be, we have to spend more money than in the past.

MR WORKS: I am not here as a representative of any district whatever but I am here as a representative of a department interested in the betterment of rural schools as far as it is possible for us to cooperate with the people in this work. I want to say a word or two about the township system. I do not believe that the present law is entirely satisfactory and what one should consider is to retain the best in it and gradually improve it as this is found necessary from experience. I would like to call your attention to this fact: Here is the state of Massachusetts which is generally recognized as one of the most progressive states of the Union in all educational matters and which has for thirty-five years had the township system, and you hear no talk whatever about going back to the district system. Not only that, but there are only two or three states east of the Mississippi which have the district system. That alone is proof to me that there must be merit in this system. I don't say that conditions in the Middle West are adapted to conditions here, but conditions in the New England States are not radically different from those in this State.

Furthermore, you put in operation a piece of legislation affecting the whole educational system of the State and it would be impossible to have that work without some injustice. The real question is, how does the amount of injustice in this system compare with the amount of injustice under the old system? I am satisfied that anybody who will make a candid and fair study of the conditions that existed under the district system and the conditions that obtain now, can not help but feel better satisfied with conditions in effect today than under the old system. There is one thing I would like to emphasize. It was implied several times that this township system has resulted in no improvement over the other system. In the first place, you have no right to place judgment after nine months' operation. So,

I would say, if this were to come to a vote before this association on the question of fairness alone the law is entitled to another year's trial.

What are some of the things that enter into a good school anyway? That is the way to get at this question. First and foremost, the one big thing is a good teacher. There is absolutely no other thing so important in reckoning a good school in your district or any other district as a good teacher, and time and time again under the old district system I have seen a trustee let a good teacher go for a difference of \$1 or \$1.50 a week and take the chance of getting a good teacher again. Dollars and cents will not measure the difference between a good teacher and a poor teacher. Will the township system bring about better teachers? I believe it will. I have attended a good many meetings of town boards, and I have found that time and time again when the question came up of increasing the salary of a teacher \$2 or \$3 a week to hold her, the board was ready to do it. You could not have got it from the old trustee. I am satisfied myself that this township system is going to bring better teachers because the town board of education will make an effort to hold them in the town better than the trustees did.

Another fact you must recognize is this, that you can not bring about a complete adjustment in so far as teaching is concerned in a short space of time. The next step is to prepare people definitely for that kind of work. We have to have a system to make it worth while to enter. Another factor in making an efficient school from the work of the teacher relates to the materials she has to work with. Just recently we have been getting some information from teachers in Livingston county; and one of the principal reasons why the teachers prefer to work in the village school rather than in the district school is expressed thus: "In the village school we can have materials to work with; in the district schools we find this practically impossible."

In a district school \$5 or \$10 will go a long way toward providing materials.

One other thing has been mentioned here and that is the inadequacy of the curriculum in the district schools. I am willing to grant that is true. It is not the kind of curriculum which should be there, but you have had a district system working on it one hundred years and have not accomplished your purpose. The township system I believe will make possible the development of a curriculum in the schools necessary for the boys and girls.

There are a number of other things I could point out to you. I want simply to say this: I hope this is not going to be voted down or given adverse consideration without very carefully weighing all the factors entering into it.

THE PRESIDENT: Do any other gentlemen desire to speak on this subject? If not, will Doctor Finegan close the discussion?

DR FINEGAN: I have only one word to say. I want to correct one or two statements made by Doctor Porter. I know that he did not intentionally make a misstatement. He implied that the town board had the authority to raise \$5000 for the purpose of improving school property. The law

provides that the board can not raise more than one-half of one per cent of the assessed valuation of the town and in no case more than \$5000.

I want to say one word in relation to the question of transportation. The fact is that children are transported to school in between four and five hundred districts today, and there is not a contract approved by the Department unless that contract shows the distance and shows that there has been provided adequate means for transporting children to and from school, and furthermore whenever the question is raised by any parent or resident of the district, and we have reason to believe that inadequate transportation is provided, the matter is taken up and skilled authorities are sent to adjust it.

Under the contract system there were last year in this State five hundred school districts in which the property of those districts was not contributing one cent for the education of the children and the support of the schools. In these districts the people contracted for the education of the children, and in five hundred of these centers they received sufficient money from the State so that fund was sufficient to make the payment necessary for the education of the children in the district which they attended. The entire property of these five hundred districts, therefore, did not contribute one cent and the children were educated entirely upon the state funds.

No one believes in compelling children to travel five, six or ten miles. That is absolutely under the control of the local board. If there is a district anywhere in the State in which the children are compelled to travel four, five or six miles to attend school and transportation is not provided, if there is a person here who can inform us of such a fact, I will see that the thing is settled inside of 48 hours from the time we get such notice.

Committee's Resolution

At the Wednesday morning session, January 16, 1918, the committee on resolutions unanimously recommended the adoption of the following resolution:

Resolved, That the State Agricultural Society, while recognizing that some changes are required in the school law in order to render it more equitable, fully indorse the township plan in principle and recommends that the law be amended as may be suitable and not repealed.

REPORT OF THE COMMITTEE ON COMMON SCHOOLS AT THE ANNUAL MEETING OF THE STATE GRANGE, IN FEBRUARY 1917

Your committee on common schools wish to report they have made a careful study of the report of the standing committee on education and common schools of the State Grange, comprised of: H. Fay Nethaway, Canandaigua, N. Y., James Pringle, Ashville, N. Y.; and Fredus H Wilcox, North Bangor, N. Y., and have made full use of the excellent work done by that committee during the past year.

They have conducted lengthy hearings, at which all interested were permitted to be heard, and thirty persons appeared and spoke, either as individuals or as representatives of their granges.

They have examined with care all the resolutions submitted to this grange on the subject of rural schools by pomona and subordinate granges of the

State, and have given due consideration to the same, and offer this report as a substitute for such resolution.

As a result this committee is unanimous in its belief that the welfare of the rural schools of this State demands a change in the methods of administration, to the end that the burden of the same may be more equitably distributed and the authority for the administration of the schools may be lodged in the hands of the people who support them and patronize them.

They found, it is true, a considerable diversity of opinion on many matters, and that it would be impossible for any individual or set of individuals to secure all those things which they would desire to see incorporated in new school legislation. In fact, every member of this committee has found it necessary to surrender some of his personal views in order that a working compromise might be reached. But this has been cheerfully done because we realize that some legislation is desirable and necessary; that the State Grange should have a voice in such legislation, and that to further delay action would not only be neglecting an obvious duty, but would undoubtedly lessen the future influence of the Grange in this and other matters.

The people of the farming sections of this State have no more important interest than the education of their boys and girls, and no organization is in position to better understand the educational needs of these communities than the grange. Hence it should take a positive stand for constructive school legislation.

Therefore we recommend that legislation be passed making the town the unit of school organization and taxation. In the formation of such legislation we regard the following principles (recommended by the special committee and accepted by regular grange committee) as fundamental: First: We believe that the power of consolidating schools should rest entirely in the hands of the people. Therefore we recommend that such power shall be taken entirely from the district superintendent and the State Department of Education, and that no consolidation order shall hereafter be effective until confirmed by the board of education of the town or towns in which the district or districts are located.

Second: We recommend that in towns having four or more districts, or school units, not more than two members of the board of education shall be chosen from any one district, and in those towns having only three districts a majority of the board shall not be chosen from any one district.

Third: We recommend that any bill passed shall contain a provision whereby local school authorities may establish in the rural communities schools adapted to the needs of such communities, with adequate provision for instruction in agriculture and homemaking; these schools to receive such State aid as will make possible their development without a tuition charge or an excessive tax rate on the town.

Fourth: Whereas, the use of many different kinds of text books is now a matter of inconvenience and unnecessary expense, we recommend that any bill passed shall contain a provision for uniform text books throughout each town, to be adopted by the board of education.

Fifth: We recommend that the board of education shall not expend in any one year for the construction of new buildings or the remodeling,

improvement or enlargement of existing school buildings, an amount in excess of one-half of one per cent of the assessed valuation of the town, and in no case in excess of \$5000, without a vote of the qualified school electors of the town.

Sixth: Whereas, experience has shown the present method of electing district superintendents of schools to be unsatisfactory, we recommend that such officials be elected at a joint meeting of the members of the town boards of education in each supervisory district.

Seventh: We recommend that the town board of education shall consist of the trustees elected by the several districts in the same manner as at present, the board to choose its own chairman and appoint its own working committees, and that in submitting to the school electors the names of persons to be voted for as members of the board of education the connection of any political party designation with such names shall be absolutely prohibited.

Eighth: Whereas, it is impossible for your committee to include in its report all the numerous details entering into a measure of such importance as a law on the subject now under consideration, we recommend that S. J. Lowell, State Master, and W. N. Giles, State Secretary, or their successors as legislative committee, be a committee to represent the State Grange of New York in the framing of a law for the government of the rural schools of the State; and we ask them to secure the incorporation in such measure of the principles above set forth, and in other matters to secure what they believe, in their judgment, to be for the best interests of the rural schools of the State.

Report adopted.

Action of Committee of Academic Principals Association

To the Principals of the State of New York:

Your committee, appointed to cooperate with the Education Department in the consideration of a township bill, does resolve as follows:

First, that the plan in our judgment is along the line of the proper development of the school systems of the State of New York.

Second, that it is our opinion that the schools in general will be greatly benefited by the passage of the township bill.

Third, that in our judgment a plan of this sort is imperative for the welfare of the children and people of the State of New York and the development of its resources, especially those of agriculture.

Therefore, let it be Resolved, That the committee does approve of the enactment of this bill.

Signed by the committee

WILLIAM F. H. BREEZE

GEO. F. BARFORD

W. J. MULTER

F. G. LYON

F. W. VAN ZILE

The following is the bill introduced by the committee on public education March 18, 1918, to amend the Education Law providing for the maintenance of schools in towns and also relative to the apportionment of additional school moneys.

An act to amend the Education Law by providing for the administration and maintenance of schools in towns other than certain union free school districts, and relative to the apportionment of school moneys.

The People of the State of New York, represented in Senate and Assembly, do enact as follow:

Section 1 Chapter 21 of the Laws of 1909, entitled "An act relating to education, constituting chapter 16 of the Consolidated Laws," as amended by chapter 140 of the Laws of 1910, is hereby amended by inserting therein a new article, to be known as article 11-a, and to read as follows:

Article 11-A

TOWN SCHOOL DISTRICTS

Section 330 School districts continued

- 331 Establishment of town school districts; division and alteration; special school districts
- 332 School districts having outstanding bonded indebtedness
- 333 Board of education of town school district
- 334 Qualifications of members of board of education
- 335 Appointment of officers by board
- 336 Bond of treasurer
- 337 Vacancies in school offices
- 338 Board to constitute a body corporate
- 339 Meetings of board
- 340 Duties of clerk
- 341 Duties of treasurer
- 342 Powers of board of education
- 343 Schools to be free
- 344 Transfer of pupils
- 345 Schoolhouse sites
- 346 Erection, repair and improvement of school buildings
- 347 Annual school budget
- 348 Levy and collection of school taxes
- 349 Borrowing money in anticipation of collection of taxes
- 350 Submission of certain questions to a vote of the town

- Section 351** Issue and sale of school bonds
- 352 State funds to be used for schools of rural school districts
- 353 Certain union free school districts not subject to provisions of article
- 354 School district officers abolished; apportionment of funds and indebtedness
- 355 Outstanding bonds; existing school property
- 356 Time and place of annual meeting
- 357 Notice of annual school meeting
- 358 Special school meetings in towns
- 359 Qualifications of voters at school meetings
- 360 Conduct of school meetings
- 361 Successful candidates to be notified of election
- 362 Appeals to the commissioner of education
- 363 Custodian of school property in school district

§ 330 School districts continued. 1 Each school district in the State is hereby continued as such district exists at the time this act goes into effect or until its boundaries are modified as provided in this chapter.

2 No order consolidating two or more school districts shall be effective until such order is approved by a majority vote of the town board of education of the town or towns in which such districts are located, and by a majority vote of the qualified electors of each district present and voting at a meeting of the districts consolidated by said order.

§ 331 Establishment of town school districts; division and alteration; special school districts. 1 The several school districts in a town, except union free school districts in which academic departments were maintained on or before the second day of May, 1917, shall constitute and are hereby established as a town school district. Such district as so established shall be designated by the district superintendent, by order executed by him and filed in the office of the town clerk, as town school district number..... of the town of

2 A town school district may be divided into two or more town school districts, but in no such case shall a town school district contain less than five school districts, and such districts shall be compact and contiguous. At the annual meeting to be held on the first Tuesday of June, 1918, or at any annual meeting thereafter, of a town school district, or at a special meeting called for the purpose, a resolution may be adopted by a majority vote of the qualified electors present at such meeting, dividing such town school district into two or more town school districts. Such resolution shall specify and designate the school districts to be included in each of such town school districts. If such a resolution be adopted, a certified copy of it shall be transmitted by the clerk of the meeting to the district superintendent of schools, who shall thereupon make an order describing such town school districts and designating them by number. Such order shall be executed in duplicate, one of which shall be filed in the office of the town clerk of the town and one transmitted to the Commissioner of Education.

Upon the execution of such order, such town school districts shall be established as described therein. The members of the board of education of the town school district so divided, in office on the first day of August following the date of the execution of such order, residing in the town school districts into which such town school district is divided, shall be members of the boards of education of the town school districts in which they reside and shall continue as such until the expiration of their respective terms. The board of education of each new town school district, established by such order, shall consist of three members, if the number of school districts in such town school district is seven or less, and of five members if the number of such district is more than seven. Vacancies in the board of education of each town school district established by such order, shall be filled at the annual meeting on the first Tuesday in May following the date of such order. The members of the board of education of each town school district, so established, shall be divided into classes, so that those continuing in office as above provided and those elected at such annual meeting, shall, where the board consists of three members, hold office for terms of one, two and three years, respectively, and, where such board consists of five members, two shall hold office for one year, two for two years and one for three years, and their successors shall be elected for terms of three years beginning on the first day of August succeeding their election.

3 When the public interest and convenience require it, because of the isolation of the territory of one or more districts or because of any other unusual local situation, an independent school district may be established by a district superintendent. Such district may be established on the petition of one or more of the boards of education having jurisdiction over the territory to be included in such independent district, or upon the petition of a majority of the qualified electors within such territory. Such petition shall show the territory to be embraced in such independent school district. The district superintendent, upon making the order establishing such independent school district, shall file the original with the Commissioner of Education and a copy of such order with the clerk of the board of education of each town school district in which the territory of such independent school district is located. Such order, however, shall not become effective until approved by the Commissioner of Education. Such independent school district shall be subject to the provisions of this chapter relative to common school districts.

4 When necessary for public convenience and the educational interests of a community, a town school district may be established comprising school districts in two or more towns in one or more counties by order of the district superintendent or district superintendents in whose supervisory districts such towns are situated. When a town school district is so established it shall be subject to the provisions of this article. The district superintendents of the supervisory districts in which such districts are located shall execute an order designating such town school district by number and shall file such order in the office of the town clerk of the town or towns in which such districts are situated.

5 School districts in a town school district established as herein provided may be annexed to a union free school district maintaining an academic department, by vote of the qualified electors of such districts present and voting at a meeting called for the purpose as provided by law. Such meeting shall be called by the board of education of the town school district in which such districts are located and the board of education of such union free school district, upon petition submitted to them signed by not less than fifteen per centum of the qualified electors of each of such districts. Such meeting shall be held at the principal schoolhouse in such union free school district. If a majority of the qualified electors present at such meeting from each of the districts shall vote in favor of such annexation, such union free school district and the districts annexed thereto shall become a town school district and shall be subject to the provisions of this article.
